Legislation. The General Assembly convenes in regular session on Thursday after the first Monday of January in odd years. It is composed of 50 Senators (19 Democrats and 31 Republicans in 1941) and 100 Representatives (36 Democrats and 64 Republicans). The 1941 General Assembly passed 239 measures and approved three constitutional

amendments. Of the latter, two would extend the terms of county officers and the third, if adopted, would enable municipalities to adopt the city manager form of government.

The most important legislative subject of the session was the reorganization of the State government, undertaken by a Republican legislature despite the opposition, in important instances, of the Democratic governor. The net result of the reorganization measures was to repeal enactments of a Democratic legislature in 1933 and to divide authority, by them solely entrusted to the Governor, between the Governor and other elective officials. Most of the measures were passed over the Governor's veto or became law without his signature. Several bills were subsequently pronounced unconstitutional, or partly so, by the State Supreme Court, which was also of Democratic complexion, and others were inoperative in part. As a result, a good deal of confusion still existed at the end of the year.

Two election laws also were being contested before the State Supreme Court at the end of the year, one creating bi-partisan county voter registration boards in the seven largest counties of the State, and the other postponing election of mayors in all cities except Indianapolis from 1942 to 1943. Other election laws put the Two Per Cent Club back under the corrupt practices act; eliminated the requirement that candidates file petitions of voters along with declarations of candidacy; barred from the ballot parties or organizations having any relations with foreign governments; permitted party watchers at the polls.

Budget appropriations totaled \$41,878,472 for the fiscal year 1941-42 and \$40,641,160 for 1942-43; in addition, \$430,500 was made available in special appropriations, Apr. 1, 1941, of which \$160,000 was for the expense of the 1941 session. The chief change in the tax structure was the reduction of gross income tax from one to one-half of one per cent for retail merchants and to one-fourth of one per cent for manufacturing processors. Disabled war veterans were given \$1,000 exemption from taxable property in addition to any other exemptions they are entitled to.

A reapportionment measure divided the State into 11 instead of 12 Congressional districts to conform to the 1940 Census. Commissions were established to study wage and hour legislation, traffic needs of the State, and the economic needs of agriculture. In the field of agriculture were a number of other acts including changes in the election procedure for soil conservation districts, reestablishment of the milk control law for two years and recreation of the State Egg Board; both the milk and egg boards were given consumer representation.

Cities were authorized to levy a tax rate up to seven cents to aid privately-owned hospitals. Fourth-class cities were authorized to establish sanitary districts. Rigid conditions were established for incorporation of a community in Marion County. Statutory limitations on tax levies for Indianapolis were removed.

The State welfare laws were liberalized with the increase of old-age and blind assistance from \$30 to \$40 a month, repeal of the requirement that recipients assign property to the county welfare department for reimbursement, and increase of maximum unemployment benefits from \$15 to \$16 and of payment period from 15 to 16 weeks. Townships were permitted to require able-bodied indigents to do needed work in return for assistance.

The Juvenile Court laws were recodified and

jurisdiction was extended over persons up to and including 18 years of age charged with any offense not punishable by life imprisonment or death. Proceedings of the court were made private. Parents of children born out of wedlock were made responsible for their care. A method of adoption procedure was set up. Males who have been married two or more times were required to prove that they were supporting their children when applying for license to remarry.

A defense measure set up advisory and administrative defense councils with broad powers and an office of civilian defense director and created a State defense fund of \$200,000. The Indiana Home Guard was created to serve during the absence of the Indiana National Guard. Negroes were admitted to the Home Guard, National Guard, and naval militia.

In the field of education were new laws providing for automatic renewal of teachers' contracts, for annual scientific hearing tests for pupils, and placing beginning grade and high school teachers on same pay scale with increases based on professional training.

Motor vehicle licenses and drivers' licenses were to be placed on sale January 1, with deadline March 1. The 1937 tire weight tax on commercial vehicles was repealed. Permissible length of trucks was increased from 33 to 36 feet. Carrier regulations were amended and increased amounts of motor vehicle funds were distributed to counties, cities, and towns.

The Sunday "blue" laws were amended to permit fishing, night baseball, and ice hockey games after one p.m. An appropriation of \$10,000 was made to protect Indiana from discriminatory freight rates. It was provided that employees of newspapers shall not be compelled to disclose any information which they may have obtained in the course of their employment. Good Friday was made a legal holiday.

Bibliography. *Indianapolis Sunday Star*, Mar 16, 1941, *Laws Passed and Appropriations Made*, compiled by the Indiana Legislative Bureau

Finances. Total tax collections in Indiana for the fiscal year ending in June, 1941, were \$103,577,000 (1940: \$100,514,000). Total sales taxes amounted to \$58,118,000, including motor fuel, \$27,123,000, general sales, \$25,873,000. Taxes on specific businesses ran to \$4,379,000, general and selective property (including the poll tax), \$3,500,000, unemployment compensation, \$23,153,000. Cost payments for the operation of general government totaled \$98,539,000 in 1939, the latest year available. (Revenues for the general government for that year were \$122,284,000.) Cost of operation per capita was \$28.97. Total gross debt outstanding in 1941 was \$8,904,000, as compared with \$4,906,000 in 1932.

Officers and Judiciary. The Governor is Henry F. Schricker (Dem.), inaugurated in January, 1941, for a four-year term; Lieutenant Governor, Charles M. Dawson; Secretary of State, James M. Tucker; Attorney General, George N. Beamer; State Treasurer, James M. Givens; State Auditor, Richard James. Chief Justice of the Indiana Supreme Court is N. Nathan Swaim; there are four associate members elected by popular vote for six-year terms.

INSURANCE. In common with all other major industries of the country insurance interests were profoundly affected by the war impact; company executives were compelled to alter radically many of their long established underwriting methods.

Upon the formal declaration of war against the Axis powers by the United States the insurance organizations of all types intensified their earlier efforts to support the Government in its defense program. The fire companies created the National Bureau for Industrial Protection, the purpose of which, as its title implies, is to safeguard industrial plants and warehouses against fire hazards, supplementing in such connection work first undertaken more than 18 months ago by engineers of the National Board of Fire Underwriters and by inspectors of rating bodies throughout the country. The insurance engineers cooperated closely with representatives of the Army and the Navy in recommending fire-protection safety devices, not alone for the cantonments, the shipbuilding, and the warehousing properties of the Government throughout continental United States, but in its outlying possessions as well. In like manner the casualty companies donated the services of their safety engineers to make careful surveys of all industrial plants engaged in defense work, with a view to suggesting means for reducing accidents to employees. The contribution of insurance interests along these lines was warmly commended by Government authorities.

Among other important happenings in relation to insurance during 1941, was the formation by the Reconstruction Finance Corporation (q.v.) of the War Insurance Corporation, with initial funds of \$100,000,000, designed to compensate for property losses suffered through bombardment or other acts of war. Just how the plan will operate, and whether a premium or special tax will be imposed to cover the possible cost of the indemnity, had not been determined at the close of the year.

When the country entered the war early in December, insurance companies were flooded with demands for bombardment coverage. For some days the business was written freely by two or three offices. The lines were promptly canceled, however, when notified by Lloyds of London of the immediate termination of all reinsurance treaties affecting such hazard; the individual underwriters of Great Britain advised at the same time discontinuance of bombardment indemnity in every other section of the world. The attitude of majority underwriters in the United States toward bombardment insurance was that the potential liability was so huge, that in the event of serious air attack by enemy powers upon any one of our great coastal centers, the combined insurance capital of the land would be insufficient to meet claims, and that the National Government alone was financially able to assume such responsibility. All standard fire insurance policies specifically set forth that "this company shall not be liable for loss caused directly or indirectly by invasion, insurrection, riot, civil war or commotion, or military or usurped power, or by order of any civil authority." Substantially the same provision appears in contracts of the casualty companies in so far as general liability, owners, landlords, and tenants covers are concerned, and is likewise incorporated in bonds of surety companies, save only that the carriers accept liability for securities lost in transit under any condition.

Policies of workmen's compensation insurance, however, have no such saving clause, a fact that is causing concern to executives these days. The Maritime Commission recently announced its willingness to assume vessel hull and cargo insurance upon American flag vessels unable to obtain full coverage from private marine writing companies. The capacity of the American Marine Insurance Syndicate, which embraces within its membership virtually all of the marine offices, is such that it has been able thus far to assume complete liability for all submitted lines, and is confident of its continued ability so to do, regardless of the number or value of the offerings.

The year was further notable for the broadening of policy contracts by virtually all divisions of insurance; especially was this true of the fire, casualty, and surety companies, each of whom increased the scope of the protection afforded assureds, the concessions in many instances being accompanied by rate reductions.

Unofficial figures on the result of 1941 activities indicate that the premium income for companies generally showed a considerable gain over that of the preceding year; the additional reserves required by the increased writings, however, will militate against any substantial increases in net surplus accounts. Little support, moreover, was given by the banking element of the business; interest returns upon the high-grade securities carried in company portfolios were extremely modest, and opportunities for further investing in stocks and bonds of proper standards seldom appeared. Appreciating the abnormal conditions that prevailed in the financial market, the National Association of Insurance Commissioners at their mid-winter meeting authorized use by the companies of December 1 security values in preparing statements for the year. Ordinarily December 31 market quotations are required. The commissioners also speculated at some length upon the possible exercise by the Government of more stringent control over insurance interests, usurping thereby to a degree functions now enjoyed by the different States. This fear was first voiced early in 1940, following a Congressional in-

vestigation of the life insurance industry, but the threat proved groundless then.

Fire Insurance. The premium income of the fire companies was estimated to be considerably in excess of that for 1940, which totaled \$1,733,959. This year's gain was traceable in part to expanded fire writings, and more especially to added sales of use and occupancy, inland marine, and ocean marine indemnity. There was also a considerable call for specialty forms of coverage to meet particular needs of individuals and corporations. The demand for use and occupancy protection was especially heavy, exceeding that of any previous period in the history of the business. Owners of machinery essential to the continuous operations of their plants, appreciating the delays and heavy costs to which they would be subjected in making replacements in the event of fire loss, were most anxious to secure adequate insurance coverage. In their consideration of applications for the indemnity, underwriters naturally gave preference to properties engaged in defense work, holding that in case of needed replacement of either machinery or raw stocks, or both, preference would be given by priority rulings.

Though the need for increasing rates upon use and occupancy lines was recognized by many company officials who advocated a modest advance in prevailing figures, majority opinion inclined to a time limit upon the policy, beyond which further coverage could be secured at added cost. Some companies flatly refused to write use and occupancy lines unless the straight fire business was given them at the same time, maintaining that if they were to assume the greater hazard under a use and occupancy contract, they should in all fairness receive the more attractive straight fire business as well.

The upturn in fire losses (see FIRE PROTECTION) strengthened the prediction of underwriters that the period of favorable losses enjoyed from 1935 to 1940 was at an end, and that henceforward a steady gain in the country's burning ratio might be counted upon. The most disastrous single fire in the history of the country, at the Fall River, Mass., plant of the Firestone Rubber and Latex Company, will probably cost the interested fire and marine companies approximately \$12,000,000.

Because of steadily mounting costs of building materials and of labor, and the difficulties and delays encountered in securing replacements of many types of machinery and of raw stocks, the satisfactory adjustment of losses, especially those reported under use and occupancy forms, has been extremely difficult; claim adjusters met problems never previously encountered.

Although the business of the fire companies expanded considerably at home throughout the past 12 months, their foreign writings fell off in large measure; practically disappearing in countries of the Far East and in continental Europe. Member companies of the American Foreign Insurance Association had a particularly large and profitable business in parts of the Philippine Islands, notably in Manila, all of which was doubtless wiped out by invading Japanese.

The outstanding happening in casualty insurance circles was the formula drafted by the War Department, and subsequently adopted by the Navy, under which employees engaged in defense work are to be furnished full indemnity for death or injuries, together with ample automobile injury and property damage protection; the business is to be written upon a "cost-plus-a-fixed fee" basis. This entirely new method of handling compensation risks has been sanctioned for use in virtually all States, so far as Government projects are concerned.

In view of the thousands of new employees engaged in war industries premiums of the compensation writing companies, based as they are upon annual payrolls, increased greatly during the year. While there was an increase in the number of compensable death and injury cases, attributed to the considerable number of new hands employed and the strain upon machinery in constant use, the result was not burdensome; it paralleled closely the experience in such connection of the casualty companies during World War I.

Automobile Insurance. Regarded for many years by managing underwriters as one of the most desirable divisions of their business, and with a long record of profit, the automobile line, both as to bodily injury and property damage features took a decided turn for the worse during the year; claims in excessive number for deaths and bodily injuries were filed with the casualty offices, while both types of institutions reported a decided increase in property damage losses. To such extent was this true that the fire companies raised their rates for the coverage effective on the first day of 1942, while the casualty companies arranged to advance their rates two weeks thereafter.

Decidedly the outstanding happening of the year in the automobile field was the enactment by New York Legislature of the motor vehicle safety responsibility law, to become operative Jan. 1, 1942. The measure, intended primarily to reduce road accident hazards, proposes further to insure payment of damages to innocent accident victims. All motorists are required to supply evidence of financial responsibility, either through holding the policy or bond of a duly licensed casualty or surety company, or through posting with the State of \$11,000 in cash or negotiable securities to guarantee payment of damages caused in an accident for which they were held at fault. Failing to comply with the requirements determined by the Act, the motorist will be denied the right to operate a car in New York; nor can he sell or transfer the car until his liability has been liquidated.

While certain shortcomings in the law exist and will likely be amended in 1942, the statute is deemed the best of its type yet proposed, and if in its operation the results prove anything like as satisfactory as the sponsors of the measure predict, the Act is sure to be adopted in other States.

Marine Insurance. First among the insurance companies to feel the effect of war conditions were the marine writing offices, upon whom calls for indemnity upon vessels and their extensive and valuable cargos started with the outbreak of hostilities in Europe in 1939. As the allied powers looked to this country very largely for foodstuffs as well as munitions of war, and as the number of modern steamships decreased through attacks by U-boats and bombers, many antiquated vessels were pressed into service to keep the British life line open. To reach their destinations the vessels were oftentimes compelled to make long and circuitous detours and to dispense with many of the ordinary navigation aids, thereby multiplying ordinary sea hazards. With constantly changing war conditions at sea, marine underwriters were forced to adjust their rates for indemnity at frequent intervals, seeking at all times, however, to avoid any semblance of overcharging. When the United States declared for an all-out war, marine insurance rates as between British and American flag vessels, which previously had favored the latter as a nonbelligerent, were unified.

Inland Marine Insurance. Indemnity upon the vast quantity of goods in transit, both by rail and heavy trucks, resulted in a heavy demand for inland ma-

rine coverage, the premiums of which for the year approximated \$60,000,000, an increase of nearly 10 per cent over those of 1940. There was a lively call for fine arts indemnity, while the personal property form of coverage attained increased sale, as issuance of the indemnity was sanctioned by various States that previously had opposed its writing within their borders.

Life Insurance. Decisions by several companies to shift to a lower interest assumption for reserves marked the first time that any American life insurance company has used a lower basis than three per cent. The move was due solely to the low level of interest returns on high-grade securities. Another result of this condition was a shift in sales emphasis still farther away from investment-type policies and toward those stressing the protection element.

The number of companies issuing new policies with provisions restricting coverage on war-caused deaths among the armed forces steadily increased during the year, until by January 1 companies representing a large majority of insurance in force were applying the war restriction to all new issues, regardless of the applicant's age or sex. This was done to protect existing policyholders from possible extraordinary losses not contemplated in fixing the premium. Total life insurance in force increased by about \$6,000,000,000 during the year, to exceed \$124,000,000,000 by the year-end. Total assets climbed to about \$32,550,000,000. Sales of new life insurance during 1941 totaled \$8,331,638,000; an increase of 10.7 per cent over 1940.

While several methods of taxing life insurance were considered in framing the 1941 revenue act, none was adopted in view of more urgent matters. It was anticipated that a life insurance tax proposal would be incorporated in the first 1942 tax measure. Although the Treasury had recommended a reduction in the exemption of life insurance death proceeds payable to a named beneficiary from \$40,000 to \$25,000, Congress left this unchanged.

INTER-AMERICAN UNION OF THE CARIBBEAN. An organization with headquarters at Havana, Cuba, formed for the purpose of convening meetings "to further closer relations and to contribute toward the development of cultural as well as economic and tourist relations" among the nations of the Caribbean area. Delegates to the meetings consist of: (1) official representatives or observers of the governments of Colombia, Costa Rica, Cuba, the Dominican Republic, El Salvador, Guatemala, Haiti, Honduras, Mexico, Nicaragua, Panama, the United States and Venezuela; (2) representatives of cultural, educational, scientific, professional, and economic institutions and organizations; and (3) individuals admitted to membership because of their interest and work in inter-American fields.

The third annual conference of the Union was held in Port-au-Prince, Haiti, during Apr. 22-29, 1941. The discussions were devoted mainly to non-political subjects bearing upon the mutual promo-

tion of culture, health, commerce and tourist travel among the participating countries. However the Mexican delegation of 19 members proposed the adoption of a set of statutes that would have endowed the Union with broad political and economic powers.

A heated debate was precipitated when Washington's delegate at the conference, the U.S. Minister to Haiti, announced that the United States opposed acceptance of the statutes on the ground that they would create an organization with functions overlapping those of the Pan American Union. This position was criticized by the representatives of Mexico, Nicaragua and Haiti. On the other hand, the Cuban and Colombian delegates and others present supported the stand taken by the United States. The conference finally voted to eliminate the phrase "Caribbean Inter-American Union" from the statutes and send them to the interested governments for study.

INTERNATIONAL LABOR ORGANIZATION. A permanent diplomatic and administrative association of nations having in its membership more than 50 nations of the world, including the United States. Its objective is the improvement of labor conditions. Its machinery consists of an annual *Conference* of representatives of the member nations, and an *International Labor Office* controlled by a *Governing Body*, the latter consisting of 32 persons, 16 of whom represent the governments, 8 the employers, and 8 the workers, meeting quarterly.

The annual Conferences draw up draft conventions and recommendations affecting industrial conditions which are presented to the competent authorities in each member nation for ratification or adoption. Up to September, 1941, the Conference had adopted 67 Draft Conventions, and 882 ratifications had been registered. The International Labor Office, with its permanent seat at Geneva, Switzerland, acts as a secretariat for the annual Conference and as a research agency for the collection and dissemination of information bearing on the problems of labor and industry throughout the world.

The International Labor Organization maintains offices in various member countries to provide contact with social, labor, and industrial trends. At the present time there are branch offices in Washington, D.C., London, Shanghai, Paris, and New Delhi. In November, 1940, a new office was opened in Montreal, Canada, through the cooperation of the Canadian Government and on the invitation of McGill University to provide service for the member countries during the war.

From July, 1939, to September, 1941, member

countries registered 43 ratifications of ILO Conventions.

A citizen of the United States, Hon. John G. Winant, was elected Director of the International Labor Organization in 1938, taking office in January, 1939. Mr. Winant resigned in February, 1941, his place being taken in the ILO by Edward J. Phelan, Acting Director. Three other United States' citizens are at the present time on the Governing Body:—Hon. Carter Goodrich, United States Government representative, Chairman; Henry I. Harri-man and Robert J. Watt, elected by the employer and worker delegates respectively. Director of the Washington Office is Ethel M. Johnson, 734 Jackson Place, Washington, D.C.

In October-November 1941 the ILO held a meeting of the Governing Body and a Conference of member states in New York City. To this Conference came delegates from 33 member countries and observers from two countries. The Conference discussed the part to be played by the ILO in postwar reconstruction and the problem of effective cooperation between Governments, employers', and workers' organizations.

IOWA. A west north central State. Area: 56,280 sq. mi., including 294 sq. mi. of inland water. Population: (1940 census) 2,538,268. The urban population comprises 42.7 per cent of the total (U.S. average, 56.5 per cent); non-white population, 0.7 per cent (U.S. average, 10.2); elderly (65 years and over), 8.9 per cent. Iowa ranks 24th in area, 20th in population, and 26th in density, with 45.3 persons per square mile. The largest city and capital is Des Moines with 159,819 inhabitants. There are 99 counties and 21 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Jessie M. Parker, Superintendent of the Department of Public Instruction, there were 503,481 pupils enrolled in the public schools of Iowa during the school year 1939-40, 364,071 in elementary schools and 139,410 in secondary schools. Teachers numbered 25,151 and received an annual average salary of \$965. Total expenditures for the year were \$56,438,684. For higher education, see IOWA under UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 9,620, of which 9,543 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 802,885; 691,257 were private and commercial automobiles, and 102,712 trucks and tractor trucks. Gross motor-fuel consumption was 572,720,000 gallons. Net motor-fuel tax receipts were \$14,855,000, the rate being three cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$12,987,000. See ROADS AND STREETS.

Railways of all classes extended 9,042 miles (Dec. 31, 1939) 3.85 per cent of the total mileage in the United States. Class I steam railways (7,688

miles) reported 12,578,202 tons of revenue freight originating in Iowa in 1940 and 15,851,420 tons terminating in Iowa. There are 35 airports and landing fields in the State (nine lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 476 civil aircraft in the State and 1,882 airline transport, commercial, and private pilots (1,659 private).

Agriculture. In the average annual gross value of farm products sold, traded, or consumed in the decade of 1929-39, Iowa led all other States with a total of \$561,846,688. Acreage harvested in principal crops in 1941 totaled 20,586,300, as compared with 20,611,000 acres in 1940. According to the latest census, there are 213,318 farms, valued at \$2,690,744,215, averaging 160.1 acres each. Farm population numbered 930,821 or 36.7 per cent of the total. Leading crops with production were: Corn, \$316,074,000, 464,814,000 bu.; oats, \$65,594,000, 177,280,000 bu.; hay, \$43,842,000, 5,721,000 tons, soybeans, \$24,082,000, 16,608,000 bu.; flaxseed, \$5,982,000, 3,438,000 bu.

Manufacturing. According to the 1939 Census of Manufactures, there were 2,670 manufacturing establishments in Iowa, employing 65,314 wage earners who received \$73,466,119 in wages for the year. The total value of products was \$718,531,801; value added by manufacture, \$244,795,279

Mineral Production. Leading mineral products in 1940 were: Cement, 4,597,781 bbl. valued at \$7,641,163 (4,717,295 bbl., \$7,771,503, in 1939), coal, 2,908,000 net tons (3,050,000 net tons valued at \$7,503,000 in 1939). Total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$25,483,936 or six-tenths per cent of the United States total

Trade. According to the 1940 census there were 5,802 wholesale establishments in Iowa, employing 24,120 persons, reporting net sales for 1939 of \$790,518,000 and annual pay roll of \$32,088,000. There were 39,024 retail stores with 87,684 employees, reporting sales of \$822,905,000 and pay roll of \$72,514,000. Service establishments numbered 13,756, employing 13,412 persons for \$10,854,000 per year, and reporting a business volume amounting to \$47,727,000. The leading business center of the State is Des Moines which reported wholesale sales of \$143,015,000, retail sales of \$82,272,000, and \$7,182,000 receipts for its service establishments. Sioux City reported sales of \$150,439,000 wholesale and \$39,306 retail; Davenport, \$49,062,000 and \$34,266,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Iowa was \$40,000,000. Under the Social Security program, financed by Federal funds matching State grants, 56,983 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$20.89 (U.S. average pension, \$21.08); 7,751 dependent children in 3,485 families received (without Federal aid) a total payment of \$66,878; and 1,527 blind persons received \$24.05 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 18,759 and received \$14.61 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 1,631 (\$108,000); NYA student work program, 5,793 (\$43,000); NYA out-of-school work program, 6,726 (\$130,000); WPA, 18,830 (\$1,018,000); regular Federal construction projects, 2,586 (\$226,000). The Farm Security Administration certified sub-

sistence payments totaling \$4,000 for the month to 146 cases.

Legislation. The General Assembly convenes in regular session on the second Monday of January in odd years. It is composed of 50 Senators (45 Republicans and 5 Democrats in 1941) and 108 Representatives (86 Republicans and 22 Democrats). The 49th General Assembly remained in session 91 days, passed 343 bills, and authorized expenditures of \$57,216,808 for the ensuing biennium (excluding the budgeting of primary road funds)—\$6,236,889 more than the preceding legislature had voted. No new taxes were imposed. The following summary of 1941 legislation by C. C. Clifton is reprinted from the *Des Moines Register*, Apr. 12, 1941:

Redistricting Iowa's nine congressional districts were condensed into eight for the 1942 elections by dividing the fourth district between a new second and third district. State senatorial districts were revised for the first time in 55 years by transferring one senator from eastern Iowa to northwest Iowa, effective in the 1944 elections. Lee county lost one of its two State representatives to Wapello county, effective in the 1944 election, because Wapello passed Lee in population in 1940.

Health Iowa became the 26th State making premarriage health examinations compulsory for both bride and groom. The law requires both parties applying for a marriage license to present a physician's certificate showing freedom from syphilis in a communicable stage. Use of sulphites to restore red color to hamburger was prohibited. County clerks were made registrars of vital statistics and empowered to appoint local registrars except in cities of 35,000 or more population, in which the local board of health appoints, usually, the city clerk.

National Defense Governor Wilson was authorized to establish a home guard to serve while the national guard is in federal service. An Iowa industrial and defense commission of 15 members was created and given \$50,000 to be used in attracting defense industries to the State. Leaves of absence for all officers and employees of the State and its subdivisions and 30 days' pay when inducted into federal service was legalized. Men in the military service were authorized to vote by absent ballot in the 1942 elections. Homestead tax credit rights and unemployment compensation benefits were preserved for soldiers.

Elections County conventions were prohibited from making nominations for which no candidate in the primary received a vote equal to 5 per cent of the governorship vote by his party. Date for holding county conventions after the primaries was changed from the fourth Saturday to the fourth Friday after the primaries. Method of counting absent voter ballots in precincts using voting machines was returned to counting them on the machines at the close of the polls. Proposals for four-year terms for constitutional State officers and county attorneys by constitutional amendment, and for four-year terms for other county officers were rejected.

Liquor and Beer No liquor legislation was considered by the legislature. The house liquor committee wouldn't consider a liquor by the drink bill. The senate committee didn't have one to consider. The only beer legislation was the single bill which the senate approved as its choice out of seven sent over by the house. The new bill, effective July 4, prohibits dancing in beer taverns unless permit is issued to a beer permit holder by a city or town council or county board of supervisors, and permits dancing where beer is sold only when there is a minimum of 500 square feet of floor space and a policeman or deputy sheriff is provided during dancing hours.

Schools A teacher tenure law making contracts continuing until terminated was enacted. The teacher's minimum wage was raised from \$50 to \$65 per month. Time of beginning of the term of county superintendents was changed from the first secular day in September to the first secular day in August. Tuition districts without high schools may pay for pupils in other districts was raised from \$9 to \$12 per month. Quarterly publication of school board proceedings was required of all consolidated and independent city or town school districts, except Des Moines. The legislature appropriated \$15,000 for a study of a revised code of school laws to be submitted in 1943. A bill for creation of a Statewide teacher pension system without contribution of State funds died. A bill for optional creation of county school units did not get out of committee.

Social Security The name of the Iowa unemployment compensation law was changed to Iowa employment security law. Employer's 3 per cent tax was limited to \$3,000 in wages paid any employee. National banks were authorized to pay taxes to the State instead of the federal government to make all bank employees eligible for benefits. The basis of payment of taxes and collection of benefits was changed from wages earned to wages actually paid in

a benefit year Old age pension funds were raised \$1,500,000 a year to \$8,500,000, which is matched by the federal government Use of white canes was limited to the blind, and motorists were required to stop for persons carrying them.

Failed to Pass. Many important measures fell by the wayside. Some were passed by one house but not the other. These included the bills to permit Iowa cities to participate in federal housing and slum clearance programs, grant aid to dependent children, require blood tests of drunken drivers, set up a teachers pension program, and provide penalties and clarify the motor vehicle law section on leaving the scene of an accident.

Finances. Total tax collections in Iowa for the fiscal year ending in June, 1941, were \$74,845,000 (1940: \$74,906,000). Total sales taxes amounted to \$38,817,000, including general sales, \$17,992,000, motor fuel, \$17,488,000. Taxes on specific businesses ran to \$3,684,000, general and selective property, \$3,909,000, unemployment compensation, \$7,713,000. The net income taxes were \$5,750,000. Cost payments for the operation of general government totaled \$76,826,000 in 1939, the latest year available. (Revenues for the general government for that year were \$91,617,000.) Cost of operation per capita was \$30.39. Total gross debt outstanding in 1941 was \$3,199,000, as compared with \$17,536 in 1932.

Officers and Judiciary. The Governor is George A. Wilson (Rep.), inaugurated in January, 1941, for his second two-year term, Lieutenant Governor, B. B. Hickenlooper; Secretary of State, Earl C. Miller; Attorney General, John M. Rankin; State Treasurer, W. C. C. Bagley; State Auditor, C. B. Akers; State Comptroller, C. Fred Porter. Chief Justice of the Iowa Supreme Court is Oscar Hale, there are eight associate members elected by popular vote for six-year terms.

See CONSUMERS' COOPERATIVES.

I.R.A. Irish Republican Army. See EIRE, IRELAND, NORTHERN, and GREAT BRITAIN under *History*.

IRAN (PERSIA). A kingdom of southwestern Asia. Capital, Tehran (Teheran); sovereign in 1941, Riza Shah Pahlevi, who was crowned Apr. 25, 1926.

Area and Population. Area, about 628,000 square miles; population, estimated at 15,000,000, including besides the dominant Iranians large minorities of Turks, Kurds, Leks, Baluchis, and Gypsies. There are about 3,000,000 nomads. Populations of the chief cities as officially estimated Mar. 1, 1940, were: Tehran and district, 540,087; Tabriz, 219,000; Meshed, 139,000; Shiraz, 119,000; Isfahan, 100,000; Hamadan, 99,000; Resht, 89,000; Kermanshah, 70,000; Kazvin, 60,000; Kerman, 59,000; Sultanabad, 55,000; Abadan, 40,000.

Defense. Service in the active army for two years is compulsory for youths of 21. They then serve in the reserves for 23 years. The strength of the active army in 1940 was reported at about 120,000 men. There was one mechanized brigade of anti-aircraft, tank, and infantry regiments, and an air force of five regiments with some 280 modern planes. In addition the armed police force comprised 7 independent mixed regiments and 15 mixed battalions. The navy had 2 sloops, 5 patrol vessels, and several smaller craft in the Persian Gulf, and a yacht and several motor patrol boats on the Caspian Sea.

Education and Religion. Despite rapid extension of educational facilities in recent years, the population remains largely illiterate. There were 4,939 schools with 273,680 pupils in 1937. Tehran has a university. Of some 900 Iranian students in foreign universities at the outbreak of the European War, most were withdrawn to Iran. The people are mainly Moslems of the Shiite sect; there are also about 50,000 Armenians, 40,000 Jews, 30,000 Nes-

torians, and some native Christians, Bahaists, and others.

Production. Agriculture and stock raising are the main occupations, but the oil industry is the chief source of government revenue. Production of the chief crops in 1937-38 was estimated as follows (in metric tons): Wheat, 1,942,300; barley, 706,900; rice, 382,100; beet sugar, 25,200 (in 1939-40); tobacco, 15,900; sesamum, 7,500; cotton, 32,900. Estimated cotton production for 1941 was 208,000 bales. The 1938 wool clip was about 18,100 metric tons. Dates, raisins, and other fruit are widely grown. The output of crude petroleum in 1940 was 78,592,000 bbl. (78,151,300 in 1939), giving Iran fourth rank among world producers. Copper mines at Baghcheh Bagh started production in 1940. Carpet making remains the leading industry. Cement, matches, cotton and woolen yarns and fabrics, refined sugar, silk textiles, and iron and steel are new industrial products fabricated with government backing. There is a large oil refinery at Abadan with a capacity of 109,390,000 bbl. annually.

Foreign Trade. Preliminary data for the year ended Mar. 20, 1941, showed commercial imports of 864,925,000 rials (612,164,000 in 1939-40) and commercial exports, excluding oil, of 925,381,000 rials (803,888,000 in 1939-40). Oil exports fell 22 per cent to 1,313,591,000 rials from 1,680,064,000 in 1939-40. Germany supplied 42.9 per cent of the commercial imports in 1940-41 (26.1 in 1939-40); Soviet Union, 9.7 (11.7); Netherlands, Indies, 9.2 (3); British India, 9.0 (10.6); United States, 8.4 (6.6); United Kingdom, 7.0 (7.7). Of the commercial exports, excluding oil, Germany took 47.9 per cent in 1940-41 (48.9 in 1939-40), United States, 13.4 (11.6); Soviet Union, 12.7 (0.4); British India, 6.2 (7.1). Petroleum products normally account for three-fourths of the value of all exports.

Finance. Budget estimates for the fiscal year ended Mar. 20, 1942, anticipated receipts of 3,613,768,718 rials and expenditures of 4,323,911,676 (3,094,394,000 and 3,210,973,000 rials, respectively, in 1940-41). Royalties from the Anglo-Iranian Oil Co., fixed in 1940 at a guaranteed minimum annual payment of £4,000,000, go into a reserve fund and are not included in the budget. However payments from the reserve fund of £2,000,000 to the War Ministry and £1,000,000 for railway construction were authorized during 1941-42. The recognized foreign debt outstanding May 15, 1940, totaled £951,706. The rial was pegged at 17.1133 rials to the U.S. dollar (1 rial = \$0.0585) on Dec. 21, 1939. The previous official fixed rate was 80.50 rials to the pound sterling.

Transportation. The Trans-Iranian Railway from Bandar Shahpur on the Persian Gulf to Bandar Shah on the Caspian Sea (866 miles) was completed Aug. 26, 1938. Under construction in 1941 were the lines Tehran-Tabriz, Tehran-Meshed, and Tehran-Yezd. The Tehran-Kazvin line was opened Mar. 8, 1940. Highways in 1940 aggregated 22,373 miles, of which 4,719 miles were of macadam or asphalt, and 10,207 miles of improved earth and gravel. An air line in 1941 linked Tehran, Kermanshah, and Baghdad. Shipping tonnage entering Persian Gulf ports in 1937-38 totaled 7,054,500 tons (5,163,036 tons British); Caspian ports, 497,098 tons.

Government. At the beginning of 1941 executive power was exercised by the Shah, acting through his Cabinet appointees. The parliament (Medjliss) of 136 members, elected for two years, sanctioned

measures proposed by the Shah and his Cabinet. Premier, Dr. Ahmed Matine-Daftary, appointed Oct. 26, 1939.

HISTORY

Anglo-Soviet Invasion. Iran was drawn unwillingly into the maelstrom of the World War during 1941. Parts of the kingdom were occupied by British and Soviet forces. The Shah was forced to abdicate, a more liberal regime was established under his son, and Iran became a virtual ally of both Britain and the Soviet Union in the struggle with the Axis.

The prelude to these events was the three-cornered struggle among Germany, the Soviet Union, and Great Britain to obtain Iran's collaboration and support, which gained considerable intensity during 1940 (see *YEAR BOOK* for 1940, p. 363). This struggle became more crucial in 1941 as the German armies advanced into the lower Balkans and Crete and launched their drive through southern Russia toward the oil fields of the Caucasus. Iran, with its valuable oil deposits and its strategic position separating the British forces in India and the Near East from each other and from the U.S.S.R., was considered a major objective of German strategy.

German activities in Iran seemed designed to bring about a coup that would place a pro-Axis government in power. Beginning in the spring, the British Government repeatedly called the attention of the Iranian Government to the danger arising from the constant infiltration of German "tourists" and "technicians" and the distribution by Axis agents and their native collaborators of arms, money, and inflammatory propaganda among discontented elements of the population. After the German attack upon Russia, the Soviet Government joined Britain in these representations. Meanwhile German agents in Iran were said to have encouraged the anti-British coup in Iraq in April. The Tehran authorities gave no open encouragement to Rashid Ali al-Gailani in his brief struggle with the British in May, but gave refuge to him and to the strongly anti-British Grand Mufti of Jerusalem when they were driven out of Baghdad.

At the end of June, a British-Soviet accord for the establishment of British and Soviet zones of influence in Iran was reported. Toward the middle of July the British and Soviet Government made parallel representations in Tehran, urging expulsion of Axis agents from Iran. A virtual Anglo-Soviet ultimatum to the same effect was delivered August 16, but Riza Shah Pahlevi again refused to order a general expulsion of Germans, who occupied key positions in Iranian factories, the communications system, and public works. He did agree to request the departure of a small number of Germans each month, but even this provoked threats of reprisals from Berlin.

The British and Russians ended this diplomatic jockeying for time by launching a joint invasion of Iran on the early morning of August 25. Supported by naval units in the Persian Gulf, British armies marched in from Iraq and Baluchistan while Soviet troops struck southward on both sides of the Caspian Sea. At the same time the British Minister and Soviet Ambassador in Tehran delivered notes to the Iranian Foreign Office asserting that their governments had no designs upon the independence or territorial integrity of Iran and that their action was directed solely against Axis attempts to seize control of the kingdom.

The resistance of the Iranian army was quickly overcome (see *WORLD WAR*). On September 1 it

ANGLO-SOVIET ZONES OF OCCUPATION IN IRAN

Under the armistice of Sept. 9, 1941, Iran agreed to Russian occupation of the area shown by vertical shading and to British control of districts shown by horizontal shading

was announced that British and Russian columns had met at Sinneh, in Western Iran, thus cutting off Iran from Turkey. Meanwhile on August 27 the Shah had accepted the resignation of the Cabinet headed by Ali Khan Mansur. A new Ministry formed by Ali Khan Furanghi ordered the cessation of hostilities (August 28). It accepted the mild armistice terms presented by Russia and Britain on August 30, but bowed reluctantly to stiffer requirements set forth in an Allied note of September 8. This provided for mass expulsion of Axis nationals and the closing of all Axis legations and consulates in Iran, occupation of strategic areas in the north and south by Soviet and British forces respectively (see accompanying map), and control of railways, airdromes, and other communication facilities in the rest of the country.

Riza Shah's Abdication. The invading forces halted their advance toward Tehran upon conclusion of this agreement. But they resumed it a week later when Riza Shah Pahlevi delayed the evacuation of Axis nationals and when public order was threatened by a spreading revolt among the tribes of southwestern Iran and by a rapidly rising wave of popular dissatisfaction with the Shah's autocratic regime. With British and Russian columns within a few miles of the capital, the Shah abdicated on September 16. His 21-year-old son, Mohammed Riza Pahlevi, succeeded to the throne. Before the Allied forces entered the suburbs of Tehran on September 17, the deposed Shah fled toward the Afghan border. On October 18, the British Government announced that he had just arrived at the island of Mauritius "where it was found desirable he should reside temporarily."

The New Regime. The new Shah managed to retain his tenuous hold upon the throne by adopting a pro-Allied policy, granting far-reaching concessions to the native demand for political reform, and taking steps to crush the revolt among the tribes in the southwest. Disorders among the Kurds, Armenians, and other minorities also were repressed. Axis nationals remaining in Iran were sum-

marily deported to Turkey. Diplomatic privileges of the Japanese and other pro-Axis legations in Tehran were curtailed. The young Shah on September 20 pledged "the closest cooperation" with Britain and the Soviet Union.

The day after Riza Shah Pahlevi's abdication, the Medjliss or parliament demanded the establishment of constitutional government, recognition of civil rights, elimination of corruption, reform of the national finances, release of political prisoners, and the restoration to the nation or to the rightful owners of the wealth and properties seized by the former Shah during his long and despotic regime. These demands were immediately granted by the new Shah. The Iranian Government announced September 18 that Mohammed had agreed to release political prisoners and deed his father's wealth to the nation. On September 20 the Shah formally proclaimed the establishment of constitutional rule, including the granting of political power to the Medjliss and Cabinet. On September 21 the Medjliss approved a new Cabinet headed by Ali Khan Furanghi but purged of seven of the former Ministers.

In these moves the young Shah was guided by Premier Furanghi, who in turn acted in collaboration with the British Minister to Tehran. However Mohammed, who had been educated in Switzerland, displayed a progressive and liberal attitude. In his first radio broadcast on October 25, he declared himself convinced that the democratic system of government was the best.

Treaty with Allies. A major task of Premier Ali Khan Furanghi's Government was the negotiation of a treaty with Britain and the Soviet stabilizing Iran's relations with the two occupationary powers. The treaty, signed in January, 1942, covered four main points according to the diplomatic correspondent of the *London Times*. These were: (1) An Anglo-Soviet pledge to guarantee Iran's territorial integrity and to provide military aid sufficient to fulfill this pledge. (2) An Allied promise to consult the Iranian Government on all military, political, and economic measures affecting domestic policy. (3) A pledge to withdraw all British and Russian troops from Iran as soon as the situation permitted. (4) An Anglo-Soviet promise of economic assistance to Iran.

Some friction between Soviet troops and Iranians was reported in October, leading the U.S. Minister in Tehran to intervene as mediator. However this friction was eliminated to a considerable extent by the withdrawal of Soviet and British troops from Tehran on October 18 and the subsequent weakening of Soviet forces in northern Iran to meet the German drive into the Caucasus. The German threat led to Anglo-Soviet preparations for the joint defense of Iran and to hasty Allied improvement of trans-Iranian transportation systems for the shipment of supplies from the Persian Gulf and India to Russia.

On December 27 Brig. Gen. Sir Godfrey Reynolds, director of transport in Iran, announced that British and American war supplies were flowing regularly by road and rail through Iran to the Russian front. Numerous engines and railway cars were shipped from Britain, Egypt, Australia, India, and the United States for use on the Trans-Iranian Railway. The ports of Bushire and Bandar Shahpur in Iran and Basra in Iraq were said to be operating at full capacity. At Bandar Shahpur a new jetty was under construction designed to double the harbor's capacity.

See GERMANY, GREAT BRITAIN, IRAQ, and UNION OF SOVIET SOCIALIST REPUBLICS, under *History*.

IRAQ (IRAK). An Arab kingdom occupying the basin of the Tigris and Euphrates Rivers in Mesopotamia. Capital, Baghdad. King, Feisal II, who succeeded to the throne Apr. 4, 1939.

Area and Population. Area, 116,600 square miles; population, estimated at 3,670,000 on Jan. 1, 1938. Chief cities, with estimated populations (1938): Baghdad, 340,000; Mosul, 98,000; Basra, the chief port, 62,000. Language, Arabic.

Education and Religion. Despite free primary education, illiteracy remains high. State school statistics for 1939-40: Infant, 34 schools, 5,174 pupils; primary, 669 schools, 85,792 pupils; intermediate, 42 schools, 11,697 pupils; secondary, 14 schools, 2,312 pupils; vocational and normal, 12 schools, 2,477 pupils. Private elementary schools numbered 72 with 17,495 pupils. There were also colleges of medicine, pharmacy, law and military science, and a higher normal school, all coeducational except the Military College. In 1935 there were 3,136,632 Moslems, 101,375 Christians, and 90,970 Jews.

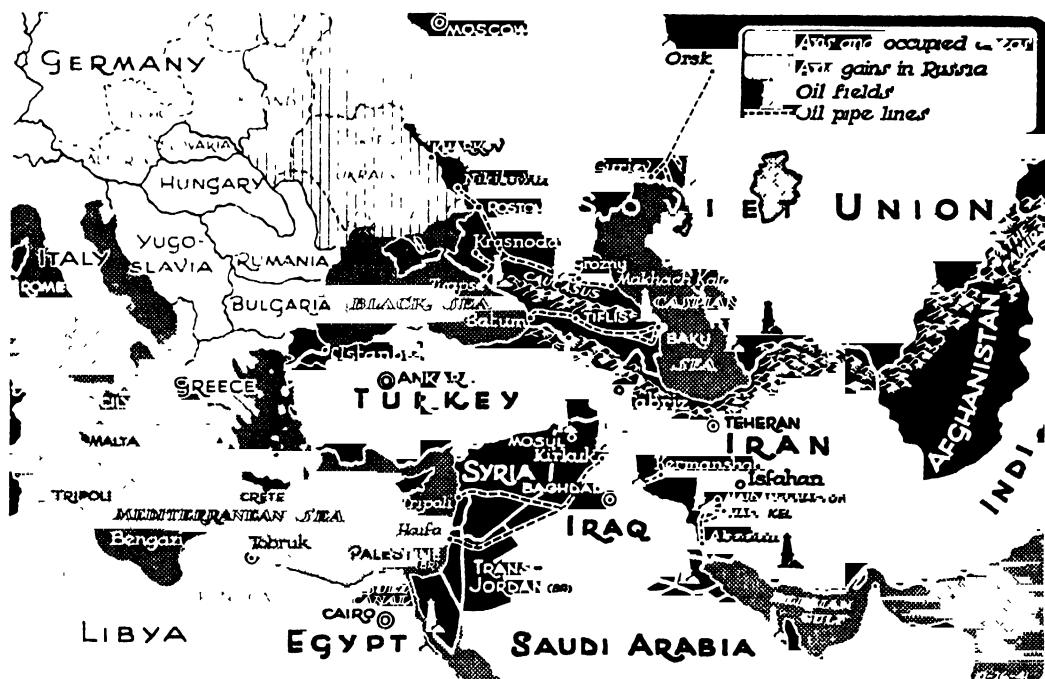

Defense. Compulsory military service for men from 19 to 25 years of age was introduced in 1936. The standing army and air force in 1938 was about 28,000 men, with a war strength of 40,000, and about 50 airplanes. A British military mission aids in training the army, which is mainly British-equipped. There was a police force of 10,382 officers and men on June 30, 1940.

Production. The principal occupations are agriculture, stock raising, and petroleum mining. Most of the petroleum output goes from Kirkuk, Iraq, by pipeline to Haifa, Palestine. The other pipeline to Tripoli, Syria, was closed in 1940. Petroleum production in 1940 was 25,725,000 bbl., of which about 23,000,000 bbl were exported. The chief crops are cotton (about 16,500 bales in 1939), dates, wheat (600,000 metric tons in 1938), barley (1,138,400 metric tons, 1938), rough rice (360,000 metric tons, 1938), tobacco (4,000 metric tons, 1938). Several large irrigation projects are expanding the area under cultivation. The 1938 wool clip was 8,300 metric tons.

Foreign Trade. Merchandise imports in 1940 were valued at 8,532,000 dinars (7,944,000 in 1939), while exports, exclusive of crude petroleum shipped by the Iraq Petroleum Co., totaled 3,528,000 dinars (3,900,000 in 1939). Most of the 23,000,000 bbl. of petroleum exported in 1940 went through the pipeline to Haifa, Palestine. Other leading exports were dates, barley, wheat, wool, hides and skins, and cotton. Sources of 1939 imports (in 1,000 dinars): United Kingdom, 1,917; Japan, 1,527; United States, 689; India, 586; Germany, 518. Chief 1939 exports markets (in 1,000 dinars): United Kingdom, 926; United States, 739; India, 421; Palestine and Trans-Jordan, 310; Japan, 169; Syria, 139.

Finance. For the fiscal year ended Mar. 31, 1941, ordinary budget estimates placed receipts at 6,426,500 dinars and expenditures at 6,666,780 dinars; for 1941-42, 8,462,768 and 8,273,226 dinars, respectively. Actual general budget receipts for 1939-40 were 5,963,712 dinars; expenditures, 6,235,270. The additional capital works account was: Receipts, 3,074,088 dinars; expenditures, 2,116,732 dinars. Capital works receipts include oil royalties. The public debt on Dec. 31, 1939, was unofficially estimated at 5,752,000 dinars. The dinar, equal to the pound sterling, averaged \$4.44 in 1939 and \$4.89 in 1938.

Transportation. Completion in 1940 of the Baiji-Mosul railway link gave Basra and Baghdad direct connections with Mosul, and with Europe via Iraq and Turkey. Excluding sidings, the railway mile-

Courtesy of The New York Times

STRATEGIC OBJECTIVES IN THE MIDDLE EAST

age in operation June 30, 1940, was 947. Railway receipts in 1939-40 were 752,546 dinars, expenditures 723,530. Highways of all description totaled 6,543 miles in 1940. Under construction in 1941 was the Baghdad-Haifa (Palestine) all-weather highway, expected to reduce motor travel time between Baghdad and Cairo to two days. The Iraq section was being built by British engineer officers at the expense of the British Government. The Imperial Airways, Royal Dutch Airlines, and Iranian State Air Lines continued to maintain services into or through Iraq during 1941, except during the period of hostilities. The port of Basra on the Persian Gulf handled greatly increased trade as a result of shipping difficulties in the Mediterranean.

Government. Following conclusion of an Anglo-Iraqi alliance on June 30, 1930, the League of Nations mandate for Iraq held by Great Britain was abolished and Iraq was admitted into the League as an independent kingdom on Oct. 3, 1932. The constitution of Mar. 21, 1925, made Iraq a constitutional hereditary monarchy with a parliamentary form of government. There is a Senate of 20 members nominated by the King for eight years and a Chamber of 115 elected Deputies. There are no stable political parties. Faisal II, born May 2, 1935, the grandson of Faisal I, inherited the throne Apr. 4, 1939, when his father, Ghazi I, was killed in an automobile accident. Emir Abdul Ilah, uncle of the boy King, was elected Regent by Parliament.

HISTORY

Iraq was drawn into the vortex of the expanding European conflict during 1941 when the German campaign for the conquest of the Near East and the Suez Canal, abetted by Nazi intrigues in Iraq, spurred ultra-nationalist, anti-British elements at Baghdad into an effort to repudiate the Anglo-Iraqi alliance and throw off the last vestiges of

British control. This attempt ended in failure.

New Government Formed. The struggle for power between pro-British and anti-British Iraqi leaders, reflected in growing governmental instability since the death of King Faisal I in 1933, led to another Cabinet overturn on Jan. 31, 1941. The ultra-nationalist Rashid Ali Al-Gailani, who had replaced the pro-British Gen. Nuri es-Said as Premier on Mar. 31, 1940 (see YEAR BOOK for 1940, p. 364), was forced out when Parliament met and denied him a vote of confidence. Although Rashid Ali had reaffirmed the Anglo-Iraqi treaty of alliance, he refused the collaboration that the British requested under the treaty. Instead he supported the ultra-nationalist Iraqi program of making the kingdom the nucleus of an independent Arab federation including French-mandated Syria and British-mandated Palestine and Trans-Jordan. As a leader of the Sunni Moslem religious sect, Rashid Ali was extremely influential among millions of Sunnis in Iraq, Iran, and India. He had the support of the violently anti-British Moslem Grand Mufti of Palestine, Haj Mohammed Amin El Husseini, who had taken refuge in Baghdad following his exile from Jerusalem. He also was said to have received liberal German financial and propaganda support for his Arab nationalist program.

Upon the resignation of Rashid Ali's Cabinet, precipitated by the withdrawal of several pro-British members, the Regent called upon one of the latter, Gen. Taha el-Hashimi, to form a new Ministry (Feb. 1, 1941). General el-Hashimi's new government included Gen. Nuri es-Said as Foreign Minister and other staunchly pro-British members. The German military occupation of Bulgaria on March 1 was followed by a conference in Cairo on March 6 between Foreign Minister Nuri es-Said and the British Foreign Secretary, Anthony Eden. Eden asked the Iraq Government's consent to the application of Clause IV of the Anglo-Iraqi alliance.

This bound Iraq to place its territory and means of transportation and communication at Britain's disposal in the event of war or the threat of war.

The Coup d'État. Opposition of the Iraq army leaders to this request was said to have precipitated the anti-British coup d'état of April 4 in Baghdad. Followers of Rashid Ali Al-Gailani surrounded the Regent's Palace, causing him to flee to Basra. At the same time officers of the Baghdad garrison seized Premier Taha el-Hashimi and forced him to submit his written resignation. Parliament was then convened and induced to elect a new Regent, Sherif Sharaf ad Din. The latter accepted Premier el-Hashimi's resignation and asked Rashid Ali Al-Gailani to form a new Government.

In addressing Parliament, Rashid Ali declared that his Government would respect the Anglo-Iraq treaty and other international engagements. However the composition of his Cabinet offered little prospect that this pledge would be kept. Accordingly the British supported Regent Abdul Ilah in holding that the new regime was unconstitutional. The attitude of officers of the Iraqi garrison at Basra forced Abdul Ilah to take refuge at Amman, Trans-Jordan. However political and military leaders belonging to the pro-British faction in Iraq continued to withhold their support from the new regime.

British Intervention. Regarding the turn of affairs in Iraq as part of the German campaign for control of the Iraq oil fields and all of the Near East, the British on April 17 landed a strong force from India at Basra. It was officially announced that this action was taken under the Anglo-Iraq treaty for the purpose of opening up lines of communication through Iraq. The Baghdad Government voiced no objection to this *fait accompli* until a second contingent of British-Indian troops arrived at Basra near the end of April. Premier Rashid Ali Al-Gailani then declared that the arrival of the second contingent while the first was still in Iraq constituted a violation of the Anglo-Iraqi treaty. He mobilized the army, occupied the Mosul oil fields, and demanded the withdrawal of the recently arrived British troops and the cessation of other British troop movements and plane flights. The British rejected these demands.

Hostilities broke out on May 2 when Iraq forces attacked the British-held airdrome at Habbaniyah (Habbania) on the Euphrates River 65 miles west of Baghdad. The same day Rashid Ali appealed to Germany for help, which was promised. On May 5 the Baghdad Government agreed to renew diplomatic relations with the Reich, severed upon the outbreak of the European War.

Declining an offer of mediation from Turkey, the British rushed air and land reinforcements to Iraq from India, Palestine, and Egypt. The Royal Air Force soon dominated the small Iraqi air force, and held in check the relatively small number of German and Italian planes that came to Rashid Ali's aid in the middle of May. British columns advanced upon Baghdad from Basra, from Trans-Jordan, and the airport at Habbaniyah. Although delayed by floods along the Euphrates River, they entered the capital on May 30. An armistice was concluded with the defeated Iraqi forces on May 31 under which fighting ceased June 1. On June 4 British troops, landed by plane, occupied Mosul, from which German air forces had withdrawn shortly before.

Flight of Baghdad Government. The collapse of Rashid Ali's regime was brought about partly through military reverses and partly through in-

ternal disintegration. The Shah of Iran and King Ibn Saud of Saudi Arabia both rejected Rashid Ali's appeals for assistance against the British. The proclamation of a holy war by the exiled Grand Mufti of Palestine was likewise a failure. The aid supplied by the Axis powers proved insufficient and the terms on which it was offered reportedly contributed to the collapse of Rashid Ali's Cabinet. British sources asserted that the Germans demanded control of the Iraq oil fields, airdromes, and the Baghdad Railway for the duration of the European War. Members of Rashid Ali's Cabinet were said to have balked at this, although the Premier was ready to sign such an accord.

Rashid Ali won recognition of his Government from the Axis powers and their satellites. He likewise concluded an agreement with the Soviet Union on May 16 for the establishment of diplomatic, trade, and consular relations. But Moscow rejected Rashid Ali's proposal that it should at the same time publicly declare itself in favor of the independence of the Arabian countries, including Iraq. No tangible aid was forthcoming from the U.S.S.R., while the United States and other governments friendly to Britain refused to extend recognition to the Baghdad Government.

About May 24 the deposed Regent, Abdul Ilah, reentered Iraq under the protection of British and loyal Iraqi troops and began to rally tribes hostile to the Baghdad Government. With British columns approaching the capital, Rashid Ali, the leading members of his Government, the Grand Mufti of Palestine, and the German and Italian Ministers, fled across the border into Iran on May 30. The same day the Mayor of Baghdad asked for armistice terms. The British guaranteed Iraq's unity and independence, agreed to the return of Iraqi troops that had fought under Rashid Ali to their peacetime stations, and turned over captured partisans of Rashid Ali to the Regent Abdul Ilah. British prisoners were released, Germans and Italians captured with Iraqi forces were interned, and the British obtained control of all vital communication and transportation facilities, as provided under the Anglo-Iraqi treaty of alliance. British forces were authorized to enter Iraq freely and to build strategic roads for its defense. The change of control in Baghdad was accompanied by an outbreak of rioting and looting by Arab irregulars, but some 500 Britons and other foreigners who had been sheltered throughout the hostilities in the British Embassy and American Legation emerged safely from the month's ordeal.

Pro-British Cabinet Named. Regent Abdul Ilah entered Baghdad on June 1 and called on former Premier Jamil al-Midfai to form a new Government. The boy King, who had been reported kidnapped, was found unharmed. A Cabinet of strongly pro-British Ministers was announced June 3, following a new outbreak of rioting by supporters of Rashid Ali, which led to the declaration of martial law in the capital. On June 9 it was announced that the new regime had broken off diplomatic relations with Italy and ordered Italian civilians to leave Iraq within 24 hours. Shortly afterward the Iraqi Government made public a message from Foreign Secretary Eden declaring Britain's intention to respect the integrity and independence of the country and expressing readiness to cooperate in measures for its defense and economic development.

Scanty news reports from Iraq thereafter indicated a continuance of unrest. An uprising of Kurds in Northern Iraq was reported from Turkey in September. The Iraq Government proceeded to

purge the army, the police, and the civil service of German sympathizers. Premier Jamil al-Midfai resigned unexpectedly early in October and Gen. Nuri es-Said, who was serving as Minister to Egypt, was hurriedly called home to take over the Premiership. At the opening of the Iraqi Parliament early in November, the Regent emphasized the need for military and other reforms. At the same time, the Government indicated that diplomatic representatives of Vichy France and Japan were not welcome because of their aid to Rashid Ali. Fifty Axis propagandists and agents were subsequently interned by Premier Nuri es-Said. Trade relations with Japan were severed in mid-October.

The assassination in Baghdad on November 9 of Fakhri Bey Nashashibi, a leading pro-British Palestine Arab, revealed that terrorist adherents of the Grand Mufti were still active in Iraq. Meanwhile both the Grand Mufti and Rashid Ali Al-Gailani had escaped from Iran to Turkey upon the Anglo-Soviet occupation of Iran. From Turkey they made their way to Berlin, where both joined in pro-Axis and anti-British propaganda broadcasts to the Arabs of the Middle East.

See ARABIA, GERMANY, GREAT BRITAIN, and SYRIA, under *History*, WORLD WAR.

IRELAND (EIRE). See EIRE (IRELAND).

IRELAND, NORTHERN. An area, largely coextensive with the region of Ulster, in the north of Ireland, consisting of six counties and two parliamentary boroughs, it is integrally united with Great Britain. Capital, Belfast.

Area and Population. The area is 5,237 square miles and the estimated population on June 30, 1939, was 1,290,000 (1,279,753 at the Feb. 28, 1937, census). Living births numbered 25,254 (19.5 per 1,000) in 1939, deaths, 17,549 (13.6 per 1,000), marriages, 9,185. The population of Belfast (1937) was 438,112, that of Londonderry, 47,804. The census of 1937 showed 428,290 Roman Catholics, 390,931 Presbyterians, 345,474 Episcopalians, 55,135 Methodists, and 59,915 of other professions. Public elementary schools in 1939-40 numbered 1,691 with 191,734 pupils; secondary schools, 75, with 14,557 pupils, technical schools and centers, 130, with 23,147 students. Queen's University in Belfast had 1,555 students.

Production. Agriculture is the chief industry; the gross value of output was £16,500,000 in 1938. Livestock, eggs, milk, bacon, and potatoes are exported to Great Britain. Livestock on Jan. 1, 1939, included 700,564 cattle, 551,262 sheep, 565,726 swine, 6,038,000 poultry. The area under crops increased from 919,700 acres in 1938 to double that number in 1941. The flax acreage alone was expanded from 20,000 to 100,000 acres to support the linen industry, which before the war depended upon imported flax. About 1,940 persons were employed in coal mines and quarries in 1938. Linen and ships, the chief manufactures, normally engage 70,000 and 15,000 workers respectively. After the outbreak of war the whole of industry was geared to war production, including ships, airplanes, tanks, shells, guns, gun mountings, rope, and other equipment.

Finance. After deducting the cost of "Reserved" and Imperial Services, actual revenues for the fiscal year ended Mar. 31, 1940, were £13,635,081; expenditures, £13,515,463. Estimates for 1940-41: Revenues, £13,840,000; expenditures, £13,700,000.

Transportation. There were in 1940 about 754 miles of main-line railways, 180 miles of canals,

and 13,186 miles of roads. Shipping lines provide frequent service from Belfast and Londonderry to British ports.

Government. Although an integral part of the United Kingdom and represented by 13 members in the British House of Commons, Northern Ireland exercises a degree of local autonomy, through a Parliament of its own and a cabinet responsible thereto. The Senate of this Parliament has 24 elected and 2 ex-officio members; the House of Commons has 52 members, all elected. The composition of the House of Commons elected Feb. 9, 1938, was: Unionists, 39; Nationalists, 8; Independent Unionists, 2; Labor, 2; Independents, 1. The chief permanent officer is a Governor (since 1922, the Duke of Abercorn). The head of the cabinet is a Prime Minister (John Millar Andrews since Nov. 26, 1940).

History. The political and religious conflict between the Protestant Unionist majority and the Catholic Nationalist minority over war policy and Northern Ireland's future relationship to Eire continued to dominate events in Ulster during 1941. The executive council of the strongly pro-British Unionist party on January 5 approved a statement attacking Eire's neutrality as "deliberately prejudicing Britain's prospects of success in a struggle which means as much for one country as the other."

Belfast and its shipyards and factories suffered from two severe German air attacks on the nights of April 15 and May 4. There were numerous civilian casualties and extensive damages from fires and demolition bombs. The fires set during the April 15 raid were so serious that Dublin in neutral Eire sent fire crews and equipment to aid the Belfast firemen. As a result of this raid, Belfast and eight other districts of Northern Ireland were declared defense areas on April 21 by order of the Ulster Minister of Public Security.

Apparently in the belief that these German raids had changed sentiment among the Catholic Nationalist minority regarding all-out participation in the war, the Ulster Government in mid-May was reported to have asked Prime Minister Churchill to extend conscription to Northern Ireland. Announcement of this plan in London on May 20 provoked a storm of protest in both Ulster and Southern Ireland. There were anti-conscription demonstrations throughout Northern Ireland on May 25 after Joseph Cardinal MacRory, Roman Catholic primate of all Ireland, issued a letter of protest. A considerable number of Ulster Unionists also opposed the conscription measure. After Prime Minister Churchill on May 27 announced that conscription would not be applied in Northern Ireland for the time being, the Ulster Prime Minister denounced the "unwarrantable interference" of Prime Minister de Valera and the Dublin Parliament in the controversy. See EIRE under *History*.

Ulster authorities continued their efforts to crush the subversive activities of the illegal Irish Republican Army. A suspected I.R.A. arms cache was discovered in a Belfast factory and four men arrested on March 16. It was revealed July 11 that Cahir Healy, Nationalist member of the Northern Ireland Parliament, had been arrested under the defense regulations on order of the British Home Security Minister, Herbert Morrison. With the cordial approval of the Northern Ireland Government, about 1,000 American construction workers arrived in Ulster during the year to work on new defense installations.

IRON AND STEEL. Out of the chaos of strikes, shortages, priorities, and war demands, the steel industry

emerged at the end of 1941 with a peak ingot production of 82,850,000 tons, an approximate 23 per cent increase over the 1940 output of 66,982,686 tons, and 63 per cent more than World War I's top mark of 50,467,880 tons in 1917. Finished steel production in 1941 was 60,000,000 tons; pig iron production was 55,748,000 tons. The steel industry operated at 98 per cent capacity, Jan.-June, 1941; 97 per cent capacity, July-Oct. and 98 per cent again in November.

Expansion during 1941 can be measured by the fact that on January 1 ingot capacity was 84,152,000 tons, on June 30, 86,148,700 tons, on December 31, 88,000,000 tons. The goal for the end of 1942 was 94,000,000 tons, including alloy steel for airplanes, tanks, and tools; ordinary steel for boilers, ships, freight cars; armor plate for aircraft, tanks, battleships, gun mounts, and helmets, and also Bessemer steel. Electric furnace capacity in 1941 increased 40 per cent. Pig iron capacity Jan. 1, 1941, was 57,000,000 tons, on June 30, 57,937,000 tons, by December 31, 59,437,000 tons. Further expansion to the 63,500,000 ton mark is expected by the end of 1942. This much expansion of pig iron capacity is planned with a view to replacing shortages in steel scrap.

The whole speed-up and expansion in the iron and steel industry was an effort on the part of the government and the producers to cope with the climbing war needs of the United States and the allied nations dependent on the United States for armaments. Billions of dollars were advanced by the Federal government through the RFC for the construction of new plants and the enlargement of existing steel mills. The American Iron and Steel Institute reported that the United States could put out 12½ tons of steel to Japan's one; and that the combined ingot capacity of the United States, the British Empire, and the U.S.S.R. was more than double that of the Axis nations: 130,000,000 tons to their 60,600,000.

The scrap shortage became acute in the fall of 1941 and was the one grave aspect of the 1942 steel expansion program. Total consumption of scrap in 1941 was about 53,000,000 tons compared with 41,000,000 tons in 1940. The automobile industry consumed 9,501,300 tons of steel. The ban on the production of passenger automobiles in 1942 was designed to release flat rolled and alloy steel for armament uses. This will not relieve the scrap shortage, however, since the impossibility of replacing them will obviate the scrapping of many an old family car. The only solution of the problem is to pick the nation clean of scrap down to its old razor

blades and hairpins, and to produce enough pig iron to take the place of scrap. The plan is to have enough new blast furnace capacity by 1943 to meet the demands of the scheduled 94,000,000-ton steel ingot program.

The 1941 fixed price on steel scrap was \$19.17 per ton; pig iron, \$23.61; the average price on steel ingots was \$97.30. Few changes are expected for the duration of the war.

See BUSINESS REVIEW; CHROMIUM; ELECTRICAL INDUSTRIES under Steel; MOLYBDENUM; PRODUCTION MANAGEMENT, OFFICE OF; SUPPLY PRIORITIES AND ALLOCATIONS BOARD.

IRON ORE. Iron ore production in the United States in 1941 broke the record with a total output estimated by the U.S. Bureau of Mines at 92,499,000 gross tons. This was a 26 per cent increase over 1940 production and a 17 per cent increase over the 1917 total, which had been the highest hitherto. The year's average price was \$2.49 per gross ton, 2¢ less than the 1940 average. Year-end stocks at the mines decreased 5 per cent from 1940 with 3,451,000 gross tons. The Lake Superior district produced 79,130,000 gross tons of iron ore in 1941, about 86 per cent of all iron ore shipped. Shipments amounted to 79,315,000 tons and were valued at \$201,181,000, a 24 per cent increase over 1940. Year-end iron ore stocks in this district were 4 per cent less than in 1940: 3,325,000 tons.

There were 1,707,811 gross tons of iron ore imported January-September, 1941, valued at \$3,917,452 compared with a total of 2,479,326 tons valued at \$6,204,641 in 1940. Three fourths of the 1941 imports were received from Chile. Exports for the same period were 1,347,641 tons at \$4,362,806 compared with 1,386,304 tons at \$4,624,555 in 1940.

The U.S. Bureau of Mines estimates appear in the accompanying table. For production index, see BUSINESS REVIEW under Minerals. See TRANSPORTATION DIVISION.

ITALIAN SURRENDER The Duke of Aosta, Viceroy of Italian East Africa (second from the left), with British officers at Amba Alagi on May 20, when he surrendered with five other generals and 19,000 men.

ETHIOPIAN RETURN: Emperor Haile Selassie on a 200-mile trek, last stage of his journey back to the capital (Addis Ababa) from which he was driven by Italian conquest in May, 1936.

group of 12 islands. Total area, 1,035 square miles; total population (1936), 140,848 (85 per cent native, 12 per cent Italian, and 3 per cent foreign). Chief towns: Rhodes, the capital, 27,466 inhabitants; Kalymnos, 15,247. Grapes, olives, tobacco, oranges, and vegetables are the main agricultural products. Livestock (1938): 62,735 goats, 51,907 sheep, 6,460 horses, donkeys, and mules, 4,710 oxen, and 2,656 swine. The important industries are sponge fishing, and the manufacture of oriental carpets, wine, olive oil, and artistic pottery and tiles. Trade (1938): 157,421,000 lire for imports and 21,851,000 lire for exports (lira averaged \$0.0526 for 1938; \$0.0520, 1939). Budget (1934-35): 48,000,000 lire. Roads (1940): 391 miles. Governor and Commander-in-Chief, Admiral Inigo Campione (appointed Aug. 5, 1941).

History. The island of Castellrosso, which is over 100 miles east of the Dodecanese group and less than 3 miles from the mainland which is Turkish territory, was occupied by British military and naval forces on Feb. 25, 1941. Three days later these forces withdrew after having accomplished their mission. The Italians claimed to have recaptured some prisoners when they reoccupied the island. See WORLD WAR.

ITALIAN EAST AFRICA. An Italian colony in East Africa established by the decree of June 1, 1936, which merged the old Italian colonies of Eritrea (area, 45,754 sq. mi.; pop., about 650,000 in 1936) and Italian Somaliland (area, 194,000 sq. mi.; pop., 1,010,815 in 1931) with the newly conquered Empire of Ethiopia (area, about 347,500 sq. mi.; pop., estimated at 10,000,000 to 12,000,000). Capital, Addis Ababa.

Italian East Africa was conquered by British Empire, Allied, and native Ethiopian troops during 1941. The Emperor Haile Selassie of Ethiopia, who was forced into exile by the Italian invaders on May 2, 1936, was restored to his throne in Addis Ababa on May 5, 1941. The political boundaries of Ethiopia prior to the Italian conquest were then restored, while Eritrea and Italian Somaliland passed under direct British control. See *History*.

The area and population of Italian East Africa by provinces, according to official Italian estimates of May, 1939, are shown in the accompanying table.

ITALIAN EAST AFRICA· AREA AND POPULATION

Province (Capital)	Sq. Miles	Population
Eritrea* (Asmara)	89,274	1,500,000
Amhara (Gondar)	76,235	2,000,000
Shoa (Addis Ababa)	24,125	1,850,000
Galla and Sidamo (Jumma)	124,369	4,000,000
Harar (Harar)	79,844	1,600,000
Somaliland* (Mogadiscio)	270,972	1,150,000
Totals	664,819	12,100,000

* Eritrea and Somaliland were not co-terminous with the former colonies; they included parts of Ethiopia.

Estimated populations of the chief cities: Addis Ababa, 150,000; Harar, 50,000; Dire Dawa, 30,000; Asmara, 23,000; Mogadiscio, 21,000; Massaua, 15,000; Gondar, 6,000; Dessye, 5,000. The number of permanent Italian residents was 200,000, according to census results announced in July, 1940. The native population includes some 2,000,000 Amharas, the former rulers of Ethiopia, who are Coptic Christians; more than 3,000,000 Galls, who are part Christian, part Mohammedan, and part pagan; and the Danakil, Somalis, and numerous other tribes, mostly Mohammedan or pagan. The chief languages are Amharic, Arabic, and Tigrenish.

Religion and Education. The subordination of the Ethiopian Copts to the Egyptian Coptic Church

was ended on Dec. 1, 1937, by the Italian Viceroy at Addis Ababa, who assumed power to appoint the Abuna (patriarch) and bishops for all Italian East Africa. With the collapse of Italian rule in 1941, however, the former relationship between the Ethiopian and Egyptian churches was restored. Roman Catholic missionary activities in Italian East Africa increased during 1936-40 while most of the Protestant missions were forced to suspend activities.

There were in 1940 both government and missionary schools for native elementary education and two institutes for young native Christians and Moslems. There were also a number of primary schools, 5 technical institutes and 4 classical high schools for Italian pupils. The Italian schools in Ethiopia were dissolved following the collapse of Italian rule in 1941.

Production. Stock raising and primitive agriculture are the chief occupations. Cultivated and wild coffee (exports, 13,000 metric tons in 1937-38), cotton, sugar, flax, bananas, dates, grapes, cereals, tobacco, fruits, and vegetables are grown in small quantities. Agricultural produce was grown for export on some foreign plantations using native labor. Salt exports in 1939 were about 250,000 tons. Gold, platinum, iron, and potash are produced in commercial quantities. A 1939 census showed 4,007 industrial firms in Italian East Africa with an invested capital of about 2,700,000,000 lire, and 4,785 commercial firms (capital, 1,100,000,000 lire), most of them in Eritrea.

Trade and Finance. Imports in 1938 totaled 2,447,057,000 lire (2,062,038,000 from Italy) and exports were 191,877,000 lire (114,845,000 to Italy). The lire exchanged at \$0.0526 in 1938. Revenue and expenditure for the fiscal year ended June 30, 1940, were estimated to balance at 2,183,000,000 lire, excluding expenditures from the special fund of 12,000,000,000 lire allocated by the Italian Government in 1938 for public works and equipment. A substantial part of the regular budget receipts was contributed by the Italian Treasury. The Maria Theresa thaler reappeared as currency in Ethiopia after the British occupation, the exchange rate being fixed at 45 lire to the thaler.

Transportation. A railway connects the port of Djibouti in French Somaliland with Addis Ababa (486 miles). Another line extends inland from Massaua on the Red Sea to Asmara, Cheren, Agordat, and Bisceia. From Mogadiscio on the Indian Ocean a railway extends inland 140 miles. During their five-year occupation of Ethiopia, the Italians built a network of motor highways linking Addis Ababa with Massaua, with Assab on the Red Sea, with Mogadiscio on the Indian Ocean, and with the other principal towns of Italian East Africa. A network of military airlines connected the chief centers and military posts of the colony. Massaua is the only safe port on the African coast between Port Sudan and Mombasa.

Government. The Italian Government formally annexed Ethiopia and proclaimed the King of Italy its Emperor on May 9, 1936. On June 1, 1936, Eritrea and Italian Somaliland were merged with Ethiopia to form Italian East Africa. The colony was administered by a Viceroy and Governor General at Addis Ababa, assisted by a Vice Governor General, a Chief of Staff, a consultative Council of Government composed of high government officials, and the governors of the six provinces (governments). There was also a Board of Consultors representing the white colonists and native chieftains. Viceroy at the beginning of 1941, the Duke of Aosta (appointed Nov. 20, 1937).

HISTORY

The British Conquest. A British offensive against the Italian forces in East Africa commenced in January, 1941, from various points in the Anglo-Egyptian Sudan and Kenya. Early in the month the Italians were driven from Kassala and most of the other positions in the Anglo-Egyptian Sudan and Kenya taken during the Italian offensive of 1940. From Kassala the main British force in the north advanced eastward along the Massaua-Bisceia railway. The Italian stronghold at Cheren was taken March 26 and Asmara, capital of Eritrea, capitulated April 1. On April 9 the port of Massaua surrendered, leaving Eritrea in British hands.

Meanwhile South Africa and other Imperial troops operating from Kenya had driven the Italians out of Italian and British Somaliland during February and March. Driving rapidly toward Addis Ababa from the south, they entered the capital on April 6. The bulk of the Italian garrison retreated northward to Dessve, leaving a small force in Addis Ababa to protect Italian civilians pending the entrance of the British. The Italian Viceroy with an army of some 38,000 men made his last stand at Alagi, Ethiopia, where he was caught between British forces advancing northward from Addis Ababa and southward from Asmara. He surrendered on May 19. Except for the region around Gondar, the remaining Italian garrisons in Ethiopia were rounded up and captured during June and July. Assab, last Italian port on the Red Sea, was occupied June 12. After the rainy season, a drive on Gondar brought the capitulation of the last Italian stronghold in East Africa on November 27.

Haile Selassie Regains Throne. British Empire forces were aided during these campaigns not only by Free French and Free Belgian detachments but also by Ethiopian regulars and guerrilla forces. The regulars were armed and trained by the British in the Anglo-Egyptian Sudan during 1940. The British also distributed rifles and ammunition to tribesmen loyal to Emperor Haile Selassie, who established his court at Khartoum in the Anglo-Egyptian Sudan in 1940. A few British officers ventured into Ethiopia to organize the guerrilla forces harassing the Italians in various parts of the country. There were estimated to be 200,000 guerrillas operating against the Italians when the British offensive began in January, 1941.

On January 15 the deposed Emperor, accompanied by his War Minister, Ras Kassa, and a high dignitary of the Ethiopian Coptic Church, was landed by a British airplane in Western Ethiopia, where he raised the standard of revolt. A patriot army rallied about him and launched an offensive against Italian forces in Western Ethiopia Debra Markos and a number of other Italian garrison posts were captured during the drive which took the Emperor from the Sudan border to Addis Ababa. Thousands of natives greeted him joyously when he rode into the capital on May 5. There he set about organizing his government and training a force of Ethiopian troops, which he offered to place at the disposal of the British anywhere in Africa or Asia. In an interview on May 8 he said his two principal objectives were to help Britain in the prosecution of the war and "to build here a state founded on the fear of God, liberty of conscience, and democratic institutions."

The Emperor received pledges of loyalty from a number of the powerful rases (chieftains) who had deserted him and thrown in their lot with the Italians during the invasion of 1935-36. Among them was Ras Seyoum, governor of Tigre Province, who asserted that he had secretly opposed the

Italians while professing to serve them. Through the joint efforts of the Emperor and the British commanding officers, the expected wholesale massacres of Italians by natives seeking revenge for the harsh treatment of preceding years was avoided. A few Italian civilians suffered at Dire Dawa and a few other points where native outbreaks took place just before the British entered to assume control.

British Administration. Pending the adjustment of permanent relations between Ethiopia and Great Britain, all of the conquered territory was placed under the jurisdiction of Lieut. Gen. A. G. Cunningham, British commander in East Africa. Administrators with experience in the British East African colonies were placed in charge of sub-divisions of the conquered territories. Sir Philip Mitchell, former Governor of Uganda and Deputy Chairman of the Conference of East African Governors, was appointed Political Adviser to Gen. Sir Archibald Wavell, commander-in-chief of all British forces in the Middle East, to assist in the administration of the former Italian territories. On August 26 London announced that East Africa, including all the former Italian territories, had been placed under a new East African Command with Lieut. Gen. Sir William Platt as commanding officer.

British-Ethiopian Relations. The British Foreign Office on July 11, 1940, undertook to assure Ethiopia's independence and recognize Haile Selassie's regime as the lawful government when the war was won. This pledge was reiterated by Foreign Secretary Eden before the British House of Commons Feb. 4, 1941. Eden said, however, that Haile Selassie had intimated that he needed outside help and guidance in expelling the Italians, and that Britain had agreed to provide it. The temporary measures of military guidance and control, he stated, would be carried out in consultation with Haile Selassie and "brought to an end as soon as the situation permits." He said that although Britain had no "territorial ambitions" in Ethiopia, the British Government took the view that Ethiopia would need political and economic aid and guidance at the conclusion of peace and that this could be provided for by an international agreement. This aroused talk of a possible British mandate over Ethiopia.

The Emperor and his associates were reported to have become restive over the restraints placed upon him by the British military commanders. However, a week after the capture of Gondar, the British East African command issued a communiqué at Nairobi, Kenya, stating that British forces would be withdrawn from Ethiopia and the country turned over to Haile Selassie's rule as soon as all Italian civilians and troops had been evacuated. There were said to be 125,000 Italians still at large in Italian East Africa, most of them in Eritrea and Italian Somaliland. The communiqué stated that men unfit for military service, women, and children would be sent from Ethiopia to Italy on Italian liners in February, while Italians of fighting age would be sent immediately to camps in British East Africa.

It was reported from Cairo on December 10 that American technicians and mechanics would be sent to Massaua and Asmara to convert Eritrea into a large-scale assembly and supply base for Allied armies operating throughout the Middle East and Africa.

See GREAT BRITAIN under *History*; WORLD WAR.

ITALIAN LITERATURE. Material gathered for this article appeared here and yon and was annotated un-

der the most difficult circumstances, for magazines, reviews, and publications arrived stintingly from Italy if at all, especially after April. The war, perforce, once again relegated the literary season into the background, forfeiting its premise to the department of History. Luckily, however, a number of scholarly and meritorious works were published outside of Italy. In America, for example, appeared *The Literary History of the Italian People* by Joseph Spencer Kennard, and Sylvia Sprigge's translation of Benedetto Croce's *History as the Story of Liberty*, works which, among others, may well be recorded as sober and intelligent research on the Italian People and their literature.

A widespread and feverish preoccupation which had literary and artistic results, might be called the art of "Compilation of Classics." Any publishing house of any note in Italy offered its specific "Series" or "Classics," prepared with pride and studious care as regards scholarship, patterns, and format.

The noteworthy Florentine review *Frontespizio* ceased publication in January, following the ill-fortunes and vicissitudes of countless other Italian reviews, as for example, *Pegaso*, which had so glorious and vitalic a beginning, but was doomed to a quick demise. *Frontespizio* at the outset had the collaboration of a trio of distinguished and eclectic literati, Giovanni Papini, Ardengo Soffici, and Piero Bargellini. The review was considered a "precious weapon for reconstruction in the field of letters and art." Predicating perhaps the old battle of internationalism versus Italian regionalism (or Italian art, culture, etc.), this publication augured a propitious weapon toward filling a void in the polemical discussion of contemporary Italian literature, and its disappearance constitutes a truly regrettable loss.

Fiction. There is very little to record in this department, due perhaps to the paucity of material reaching the United States. However, one memorable collection was launched by the enterprising house of Mondadori of Milan. These publishers brought forth the fifth volume of nine or ten of the series, *Tutte le opere (All The Works)* of Massimo Bontempelli. These five published volumes comprise all the author's novels, short stories, and other narrations, constituting rather bulky volumes of some 400 pages in attractive jackets. Lucilla Antonelli brought out a novel which poses a Pirandellian problem, *I fratelli lontani (Distant Brothers)*, Corbaccio, Milan. Enrico and Marco are sons of the same mother but of different fathers. The narration builds a subtle and dialectic argument as to the why and wherefore of the hatred and antipodal tastes of the two sons. In the end the problem is brought to an abrupt, if not too convenient, solution in a common grief that befalls the family and creates common sympathy and understanding. The novel to be impressive needed probably the ingenious and philosophical mind of a Pirandello. Nowhere, however, does it rise to a scintillating and convincing climax.

Drama. *L'eroe senza tragedia (The Hero Without a Tragedy)*, of Giovanni Cenozato, enjoyed an enviable success as a play in Rome. The title and the material is the reverse of Gino Rocca's highly amusing play *La tragedia senza eroe (Tragedy Without a Hero)*. Giovanni Cenozato's play creates a facetious situation in which the protagonist is advised to assume the role of a murderer to acquire fame. An elaborate concoction of his innocence in turn makes a hero of him, on the strength of which a rich woman marries him. The final tragedy sets in when his wife learns of his unquestionable innocence and divorces him forthwith. It is a whimsical

and very entertaining play, jocularly treated throughout. *La nostra via (Our Pathway)*, on the other hand, is an extremely serious and moral play by Marinucci. It received cold and adverse criticism, "our pathway is that which guides us toward the ideal of uncontaminated purity, and the world is but corruption, vileness, calculation, deceit—parents who build their castles of folly upon the ruins of domestic affection—elegant tennis players who shift from the embraces of their fiancées to the embrace of their fiancées' sisters." The play was stigmatized as one of "academic idealism"; it may be called an unsuccessful *coup d'essai* by a young man who has not yet emerged from "academic literature."

Criticism and Varia. In America scholars have been particularly active on Italian letters. First in order must be recorded Joseph Spencer Kennard's *A Literary History of the Italian People*, (The Macmillan Co., New York). This work takes its place easily among the best publications of the year. The work as a whole constitutes a monumental text for all English-speaking peoples enamoured of Italian Arts and Letters. In this connection also could be mentioned (though bearing 1940 as date of publication) Bernard Miall's translation of Luigi Salvatorelli's *A Concise History of Italy From Pre-historic Times to Our Own Day* (Oxford University Press, New York), an all-comprising history in outline form which may very readily be used as a reference work. Lastly, and also in the nature of a reference book, is Renato Piattoli's painstaking compilation of all the documents of the life of Dante Alighieri, his ancestors, heirs, events, etc., *Il Codice Diplomatico Dantesco* (Società Dantesca Italiana, Florence). This work draws to completion the undertaking started by other scholars as far back as 1895, and has an especial feature in some unpublished documents heretofore unnoticed. See SWISS LITERATURE.

ITALO-GREEK WAR. See WORLD WAR.

ITALY. A kingdom of southern Europe, upon which a Fascist dictatorship was superimposed beginning in October, 1922. Sovereign, King Victor Emmanuel III, who ascended the throne July 29, 1900; he assumed the title of Emperor of Ethiopia on May 9, 1936, and of King of Albania on Apr. 13, 1939.

Area and Population. Excluding Libya (q.v.), which became part of Italian national territory in 1938 and Albania (q.v.), which was annexed in 1939, Italy had an area of 119,714 square miles and a population estimated at 45,354,000 on Nov. 30, 1941 (42,444,588 at the 1936 census, which did not include 528,542 workers and soldiers in Africa). The 1936 census showed 31,735,027 urban and 11,258,575 rural residents. Living births in 1939 numbered 1,040,413 (23.5 per 1,000); deaths, 590,652 (13.4 per 1,000); marriages totaled 324,843 (7.4 per 1,000) in 1938. Emigrants in 1938 numbered 61,548, emigrants who returned to Italy totaled 36,892. Foreigners in Italy at the 1936 census numbered 108,597 as compared with an estimated 9,600,000 Italians living in other countries.

The city of Rome had an estimated population of 1,327,126 on Jan. 1, 1940. Other chief cities with the estimated populations on Jan. 1, 1939 (not including workmen and soldiers absent in Africa and the Dodecanese), were: Milan, 1,205,542; Naples, 920,460; Turin, 690,015; Genoa, 654,-

211; Palermo, 431,666; Florence, 351,055; Bologna, 315,158; Venice, 283,926; Trieste, 258,612; Catania, 251,978; Bari, 210,777; Messina, 202,375; Verona, 166,315; Padua, 150,203; Taranto, 151,150; Leghorn, 134,545; Brescia, 134,340; Ferrara, 122,913; Reggio di Calabria, 121,876; Cagliari, 119,934; La Spezia, 119,067.

Colonial Empire. At the beginning of 1941, the total area of Italy's overseas possessions (including Albania and Libya) was 1,279,589 square miles; population (1939 estimate), 14,186,401. See **ALBANIA**; **ITALIAN AEGEAN ISLANDS**; **ITALIAN EAST AFRICA**; and **LIBYA** for separate articles. Also see below under *History*.

Education and Religion. School enrollment in 1937-38 was: Elementary, 5,051,306; secondary (including technical and art), 613,588; higher education (1938-39), 77,429. One out of every five adults is illiterate. According to the census of 1931 there were 41,014,096 Roman Catholics (99.6 per cent), 83,618 Protestants, and 47,825 Jews.

Production. About 46.3 per cent of the working population was engaged in agriculture and fishing in 1939, 30.4 per cent in mining, quarrying, and industry, 8.3 per cent in commerce, and 4.6 per cent in transportation. According to the 1939-40 industrial census, Italy had 1,079,613 manufacturing firms (720,006 classified as workshops run by craftsmen), 1,172,752 commercial firms, and 146,870 firms engaged in communications and transport. The total number of industrial workers, according to statistics issued by the Fascist Confederation of Industrialists in 1940, was 3,825,542, apportioned mainly as follows: Building enterprises, 623,000, foodstuffs, 389,000; mechanical and metallurgical, 709,000; building materials, 541,000, textiles, 653,142; chemicals, 155,192.

The accompanying table compares agricultural production in 1939 and 1940 with the 5-year average for 1931-35:

Commodity	1931-35 av.	1939	1940
Wheat ^a .1,000 bushels	267,140	293,285	260,880 ^b
Rice 1,000 pounds	1,507,320	1,680,448	1,853,350
Rye 1,000 bushels	6,281	5,950	5,998
Barley do	10,300	10,816	10,056
Oats do	38,015	37,690	39,318
Corn do	104,528	101,661	135,006
Potatoes do	88,524	102,155	121,211
Tomatoes 1,000 pounds	1,818,354	1,931,318	2,444,813
Sugar beets 1,000 met tons	2,418	2,671	5,200

^a The wheat crop reached a record high of 297,317,000 bushels in 1938 and was nearly as large in 1937. Unfavorable weather was primarily responsible for the decline in 1940.

^b This revised figure is from an Italian press item of Sept. 28 1941. This item states that the 1941 crop amounted to only 262,717,000 bushels, the 1940 and 1941 crops being the smallest since the beginning of the "battle of grain."

Production of other crops was: Potatoes, 2,941,600 metric tons in 1939; beet sugar, 420,300 metric tons in 1939; raw silk, 7,427,400 lb. in 1940; olive oil, 175,300 metric tons in 1938; wine, 41,780,000 hectoliters in 1938.

Mineral and metallurgical production in metric tons in 1938 (except where otherwise specified) was: Iron ore, 520,000; lead (smelter), 38,000 (1939); zinc (smelter), 33,600 (1939); pyrites, 437,000; lignite, 1,322,000; sulphur (crude), 397,000; asphaltic and bituminous rock, 258,047; marble, 457,222; marine salt, 883,420; bauxite, 360,800; mercury, 195,523; aluminum, 28,000 (1939); tin (smelter), 300; pig iron, 929,000; steel ingots and castings, 2,307,000; copper, 4,700; cement, 4,587,000. Rayon production in 1939 was 54,000 metric tons; cotton (1938), 7,500 metric tons. Woolen textiles, chemicals, sulphuric acid, superphosphate, copper sulphate, cheese, and alimentary pastes are other important manufactures.

Foreign Trade. Publication of trade figures was suspended in 1940. The Bank of Italy reported imports of 10,000,000,000 lire in 1939 (10,900,000,000 in 1938) and exports to foreign countries of 8,500,000,000 lire (7,960,000,000 in 1938). In the first seven months of 1939, exports to Italy's overseas possessions totaled \$64,381,000 and imports from the possessions \$8,927,000. After Italy entered the war in June, 1940, Germany strengthened its position as the chief source of imports and destination of exports. For distribution of trade in 1938, see **YEAR BOOK** for 1939, p. 386. Also see **TRADE, FOREIGN**.

Finance. For the six fiscal years ended June 30, 1940, Italy accumulated an aggregate budget deficit of more than 82,000,000,000 lire. The Minister of Finance in May, 1941, estimated total revenue for the fiscal year 1940-41 at 31,000,000,000 lire and expenditure at 96,000,000,000. Ordinary budget estimates for 1941-42 placed receipts at 31,082,000,000 and expenditures at 39,876,000,000 lire (exclusive of war costs and other extraordinary expenses). The Government announced Oct. 2, 1941, that an additional war fund of 24,000,000,000 lire was placed at the disposal of the War Ministry on August 31. As of June 30, 1940, the public debt was reported at 200,000,000,000 lire. The deficit of 65,000,000,000 lire in 1940-41 would bring the total on June 30, 1941, to 265,000,000,000. Average exchange value of the lira: \$0.0520 in 1939, \$0.0504 (nominal) in 1940.

Transportation. The Italian state railways, with 10,551 miles of line, carried 107,800,000 passengers and 54,183,672 metric tons of freight in 1938-39. Private railway lines extended 3,897 miles. Highways, 126,830 miles in January, 1941. Railway traffic was restricted by a severe coal shortage after Italy entered the war. Italian air lines extended 25,373 route miles in August, 1939. The Rome-Rio de Janeiro air service, inaugurated by the Italian LATI system in December, 1939, maintained a weekly service throughout 1941. The Italian merchant marine on June 30, 1939, comprised 1,350 steam and motor ships of 1,989,482 tons. During 1939, 12,119 vessels of 22,816,000 net registered tons entered Italian ports in the foreign trade.

Government. Italy's Fascist dictatorship was superimposed upon the constitutional monarchy established by the Constitution of Mar. 4, 1848. Under the law of Dec. 9, 1928, the Fascist Grand Council, consisting of (1) life, (2) ex-officio, and (3) extraordinary members, acted as "the supreme organ coordinating and uniting all the activities of the regime." The life members (two in 1941) were the Quadrumvirs of the March on Rome. Members in the other two categories were all appointed by the Head of the Government.

Parliament consisted of a Senate (535 members in 1941), all appointed for life by the King on nomination by the Head of the Government, and a Chamber of Fasces and Corporations, which on Mar. 23, 1939, replaced the Chamber of Deputies provided for in the 1848 Constitution. The Chamber of Fasci and Corporations was composed of about 700 National Councillors, who held their seats by virtue of membership in The Fascist Grand Council, the National Council of the Fascist party, and the National Council of Corporations. By the law of Oct. 7, 1938, both the new Chamber and Senate were restricted to voting by a show of hands or by acclamation, instead of the former secret ballot. They could vote only on measures submitted to them by the Head of the Government or on matters that he had previously authorized them to discuss.

At the beginning of 1941, the Cabinet was constituted as follows: Premier, Head of the Government, and Minister of Interior, War, Navy, Air, and Land Reclamation, Benito Mussolini; Foreign Affairs, Count Galeazzo Ciano; Italian Africa, Ottilio Teruzzi; Corporations, Renato Ricci; National Education, Giuseppe Bottai; Agriculture and Forests, Giuseppe Tassinari, Finance, Count Paolo Thaon di Revel; Justice, Count Dino Grandi; Communications, Giovanni Host Venturi; Popular Enlightenment, Alessandro Pavolini; Public Works, Giuseppe Gorla; Trade and International Payments, Raffaello Riccardi; Secretary-General of the Fascist party, Adelchi Serena. See below for changes during 1941.

HISTORY

For Italy the year 1941 was one of successive military and naval disasters, growing economic privation, increasing dependence upon Germany, and mounting discontent with the leadership of Premier Mussolini and his Fascist party.

As described in the article *WORLD WAR*, Marshal Graziani's armies in Libya suffered a crushing defeat in January and February. The Italian forces in Albania were saved from impending disaster only by German military intervention in the Balkans in April. Addis Ababa fell to British Imperial forces on April 6. The Duke of Aosta surrendered the main Italian army in Ethiopia on May 19 and by the end of November the Italian empire in East Africa was completely liquidated.

Italian hopes for eventual victory were revived in the spring when the Germans overran Yugoslavia, Greece, and Crete and drove the British forces in Libya back to the Egyptian frontier. But these hopes sank again with the steady whittling down of Italian naval and air power, the launching of a second successful British offensive in Libya in November, the German failure to knock out the Russian army, and the entrance of the United States into the war in December. Persistent British air raids upon the cities and military-naval bases in southern Italy likewise served to undermine morale.

Anti-Fascist sentiment spread among all sections of the population, including the professional army officers who held Mussolini and his associates responsible for Italy's military setbacks. In addition to the heavy military casualties in Albania, it was reported that thousands of soldiers lost their feet or legs from frostbite for lack of proper equipment for winter campaigning. Italy's growing military, economic, and political dependence upon Germany was even more humiliating to the Italian people, who saw the hated German secret police and armed forces spreading their tentacles over the kingdom. The morale of the nation was clearly a matter of anxiety to the Fascist regime by the end of 1941, but experienced observers warned the anti-Axis world not to expect an early Italian collapse.

Political Developments. Mussolini's political difficulties were reflected in the numerous shake-ups of military, governmental, and Fascist party officials announced during the year. January saw the replacement of Gen. Ubaldo Soddu by Gen. Ugo Cavallero as Italian commander in Albania, the promotion of Crown Prince Humbert to the rank of an Army General, and the transfer of prominent members of the Government and party from their official duties to service on the Albanian front. Foreign Minister Ciano and half the other members of the Cabinet were assigned to active military duty, apparently in an effort to end criticism of high party officials as "slackers" and beneficiaries of Il Duce's

favoritism. Numerous changes in the Rome hierarchy of the Fascist party were announced February 4 and the displaced officials were sent to the Albanian front. There were arrests of "defeatists" and critics of the regime.

On February 23 Premier Mussolini broadcast to the nation his defense against the charges of Marshal Graziani and other army officers that Italian defeats were due to inadequate preparation and equipment (see *YEAR BOOK* for 1940, p. 376). He admitted that in Libya "the entire Tenth Army has been smashed with its armaments and guns and the Fifth Air Corps has been almost completely sacrificed." But he asserted that in preparation for the Libyan campaign, he had sent 14,000 officers, nearly 400,000 soldiers, 1,924 cannon, 15,386 machine guns, 779 tanks, 9,584 motor vehicles, and 4,809 motorcycles to North Africa between Oct. 1, 1937, and Jan. 31, 1940. He promised the defeat of Greece "in the spring" and said that Italy would "march side by side with Germany to the end." Describing Germany's military strength, he declared it assured the Axis of eventual victory over Britain, even if the British received American help.

Count Dino Grandi's transfer from the post of Minister of Justice to army service was announced March 7. On March 25 Marshal Graziani was dismissed as commander-in-chief in North Africa. King Victor Emmanuel narrowly escaped an assassin's bullets in Albania May 17. On May 29 Rome announced the replacement of Lieut. Gen. Achille Starace as chief of the Fascist Militia's general staff by Lieut. Gen. Enzo Galbiati. Meanwhile the successful conclusion of the Balkan campaign through German intervention, with territorial compensation to Italy, brought distinct improvement in Italian morale.

On June 10, the first anniversary of Italy's entrance into the war, Mussolini listed Italy's gains in a speech before the Chamber of Fasces and Corporations. He said part of Slovenia had become an Italian province and that "with the annexation of almost all the islands of the Dalmatian Peninsula, with the creation of two provinces of Split and Kotor, and the enlarging of old, extremely faithful Zara, the Dalmatian problem may be considered solved." To the Italian protectorate of Albania had been added the Kossovo district of Yugoslavia and the Greek district of Ciamura. Montenegro was to be "independent within the Italian orbit." The newly installed Pavelich regime in Croatia formally accepted Italian tutelage and an Italian ruler. Finally, by arrangement with Germany, almost all of Greece including its capital had been occupied by Italian troops. See *ALBANIA, GREECE, and YUGOSLAVIA* under *History*.

By autumn it became clear to many Italians that their territorial and other gains in the Balkans were largely illusory. Croatia was actually run by and for the Germans, and its government turned increasingly to Berlin rather than Rome. Italian troops occupied Greece but the German authorities in Athens exercised actual control. Revolts in Montenegro, Albania, Slovenia, and Dalmatia harassed the Italian occupational forces. Disputes arose with Bulgaria and Croatia over the division of territorial spoils.

Meanwhile Italy was forced to pay an increasingly high price for Hitler's military assistance. Supplies of foodstuffs, raw materials, and other commodities began to run low, due in large part to heavy shipments to the Reich in payment for German coal, oil, etc. On July 29 the first of the Italian divisions to be sent to the Russian front was reviewed by Mussolini at Mantua. As German diffi-

culties in Russia increased Hitler raised his demands upon Mussolini for further aid. The British stepped up the tempo of their naval and air attacks upon Italian shipping, defense bases, and cities. September brought a drastic curtailment of food rations and the progressive elimination of luxuries.

Reviving political discontent was reflected in the all-round tightening of governmental control measures and the steady extension of German influence. Minor disorders were reported in the industrial centers of Northern Italy, while Sicily was said to be smouldering with revolt. To still the rising criticism of the Fascist hierarchy, Mussolini on October 25 announced a sweeping reorganization affecting 19 of the 22 Fascist guilds which controlled the nation's economic life. Seventeen young "vice federal secretaries" of the Fascist party were appointed November 17 and assigned to posts in northern and southern Italy, apparently to bolster failing morale with the party's ranks. The most extensive shake-up ever made in the Fascist National Council took place December 3. Twenty-eight new council members were appointed, 21 removed, and 40 others confirmed. Numerous party functionaries were among the hundreds of Italians charged with food bootlegging and profiteering.

The trial of 60 persons charged with conspiring to assassinate Mussolini and overthrow the Fascist regime was opened in Trieste before the Special Tribunal for Defense of the State on December 2. The blowing up of three powder factories in 1940, with the loss of 137 lives, was attributed to the defendants. Nine of them were sentenced to death December 14. Forty-eight received prison terms of from 3 to 30 years. Three were acquitted.

Mussolini's declaration of war upon the United States on December 11 aroused deep forebodings among the Italian people. A week later the Premier sharply attacked the lack of determination on Italy's home front, calling upon his countrymen to "hate the enemy before us." There followed on December 26 the resignations of Adelchi Serena, Secretary of the Fascist party, and of Giuseppe Tassinari, Minister of Agriculture. They were succeeded by Aldo Vidussoni and National Councilor Pareschi, respectively. These changes were attributed to dissatisfaction with the food situation and to protests within the Fascist party against Mussolini's acceptance of German demands on Italian food supplies.

Economic Scarcities. The increasing severity of rationing measures indicated a growing scarcity not only of food but of raw materials and other essential commodities. Ration cards for diners in restaurants were introduced February 1. On February 21 olive oil, butter, and fat rations were cut in half. Gasoline rations were halved April 10. On May 4 meat was made available twice, instead of three times, weekly. The making of biscuits or crackers of flour, milk, or rationed fats was banned effective June 15. The soap ration was cut from 200 grams monthly to 150 grams on September 1. Restriction of restaurant meals was extended on September 3. A decree of September 13 paved the way for rationing of clothing, textiles, and shoes. Starting October 1 bread was rationed at 7 ounces per person daily, and sales of most of the consumer commodities were banned for a month as a prelude to rationing.

These developments were accompanied by rapidly mounting prices notwithstanding government price curbs; extension of the normal working week to at least 60 hours in the metal and mechanical industries; the virtual paralysis of many peace-time industries for lack of raw materials and fuel; the spread of food profiteering and fraud in military

contracts, provoking sharper punitive laws; the imposition on November 11 of a 10 p.m. curfew on bus and street-car transportation in all cities, and restriction of the use of gas for cooking and heating water to 7½ hours daily. Subscriptions to a forced loan, which closed September 30, brought in 20,216,082,000 lire of cash, as compared with receipts of 15,272,884,000 lire raised by a similar loan in February.

Anti-Liberal Trend. The political, economic, and military difficulties of the Government led the Fascist regime to place new emphasis upon its revolutionary aspects. Discriminatory restrictions were imposed upon the nobility, business men, and capitalists, and the middle class in general. The regime espoused new and more harsh anti-Jewish legislation, providing for the expulsion of all non-Aryans from the country. There was an increase in tension between the Fascist State and the Vatican. In March Fascist authorities banned distribution of a pastoral letter issued by the Bishop of Cremona describing "perverse or inept rulers" as a form of God's punishment upon peoples abandoning the Christian faith to embrace "idolatry." The Under-Secretary of the Interior on April 19 publicly warned the Vatican to stay out of politics. The Cremona newspaper *Regima Fascista*, owned by the radical ex-Secretary of the Fascist party, Roberto Farinacci, waged a vigorous campaign against the allegedly anti-Axis policies of the Vatican, particularly its refusal to endorse the Axis campaign against Russia. Other Fascist organs joined in this attack. The Italian Government in August reportedly demanded the expulsion from Italy of the British and Yugoslav Ministers to the Holy See.

Relations with Germany. Vatican circles, like many other elements in Italy, were alarmed by the growing Nazi control over Italian political and economic as well as military affairs. This control was exercised directly through German officials in Italy and indirectly through the influence of the radical, pro-Nazi faction within the Fascist party—a group which enjoyed Mussolini's growing favor.

Several conferences between Il Duce and the German Fuehrer paved the way for closer Italo-German collaboration. It was announced in Rome and Berlin January 20 that the two dictators had conferred secretly and reached "complete agreement" on all questions. The form of German military aid to Italy was believed the chief issue discussed. About the same time a German mission of 35 economic experts arrived in Rome for the purpose of coordinating German and Italian economic resources to better advantage. An agreement for larger exports of Italian foodstuffs to Germany in return for German coal, steel, and iron was announced February 4. Numerous German industrialists reached Milan February 7 to take charge of Axis industrial cooperation measures. New contingents of Italian workers were sent to German farms and factories to replace Germans called to arms or sent to administer conquered territories. Signature of a secret economic pact was announced February 27.

A three-day conference of Italian and German representatives in Vienna on March 21 agreed upon larger Italian food shipments to the Reich. Mussolini and Hitler met again at the Brenner Pass on June 2. According to Mussolini's spokesman, Virginio Gayda, they organized the Axis for action against United States intervention in the war. The German attack on Russia likewise was discussed, for on June 26 Rome announced that Italian troops would participate in the campaign. Another conference between Mussolini and Hitler took place on the Russian front on August 25-29. A com-

muniqué issued at its close referred to the "community of fate" of the two dictators and promised the "destruction of the Bolshevik danger and plutocratic exploitation." Indications were that Hitler asked for the dispatch of more Italian troops to the Russian front. At the end of September Il Duce was said to have agreed to send three divisions to Russia in place of the 10 requested by Hitler.

Dr. Wilhelm Funk, Reich Minister of Economics, laid plans for closer Italo-German economic cooperation and for Italian aid in exploiting conquered Russian territories during a visit to Rome on October 19-23. He assured the Italians that under Hitler's "new order" in Europe, Italy would exercise economic and political domination over the Mediterranean. On October 25 Count Ciano, who had resumed his duties as Foreign Minister, conferred with Hitler on the Russian front. They were said to have discussed the sending of thousands of Italian farmers to the conquered Ukraine to assist in increasing agricultural production. It was also reported that Ciano demanded full control over occupied zones in Greece and Yugoslavia. On behalf of Italy, Count Ciano signed the protocol extending the Anti-Comintern Pact for another five years at the ceremonies in Berlin November 25 (see FASCISM).

War with United States. Mussolini followed in Hitler's footsteps throughout the train of events leading to the Axis war declarations against America in December. On February 12 Italy insisted upon the removal of the American Consulates at Naples and Palermo. Washington replied by closing the Italian consular offices in Detroit, Mich., and Newark, N.J., and restricting movements of Italian consular agents in the United States. The U.S. Government seized 28 Italian merchant ships totaling 168,944 gross tons in American ports March 30 and arrested officers and sailors who had sabotaged the ships' machinery on orders of the Italian naval attaché in Washington. The U.S. demanded the naval attaché's immediate recall. Italy retaliated by forcing the recall of the U.S. military attaché in Rome.

When Italian assets in the United States were ordered frozen June 14, Italy took similar measures against American assets. On June 21 the Italian Embassy in Washington was requested to close all its consular offices and other Italian agencies in the United States by July 15. Italians were forbidden to leave the United States without authorization. This measure was immediately applied to American citizens in Italy. The climax came on December 11, five days after Japan's treacherous attack upon the United States, when Mussolini informed millions of Italians gathered before radios in all parts of the country that they were at war with America. All of the Central American and Caribbean republics of the New World followed the United States into war with Italy. Mexico, Colombia, and Venezuela immediately severed diplomatic relations with Rome. In all other Latin American countries Italian prestige reached a new low.

Relations with France and Spain. Italy's claims upon Tunisia, Corsica, Nice, and other French territories were an important factor affecting the important Franco-German collaboration negotiations (see FRANCE under *History*). The danger that Hitler would repudiate his pledges to Italy in order to win the Vichy Government over to full military and naval collaboration with the Axis hung over all Italo-German relations during 1941. In a speech in Rome on November 3 Mussolini indicated that he had not forgotten or relaxed Italy's demands for French territories. However a subsequent confer-

ence between Admiral Darlan and Count Ciano in Turin December 9 led to modification of the armistice terms and to an economic accord (see FRANCE under *History*).

The year also witnessed a further replacement of Italian influence in Spain by Germany, despite Mussolini's strong claims upon General Franco. The Spanish seizure of Tangier was apparently designed in part to forestall Il Duce. Mussolini and Franco conferred at Bordighera, Italy, on February 12 and announced their "identity of views on problems of a European character." The subject of their discussion was not disclosed.

Free Italy Movement. A Free Italian Committee, composed of Italians pledged to overthrow Mussolini and restore democracy was established in London in February with the aid of the British Ministry of Information. An associated committee was formed in New York. This movement gained strong impetus throughout the Western Hemisphere as a result of the establishment of the anti-Axis black list by the United States. The Axis declarations of war upon the United States gave additional momentum to the agitation, which was led by Count Sforza and other prominent exiles.

IVORY COAST. See FRENCH WEST AFRICA.

JACKSON DAY DINNERS. See DEMOCRATIC PARTY.

JAMAICA. A British West Indian crown colony. Area, 4,450 square miles; population (Jan. 1, 1939 estimate), 1,173,645, including 19,039 East Indians. The Cayman Islands (104 sq. mi.; pop. 6,975 in 1939), Turks and Caicos Islands (166 sq. mi.; pop. 5,300 in 1939), Morant Cays, and Pedro Cays (Guano Islands) are dependencies of Jamaica. Chief towns (1921 census): Kingston (capital), including Port Royal, had 63,711 inhabitants; Spanish Town, 8,694; Montego Bay, 6,580; Port Antonio, 6,272. Education (1938): 664 public elementary schools and 163,732 students enrolled. In addition, there were 9 industrial schools and various secondary and high schools.

Production and Trade. Sugar (156,550 long tons for 1940-41; 168,830 tons estimated for 1941-42), bananas, coffee, rum, coconuts, pimento, grapefruit, ginger, cacao, oranges, tobacco, and logwood are the main agricultural products. Livestock (1938-39): 124,257 cattle, 10,800 sheep, 20,977 horses, mules, and donkeys. Trade (1940): £6,000,000 approximately for imports and about £3,000,000 for exports (bananas 7,500,000 stems, compared with 18,750,000 stems in 1939). Shipping (1938): 1,403 vessels aggregating 4,279,017 tons entered.

Communications. In 1940 there were 210 miles of railway open to traffic and for the fiscal year ended Mar. 31, 1940, 298,000 tons of freight and 421,767 passengers were carried. At the end of 1940 roads totaled 6,914 miles. There were 1,628 miles of telegraph line and 3,927 miles of telephone line. On Aug. 19, 1941, the Royal Dutch Air Lines started a weekly air service linking Kingston with Curaçao, Aruba, and Trinidad.

Government. Finance (revised estimates for

1940-41): £3,201,164 for revenue and £3,431,756 for expenditure. Public debt (Mar. 31, 1939): £6,303,139. The governor is assisted by a privy council. There is a legislative council of 30 members (the governor as president, 5 ex-officio, 10 nominated, and 14 elected). Captain-General and Governor-in-Chief, Sir Arthur Richards (appointed June 15, 1938).

History. The Anglo-American agreement of Sept. 2, 1940, for the establishment of United States naval and military bases in Jamaica (see YEAR BOOK for 1940, p. 377) was incorporated in the treaty signed in London Mar. 27, 1941 (see GREAT BRITAIN under *History*). Under the treaty, the Governor of Jamaica leased six areas on the south coast to the United States for 99 years, as follows: (1) The waters of and approaches to Portland Bight, including Galleon Harbor and Goat Islands (about 2 sq. miles); (2) A section of the shoreline of Portland Ridge peninsula (18 sq. miles); (3) A tract of some 34 square miles, including part of the shoreline of Manatee Bay; (4) Pigeon Island (50 acres); (5) An area of 1 square mile between Rest and May Pen, along the canal between Rhynsberry and Manningsfield, and (6) About 225 acres near the intersection of the Dunkeld-Mandeville Road and the Jamaica Railway.

The U.S. Government proceeded to develop facilities on these sites designed to make them the main supply depot for its Caribbean naval and air forces, as well as a watch station on the Panama shipping route. It obtained the right to share in the use of British military airfields and of the naval dockyard at Port Royal. The United States was authorized to expand the facilities at Port Royal for the supply, maintenance and repair of naval vessels. American naval officials took formal possession of the leased area at Portland Bight on April 4 and the construction of the naval air base there was in full swing in May, giving employment to many Jamaicans. The cost of the naval and naval-air installations was placed at \$2,275,000.

Fearing a shortage of labor during the time of the construction of the United States bases, employers of labor in Jamaica were offering their skilled and unskilled workers the option of signing five-year work contracts. Some thousands of skilled and semi-skilled workers went to work on the locks of the Panama Canal, and a hundred highly skilled engineers went to Great Britain to work in munition factories.

Lord Moyne, British Colonial Secretary, on Mar. 12, 1941, announced that constitutional reforms based on the recommendations of the West India Royal Commission had been discussed with the Jamaican governor and that the changes recommended for consideration by the legislative council of Jamaica were: (1) Universal adult suffrage; (2) An enlarged legislative council of not less than 40 members, to comprise approximately double the present number of elected members, nominated members to be representative of all sections of opinion and to vote freely, and 3 (instead of 5) official members. The People's National Party, the delegates of which on May 8, 1941, had voted unanimously for self-government or dominion status in 1948 or before, decided, in June, to accept the new Constitution if certain amendments were incorporated. On Aug. 22, 1941, after a debate lasting three days, the legislative council rejected the Constitution suggested by the British Colonial Secretary. An amendment was adopted by the legislative council asking for a legislature of two houses such as exists in Barbados and had existed in Jamaica prior to 1866.

JAMES FOUNDATION. See PHILANTHROPY.

JAN MAYEN. An arctic island (34 miles long and 9 miles wide) between Greenland and northern Norway, 220 miles north-northeast of Iceland. Area, 144 square miles. It is mountainous, Beerenberg in the north being 8,350 feet high. A meteorological station was established on the island by Norwegians in 1921. On May 8, 1929, Jan Mayen was officially proclaimed as Norwegian territory and was joined to Norway by the law of Feb. 27, 1930.

JAPAN. A Far Eastern empire, comprising (1) Japan proper, or the five main islands of Honshu, Kyushu, Shikoku, Hokkaido, and Ryukyu, with some 600 smaller islands; (2) Formosa (Taiwan); (3) Korea (Chosen); (4) Karafuto (southern Sakhalin); and (5) Pescadores (Bokoto) Islands. In addition Japan controlled the leased territory of Kwantung and the South Manchuria Railway Zone in Manchuria and mandated territories (Marianne, Caroline, and Marshall Islands) in the North Pacific. During 1931-33 it established a protectorate over three Chinese provinces (Liaoning, Kirin, and Heilungkiang) in Manchuria and Jehol Province in Inner Mongolia, forming them into the new state of Manchoukuo. Capital of Japan, Tokyo; Emperor, Hirohito, who ascended the throne Dec. 25, 1926. See separate articles on FORMOSA, KOREA, KARAFUTO, JAPANESE PACIFIC ISLANDS, KWANTUNG, and MANCHOUKUO.

Area and Population. The area and population of the empire at the censuses of 1935 and Oct. 1, 1940, are shown in the accompanying table.

JAPANESE EMPIRE AREA AND POPULATION

	Area sq miles	Population, 1935 census	Population, 1940 census
Japan proper	147,593	69,254,148	73,114,308
Korea	85,228	22,899,038	24,326,327
Formosa ^a	13,880	5,212,426	5,872,064
Karafuto	13,434	331,943	414,891
Kwantung ^b	1,438	1,656,726	1,367,334
Mandated Pacific Is	830	102,537	131,157
Japanese Empire	262,912	99,456,818	105,226,101

^a Including Pescadores (Bokoto) Islands, area, 49 square miles ^b Including South Manchuria Railway Zone

According to the 1940 census, there were in the empire 52,896,862 males and 52,329,239 females. The population of Japan proper increased 5.6 per cent during the inter-censal period 1935-40 as against 7.5 per cent during 1930-35. The increase for the empire as a whole was 6.4 per cent for 1935-40 and 8.2 per cent for 1930-35. The number of Japanese subjects residing in foreign lands in 1938 was 1,059,913, while the number of foreigners residing in Japan was 29,212. United States citizens in Japan on Jan. 1, 1941, numbered 5,295.

Living births in 1938 numbered 1,928,321 (26.7 per 1,000 as against the pre-war rate of about 36 per 1,000); deaths, 1,259,805 (17.4 per 1,000); marriages, 538,831 (7.46 per 1,000). The populations of the chief cities at the 1940 census were: Tokyo, 7,778,804; Osaka, 3,252,340; Nagoya, 1,328,084; Kyoto, 1,089,726; Yokohama, 968,091; Kobe, 967,234; Hiroshima, 343,968; Fukuoka, 306,763; Kawasaki, 300,777; Yawata, 261,309.

National Defense. Military and naval service is universal and compulsory. An official Washington estimate placed the active army on Jan. 1, 1941, at 1,554,000; trained army reserves, 701,000; active air force, 35,500; trained air force reserves, 16,000. Military and naval planes numbered approximately 3,000; production of new planes was estimated at 1,500 to 2,500 annually. The navy on Jan. 1, 1941, was reported to comprise 10 battleships, 7 aircraft carriers, 35 cruisers, 5 coast defense ships, 103 de-

stroyers, 12 torpedo boats, and 65 submarines. Five or six battleships, 4 pocket battleships, 5 or more cruisers, 2 aircraft carriers, and various destroyers, submarines, and auxiliary vessels were under construction. The active naval personnel was over 107,000.

Education and Religion. Illiteracy is confined largely to people over 50 years of age. The school enrollment in 1937 was: Kindergarten, 152,627; elementary, 11,566,912; secondary, 842,792; universities and colleges, 72,195; special and technical schools, 531,807; preparatory technical schools, 1,964,599. There is no State religion. Shintoism, with 13 different sects, and Buddhism, with 12 sects, are the principal religions. In 1940 all religious groups were brought under State control and the Christian denominations were merged in a single Japanese Christian Church.

Production. Manufacturing normally accounts for about 32.7 per cent of the national income (estimated at 24,519,036,000 yen in 1939), commerce for 25.4 per cent, and agriculture for 17.7 per cent. Agriculture, however, supports nearly half the population of Japan proper. The Ministry of Agriculture and Forestry estimated the value of agricultural products in 1940 at 8.5 per cent less than the total of 5,614,000,000 yen recorded for 1939. Farm income in 1940 was estimated at 4,000,000,000 yen. The 1940 rice crop in Japan proper amounted to about 310,000,000 bu. (about 295,672,000 m 1941); raw silk, 711,902 bales (of 132.25 lb.) for year ended May 31, 1941; wheat, 1,785,660 metric tons in 1940 (1,568,580, estimated, m 1941); barley, 1,687,300 metric tons in 1940. sugar (Japan and Formosa), 992,760 metric tons in 1940-41; potatoes, 1,848,100 metric tons in 1938; tobacco, flue-cured, 122,000,000 lb. m 1941 (Japanese Empire); tea, 57,500 metric tons in 1939. The value of raw marine products in 1938 was 248,895,000 yen.

In 1937 textiles accounted for 25 per cent of the value of all manufacturing output; metals and metal products, 21 per cent, chemicals, 18.9; machinery and tools, 15.3. The world's leading exporter of cotton piece goods, Japan in 1940 exported 1,800,000,000 sq. yd. of cotton cloth valued at 378,000,000 yen, the lowest volume since 1931. Output of rayon was 108,569 metric tons in 1939; cement, 5,074,000 metric tons (for Japanese Empire), newsprint, 407,632 short tons in 1940. Leather, headgear, pottery and lacquer wares, mats, crude camphor and camphor oil, brushes, vegetable oil, sugar, rice wine, beer, and tobacco products are other leading manufactures. The output of crude petroleum in 1940 was 2,639,000 bbl. Other metal and metallurgical production was (m metric tons): Coal, 53,000,000 in 1938 (including Korea and Formosa); pyrites, 1,751,000 in 1936; manganese ore (metal content), 34,000 in 1936; iron ore, 470,000 in 1936; pig iron and ferro-alloys, 2,635,000 in 1937; steel ingots and castings, 5,811,000 in 1937 (including Korea); copper ore (metal content), 77,000 in 1939; aluminum (smelter), 23,000 in 1939; gold, 26,000 kilograms in 1939.

Foreign Trade. Publication of detailed foreign-trade statistics was officially prohibited from Oct. 16, 1940. Imports of the entire Japanese Empire in 1940 were 3,709,000,000 yen and exports 3,972,000,000 yen, increases of 18.6 and 1 per cent respectively over 1939. Imports of Japan proper were 2,492,042,000 yen for the first nine months of 1940; exports, 2,743,223,000 yen. For the calendar year 1939 imports of Japan proper were 2,917,666,000 yen; exports, 3,576,370,000 yen. Japan's trade with foreign-currency countries for the calendar year 1940 was (unofficial estimates): Imports, 2,700,-

000,000 yen; exports, 1,800,000,000 yen. For trade with United States in 1940 and 1941, see **TRADE, FOREIGN.** The United States, Manchoukuo, China, British India, Netherlands Indies, and Great Britain, in the order named, were Japan's principal customers or sources of supply in 1939.

The chief 1939 exports were (millions of yen): Raw silk, 507; cotton tissues, 404; machinery, 209; ores and metals, 139, rayon, 137; tinned and bottled foods, 132; timber, 129; paper, pulp, and manufactures, 120, drugs and chemicals, 108. The leading imports were (millions of yen): Ores and metals, 848; raw cotton, 462; machinery, etc., 288; oils, fats, etc., 263; drugs and chemicals, 171; fertilizers, 108.

Finance. As a result of the war with China beginning in July, 1937, total budget appropriations increased from 2,272,100,000 yen (actual expenditure) in the fiscal year ended Mar. 31, 1937, to 12,875,000,000 yen (budget estimate) in 1941-42. Of the latter total, 7,575,000,000 yen were to be raised by loans. The direct cost of financing the war in China for 1941-42 was placed at 4,880,000,000 yen. See **YEAR BOOK** for 1940, p. 379, for preceding budgets. The national debt rose from 10,578,000,000 yen in July, 1937, to 32,936,000,000 yen on July 31, 1941. Appropriations for the Chino-Japanese war from September, 1937, up to Jan. 1, 1942, aggregated 22,335,000,000 yen. The average exchange rate of the yen was $\$0.2596$ in 1939 and $\$0.2344$ in 1940.

Transportation. Japan had 11,144 miles of State and 4,240 miles of private railway lines in 1938, 591,766 miles of roads in 1940, and 9,598 miles of air routes in August, 1939. On July 10, 1941, an undersea railway tunnel linking Shimonoseki on the southern tip of Honshu Island with Moji on the island of Kyushu was holed through. The project, considered important from a military standpoint, took five years and cost 25,000,000 yen. Railways and highways in general were reported to have deteriorated badly during the four-year China struggle. The merchant fleet of steamers on July 1, 1939, comprised 2,337 ships of 5,629,845 gross tons. The amalgamated Tokyo-Yokohama harbor was renamed Keishin Port on May 20, 1941, upon the completion of extensive improvements.

Government. Under the Constitution of Feb. 11, 1889, executive power was vested in the Emperor, acting with the advice and aid of a ministry appointed by and responsible to him, but every law normally required the approval of the Imperial Diet of two chambers. The Upper Chamber (House of Peers) consisted in 1941 of 422 members, of whom 193 were chosen for life on the basis of rank, wealth, and other qualifications and the remainder were elected from and by special groups for seven years. The House of Representatives consisted of 466 members elected for four years. The elections of Apr. 30, 1937, divided the House into two major parties (Minseito, with 175 seats, and Seiyukai, with 172), three minor parties and various independents. The military-Fascist groups gradually extended their control over the government after the invasion of Manchuria in 1931 and in 1940 the transformation of Japan into a completely totalitarian State was initiated. See **YEAR BOOK** for 1940, p. 383 f., and *History* below.

HISTORY

Trail of Aggression. Japan's determined drive for military domination and economic control over the peoples and resources of all eastern Asia and the rich islands of the western Pacific reached a dramatic climax in 1941. On Sept. 18, 1931, the Japa-

nese militarists launched their expansionist program by the invasion of Manchuria. Their attack upon China began July 7, 1937. On Sept. 22, 1940, Japanese troops occupied the northern part of French Indo-China, and on July 23, 1941, the Vichy Government of France, yielding to joint German and Japanese pressure, agreed to Japanese military occupation of all Indo-China (see FRENCH INDO-CHINA under *History*).

Saigon and other strategically located points in southern French Indo-China were rapidly converted into bases for an attack upon the British, Dutch, and American possessions in Malaya and the Western Pacific. The blow fell without warning on December 7, Washington time (December 8, Tokyo time). The Japanese army, navy, and air force simultaneously attacked Hawaii, the Philippines, Wake Island, Guam, Hong Kong, British Malaya, and Thailand. The Thai Government capitulated immediately. Guam surrendered December 11, Wake Island December 24, and Hong Kong the following day. Before the end of December, the oil-producing sections of Brunei and Sarawak in northern Borneo had been occupied by Japanese troops. Manila was facing imminent capture and the Japanese armies were making rapid progress in a drive down the Malay Peninsula toward the great British base of Singapore, key bastion of Allied defenses in southeastern Asia. See WORLD WAR for full account.

The Strategic Background. Japan's bold challenge to the United States and Britain, despite initial military successes, represented an act of desperation stemming from the failure of its militarist ruling clique to conquer China. Another year of costly and bloody warfare had failed to break the military stalemate between Nipponese and Chinese armies (see CHINA under *History*). The acute economic and financial strain imposed by more than four years' fighting in China was undermining Japan's armed strength and the prestige of its military forces. The United States and Britain were extending growing aid to China. Anglo-American support encouraged the Netherlands Indies to reject Japan's demands for their peaceful incorporation into the Japanese politico-economic empire. In mid-June, 1941, Tokyo angrily recalled the economic mission it had sent to Batavia in 1940 (see NETHERLANDS INDIES under *History*).

The Japanese gained substantial economic as well as military advantages through the complete occupation of French Indo-China in July. But the resultant severance of economic relations with Japan by the United States, the British Commonwealth, the Netherlands, and all their possessions brought Tokyo face to face with the threat of national catastrophe. The economic blockade was reinforced by the joint military preparations of all the anti-Axis powers in Eastern Asia and the Western Pacific. Japan had to break this economic and military encirclement, either by diplomatic or military action, or abandon its oft-proclaimed plan for exclusive control of Greater East Asia.

The effort to break out of the trap into which the militarists had led the nation was carried on by means of diplomacy from August through November. Meanwhile Japan rushed preparations for a military showdown in case diplomacy failed. The German attack upon Russia in June and the subsequent withdrawal of large Soviet forces from Siberia to the European fronts facilitated these preparations. Freed from the immediate danger of a Russian attack, the Japanese were able to concentrate most of their forces, except those tied up in China, for a powerful thrust into Malaya and the South

Seas. If they could seize that area, with its abundant oil, tin, rubber, and other rich resources, the Japanese could free themselves in large measure from economic dependence upon the Anglo-American-Dutch world.

When the United States and its associates refused to end the blockade unless Japan first withdrew its troops from French Indo-China and China, the Tokyo militarists struck treacherously and powerfully on December 7. They risked their own fate and that of Japan upon the conquest of Singapore and other key positions in Southeastern Asia before their enemies could mobilize greater military resources in that theater of war. The Japanese also relied upon their Axis partners in Europe to tie up sufficient Allied forces to prevent the timely reinforcement of Allied positions in the Far East.

Negotiations with Russia. Hoping to win a free hand for southward expansion and, if possible, to end Russian aid to China, the Tokyo Government early in 1941 pressed forward with the negotiations for an understanding with Moscow, begun in 1940 (see YEAR BOOK for 1940, p. 382). On January 20 Foreign Minister Matsuoka's efforts secured a renewal of the important Russo-Japanese fisheries treaty for one year, although the Russians exacted a 20 per cent higher price for the Japanese fishing concession in Soviet territorial waters.

During his three-weeks' visit to Berlin, Rome, and Moscow on March 23-April 13, Matsuoka continued negotiations with the Kremlin. On April 13 he obtained Premier Molotov's signature to a pact providing that if either signatory became involved in hostilities with one or several other powers, "the other contracting party will observe neutrality throughout the conflict." The treaty contained a mutual pledge to respect each other's "territorial integrity and inviolability." In an accompanying "frontier declaration" the Soviet Union undertook to respect the territorial integrity and inviolability of Manchoukuo in return for a similar pledge by Japan with respect to the Mongolian People's Republic (Outer Mongolia).

Premier Konoye of Japan greeted this pact as of "epoch-making significance." It lessened the danger of a Soviet flank attack if Japan struck at the Anglo-American positions in southeast Asia. It also released Japan from its obligation under the Tripartite (Axis) alliance of Sept. 27, 1940, to aid Germany in the event of a Soviet-German clash. But Konoye's prediction that it would "serve as a basis for rapid solution" of other outstanding Soviet-Japanese issues was not fulfilled. Moscow declined to reduce its aid to China, grant Japan permanent fisheries rights, or conclude a trade treaty. A Soviet decree of April 29 cut off German shipments of planes, arms, munitions, and other war supplies across the USSR to Japan.

Both Tokyo and Moscow continued their military preparations in Manchoukuo and Siberia, respectively, and there were further minor clashes along the Japanese-Russian frontiers. But in October the progress of the German invasion of Russia forced Moscow to end shipments of war supplies to China and to weaken its Far Eastern army. The early collapse of the Red Army was anticipated. The time seemed ripe for a coordinated Axis offensive against Anglo-American positions throughout the world.

Anglo-American-Japanese Relations. In anticipation of Japanese aggression against their Far Eastern possessions, the Anglo-American-Dutch powers made diplomatic and military preparations to meet it throughout 1941. Besides extending increased financial and military aid to China, Washington and London early in the year began to recall their na-

tionals from the Far East. Successive measures were taken to strengthen the garrisons and fortified defenses of the possessions threatened with attack. In Tokyo these countermeasures aroused both anger and apprehension. Government spokesmen and the Japanese press alternated between threats to drive the white race from Eastern Asia and Oceania and assurances that Japan had no aggressive intentions.

In February the Tokyo Government launched a subtle peace maneuver, apparently with the intention of making both Germany and the Anglo-American coalition bid against one another for Japan's friendship. The offer to mediate between the warring European powers aroused a hostile reception in Berlin and was rejected in London and Washington. But Prime Minister Churchill, apparently feeling that Japan might yet be won away from the Axis, welcomed the opportunity to dispel Anglo-Japanese "misunderstandings." President Roosevelt, by failing to mention Japan in a series of strongly anti-Axis speeches, likewise indicated a desire to conciliate Tokyo. On May 5 American and British oil companies operating in the Netherlands Indies were authorized by their governments to renew for another year their 1940 contract to deliver 1,800,000 tons of petroleum annually to Japan.

Diplomacy failed to prevent a steady increase in tension. On May 25 Japanese troops broke into sealed warehouses in Haiphong, French Indo-China, and seized \$10,000,000 worth of American-owned gasoline and other goods originally destined for China. Washington protested to no avail, and on May 29 it cut off the export from the Philippines to Japan of raw materials needed by the Japanese war machine. Nevertheless negotiations for a settlement of American-Japanese issues, which had been reopened after Admiral Kichisaburo Nomura's arrival in Washington in February as Japanese Ambassador, were continued until the Japanese occupation of southern French Indo-China in July.

Washington thereupon broke off the conversations, and President Roosevelt on July 24 froze Japanese assets in the United States. The British and Dominion governments and the Netherlands Indies followed suit. The effect was to suspend virtually all Japan's trade relations with areas that normally accounted for three-fourths of Japan's foreign trade outside of the yen bloc. Tokyo replied by freezing American, British, and Dutch assets within the Japanese Empire and territories under its control.

Anticipating a Japanese drive into Thailand from French Indo-China, Washington and London early in August issued warnings that such a move would be "a matter of concern." A struggle between Japanese and Anglo-American diplomacy ensued in Bangkok. Until the Japanese invasion in December, Anglo-American representations appeared to have effectively blocked Japanese plans for the peaceful occupation of Thailand (q.v.). On August 24 Prime Minister Churchill announced that if Japan attacked the United States, the British Commonwealth would immediately declare war upon Japan.

Washington Negotiations. At the beginning of August the Japanese Government suggested a meeting of Premier Konoye and President Roosevelt to seek an adjustment of Japanese-American differences. At the same time it urged resumption of the informal diplomatic conversations that had been suspended July 24. President Roosevelt replied August 17 that these proposals were acceptable provided Japan agreed in advance to "embark upon a peaceful program for the Pacific along the lines of the program and principles to which the United States is committed" Japan on August 28 declared it accepted

the program and principles outlined by the President, and gave assurances that it had no intention of using military force against any neighboring nation without provocation.

President Roosevelt then (September 3) asked Japan to accept the following principles as the basis of future Japanese-American relations: (1) Respect for the territorial integrity and sovereignty of all nations, (2) non-interference in the internal affairs of other countries; (3) equality of commercial and other opportunity, (4) non-disturbance of the *status quo* in the Pacific except by peaceful means. The Japanese Premier on September 6 said that he fully subscribed to these four principles, but his statement was qualified and restricted to the southwest Pacific area (not the Pacific as a whole) by the provisions of a peace formula submitted by the Japanese Ambassador in Washington the same day. The formula invoked the right of self-defense to justify Japanese policy in French Indo-China and Thailand, and indicated that Japan could not accept the principle of commercial equality in China where Japan expressed the desire to station troops for an indefinite period.

In a lengthy note of October 2 pointing out the divergence of American and Japanese policy, the State Department urged "a clear-cut manifestation of Japan's intention in regard to the withdrawal of Japanese troops from China and French Indo-China." After further exchanges of proposals and the arrival in Washington of Saburo Kuru, special Japanese envoy, the Japanese Government on November 20 submitted a five-point formula for a mutual understanding. Under this proposal the United States would supply Japan with as much oil as it required, suspend freezing measures, discontinue aid to China, and cooperate with Japan "with a view to securing the acquisition of those goods and commodities which the two countries need in Netherlands East Indies."

In return Japan offered to withdraw its troops from French Indo-China "upon either the restoration of peace between Japan and China or the establishment of an equitable peace in the Pacific area." In the meantime it offered to withdraw its troops from southern French Indo-China to the northern part of that territory upon acceptance of the formula. Finally it proposed a mutual Japanese-United States undertaking not to make any armed advance "into any of the regions in the Southeastern Asia and the Southern Pacific area excepting the part of French Indo-China where the Japanese troops are stationed at present."

The United States on November 26 rejected this proposal as offering no basis for a temporary adjustment much less a peaceful settlement of the issues at stake. Instead it proposed another formula calling for the withdrawal of Japanese forces from China and French Indo-China. This formula proposed mutual Japanese-United States commitments as follows: (1) to conclude a mutual non-aggression pact among the governments principally concerned in the Pacific; (2) to conclude among the same governments an agreement to respect Indo-China's territorial integrity and not to seek preferential economic treatment therein; (3) not to support any government in China other than the Chungking Government; (4) to relinquish extra-territorial and other related rights in China; (5) to negotiate a reciprocal trade treaty; (6) to remove freezing restrictions; (7) to agree upon a plan for stabilizing the dollar-yen rate; and (8) to agree that no agreement previously concluded with third powers be interpreted so as to conflict with the fundamental purpose of the proposed formula. In

drafting this proposal, the State Department consulted and received the approval of the British, Dutch, Chinese, Australian, and New Zealand representatives in Washington.

Japan clearly indicated its attitude on Point 8 of the U.S. formula by signing a five-year extension of the Anti-Comintern Pact in Berlin on November 27 (see GERMANY under *History*). Reports of heavy Japanese troop movements into southern French Indo-China, greatly in excess of the forces authorized by the Vichy-Tokyo accord of July 23, led President Roosevelt on December 2 to ask Tokyo the reasons for this step and "the intention of the Japanese Government." Ambassador Nomura replied December 5 that the reports of Japanese troop movements were exaggerated and that there had been no violation of the Vichy-Tokyo accord. On the afternoon of December 6 President Roosevelt dispatched an appeal to Emperor Hirohito to "give thought in this definite emergency to ways of dispelling the dark clouds." He described the alarm aroused in the United States and elsewhere by Japanese military preparations in Indo-China and declared that the withdrawal of Japanese troops "would result in the assurance of peace throughout the whole of the South Pacific area."

One hour after the surprise Japanese attack of December 7 upon American bases in the Pacific, Ambassador Nomura and Kurusu delivered the Japanese rejection of the American peace formula of November 26. The note accused the United States and Britain of obstructing peace between Japan and China and "interfering with Japan's constructive endeavors toward the stabilization of East Asia." It charged them with "perfecting an encirclement of Japan" which endangered "the very existence of the Empire." The note asserted the U.S. Government "failed to display in the slightest degree a spirit of conciliation" thus blocking progress of the peace negotiation; that it always held fast "to theories in disregard of realities;" and that it was "scheming for the extension of the war."

Japan, the note declared, could not accept the perpetuation of the "dominant position the United States had hitherto occupied not only in China but in other areas of East Asia." The American peace formula "ignores Japan's sacrifices in the four years of the China Affair, menaces the Empire's existence itself, and disparages its honor and prestige." The note continued: "Obviously it is the intention of the American Government to conspire with Great Britain and other countries to obstruct Japan's efforts toward the establishment of peace through the creation of a new order in East Asia, and especially to preserve Anglo-American rights and interests by keeping Japan and China at war." The note concluded that in view of this attitude Japan considered it impossible to reach an agreement through further negotiation.

After reading this note in the presence of the Japanese representatives, Secretary Hull declared: "In all my 50 years of public service I have never seen a document that was more crowded with infamous falsehoods and distortions—infamous falsehoods and distortions on a scale so huge that I never imagined until today that any government on this planet was capable of uttering them."

War Declarations. On the same day (December 7 Washington time) the Japanese Foreign Minister told the American Ambassador in Tokyo that the Emperor had received President Roosevelt's appeal of December 6 and that he desired the Japanese note of December 7 to be regarded as his reply. A proclamation declaring war upon the United States and Great Britain was issued by the Emperor at the

same time. On December 8 the United States Congress and the British Cabinet declared war upon Japan. Their action was followed by similar declarations on the part of Canada, Costa Rica, Dominican Republic, Guatemala, Haiti, Honduras, El Salvador, Panama, Cuba, Nicaragua, the Netherlands, the Netherlands Indies, China, Union of South Africa, New Zealand, Australia, Free France, Poland, and Czechoslovakia. Mexico, Colombia, and Venezuela severed diplomatic relations with Japan and most of the remaining Latin American countries indicated that they would follow suit.

Internal Politics. The decision to stake Japan's future in a war with the United States, Britain, and their allies was taken by the militarists dominating the Tokyo Government only after long deliberation and the elimination from the Government of moderate elements favoring a more cautious expansionist policy. The Diet, which was shorn of virtually all power by the totalitarian reforms of 1940 (see preceding YEAR BOOK), acquiesced in its new status when parliament reconvened in January. The House of Representatives and House of Peers both pledged themselves "to support the government and strengthen swiftly the nation's wartime structure in order to meet the present grave situation." In ensuing weeks they passed without demur a record-breaking budget, a drastic new national defense and security law, and a bill authorizing the Government to "adjust the industrial structure where considered necessary."

The progressive deterioration of Japan's economy and the army's demand for more rigorous control measures led Prince Konoye to reorganize his Cabinet late in March after adjournment of the Diet. He named Masatsumu Ogura, a leading industrialist, as Minister of Wartime Economy Control of the armed forces over the Government was extended by the appointment of Vice Adm. Teigoro Toyoda as Minister of Commerce and Industry and of Lieut. Gen. S. Suzuki as chief of the Planning Board with a seat in the Cabinet. Another army man, General Yanagawa, became active head of the Imperial Rule Assistance Association, the new government party. Beginning April 1 rice and meat were rationed.

The German attack upon Russia, which apparently took the Japanese Government by surprise, placed Japan in a precarious position by forcing the Soviet Union into alliance with Britain and into closer relations with China and the United States. Two weeks of continuous conferences followed in Tokyo, with the Emperor, high military-naval officials, and representatives of political groups participating. The Konoye Cabinet was then reorganized again (July 18). Foreign Minister Matsuoka, outstanding advocate of cooperation with the Axis, was replaced by Vice Admiral Toyoda. Baron Hiranuma, leading advocate of Fascist policies, assumed the new post of Vice Premier. Four army generals strongly represented the expansionist views of the armed forces. Observers concluded that the Government would henceforth strive to win Japan's long-proclaimed objective of domination in East Asia with less dependence upon advice from Berlin. The move into southern French Indo-China followed immediately afterward.

The economic embargo to which Japan was soon subjected had quick and drastic internal repercussions. The country was placed on a full war footing, while the most strenuous efforts were made to mobilize and ration economic resources. At the same time the Cabinet and other ruling circles were sharply divided over Japan's policy toward the United States. As usual, the extremist military-naval elements, who demanded that Japan push

ahead with its program of southward expansion in defiance of the opposing coalition, had their way. Baron Hiranuma was severely wounded by a would-be assassin, apparently because he counseled moderation. Prince Konoye was reported to have defied extremist sentiment in reopening the Washington negotiations in August.

As the German drive into Russia gained momentum, the Tokyo extremists became louder in their demand for calling off the Washington discussions unless the United States receded from its position. Dissension in the Cabinet over "the manner of executing national policy" reached a head in mid-October. After Prince Konoye had conferred with the Emperor and leading statesmen, the entire Cabinet resigned on October 16. That the extremists had carried the day was manifest in the composition of the new Government formed October 18 by the incumbent War Minister, Gen. Eiki Tojo, an ultra-nationalist of strongly pro-Axis leanings. Against precedent and statutory law, General Tojo was permitted to remain in active military service while concentrating in his hands the powers of Premier, War Minister, and Home Minister—the latter office controlling the police. He thus assumed many of the aspects of a military dictator. Other leading members of the new Government were Foreign Minister Shigenori Togo, former Ambassador to Moscow and Berlin; Finance Minister Okinobu Kaya, a pro-army bureaucrat, Cabinet Secretary Naoki Hoshino, and Minister of Commerce and Industry Shinsuke Kishi.

Formation of the Tojo Government increased the tension in the Pacific. The new Premier again proclaimed Japan's determination to bring China to terms and establish domination in East Asia. Early in November he ordered Saburo Kurusu, the diplomat who signed the Tripartite Alliance in 1940, to Washington to aid Ambassador Nomura in the negotiations. Later indications were that Kurusu was sent to spin out the discussions and allay American suspicions until Japan was ready to strike. However Japanese spokesmen and official organs gave frequent warning that Japan's patience was reaching the point of exhaustion and that Washington was being given "a last opportunity to make amends for past aggression." After hearing the Premier declare that "the government has completed all necessary preparations and has anticipated every possible obstacle," a special session of the Diet (November 15-20) formally demanded a firm foreign policy.

On November 29 Premier Tojo publicly declared that American and British exploiters of Asiatic peoples "must be purged with a vengeance." On December 2, when submarines and other units of the Japanese fleet were secretly en route to their positions for the surprise attack upon Hawaii, the Tokyo Cabinet announced its decision to continue the Washington negotiations.

JAPANESE BEETLE. See ENTOMOLOGY, ECONOMIC; ZOOLOGY.

JAPANESE PACIFIC ISLANDS (NANYO). The former German possessions in the North Pacific, mandated

to Japan at the close of the World War. There are three main groups of islands: (1) MARIANA or LADRONE (14 islands), including Saipan, Tinian, Rota; (2) CAROLINE (577 islands), including Yap, Palau, Korror, Spring, Wednesday, Ponape, Kusaie; (3) MARSHALL (60 islands), including Jaluit. Total area, 830 square miles; population (October, 1940, census), 131,157. Sugar, maize, phosphates, tapioca, bananas, coffee, yams, alcohol, bauxite, and copra are the main products. It was announced during 1941 that the island of Palau would be able to supply enough bauxite to meet 75 per cent of Japan's aluminum requirements. The reserves of the Palau bauxite deposits were estimated at 10 million tons. Trade (1937): Y23,265,000 for imports and Y38,252,000 for exports (yen averaged \$0.2879 for 1937) Budget (1940): Y10,941,000 for revenue and Y10,839,000 for expenditure (yen averaged \$0.2344 for 1940).

These islands were fortified by the Japanese and converted into naval and air bases in violation of the provisions of the League of Nations mandate and the Nine-Power Treaty. From them was launched the surprise Japanese attack of Dec. 7, 1941, on Hawaii. See WORLD WAR.

JARVIS ISLAND. A mid-Pacific island (0° 23' S. and 159° 54' W.), south of Hawaii and owned by the United States. The island lies in the path of the main steamship lanes and the Pan American Airways route from Honolulu to New Zealand and Australia. In former years guano was produced from the island but it remained uninhabited for a number of years until 1936 when the U.S. Department of the Interior set up an aerological station (see YEAR BOOK for 1936).

JEWISH CONGREGATIONS. The census of 1937, together with supplementary data published by this writer in the *American Jewish Year Book*, shows that there are 3,728 permanent Jewish congregations in the United States, located in nearly 1,000 cities and villages in the 48 states. A total of 4,641,000 Jews reside in these places and 130,000 Jews reside in adjacent cities and villages without congregations. During the last ten-year period for which statistics are available, the Jews of the United States increased barely 13 per cent, while the number of Jewish congregations grew almost 20 per cent. In nearly 100 small cities and villages Jewish congregations were organized for the first time during the ten-year period.

Nearly 105,000 Jewish children now receive religious instruction in 1,030 Sabbath schools maintained by the Jewish congregations. In addition, weekday religious instruction, in after public school hours, is given to an additional 85,000 Jewish children. The number of Jewish parochial schools are few, and barely 4,000 Jewish children are enrolled in these schools.

The past ten years witnessed a great increase of permanent synagogue buildings. A total of 2,850 Jewish congregations now own their synagogue buildings, compared with 1,780, ten years ago. The value of the buildings, however, decreased. In 1927, a total of 1,135 congregations valued their synagogues at \$97,400,000 or an average of \$85,815 per synagogue building; while in 1937, a total of 2,025

congregations valued their synagogues at \$123,284,000, or an average of \$60,910. The decrease in value was no doubt influenced by the fact that real estate values were lower in 1937 than in 1927.

A total of 2,060 congregations reported that they spent during the year of the census \$14,404,000 or an average of \$6,670 per congregation. These current expenditures included \$2,560,000 for rabbis' salaries, \$787,000 for repairs and improvements, \$830,000 payment on congregations debt, while the remainder was spent by the congregations for worship, religious instruction, charity, and other religious activities. Salaries for rabbis thus constituted 18 per cent of the total expenditures of the congregations; payment on congregational debts, 6 per cent; and repairs and improvements, 5 per cent.

Several thousand Jewish societies are affiliated with the 3,730 congregations. These include educational societies and study circles, youth societies, brotherhoods, sisterhoods, loan funds, and numerous other types of charitable societies. A portion of the 4,000 congregations are affiliated into national federations, each of which aims to meet certain needs, such as the publication of textbooks for religious schools, which must be met on a nation-wide scale. The largest of these federations is the Union of American Hebrew Congregations which has 307 member congregations.

H. S. LINFIELD.

JEWISH WELFARE BOARD. Organized Apr 9, 1917, the Board has a twofold purpose. It is the parent body for Y.M.H.A.'s, Y.W.H.A.'s and Jewish Community Centers in the United States and Canada. It also provides for the religious and welfare needs of men in the service of the U. S. Army, Navy, Marine Corps, disabled veterans, young men in CCC camps. The Board is composed of 325 constituent societies in the United States and Canada, which have 425,000 members. Seven regional organizations are affiliated in its work.

The Board works in the fields of Jewish Center problems relating to programs of activities and administration, vocational guidance, educational and recreational activities, cultural and social adjustment of immigrants, community surveys and institutional studies, club leadership training, summer and day camps, health and physical education, extension education, forums and lectures, and maintains a field service in contact with its affiliate organizations.

The Jewish Welfare Board is one of six organizations of the United Service Organizations for National Defense (q.v. under SOCIETIES), cooperating with the Y.M.C.A., Y.W.C.A., National Catholic Community Service, National Travelers Aid Association, and Salvation Army. In this connection, its activities are conducted on a nonsectarian basis.

The army and navy committee of the Board, John M. Schiff, chairman, serves men of Jewish faith in the Army, Navy, and Marine Corps and in the national defense service. The committee on religious activities, Rev. Dr. David de Sola Pool, chairman, assumes responsibility for religious services to Jewish men in the national defense. The Board, through the Jewish Community Centers affiliated with it and through community committees, plans activities in the several communities for men in the defense service.

The officers of the Board are: Irving Lehman, Honorary President; Frank L. Weil, President; Lloyd W. Dinkelspiel, Mrs. Felix M. Warburg, and Mrs. Walter E. Heller, Vice-Presidents; Frederick L. Ehrman, Treasurer; Joseph Rosenzweig, Secretary; and Louis Kraft, Executive Director. The

headquarters are at 220 Fifth Avenue, New York City.

For Jewish Activities in the United States see JEWISH CONGREGATIONS OF THE U.S.; JEWISH WELFARE BOARD; groups listed under SOCIETIES, as *Jewish Women, Inc., National Council of, ORT, Zionist Organization of America; Zonta International.*

JOHNSTON ISLAND. A coral island in the central Pacific (16° 13' N. and 169° 50' W.), southwest of Hawaii, belonging to the United States and under the jurisdiction of the Navy Department. In 1939 Congress appropriated funds for the establishment on the island of a naval air base and submarine base. A channel was cut through the barrier reef and coral heads were removed from the lagoon to permit entrance of seaplane tenders and submarines and the landing of seaplanes. In March, 1941, Congress voted an additional sum of \$6,935,500, almost evenly divided between Johnston and Palmyra (q.v.) islands, for the construction of landplane runways and additional aviation facilities. Effective May 15, 1941, the island was designated a "naval defensive sea area" and unauthorized vessels and aircraft were forbidden to approach within three miles. The newly completed naval air station at Johnston Island was commissioned Aug 15, 1941. In December the installations were attacked by Japanese ships and planes.

JUVENILE DELINQUENCY. The actual extent of juvenile delinquency in the United States cannot be measured by data available at present. Juvenile-court statistics are affected materially by such factors as the availability of social resources for dealing with problems of behavior without court action, the place of the court in the child-welfare program of the community and its relationship to other agencies, community attitudes toward certain types of offenses, the legal age jurisdiction of the court, and techniques used in handling behavior problems by the police and school. However, in the absence of community-wide statistics of delinquency cases, such data as are available for court cases have considerable value in helping to state the problem. For the year 1940, 514 juvenile courts serving areas representing 38 per cent of the total population of the United States reported to the Children's Bureau of the U.S. Department of Labor 82,821 delinquency cases. From these figures it is estimated that approximately 200,000 different children yearly come to the attention of juvenile courts because of delinquency. The problem is, therefore, a serious

one numerically, particularly because juvenile court records show only a portion of the total number of children with behavior problems. Moreover, there is ample indication that adult crime has its earlier manifestations in juvenile delinquency and failure to develop satisfactory social relations.

In recent years there has been a growing awareness of the relationship between juvenile delinquency and the environment—home, school, and community—in which the child is growing and developing. Recent years have witnessed also a growing amount of interest among such professional groups as psychiatrists, social workers, sociologists, and psychologists. As a result there is now a considerable and growing understanding of the reasons that make particular children delinquent and of ways of treatment that give promise of improvement in individual cases, and may help to prevent delinquency in others.

Less emphasis is being placed upon specialization in the individual categories and more emphasis is being placed upon the importance of strengthening basic services for all children. Two major social-service concepts of interest in this respect are receiving increasing acceptance. One concept stresses the importance of keeping the child in his own home whenever possible; the other, which has changed the pattern of social service in the past few decades, stresses individualization of treatment and recognizes that each child may need something different from what is needed by any other child and that the unit of interest should be the *child* rather than the group or the institutional population. Thus all agencies dealing with children have sought or have been urged to give individualized case-work services to children, and the terms "orphan," "dependent," "neglected," and "delinquent" have come to carry less and less significance. These terms are not mutually exclusive. A neglected child, for example, may also be delinquent or may become delinquent because of neglect.

The number and kind of social services for children have increased rapidly in recent years, but the greatest impetus to this movement came in 1935 with the passage of the Social Security Act Part 3 of title V of the act, as amended, authorizes an annual appropriation of \$1,510,000 for grants to States for child-welfare services for the purpose of enabling the United States, through the Children's Bureau (q.v.), to cooperate with State public welfare agencies in establishing, extending, and strengthening, especially in predominantly rural areas, welfare services for the protection and care of homeless, dependent, and neglected children, and children in danger of becoming delinquent.

Some delinquency, it must be recognized, has a psychopathological origin. Child-guidance clinics for children, which had their beginning with juvenile courts, are now widely used by the community for the treatment of conduct problems which might lead to delinquency. These clinics generally have the services of a psychiatrist, a psychologist, and of psychiatric social workers. In many cities child-guidance service is available, but most small towns and rural areas are without these resources. However, encouraging experiments in extending such facilities to rural areas are being made, chiefly through the stimulation of public and child-welfare services by Federal funds under the Social Security Act. At present there are some 700 psychiatric clinics for children in operation in the United States under both private and public auspices.

The school also has an important place in the prevention and treatment of social problems of children. Its primary responsibility is the organiza-

tion of an educational program which is sufficiently flexible to meet individual needs. In cities the employment of social workers by the school offers a promising means of discovering and dealing with the social problems of children at an early stage. This service is utilized in many cases as an aid in adjusting the school program to the needs of the individual child. For extended treatment these workers have to depend largely upon the organized social-welfare resources of the community. In many rural areas social service needed in relation to school children is being provided by the public welfare agency.

Because the attitudes and understandings of parents greatly affect the behavior of their children, attention is being focused more and more upon developments in the field of parent education. During recent years particularly, much research has been devoted to principles of mental hygiene and habit training as well as the general aspects of child care. The results of modern research are being made available in easily understandable form to many parents through literature and radio talks on child care, guidance, and training offered by the Children's Bureau and other agencies and organizations; through parent-education programs conducted in colleges and schools, and through child-study groups and mothers' classes.

Recreation has long been recognized as a normal part of the life of the individual and as such has many inherent possibilities for the prevention of delinquency. Organized groups under private auspices such as the Boy Scouts, the Girl Scouts, the Camp Fire Girls, the Girl Reserves, clubs operated in connection with churches, young men's and young women's associations, boys' clubs, and the like play an important part. In recent years public responsibility as represented in local, county, State and national parks, school and municipal playgrounds and, more recently, the recreation projects of the Work Projects Administration (q.v.) have helped to give recreation a significant place in the total educational enterprise. Desirable types of commercialized recreation are a normal and essential part of community life. The importance of full-time year-round leadership in recreation is receiving more recognition than in the past. The total number of such leaders employed in 1940 was greater than in any other previous year. Nevertheless, existing recreational facilities still lag far behind actual needs in most communities.

The effect of undesirable community influences on children and immature youths has led some of the traditional agencies for dealing with delinquents to modify their practices and to develop protective services. Many police departments have developed crime prevention departments for the purpose of dealing with cases in which children are involved either as offenders or as victims, dealing with conditions dangerous to youth, and patrolling public places and supervising commercial amusement. In addition to police departments, several public and private children's organizations such as child-welfare agencies, children's aid societies, juvenile protective associations, and societies for the prevention of cruelty to children, often make protective work a major function.

In many respects the line of demarcation between prevention and treatment is very thin, if it exists at all. In many cases, for example, delinquency is prevented through the treatment service of the child guidance clinic, child welfare services, and social agencies providing services to families. In the main, however, the agencies upon which the State traditionally has placed responsibility for the

treatment of juvenile delinquency are the juvenile courts (see 1940 YEAR BOOK) and the training schools (see 1940 YEAR BOOK).

Although there is now a considerable and growing understanding of ways of treatment that gives promise of improvement in individual cases, the methods of work and facilities of agencies dealing with delinquent children have frequently lagged far behind scientific knowledge concerning child behavior. In the treatment programs of training schools, for example, the provisions for medical and mental health services, recreational and leisure-time activities, and educational, vocational, and spiritual guidance and training vary greatly as to adequacy and character and in the ways in which they are used. There is now, however, considerable evidence of much interest among training-school administrators in developing standards and improving practices in the training school. Two professional associations are active, the National Conference of Juvenile Agencies and the National Association of Training Schools, whose published proceedings of annual conferences cover a wide range of interests. Since 1937 the Children's Bureau has had an Advisory Committee on Training Schools for Socially Maladjusted Children composed of training-school administrators and representatives of closely allied fields. Efforts now are being made to define the function and place of the training school in the child-welfare field. The fact that practice has not kept pace with established knowledge is not unique, of course, to the training school. Similar lags are noticeable to varying extents in many other fields. Good signs of progress in any field, however, are increased awareness of the lag between knowledge and practice and efforts to lessen the gap between the two.

Among newer methods that are applicable to the treatment of behavior problems is one that has not yet been put into widespread practice although experience to date has shown the value of the work with certain individual characteristics and with various types of social maladjustment. The new technique, group work, may be defined as an educational process emphasizing: (1) The development and social adjustment of an individual through voluntary group association; and (2) the use of this association as a means of furthering other socially desirable ends. (See Newstetter, W. I., "What is Social Group Work?" *Proceedings of the National Conference of Social Work*, 1935, p. 291. The University of Chicago Press, Chicago, 1935.)

By accepting the individual approach and voluntary association, group work contributes to the treatment of delinquency in three ways: (1) By recognizing purpose or feeling on the part of the child and adolescent; (2) by providing adequate programs to meet the special needs of maladjusted or delinquent children; and (3) by acting as part of the treatment process involving the services of case work and group work.

Group work is not identified with any particular agency, public or private; rather it is a specialized resource, a technique that can be used by many different agencies in a variety of fields. The fact that the method requires the services of a psychiatrist and of a group leader especially trained to deal with emotional difficulties of children has resulted in limiting this treatment to relatively few agencies or organizations. Although not yet widely in use, group therapy offers, besides the service to the individual, an opportunity for further study and exploration in respect to group activities generally.

A very pertinent question at the present time is

whether the war will bring about an increase in juvenile delinquency. During the past year observations of persons visiting defense areas in the United States have indicated that there are some evidences of increase in the areas in which the stresses and strains of the defense program have stepped up the tempo of living. These indications together with the experience of this and other countries during the last world war, and the experiences of England and Canada during the present war point to the fact that increases in juvenile delinquency must be anticipated and that preventive and remedial measures will need to be strengthened greatly. See *PSYCHOLOGY under Social Psychology; PRISONS, PAHOLE, AND CRIME.*

KATHARINE F. LENROOT.

KANSAS. A west north central State Area: 82,276 sq. mi., including 163 sq. mi. of inland water. Population: (1940 census) 1,801,028. The urban population comprises 41.9 per cent of the total (U.S. average, 56.5 per cent); non-white population, 3.7 per cent (U.S. average, 10.2), elderly (65 years and over), 8.5 per cent. Kansas ranks 13th among the States in area, 29th in population, and 36th in density, with 21.9 persons per square mile. The capital is Topeka with 67,833 inhabitants, largest city, Kansas City, 121,458. There are 105 counties and 20 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to George L. McClenney, Superintendent of Public Instruction, there were 365,970 pupils enrolled in the public schools of Kansas during the school year 1939-40, 254,017 in elementary schools and 111,953 in secondary schools. Teachers numbered 18,944. Total expenditures for the year were \$31,121,132.77.

Transportation. State highway mileage in 1939, including streets under State control, totaled 9,864, of which 9,115 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 584,380; 480,002 were private and commercial automobiles, 233 busses, and 102,433 trucks and tractor trucks. Gross motor-fuel consumption was 503,586,000 gallons. Net motor-fuel tax receipts were \$10,562,000, the rate being three cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$4,012,000.

Railways of all classes extended 8,664 miles (Dec. 31, 1939) 3.69 per cent of the total mileage in the United States. Class I steam railways (8,538 miles) reported 13,039,508 tons of revenue freight originating in Kansas in 1940 and 8,684,397 tons terminating in Kansas. There are 41 airports and landing fields in the State (15 lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 493 civil aircraft in the State and 2,019 commercial and private pilots (1,814 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 22,313,300, as compared with 19,684,600 acres in 1940. According to the latest census, there are 156,327 farms, valued at \$1,421,387,464, averaging 308.2 acres each. Farm population numbered 606,099 or 33.7 per cent of the total. Leading crops with production were: Wheat, \$164,665,000, 173,332,000 bu.; corn, \$39,485,000, 57,224,000 bu.; sweet sorghums, \$15,023,000, 4,173,000 tons; oats, \$13,114,000, 36,423,000 bu.; hay, \$13,077,000, 2,221,000 tons; grain sorghums, \$12,749,000, 24,055,000 bu.; barley, \$10,187,000, 28,120,000 bu.

Manufacturing. According to the 1939 Census of Manufactures, there were 1,494 manufacturing establishments in Kansas, employing 31,614 wage earners who received \$36,938,032 in wages for the year. Total value of products was \$464,353,506; value added by manufacture, \$118,952,470.

Mineral Production. Leading mineral products in 1940 were (with 1939 figures in parentheses): Petroleum, 66,270,000 barrels (60,703,000 barrels valued at \$63,100,000); natural gas, 1940 figure not available (80,556,000 M cubic feet valued at \$29,356,000 in 1939), cement, 3,441,612 barrels, \$5,192,160 (3,746,370 barrels, \$5,614,112); coal, 1940 figure combined with Missouri, 6,736,000 net tons (1939 figure for Kansas alone, 2,920,000 short tons valued at \$5,490,000). The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$123,391,521 or 2.91 per cent of the total for the United States. Kansas ranks eighth among the States in value of minerals produced.

Trade. According to the 1940 census there were 5,130 wholesale establishments in Kansas, employing 14,997 persons, reporting net sales for 1939 of \$427,651,000 and annual pay roll of \$18,163,000. There were 27,545 retail stores with 56,490 employees, reporting sales of \$473,551,000 and pay roll of \$42,510,000. Service establishments numbered 10,047, employing 10,191 persons for \$6,990,000 per year, and reporting a business volume amounting to 30,397,000. The leading business center of the State is Wichita which reported wholesale sales of \$69,574,000, retail sales of \$53,243,000, and \$4,704,000 receipts for its service establishments. Kansas City reported sales of \$39,719,000 wholesale and \$35,111,000 retail, Topeka, \$19,730,000 and \$31,633,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Kansas was \$33,332,000. Under the Social Security program, financed by Federal funds matching State grants, 28,885 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$19.38 (U.S. average pension, \$21.08); 15,634 dependent children in 6,610 families received average monthly payments of \$29.05 per family (U.S. average, \$32.73), and 1,402 blind persons received \$20.62 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 12,186 and received \$14.70 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 1,978 (\$131,000), NYA student work program, 5,179 (\$25,000); NYA out-of-school work program, 5,770 (\$114,000); WPA, 20,280 (\$1,092,000); other Federal emergency projects, 14 (\$2,000); regular Federal construction projects, 5,301 (\$582,000). The Farm Security Administration certified subsistence payments totaling \$14,000 for the month to 497 cases.

Legislation. The Legislature convenes in regular session on the second Tuesday of January in odd years. It is composed of 40 Senators (5 Democrats and 35 Republicans in 1941) and 125 Representatives (27 Democrats, 97 Republicans, and one vacancy). The following is a synopsis of the more important laws enacted by the Legislature in 1941, prepared by Fred E. Gulick, Assistant Revisor of Statutes.

Abstractors. Business of abstracting land titles regulated. **Apportionment:** State apportioned into six congressional districts. **Civil Service:** State system of civil

service instituted and state department of civil service created.

Corporations (1) Speculative securities act (Blue-sky law) amended to exempt certain securities and transactions from provisions thereof. (2) Seventeen sections of corporation code, originally enacted in 1939, amended for clarification and corporate succession permitted for one hundred years. (3) Procedure for withdrawal of foreign corporations from state provided and certain former withdrawals ratified. (4) Procedure for corporate conveyances of land prescribed. (5) Special act for incorporation of electric cooperative, nonprofit, membership corporations enacted. (6) Special act for incorporation for mutual nonprofit hospital service corporations enacted.

Education (1) State wide contributory system for payment of retirement annuities to school teachers and employees established. (2) School code study by Legislative Council commenced in 1939 authorized to be continued.

Elections Communist party barred from elections.

Insurance Sale of industrial life insurance regulated. See, also (6) under subject *Corporations Interstate Compacts*. Republican River compact relating to use of waters thereof ratified. *Interstate Cooperation* Commission on interstate cooperation created. *Irrigation* General act for organization and operation of irrigation districts enacted. *Itinerant Merchants* Itinerant merchants regulated, licensed and taxed. *Labor* Unemployment compensation act completely revised and merit rating of employers advanced to Jan 1, 1941. *Local Government* Creation of sewage districts in townships having public water supply authorized. See, also, (1), (3), and (5) under *Taxation*. *Monopolies and Unfair Trade* Unfair practices act enacted to prohibit unfair sales and unfair trade practices by retailers and wholesalers. *National Defense* Provision made for the establishment of state and local councils of defense. *Oil and Gas* Interstate oil and gas compact extended to Sept. 1, 1943. *Public Health* Barber-shop business regulated and fixing of minimum prices for barber services authorized.

Social Welfare (1) Act providing for recovery of assistance given from recipient repealed. (2) Special old age assistance fund created to increase grants. (3) Special social welfare equalization fund created to ease burdens of counties having exceptionally high social welfare expenses.

Taxation (1) Political subdivisions authorized to consummate agreements for payment of sums in lieu of taxes by the United States. (2) Inheritance tax law completely revised. (3) Tax limitation law applying to all political subdivisions completely revised. (4) New procedures established for sale of real estate for taxes and judicial foreclosure of tax delinquent real estate required. (5) Budget law applying to all political subdivisions amended and revised. (6) Special fuel use tax law enacted taxing all fuels used to propel motor vehicles except fuels taxed under motor vehicle fuel tax law (gasoline tax). (7) New law taxing cereal malt beverages and malt products permits wholesalers within or without state to pay tax and affix stamps or crowns evidencing payment of tax. (7) Grain dealers and producers subjected to license tax based on number of bushels handled or produced and grain exempted from ad valorem taxation. (8) Permanent annual state tax levy provided to raise funds for buildings at state educational institutions. (9) Tax code study by Legislative Council commenced in 1939 authorized to be continued.

Finances. Total tax collections in Kansas for the fiscal year ending in June, 1941, were \$45,137,000 (1940: \$43,352,000). Total sales taxes amounted to \$24,123,000, including general sales, \$11,189,000, motor fuel, \$10,831,000. Taxes on specific businesses ran to \$3,835,000, general and selective property, \$4,997,000, unemployment compensation, \$4,863,000. The net income taxes were \$2,456,000. Cost payments for the operation of general government totaled \$36,902,000 in 1939, the latest year available. (Revenues for the general government for that year were \$52,416,000.) Cost of operation per capita was \$20.42. Total gross debt outstanding in 1941 was \$16,884,000, as compared with \$23,410,000 in 1932.

Officers and Judiciary. The Governor is Payne Ratter (Rep.) inaugurated in January, 1941, for his second two-year term; Lieutenant Governor, Carl E. Friend; Secretary of State, Frank J. Ryan; Attorney General, Jay S. Parker; State Treasurer, Walter E. Wilson; State Auditor, George Robb. Chief Justice of the Kansas Supreme Court is John S. Dawson; there are six associate members elected for six-year terms. See FLOODS; PLANNING.

KANSU. See CHINA under *Area and Population*.

KARAFUTO. The Japanese part (south of 50° N.) of Sakhalin island, separated from Japan by the strait of La Pérouse. Area, 13,935 square miles; population (census of October, 1940), 414,891. Chief towns (Jan. 1, 1938 populations): Toyohara, the capital, 37,365; Esutoru, 31,959; Shikka, 24,399; Otomari, 24,269. Timber, paper, fish, coal, and petroleum are the main products. Trade (1937): Y59,403,628 for imports and Y121,372,966 for exports (yen averaged \$0.2879 for 1937; \$0.2344, 1940). Budget (1940-41): Y66,971,457.

KAZAKH SOVIET SOCIALIST REPUBLIC. See UNION OF SOVIET SOCIALIST REPUBLICS under *Area and Population*.

KEARNEY STRIKE. See LABOR CONDITIONS under *Strikes*.

KEDAH. See BRITISH MALAYA.

KEEWATIN. See NORTHWEST TERRITORIES.

KELANTAN. See BRITISH MALAYA.

KENTUCKY. An east south central State. Area: 40,395 sq. mi., including 286 sq. mi. of inland water. Population: (1940 census) 2,845,627. The urban population comprises 29.8 per cent of the total (U.S. average, 56.5 per cent); non-white population, 7.5 per cent (U.S. average, 10.2); elderly (65 years and over), 6.6 per cent. Kentucky ranks 36th among the States in area, 16th in population, and 15th in density, with an average of 70.9 persons per square mile. The capital is Frankfort with 11,492 inhabitants; largest city, Louisville, 319,077. There are 120 counties and 13 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to the latest Biennial Survey of Education, there were 618,318 pupils enrolled in the State School System during the school year 1937-38. Of this total, 526,807 were enrolled in kindergartens and elementary schools and 91,511 in secondary schools; 45,629 were in separate Negro schools. The instructional staff comprised 18,860 persons, who received an annual salary of \$835 (U.S. average: \$1,374), 4,648 or 26.5 per cent were men. Expenditures for all public schools in 1937-38 were \$23,826,391, making a total cost per capita of \$8.04 (U.S. average: \$17.15). School buildings (1936 count) numbered 7,592; there were 4,387 one-room, one-teacher schools (1938). The value of public property used for school purposes was \$74,602,534. For higher education, see under *Kentucky* in the table of UNIVERSITIES AND COLLEGES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 9,415 of which 9,143 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 470,825; 387,068 were private and commercial automobiles, 768 busses, and 75,891 trucks and tractor trucks. Gross motor-fuel consumption was 305,334,000 gallons. Net motor-fuel tax receipts were \$14,717,000, the rate being five cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$5,509,000.

Railways of all classes extended 3,691 miles (Dec. 31, 1939) 1.57 per cent of the total mileage in the United States. Class I steam railways (2,551 miles) reported 44,882,146 tons of revenue freight originating in Kentucky in 1940 and 11,565,221 tons terminating in Kentucky. There are 19 airports and landing fields in the State (four lighted

fields) and one seaplane base. On July 1, 1941, according to the Civil Aeronautics Authority, there were 167 civil aircraft in the State and 508 commercial and private pilots (438 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 5,209,500, as compared with 5,156,800 acres in 1940. According to the latest census, there are 252,894 farms, valued at \$775,-494,098, averaging 80.2 acres each. Farm population numbered 1,262,943 or 44.4 per cent of the total. Leading crops with production were: Tobacco, \$73,477,000, 307,375,000 lb.; corn, \$58,-464,000, 73,080,000 bu.; hay, \$20,762,000, 1,815,000 tons; wheat, \$7,481,000, 7,125,000 bu.

Manufacturing. According to the 1939 Census of Manufactures, there were 1,640 manufacturing establishments in Kentucky, employing 62,791 wage earners who received \$61,902,354 in wages for the year. The total value of products was \$481,029,-771; value added by manufacture, \$187,400,426.

Mineral Production. Leading mineral products include: Coal, of which 39,732,000 net tons were produced in Eastern and 8,668,000 in Western Kentucky in 1940 (total for 1939, 42,805,000 short tons valued at \$74,481,000); natural gas, 47,771,000 M cubic feet valued at \$20,630,000 in 1939, petroleum, 5,193,000 barrels in 1940 (5,621,000 barrels valued at \$5,900,000 in 1939). The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$113,243,154 or 2.67 per cent of the United States total. Kentucky ranks eleventh among the States in value of minerals produced.

Trade. According to the 1940 census there were 2,174 wholesale establishments in Kentucky, employing 19,499 persons, reporting net sales for 1939 of \$464,432,000 and annual pay roll of \$23,671,000. There were 30,919 retail stores with 55,062 employees, reporting sales of \$520,135,000 and pay roll of \$46,090,000. Service establishments numbered 9,364, employing 13,385 persons for \$9,760,000 per year, and reporting a business volume amounting to \$34,093,000. The leading business center of the State is Louisville which reported wholesale sales of \$215,936,000, retail sales of \$131,004,000, and \$12,266,000 receipts for its service establishments. Covington reported sales of \$9,392,000 wholesale and \$21,627,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Kentucky was \$36,312,000. Under the Social Security program, financed by Federal funds matching State grants, 57,806 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$8.94 (U.S. average pension, \$21.08), and an estimated 1,370 dependent children in 430 families received (without Federal aid) an approximate total payment of \$17,000. General relief cases, which are supported by State and local funds only, numbered approximately 5,000 and received an estimated total payment of \$44,000.

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 7,563 (\$501,000); NYA student work program, 2,702 (\$25,000); NYA out-of-school work program, 7,421 (\$159,000); WPA, 29,148 (\$1,390,000); regular Federal construction projects, 10,044 (\$1,187,000). The Farm Security Administration certified subsistence payments totaling \$32,000 for the month to 401 cases.

Legislature. The General Assembly convenes in regular session on Tuesday after the first Monday

of January in even years. (There was no session in 1941.) It is composed of 38 Senators (29 Democrats and 9 Republicans in 1941) and 100 Representatives (72 Democrats and 28 Republicans). The President of the Senate is Rodes K. Myers; President Pro Tem, Edwin C. Dawson; Speaker of the House, B. F. Shields.

Elections. Two measures were submitted to the vote of the people in 1941 and both were passed. Use of voting machines was permitted in counties, the machines to be installed at county expense, and it was specified that not more than ten per cent of the school funds should be distributed on any other than a census-pupil basis.

Finances. Total tax collections in Kentucky for the fiscal year ending in June, 1941, were \$60,553,000 (1940: \$53,404,000). Total sales taxes amounted to \$24,003,000, including motor fuel, \$15,563,000. Taxes on specific businesses ran to \$8,651,000, general and selective property, \$5,385,000, unemployment compensation, \$11,255,000. The net income taxes were \$5,382,000. Cost payments for the operation of general government totaled \$41,505,000 in 1939, the latest year available. (Revenues for the general government for that year were \$68,086,000.) Cost of operation per capita was \$14.75. Total gross debt outstanding in 1941 was \$16,815,000, as compared with \$16,607,000 in 1932.

Officers and Judiciary. The Governor is Keen Johnson, Dem.) inaugurated in December, 1939, for a four-year term; Lieutenant Governor, Rodes K. Myers; Secretary of State, George G. Hatcher, Attorney General, Hubert Meredith; State Treasurer, Ernst E. Shannon, State Auditor, D. A. Logan, Chief Justice of the Kentucky Supreme Court is William Rees, there are six associate members elected by popular vote for eight-year terms.

KENYA. A British colony and protectorate in East Africa. Area, 224,960 square miles, population (1939 estimate), 3,500,352, including 3,413,371 natives, 46,897 Asiatics, 20,894 Europeans, and 15,481 Arabs. Chief towns: Nairobi, the capital, 61,000 inhabitants; Mombasa, 50,000; Nakuru, Kisumu. Education (1939): 2,125 schools of all kinds.

Production and Trade. Cotton, maize, sugar, coffee, pyrethrum, sisal, tea, timber, sodium carbonate, wattle, and gold (77,243 fine oz., 1940) are the main products. Livestock in European areas (1938): 497,478 cattle, 563,049 sheep, 13,192 swine, and 1,689 goats. Kenya and Uganda are one administrative unit for customs purposes. There is complete freedom of trade between the two territories and Tanganyika, the revenue from customs being allotted to the consuming territory. Trade for 1940 (Kenya and Uganda combined), including bullion and specie: £9,552,000 for imports and £9,252,000 for exports. Shipping (1939): 4,465,549 tons entered and cleared the ports.

Communications. The state-owned Kenya and Uganda railways, during 1940, carried 1,026,337 tons of freight and 1,019,048 passengers. At the end of 1940 there were 16,537 miles of roads. The telephone and telegraph system had 18,985 miles of line.

Government. Finance (1939): £3,811,778 for revenue and £3,808,079 for expenditure. The executive power is vested in a governor, assisted by an executive council. There is a legislative council of 41 members (the governor as president, 11 ex-officio, 12 nominated, and 17 elected). By the Kenya Annexation Order in Council, 1920, the territories of the mainland, excluding the mainland dominions of the Sultan of Zanzibar, were recog-

nized as a colony; the coastal belt rented from the Sultan of Zanzibar remains a protectorate. Governor and Commander-in-Chief, Sir Henry Moore (appointed Oct. 26, 1939).

History. In January, 1941, the East African Governors' Conference, held in Nairobi, was attended by the governors of Kenya, Uganda, Tanganyika, Northern Rhodesia, and Nyasaland, and the acting British Resident in Zanzibar. The Conference agreed in principle to the introduction of the machinery for closer coordination of the policies of Kenya, Uganda, Tanganyika, and Zanzibar in all matters affecting the control of imports, currency, exchange, and supplies for military needs. A report made by the East African Delegation which attended the Eastern Group Conference in New Delhi was considered. The military discussions were attended by the General Officer Commanding in East Africa.

In March it was reported that, as a result of the success of the military campaign in Somaliland, which had removed the threat of an Italian air attack, all the highland districts, including Nairobi, were removing black-out restrictions. The British government, it was announced during April, agreed to buy 100,000 tons of the Kenya, Tanganyika, and Uganda sisal crop due to be marketed between Nov. 1, 1940 and Oct. 31, 1941. Italian civilian deportees from Italian East Africa were being accommodated in a camp at Nyeri, the cost of maintenance being met by Great Britain. See TANGANYIKA under *History*, WORLD WAR.

KINDERGARTENS. See PSYCHOLOGY; SCHOOLS.

KINGMAN REEF. An atoll in the Pacific Ocean 1,067 miles southwest of Honolulu, Hawaii, owned by the United States. The reef is about eight miles long and the lagoon is about five miles wide, but only a small area of land remains uncovered at high tide. The atoll was occupied temporarily by a Pan American Airways crew in 1936-37. Effective May 15, 1941, President Roosevelt proclaimed it a naval defensive area. Unauthorized vessels and aircraft were forbidden to approach within three miles. The Navy Department has jurisdiction over the atoll.

KOREA (CHOSEN). A former empire of eastern Asia, annexed by Japan on Aug. 22, 1910, and incorporated as an integral part of the Japanese empire in 1919. Capital, Keijo (Seoul).

Area and Population. Area, 85,246 square miles. Population, 24,326,327 at census of Oct. 1, 1940. The racial division of the population on Jan. 1, 1939, was: Koreans, 21,950,716; Japanese, 633,320; foreigners (mostly Chinese), 94,815. Populations of the chief cities on Jan. 1, 1939, were: Keijo (Seoul), 706,396; Heijo (Pyeng-Yang), 185,419; Taikyū, 110,866; Jinsen (Chemulpo), 102,473. The Koreans have their own spoken and written language, but Japanese is the language of the government.

Education and Religion. About 60 per cent of all

adults are illiterate. In May, 1938, there were 3,033 elementary schools with 1,051,070 pupils, 43 middle schools with 23,407 pupils, 51 girls' high schools with 19,072 pupils, 203 vocational and professional schools with 30,406 students, and the University of Keijo with 542 students. As of Jan. 1, 1939, there were 499,300 Christians, 286,000 Buddhists, and about 105,000 adherents of Shintoism, which is supported by the government. Confucianism and ancestor worship are widely practiced. On Oct. 7, 1940, Christian denominations with about 60,000 Korean members were dissolved by the government and merged in a new association pledged to eliminate foreign influence and condemn doctrines at variance with Japanese national policy. The schools maintained by these denominations were reorganized and military drill introduced.

Production. Over three-fourths of the working population is engaged in agriculture and forestry. About one-fourth of the cultivated area is devoted to rice (137,200,000 bu. produced in 1939). Yields of other cereals in 1939 were (in metric tons): Wheat, 334,400; barley, 1,329,700; oats, 39,600 (1938); corn, 98,600 (1938). Millet, cotton, raw silk, soybeans, hemp, tobacco, and fruit are widely grown. Livestock in 1938 included 1,713,000 cattle, 1,620,000 swine, 51,000 horses, and 20,000 sheep. Fisheries production (1938) was valued at 89,920,000 yen. Mineral and metallurgical production in 1936 (the last year for which figures were published) was valued at 110,429,655 yen, chiefly gold (59,353,700 yen), coal (13,310,000 yen), pig iron (7,866,000 yen), steel (6,533,000 yen). Copper, silver, lead, tungsten, graphite, molybdenum, wolfram, and mica also are mined. Mineral and metallurgical output has developed markedly since 1936 under the stimulus of Japan's war emergency and of subsidies advanced by the Korean Government. A number of smelters, iron foundries, and steel plants were under construction in 1941. New power units having over 300,000 kilowatt capacity were placed in operation. Other leading industrial products are textiles, paper, pottery, metal ware, tobacco products, brewed drinks, and leather.

Foreign Trade. Korea's overseas merchandise imports in 1939 totaled 1,388,448,284 yen (1,229,417,000 from Japan proper); exports, 1,006,793,785 yen (736,883,000 to Japan proper). Chief exports (in 1,000 yen): Rice, 174,613; fertilizers, 53,783; crude copper, containing gold and silver, 51,697; raw silk, 24,181; soybeans, 21,104. Chief imports were machinery, silk textiles, timber, coal, fertilizers, rayon, paper, underwear, woolen textiles, millet.

Finance. Budget estimates for the fiscal year ended Mar. 31, 1941, placed both receipts and expenditures at 866,641,112 yen. The public debt on Mar. 31, 1938, was 593,546,214 yen. The yen exchanged at \$0.2596 in 1939 and \$0.2344 in 1940.

Transportation. Railways extended about 3,063 miles on Jan. 1, 1939 (state lines, 2,363; private, 700). During 1940 the state lines laid 106 miles of new track; private lines, 124 miles of standard line and 52 miles of narrow-gauge. Passengers on state lines numbered 82,518,647 in 1940 (59,694,228 in 1939); all rail facilities were reported badly congested in 1941. The 1941-42 state railway budget totaled 422,935,000 yen (25,224,642 yen for new construction). Highways extended 19,048 miles in 1939. Air lines linked Keijo with the other chief cities of Korea, Japan, Manchoukuo, and North China. Shipping entering the open ports in 1938 totaled 14,677,742 tons.

Government. Korea is ruled by a governor-general

appointed by the Emperor of Japan. He is assisted by a Privy Council of 82 Koreans. Governor-General in 1941, Gen. J. Minami (appointed December, 1937).

History. The Tokyo newspaper *Asahi* on March 27 reported that 15 British and American missionaries had been arrested by the Government-General of Korea on charges of engaging in anti-war and anti-Japanese propagandist activities. Following a protest from Washington, some of the American missionaries were released, but they were required to report regularly to Japanese officials. The Washington representative of the anti-Japanese Sino-Korean People's League reported on July 28 that the Japanese had banned the use of the Old Testament in all Christian churches and schools in Korea. On August 25 was announced the completion in Korea after four years of work of the largest dam in the Orient, one of a series of dams called for under the Yalu hydro-electric project.

KWANTUNG. The territory occupying the southern part of the Liaotung Peninsula, Manchuria, leased from China by Japan. Area, including 40 adjacent islands, 1,337 square miles. Population (census of October, 1940), 1,367,334. Chief towns (1938 populations): Dairen, 515,743; Port Arthur (Ryojun), 145,286; Pulantien; Kinchow. Agriculture, fishing, and the manufacture of salt were the main industries. Trade (1937): Y680,061,785 for imports; Y451,798,860 for exports (yen averaged \$0.2879 for 1937; \$0.2344, 1940). Budget (1940-41): Y57,300,655. In December, 1934, the Kwantung Government was replaced by the Kwantung Bureau and subordinated to the Japanese Embassy. See MANCHOUKUO.

LABOR, U.S. Department of. See LABOR CONDITIONS; separate articles on the following branches of the Department: CHILDREN'S BUREAU; CONCILIATION SERVICE, U.S.; WAGE AND HOUR DIVISION; WOMEN'S BUREAU. The Secretary of Labor in 1941 was Frances Perkins.

LABOR CONDITIONS. Sweeping changes appeared on the labor scene as war engulfed most of the world in 1941. As opposing belligerents sought to push production of war materials to its utmost capacity, the rights of labor were restricted in some countries, virtually destroyed in others. In the warring nations employment approached all-time peaks, although the shift from peace to war economy produced serious dislocations of employment, and in

some of the conquered countries industry was disrupted and unemployment greatly increased. Perhaps the most striking development of the year was the expanded control by national governments of almost all phases of labor activities. Strikes were widely prohibited, or the right to strike was voluntarily surrendered in favor of new machinery for mediation and arbitration of industrial disputes. In the United States Federal troops were used to commandeer strike-bound plants for the first time since 1921. In German-occupied Europe, trade union activities were placed under stringent supervision; hire and terminations of employment were subjected to official approval; wages rigidly controlled. Almost universally, regulations restricting the hours of work and the employment of women and young persons were relaxed or abandoned. At the same time, especially in the United States and the British Commonwealth, labor accepted greater responsibility in the councils of government and industry.

Employment and Unemployment. The second world war has affected the level of employment in various countries in diverse ways. In some of the conquered countries of Europe not yet integrated with German economy, unemployment increased during 1941. In Norway, according to trade union fund returns, it rose from 12 per cent in November, 1940, to 18.3 per cent in March, 1941. Between July, 1940, and February, 1941, the number of unemployed registered with employment exchanges in Yugoslavia rose 250 per cent. To the contrary, unemployment in Denmark and The Netherlands was lower than at any time during the past 10 years. Industrial France began to show sign of recovery from the paralysis of conquest as unemployment was reduced to half the 1940 maximum. In Belgium unemployment had spread to 25 per cent of the working population in January, 1941, but by mid-year the number of unemployed had dropped to less than 15 per cent. Sweden and Switzerland, both non-belligerents, presented sharp contrasts. In Sweden unemployment increased four-fold between July, 1940, and March, 1941, due largely to further loss of export markets during the year. Switzerland on the other hand had less unemployment than in 1929. (*Internat. Labor Rev*, Sept, 1941.)

Despite lack of statistics from some countries, it may be stated that in those countries actively engaged in the war unemployment uniformly declined. Germany found it necessary to import workers from Italy and several of the conquered countries. The number of wholly unemployed applicants who registered for work in Great Britain declined from 543,225 in January to 195,747 in October. In Canada during the first half of the year the lowest level of unemployment since 1930 was reached. Australia reported a record low level of 3.6 per cent in the second quarter of 1941.

Unemployment was reduced in the United States to the lowest point in the last 10 years. The Bureau of Labor Statistics of the Department of Labor estimated that there were 3,900,000 unemployed in October, 1941, as compared with 7,400,000 in October, 1940, and 7,600,000 in January, 1941. Total civil nonagricultural employment in October, 1941, amounted to 40,757,000, an increase of approximately 3,382,000 since October, 1940, and more than 3,400,000 above the 1929 peak. The Work Projects Administration (q.v.) estimated that in November 49,400,000 workers, including agricultural labor, were gainfully employed in the United States.

The transformation of industry from peace-time production to a war economy caused serious dis-

locations of employment. The shortage of certain types of workers necessary for war industries increased and at the same time the curtailment of raw materials available to nonessential industries produced substantial unemployment. Estimates of the number of workers in the United States who would lose present jobs because of lack of materials to supply civilian industries have ranged from several hundred thousand to two or three million.

EMPLOYMENT, PAY ROLLS, AND EARNINGS IN UNITED STATES INDUSTRIES DURING 1941*

Month	Employment index	Pay-roll index	Average weekly earnings (dollars)	Average hours worked per week	Average hourly earnings (cents)
Jan	115.5	120.7	27.71	39.0	68.9
Feb	117.8	126.9	28.58	40.0	69.2
Mar	119.9	131.2	29.11	40.4	69.7
Apr	122.6	134.7	29.17	40.0	70.8
May	124.9	144.1	30.78	40.8	72.6
June	127.8	152.1	31.85	41.3	73.8
July	130.7	152.7	31.22	40.3	74.4
Aug	133.0	158.3	31.63	41.0	74.5
Sept	135.2	162.6	32.05	40.9	75.8
Oct	135.3	166.6	32.89	41.1	77.0
Nov	134.7	165.2	32.81	40.3	78.1
Dec.	134.3	170.2	33.69	41.2	78.7

* Condensed from tables of Bureau of Labor Statistics, U.S. Department of Labor. Indexes are based on 3-year average, 1923-25=100, and has been adjusted to preliminary 1939 census figures.

While some immediate increase in unemployment was in prospect, nearly all workers were expected eventually to be reabsorbed by the war industries. To cushion the immediate sharp reduction in production of nondefense articles the Office of Production Management (q.v.) attempted to distribute defense contracts to civilian manufacturing plants, but met with indifferent success. Efforts to reemploy the laid-off workers in defense industries proved more successful.

The shortage of skilled workers was most acute in the machine tool, shipbuilding, aircraft, and ordnance industries. The U.S. Office of Education (q.v.) instituted refresher and supplementary courses in public vocational schools for trained workers whose skill had deteriorated from years of disuse. Intensive engineering courses were provided to train new workers. At the same time the OPM instituted a plan of training-within-industry, the chief features of which were the upgrading of workers who demonstrated proficiency in a skill below the grade required and the breaking down of skilled operations into several parts for which workers could be more quickly trained. The U.S. Department of Labor also established apprenticeship programs in more than 1,000 plants. It is estimated that some 3½ million workers were being trained under these various programs.

Governmental control of placement and transfer of employees was also accelerated by the shortage of industrial man power produced by the war. In Norway, Poland, and Bohemia-Moravia, all under the domination of Germany, stringent laws were adopted making consent of the central government a prerequisite for hiring, termination of employment, and transfer of workers. In Germany government authorization was made a requirement for retirement of workers as well as for other terminations. Compulsory labor was introduced in Bohemia-Moravia and Norway during the year. Russia established standard rules for employment. Workbooks and passports with entry of reasons for prior dismissals were a requisite of hiring. Severe penalties were provided for leaving employment without permission. Great Britain made dismissals and voluntary terminations subject to official consent, and all British subjects were required to

register with employment exchanges. In Australia regulations prohibited employers from engaging employees in specified categories of war-industry employment without the written consent of their former employers and an official permit authorizing acceptance of employment.

The United States adopted no such stringent regulations. The role of the government was to supply information concerning employment opportunities in war industries, to bring to the attention of employers reservoirs of surplus labor which might be absorbed into expanding industries, and to encourage employers and labor unions to arrange voluntarily for the shift of employees from nonessential industries to the war industries. See *EDUCATION under Youth Employment, WORK PROJECTS ADMINISTRATION.*

Hours of Work. There was a continuation of the trend to relax and discard governmental restrictions on the hours of work. In the United States and Canada statutory limitations were abandoned with regard to persons employed in the construction of defense projects and army training centers. In France the regular work week was increased from 40 to 48 hours. In Italy, because of the shortage of skilled labor two 12-hour shifts replaced the three 8-hour shifts in the metal industry, for plants operating less than 24 hours per day the normal work week was fixed at 60 hours. Concurrently, additional compensation for overtime work was greatly restricted. Great Britain set a maximum work week of 60 hours and, after unsuccessful experiments with a 7-day week, prohibited Sunday work with certain exceptions. Contrary to the general trend, a Belgian decree, issued in May, 1941, provided for reduction of working hours to spread employment, and for the payment of special allowances to part-time workers. The South African Factories Act of 1941 reduced the maximum weekly hours of work from 48 to 46.

The average work week in industries of the United States increased from 38 hours in 1940 to approximately 40.5 in 1941, an average slightly above the maximum work week established under the Fair Labor Standards Act without payment of overtime. The average work week for all employed persons in the country, including agricultural labor, rose from 43.3 hours in the previous year to 46.4 in 1941. A census by the Department of Labor, comparing 1940 with 1941, discloses a striking decline in the percentage of employees working less than 40 hours per week and a substantial increase in the percentage of persons working more than 50 hours per week, as follows:

Hours worked during week	April, 1940	April, 1941
Less than 40 hours	27.2 per cent	17.4 per cent
40-49 hours	46.9 per cent	52.4 per cent
50 hours and over	25.9 per cent	30.2 per cent

See **LABOR LEGISLATION; WAGE AND HOUR DIVISION.**

Wages. Statistics as to general wage levels were available from only a very few countries. In Switzerland, Denmark, and Germany the hourly rate of return in real wages declined, cost of living having risen. The British Trades Union Congress reported that wages in Great Britain had increased 20 per cent during the war while the cost of living had risen 30 per cent. In the United States, however, earnings rose faster than cost of living, so that real wages substantially increased. It was estimated that the cost of living rose 12 per cent between September, 1939, and December, 1941, while average weekly earnings in manufacturing industries increased 33.9 per cent. The National Industrial Con-

ference Board reported that from November, 1940, to November, 1941, wages rose 20 per cent; in the same period living costs went up 9 per cent. From mid-November to mid-December weekly earnings were reported to have increased 3.3 per cent and the cost of living only about .3 per cent, indicating the continuing upward trend of real wages to the very end of the year. Average weekly money wages amounted to \$31.85 in June, 1941, as compared to \$25.79 in June, 1940. A large part of this increase was due to substantial overtime work paid for at overtime rates.

In many countries provision was made for a wartime cost-of-living bonus independent of basic wages. The Canadian government provided for uniform bonuses, to be fixed at 3-month intervals, payable for each 5 per cent increase in the cost of living above the August, 1939, level. The Swedish Confederation of Trade Unions and the Swedish Employers' Federation concluded in January, 1941, a new sliding scale wage agreement to meet changes in the cost of living. In Hungary wage supplements of 15 per cent were decreed by the government.

In the German-occupied countries of Europe wage increases were generally prohibited. In Norway the German authorities nullified an agreement for wage increases which had been negotiated between the Confederation of Trade Unions and the Norwegian Employers' Federation. Real wages fell not less than 30 per cent below April, 1940, levels. In The Netherlands wage increases in collective agreements were prohibited unless first submitted and approved by the occupational authorities. The Ministry of Social Affairs of the Government was empowered to change wage rates in collective agreements. A similar decree was put into effect in Bohemia-Moravia. In Belgium no increase in wage rates or salaries beyond the rates and salaries in effect on May 10, 1940, was permitted. In Poland, a wage differential was established in agriculture in favor of German workers on the ground that they were accustomed to a higher standard of living than Polish workers. In industry the same effect was accomplished without a wage differential by requiring Polish workers to pay 15-20 per cent of their wages to the German Government. In France, where wages had been fixed at the pre-war level, supplementary allowances, payable by employers, were provided because of the higher cost of living. See **BUSINESS REVIEW; LIVING COSTS, RAILWAYS.**

Union Movements. Almost without exception the governments of the world increased their control of trade union movements. In the totalitarian countries trade unions were dominated and even absorbed by the government. Throughout the British Commonwealth the war restricted the scope of their activities, and at the same time extended their participation in the government and in war activities. In the United States proposed regulatory measures gained popular support, while the government increasingly brought union leaders into its councils.

Long established trade union movements in many European countries virtually collapsed as German armies swept across Europe. In France the central workers' and employers' organizations were dissolved by decree in November, 1940. The announced policy of the government was to convert the local units of the old organizations into a single trade union which would be prohibited from intervening in political affairs. In Rumania all corporations of workers were completely suppressed because they "did not confine their activities to the

study, protection, and development of their purely occupational limits." German occupation authorities in Norway succeeded in removing the old officers of the Confederation of Trade Unions and gave it a new leadership. As a result, many local units of the Confederation withdrew and withheld dues payments from the central organization. In Bohemia-Moravia, where in 1939 the free trade union organizations had been suppressed and two government-controlled federations of workers had been set up, the latter were replaced by the government-controlled Workers' Trade Union Center.

Trade union membership in the United States and Great Britain showed a marked growth. The American Federation of Labor reported a membership of 4,569,056 and the Congress of Industrial Organizations nearly 5,000,000, large annual gains for both organizations. The independent railroad brotherhoods and other unaffiliated unions also reported increased memberships. The unionization of employees of the Ford Motor Company, Republic Steel Corporation, and Bethlehem Steel Company, previous anti-union strongholds, gave tremendous impetus to the American trade union movement. The British Trades Union Congress reported a membership increase of 200,000.

The annual conventions of both the Congress of Industrial Organizations and the American Federation of Labor endorsed the Government's foreign policy and pledged its cooperation to obtain maximum production. The Congress of Industrial Organizations proposed an industry council for each war industry to be composed of an equal number of representatives from labor and management with an impartial chairman representing the government. The American Federation of Labor emphasized its readiness to cooperate in the war effort and, looking forward to peace, resolved to inform President Roosevelt that "at the conference table . . . labor must have its representation. . . ."

In a far-reaching decision, the U.S. Supreme Court ruled that the anti-trust laws are inapplicable to trade unions engaged in "jurisdictional" strikes resulting in restraints of trade. (*United States v. Hutcheson*, 312 U.S. 219.) In New York, George Browne, president, and Willie Bioff, Hollywood representative, of the International Alliance of Theatrical Stage Employees were convicted of extortion. The American Federation of Labor, at its annual convention in November, refused to reelect Browne to its executive board. See CONSTRUCTION INDUSTRY; MUSIC.

Collective Bargaining. In totalitarian countries normal collective bargaining disappeared, of course, with the outlawing of trade unions. In the countries where freedom of association prevailed, despite the increased government control of union movements, collective bargaining was encouraged and extended to cover increasing numbers of workers and industries. Indeed the purpose of the greater governmental control has been to encourage unionism and to place greater reliance on collective bargaining for the solution of war labor problems. The Swiss Government, in May, was empowered to enforce the terms of existing collective bargaining agreements upon all employers and workers in a given trade or industry even though they are not members of the trade associations which are parties to the agreement. In Great Britain a court of inquiry, appointed under the terms of the Industrial Court Act of 1919, held that during the war emergency an employer must bargain collectively with his employees regarding a dispute which grew out of the discharge of a worker because of her union activity.

The U.S. Supreme Court ruled in *National Labor Relations Board v. H. J. Heinz Co.* (311 U.S. 514) that the National Labor Relations Act required, as part of the procedure of collective bargaining, that employers embrace in written and signed instruments the terms of their agreements with unions representing a majority of the employees in appropriate bargaining units. The National Labor Relations Board (q.v.), which decides disputes as to units and majority designations, determined by means of elections and otherwise more than twice as many such representation disputes in 1941 as in previous years, and certified bargaining representatives in 2,566 cases. For the first time since its establishment in 1935, the Board handled more representation disputes than complaints of unfair labor practices, indicating increased willingness of employers to negotiate agreements with unions certified by the Board. In June, the Ford Motor Company and the United Automobile Workers (C.I.O.) entered into a collective contract, the first with a major automobile manufacturer establishing a closed shop. "Little Steel" (Bethlehem, Republic, Youngstown Sheet & Tube) and the Goodyear Tire & Rubber Company which had long resisted unionization signed agreements with C.I.O. unions during the year. Practically all labor organizations, A.F.L. as well as C.I.O., reported great gains in the number of agreements made with employers. More than half the workers in major defense industries were estimated to be covered by collective bargaining contracts, and the National Industrial Conference Board reported that about one-third of all the union contracts provided for closed shops.

The Office of Production Management, seeking to stabilize shipbuilding labor conditions, initiated bargaining conferences between representatives of the employers and unions in the industry. Four zone agreements resulted, establishing wages, hours, and working conditions for 2-year periods. The U.S. Maritime Commission promoted an agreement between the maritime unions and shipping companies providing war bonuses and other conditions for seamen and establishing an arbitration board for settling disputes. (See SHIPPING.) Other agreements between unions and employers were stimulated by the Federal Government for the purpose of dealing with specific problems such as dilution of skilled labor, transfer of workers from nondefense to defense industries, jurisdictional disputes, etc. The State of Rhode Island adopted a "Little Wagner Act" to encourage collective bargaining modeled on the National Labor Relations Act.

Strikes. With expansion of employment, the number of strikes rose substantially in those countries where the right to strike was still recognized. Little accurate information was available outside the nations of the British Commonwealth and the United States.

The Ministry of Labor *Gazette* reports that in Great Britain, during the first 10 months of 1941, there were 1,038 disputes involving stoppages of work as compared with 762 such disputes during the corresponding period of 1940. The number of workers involved increased from 265,800 to 288,800, and there was a corresponding increase in the number of working days lost by strikes. In Australia, it was estimated that the number of man-days lost during the first 6 months of 1941 exceeded the total for the entire previous year. Canada had 125 strikes during the first 6 months of the year, affecting 37,393 workers, and causing a loss of 151,766 man-days. The number of strikes declined somewhat during the latter half of the year, but

the annual total is estimated to be some 30 per cent greater than in 1940. Canadian strikes tended to run only for short periods before settlement by conciliation, but there were several notable exceptions including a strike for increased wages among 3,700 automobile parts factory workers at St. Catharines, Ontario, lasting nearly 3 weeks.

In the United States there was a sharp upward trend in the number of strikes despite the creation of new governmental agencies to mediate labor disputes in defense industries. During 1941, it is estimated that 4,223 strikes occurred, 75 per cent more than in 1940. It is to be noted, however, that the average duration of strikes in the last three months of 1941 was only one-half as long as the average duration of strikes in the first three months of 1941. The number of workers involved totaled approximately 2,400,000, a half million more than in any year of the past decade. The number of man-days idle was about four times as great as in 1940. In January, 1941, there were 341 strikes in progress and the amount of idleness during the month amounted to 660,535 man-days. By August it had risen to 624 strikes in progress, with 1,750,013 man-days lost. The number of strikes rose even higher in September and October. In December, when the Axis nations declared war on the United States, the wave of strikes declined abruptly. The record for the entire year showed a significant excess over the averages for the 5-year period from 1935-39. Toward the end of the year and early in January, 1942, many national labor organizations pledged themselves to call no strikes in war industries. In several States, the State Federations of Labor (A.F.L.) and the State Industrial Councils (C.I.O.) joined with State Manufacturers' Associations in agreements that there should be no strikes or lock-outs, but disputes would be submitted to arbitration.

According to the Bureau of Labor Statistics approximately half of all strikes involved questions of union organization. Wage-and-hour issues comprised about 36 per cent of the total number of strikes affecting nearly 775,000 workers. Jurisdictional strikes, according to the Bureau, numbered only 45 and involved about four-tenths of 1 per cent of the total number of strikers.

In three outstanding instances during the year, strikes resulted in the seizure of plants by the Federal government. At the Inglewood, Calif., plant of the North American Aviation, Inc., where a dispute arose over wages, local union officials called a strike in the face of pledges by national representatives of the United Automobile Workers Union, C.I.O., not to call a strike while the National Defense Mediation Board took the dispute under advisement. President Roosevelt, acting under his emergency powers, ordered Federal troops to take over and operate the plant. At the Kearney, N.J., yards of the Federal Shipbuilding and Drydock Company, the Navy Department commandeered the strike-bound plant after the company had rejected a recommendation of the National Defense Mediation Board to grant the Industrial Union of Marine and Shipbuilding Workers of America (C.I.O.) a "maintenance of membership" agreement. The third plant seizure occurred at the Bendix, N.J., plant of Air Associates, Incorporated. When the company failed to carry out the terms of a settlement worked out by the National Defense Mediation Board, President Roosevelt ordered the U.S. Army to take over the plant. All three of the plants were subsequently returned to private operation.

Among other strikes headlining the year were

those among coal miners. Approximately 318,000 bituminous coal miners throughout the Appalachian area were idle during the month of April, while a new 2-year agreement was negotiated between the United Mine Workers of America and the various coal operators' associations. The chief controversy concerned elimination of the long-standing 40-cent wage differential between Northern and Southern mines. The National Defense Mediation Board recommended that the differential be eliminated. The parties accepted the recommendations and signed a 2-year contract for the entire Appalachian area. The contract, however, did not cover so-called "captive" coal mines, controlled and operated by large manufacturing industries. When operators of "captive" mines refused a demand for a closed shop, the United Mine Workers called a strike, making idle some 50,000 workers. After the National Defense Mediation Board by a vote of 9-2 recommended that the closed-shop demand be rejected, the union renewed its strike. Through presidential intervention the strike was called off while the union-shop demand was submitted to a three-man arbitration board. By a vote of 2-1 the arbitrators granted the closed shop and the binding award was put into effect.

* Condensed from tables of Bureau of Labor Statistics, U.S. Department of Labor. All figures for 1941 are preliminary. The table excludes strikes lasting less than 1 day or involving fewer than 6 workers.

Governments and Labor Disputes. Continuous industrial production without interruption by strikes became increasingly vital to all governments. Accordingly, strikes were either outlawed or, if workers were left free to strike, governments attempted to settle disputes before they reached the strike stage.

Denmark suspended its conciliation act of 1934 and prohibited work stoppages. A Labor and Conciliation Board composed of representatives of employers, labor, and neutral interests was established. The Board acts both as a mediation and a decision-making body. Strikes were also prohibited in Norway and official conciliators were placed under the control of the German Commissioner's Office. In Australia the Commonwealth Conciliation and Arbitration Act was amended in December, 1940, to extend jurisdiction of the Arbitration Court to all industrial disputes regardless of whether or not they extend beyond the limits of any one State of

the Commonwealth. At the same time Conciliation Commissioners were empowered to investigate any threatened dispute.

In the Western Hemisphere several countries adopted more stringent regulations in an effort to prevent work stoppages. Canada made provision for government supervision of strike votes in war industries. For the period of the war, Chile prohibited strikes and lock-outs of more than 10 days' duration. At the end of 10 days such disputes must be settled by compulsory arbitration. The Federal Labor Act of Mexico was amended to limit strikes to those with lawful objectives; physical violence and property damage were made penal offenses; strikes can only be called by a majority of the employees of the business concerned and only after written demands and a 6 to 10 days' notice of intention to strike have been served upon the employer. The statute requires the employer to make reply to the written demands within 48 hours.

In the United States the Conciliation Service of the Department of Labor doubled its number of commissioners to a total of 120 but was unable to handle all defense strikes. Public sentiment for legislation prohibiting strikes increased. In March, 1941, President Roosevelt, by executive order, created the National Defense Mediation Board. As originally organized the Board consisted of 11 members—4 employers, 4 union leaders (2 A.F.L. and 2 C.I.O.), and 3 public representatives. The announced duty of the Board was primarily that of a mediation agency, but in many instances its recommendations were similar to decisions or awards of an arbitration board. After 7 months the Board all but collapsed when the United Mine Workers, under the leadership of John L. Lewis, refused to accept a decision of the Board denying the union closed-shop contracts in the "captive" mines. The two C.I.O. members of the Board resigned and refused requests of President Roosevelt to return to its membership.

As a result, anti-strike legislation pending in Congress was given tremendous impetus and numerous bills were debated. The Smith Bill for regulation of unions passed the House by a large majority. It provided for registration of unions, filing of financial statements, government supervision of strike votes, restriction on closed shop,

and forfeiture of workers' rights under the National Labor Relations Act in certain circumstances. The bill also contained a provision for placing the National Defense Mediation Board on a statutory basis. The Senate Committee recommended the Ball Bill, which proposed to revamp all the mediation machinery of the government with a Labor Disputes Commission at the top to arbitrate all controversies. This bill also proposed to outlaw strikes for closed shops where closed-shop agreements had not previously been in effect.

The Senate Committee postponed action on the Smith Bill while the Administration convened a war labor conference of industrialists and labor leaders to work out a voluntary program for outlawing strikes in defense industries for the duration of the war. The conference had no difficulty in agreeing that there should be no strikes or lock-outs during the war, and it recommended the appointment by the President of a War Labor Board to arbitrate, or otherwise adjust labor disputes. The conference was not able to agree as to whether union demands for a closed shop should be referable to the Board or whether the status quo as to closed and open shops should be maintained. The President's recommendation to the conference that all disputes, including closed-shop issues, be referable to the Board, was finally accepted. The conference was then adjourned without agreeing on any war labor policies to govern the Board in making decisions and without defining the functions, duties, or form of organization of the machinery needed for adjusting and arbitrating labor disputes.

(Early in January, 1942, the President issued an administrative order establishing a War Labor Board of 12 men, consisting of 4 public representatives, 4 labor representatives (2 A.F.L., 2 C.I.O.), and 4 management representatives. In addition the President appointed a list of umpires and additional management and labor representatives to serve on panels for mediating, arbitrating, or otherwise settling disputes. The order abolished the National Defense Mediation Board, and although it authorized the new War Labor Board to make final decisions, in form and substance the duties and organization of the Defense Mediation Board were maintained under another name.)

Health and Safety. The speeding up of production, the employment of inexperienced workers,

and the extension of hours and overtime work in many countries, increased the probability of industrial accidents and endangered the health of many workers. The annual report of the Bureau of Labor Statistics covering 1940 disclosed that in the United States there were 18,100 fatal accidents, compared with 16,400 in 1939, and 1,782,000 workers suffered temporary total disability, compared with 1,447,700 in 1939. The only reduction occurred with regard to permanent partial impairment: 109,400 persons in 1939; 89,600 in 1940. The report states that "the increases are chargeable to increased employment, longer working hours, and a relaxing of safety precautions in industries which experienced sharp increases in employment." (*Monthly Labor Rev.*, Aug., 1941.) Incomplete data for 1941 indicates that the accident rate will be somewhat higher than in 1940.

British industry reported a marked increase in illness among workers, attributable largely to the longer work week and to lighting and ventilating conditions during "blackouts." Medical supervision was established in many factories and regulations fixing minimum lighting standards were issued. As noted elsewhere, the work week in Great Britain was limited to 56-60 hours after experiments with a longer week. Spain adopted new measures for the prevention of, and compensation for, occupational diseases. Under the plan preemployment medical examinations are required.

Women in Industry. As the war increased in intensity women continued to take over work previously performed almost exclusively by men in many countries. Even in the United States, where large reservoirs of unemployed workers had not yet been absorbed, the number of women workers increased by about 4 per cent. However, this trend was not universal. Because of widespread unemployment, the French Government took steps to restrict the employment of women.

At the end of 1939 women constituted more than one-fourth the total number of workers in Germany. Reports received by the International Labor Office indicate that employment of women has steadily increased since that time. Concurrently, the character of their occupations has changed and they are regularly taking jobs formerly performed by men. They operated public transportation systems and worked in foundries and pattern makers' shops, performing lighter work such as core-making and lacquering. At the same time, new regulations prohibiting women from performing heavy manual labor likely to prejudice health were announced. In the factories of Great Britain, experiments with part-time employment of housewives proved satisfactory. The plan provided for employment of women residing near particular factories on either morning or afternoon shifts, adjusted to the necessities of their household duties.

Protective regulations previously adopted on behalf of women workers were generally relaxed. In Australia the Commonwealth Court of Arbitration ruled that female labor might be employed between 7 a.m. and 10 p.m. In Italy, restrictions on the hours of employment of both women and young persons were suspended and night work was permitted. Trade unions which have been reluctant to permit the employment of women for work normally performed by men relaxed their rules. In Great Britain the National Union of Railwaymen consented to the employment of women in certain railway occupations hitherto prohibited, and the employers agreed that the wages paid to women would be the same as those paid to men performing the same work.

Child Labor. Accompanying the relaxation of regulations protecting women in industry, were similar relaxations with regard to child labor. However, in the United States there was at least one noteworthy advance. In February the U.S. Supreme Court expressly overruled *Hammer v. Dagenhart*, a decision of the same Court, made 22 years earlier, which had held that Congress was without power to exclude the products of child labor from interstate commerce. The new decision was made in the case of *United States v. Darby Lumber Co.*, sustaining the constitutionality of the Fair Labor Standards Act of 1938. See CHILDREN'S BUREAU.

Legislation in certain British dependencies also ran counter to the general trend, as limitations upon the use of child labor were increased both with regard to age and types of work in which children were permitted to engage. It is difficult to determine to what extent previous protective measures surrounding the employment of children have been abandoned in European countries. Restrictions were partially suspended in Italy and compulsory agricultural child labor was introduced in Germany.

WILLIAM M. LEISERSON.

LABOR LEGISLATION. Executive orders of the President relaxing certain work hour limitations, and pressure by the War and Navy departments for increased defense production—rather than declaration of war during the final month of the year—affected the maintenance of safety and other labor standards in 1941. Long before the tragedy of Pearl Harbor the State legislatures had adjourned.

Of the 46 State and Territorial legislatures which met in regular session in 1941, only one—New Mexico—failed to add some detail to the accumulating structure of American labor law. However, the annual grist of new laws was interesting owing to the variety of its composition rather than impressive because of volume of important advance.

The Rhode Island legislature was one of the most productive—with a record of passing no fewer than 20 of its 22 labor bills, including the adoption of a "Baby Wagner" labor relations act as well as definite progress away from court and toward commission administration of workmen's compensation. Especially significant elsewhere was Delaware's swing from elective to compulsory compensation; Washington's change from limited list to complete coverage of occupational diseases, Oklahoma's pitiful stumble, after a quarter-century, toward possible compensation in fatal accident cases; and Massachusetts' failure to legislate, which puts creation of State compensation insurance on the ballot for 1942.

Florida furnished the greatest and only important advance of the year in legislation against child labor. Out of 28 wage-hour bills introduced in as many jurisdictions, Puerto Rico and Hawaii alone adopted this legislation; Minnesota by formal statute became the ninth State authorized to cooperate with the Federal Department of Labor in administering the Fair Labor Standards Act of 1938; Alaska created the only new labor department; and Illinois, after prolonged delay, finally adopted rock dusting of coal mines to check the spread of coal dust explosions.

The District of Columbia for the first time is to have safety inspection in places of employment,

through a hookup with the local minimum wage authorities. Other administrative developments of significance include legislation in Colorado and Oregon placing the cost of financing State safety work upon industry, and the obvious concern in a number of States over the administrative problems created by employers who violate the law through failure to insure their risk under workmen's compensation.

No outstanding advance step in social security was taken in 1941, although there were numerous minor revisions of existing State old-age assistance and unemployment compensation laws. The most significant national legislation was the inauguration of Federal safety inspection of coal mines.

Unusual hostility to labor organization was reflected in the introduction of numerous unfriendly bills, but while a number of such measures were adopted few of special importance became law. Reflecting concern over readjustments necessary on account of defense preparations, several State legislatures as well as Congress enacted laws providing for reinstatement to former positions, upon release from active service, of persons selected for training with the armed forces.

More detailed references to this year's principal legislative developments are conveniently grouped under the following topics.

Workmen's Compensation. Changing from the "elective" to the compulsory type of compensation law Delaware also extended coverage to employers of more than 3, liberalized benefits generally, reduced the non-compensated waiting period to 3 days, and added to the occupational disease schedule: dermatitis, silicosis, poison oak, and poison ivy. Florida wiped out the "horticultural" exceptions as well as the exemptions of sawmills employing 10 or less, liberalized benefits, and accelerated claims administration. Illinois raised by 10 per cent the maximum amount of benefit payable in fatal accident and occupational disease cases. Maryland provided a fund from fines collected from no-insurance employers to pay awards against such employers; also transferred State fund to five new per diem Commissioners of the State Accident Fund, and adopted an anti-social waiver system for previously injured employees. Ohio raised the maximum weekly benefit to \$21, and provided for a survey of compensation administration. Washington increased benefits, and changed from schedule to general coverage for occupational diseases. Oklahoma prepared for popular vote on inclusion of death benefits by constitutional amendment. Utah transferred the State fund from the industrial commission to the finance department, and established schedule occupational disease compensation. Montana extended welfare relief to silicotics, and Pennsylvania finally made provision for actual payment of the State's share of compensation to silicotics. Rhode Island made comprehensive improvements in both compensation law and its administration, swinging away from court toward commission enforcement. Massachusetts required no-insurance employers to post notice that their employees are not covered, while North Carolina and Ohio facilitated employee suits against no-insurance employers to prevent removal of property from the State.

Labor Relations. Sixteen States enacted anti-sabotage laws while California for the emergency outlawed the secondary boycott and refusals to handle "hot cargo." Maryland prohibited sit-down strikes. Texas prohibited interference with persons engaged in any lawful employment and Georgia provided for compulsory 30-day cooling-off periods. New Jersey set up a per diem board of mediation in

the labor department and enacted an anti-injunction law. North Carolina authorized a conciliation service in the labor department but made no special appropriation. Rhode Island created a per diem "Little Wagner" labor relations act. On the Federal level a presidential National Defense Mediation Board (q.v.) functioned temporarily until snagged on the closed shop issue in the "captive mine" case.

Child Labor. The outstanding progress against child labor was extension of legislation in Florida to establish the 16-year minimum age for factory work at any time, and for all work during school hours, but with a minimum limit for non-factory work outside of school hours of only 10 years. For minors under 16, the 8-hour day and 40-hour week limited to 6 days is established with prohibition of employment after 8 p.m. and before 6:30 a.m. All agricultural and domestic service outside school hours is exempted, as well as such service for parents at any time at the child's own home. There are also some variations for theatrical and street employments, but employment of boys under 16 and girls under 18 as messengers is prohibited, as well as all under 18 for a specific list of hazardous occupations to be extended by the administration. Employment certificates up to 16 and age certificates between 16 and 18 are required. California relaxed regulations for its theaters and motion picture, radio broadcasting and television studios, permitting appearances of children of 8 (formerly 15), and of any age in radio and television studios on written consent of the labor commissioner. Indiana, by amendment, exempted newspaper carriers from the protection of her child labor law.

Health and Safety. Colorado placed a tax upon all workmen's compensation insurance premiums to finance safety work under the Industrial Commission. Oregon added a 2½ per cent premium tax for safety work in addition to the existing 10 per cent allowed to State compensation fund for expenses of administration. To minimum wage administration in the District of Columbia was added industrial health and safety inspection with rule-making authority for appropriate control under the new "minimum Wage and Industrial Safety Board." Several States, including Colorado, Illinois, Montana, Ohio, Pennsylvania, West Virginia, and Wyoming, strengthened their mine safety laws, and boiler inspection administration was provided in Iowa and Utah. Illinois adopted rock dusting to prevent the spread of coal dust explosions. Outstanding national legislation was provision for Federal coal mine inspection with right of entry and authority to publish findings on health and safety.

Wages and Hours. The "kick-back" on wages set by collective bargaining agreements was prohibited in Illinois, and the public body awarding public work contracts was required to observe the prevailing rate of wages. New Hampshire also extended the prevailing rate system, and prohibited wage "kick-backs." Nevada strengthened her public works provision for the prevailing wage rate. Vermont and Rhode Island extended their pay-day laws to cover additional employers, and the latter authorized the director of labor to collect unpaid wages up to \$200 per claim. Nebraska relaxed statutory hour regulations for females, and provided that fees for extension permits shall constitute a special fund for administrative costs, with rule-making authority given to the commissioner of labor. Relaxing standards in the name of national defense, Connecticut authorized the governor to extend beyond 8 weeks the 10-hour day and 55-

hour week emergency exemption permitted women and minors in manufacturing and mechanical establishments. Puerto Rico enacted a wage-hour law for all workers except domestic servants, and created a board which after industry committees have recommended standards is to hold public hearings and issue mandatory orders on minimum wage and maximum hours as well as on health and safety. On October 4 Hawaii approved a wage-hour plan without provision for wage boards. Minnesota by statute authorized its Industrial Commission to cooperate with the U.S. Department of Labor in enforcing the Fair Labor Standards Act and to be reimbursed for such assistance. Congress suspended several Federal 8-hour laws, provided time and a half is paid for overtime.

Miscellaneous. Industrial home work legislation was importantly strengthened in the one State of New Jersey where a substitute statute will extend wide powers of prohibition to the labor commissioner in addition to the statutory listing of certain prohibited articles. Apprenticeship laws were enacted in Arizona, Montana, New York, and Washington. Arkansas required persons soliciting advertisements for labor organizations to file bond. Kansas and Nebraska imposed penalties on labor organizations discriminating because of race or color. Texas required investigation and favorable recommendation by the commissioner of labor statistics before the Secretary of State may issue or amend a charter granted to organize wage earners.

Administration. Alaska created for the first time a department of labor, headed by a 4-year commissioner. Through State government reorganizations Colorado placed its Industrial Commission without change in an executive department and Indiana transferred its numerous labor law enforcing agencies to a new department of public works and commerce. Connecticut increased by 7 her inspection staff, and the District of Columbia expanded her minimum wage administration to cover health and safety under a new-named Minimum Wage and Industrial Safety Board. Idaho substituted a State fund manager for the existing compensation insurance commission. An investigating commission was created in Indiana to report in 1943 upon needed minimum wage, maximum hour, and labor relations legislation. Minnesota established an interim committee to report on general occupational disease coverage instead of the existing schedule. Nevada transferred employment security to a special new department. Ohio created a Senate committee to survey compensation administration. Wyoming authorized the health board to study occupational disease and report to the governor by Jan. 1, 1943. Congress eliminated mediation functions of the Maritime Labor Board and extended it only to June 30, 1942, with vanishing appropriation. For the first time Federal authority to enter and inspect coal mines and to publish the findings was granted by Congress, the work to be done in cooperation with the Bureau of Mines under the Secretary of the Interior through a large qualified staff selected under the civil service law. Meanwhile, special national defense mediation was provided through executive order, while Congress in an effort to curb strikes prepared for drastic legislation which was indefinitely postponed with the coming of war.

It is important to remember that any annual summary of labor laws enacted by the legislatures does not contain all of the year's new legal regulations for the protection of labor. With the rapid development of "administrative labor legislation" there is year by year a substantial stream of rules

or orders—sometimes in the form of safety codes running to many printed pages—which have the force and effect of law. See articles on States under *Legislation*.

LABRADOR. See under NEWFOUNDLAND.

LABUAN. See BRITISH MALAYA.

LACROSSE. Johns Hopkins University returned to the top in lacrosse in 1941 after a series of disappointing seasons. The Marylanders went through undefeated, supplanted the University of Maryland as national champions and also gained a leg on the Wilson Wingate Memorial Trophy. The Johns Hopkins team topped its intercollegiate record by whipping the Mount Washington Club of Baltimore, handing the Mount Washington team its first defeat in two campaigns.

For the first time lacrosse was played on mid-Western campuses, and Kenyon College, Oberlin, and the University of Michigan sported teams. In the annual North-South game, the Southerners squeezed out a 7-6 victory when Lazenby of Navy scored just before the final whistle.

LATVIA. A former Baltic state, which proclaimed its independence from Soviet Russia Nov. 18, 1918. It was reannexed to the U.S.S.R. as a constituent republic Aug. 5, 1940, and occupied by German troops in July, 1941. Capital, Riga.

Area and Population. Area, 25,402 square miles; estimated population on Dec. 31, 1939, 1,951,000. About 35 per cent of the population lives in communities of 2,000 or more. Living births in 1939 numbered 36,932 (18.5 per 1,000); deaths, 27,827 (13.9 per 1,000). The population of Riga in 1939 was 393,211; of other towns at the 1935 census: Liepaja (Libau), 57,098; Daugavpils (Dvinsk), 45,160; Jelgava (Mitau), 34,099.

Education and Religion. At the 1930 census, 13.6 per cent of the population 10 years of age and over were illiterate. In 1938-39 there were 1,895 elementary schools, with 229,825 pupils; 114 secondary schools, with 25,225 pupils; 135 technical and vocational schools, with 11,442 students; and one university (at Riga), with 7,281 students. At the 1935 census, 56.13 per cent of the inhabitants

were Protestants, 24.45 Roman Catholics, 14.4 per cent Greek Catholics and members of the Orthodox Church, and 4.79 per cent Jews.

Production. Agriculture, stock raising, lumbering, and manufacturing are the principal occupations. Yields of the chief crops in 1939 were (in metric tons): Wheat, 198,700; barley, 209,000; rye, 429,700; oats, 450,300; potatoes, 1,640,100; beet sugar, 36,000 in 1939-40; linseed, 25,000. Livestock in 1939 included 1,271,720 cattle, 1,469,570 sheep, 891,470 swine, and 414,470 horses. State and private forests covered 4,317,482 acres and produced 3,489,250 cubic meters of timber in 1937-38. There were 5,977 industrial enterprises with 98,497 employees on Dec. 31, 1938. Metallurgy, textiles, wood-working, foodstuffs, and chemicals were the principal manufacturing lines.

Foreign Trade, etc. Merchandise imports in 1939 were 224,600,000 lats; exports, 228,100,000 lats. Prewar trade was mainly with Germany and the United Kingdom. For the fiscal year ended Mar. 31, 1940, revenue was estimated at 198,852,000 lats; expenditure, 198,696,000 lats. As of Mar. 31, 1940, the public debt totaled 197,200,000 lats (internal, 51,900,000; external, 145,300,000). Average exchange value of the lat, \$0.1938 in 1938 and \$0.1852 in 1939.

At the beginning of 1940 there were about 2,075 miles of railway lines, 58,730 miles of roads, 2,775 miles of inland waterways. The Latvian merchant marine in 1939 comprised 194,000 gross tons.

Government. The democratic Constitution adopted by a Constituent Assembly on Feb. 15, 1922, was suspended May 15, 1934, when a *de facto* anti-Communist dictatorship was established by the government headed by Premier Karlis Ulmanis. Parliament was dissolved, political parties abolished, and legislative functions were assumed by the Ulmanis Cabinet. When the term of President Kvisiis expired Apr. 11, 1936, Dr. Ulmanis assumed the Presidency in addition to the Premiership. On Oct. 5, 1939, the Latvian Government yielded to a Soviet ultimatum and signed a mutual assistance pact authorizing the establishment of Soviet military, naval, and air bases in Latvia, but safeguarding the republic's independence. On June 16, 1940, Moscow demanded establishment of a pro-Soviet government. Latvia was invaded June 17, a pro-Soviet regime was set up June 20, and on July 14-15 "managed" elections produced a solidly pro-Communist parliament, which met July 21 and petitioned for Latvia's admission into the Soviet Union. The petition was granted by the Supreme Soviet in Moscow August 5 and ratified by the Latvian parliament August 24-25. Meanwhile sovietization of Latvia was carried out (see YEAR BOOK for 1940, p. 400-401).

History. The German attack upon the Soviet Union of June 22, 1941, was accompanied by an organized rising against the Soviet troops and pro-Communist regime in Latvia by the anti-Communist elements of the population. According to German sources, some 60,000 Latvians took the field (apparently with arms supplied by Germany) and assisted the Reich's forces in expelling Soviet troops. The Germans assisted in preparing this uprising through Latvians who had taken refuge in the Reich at the time of the Soviet occupation in 1940.

The German invasion unleashed a bitter civil war in the rural districts between Latvian patriots and Soviet partisans. This merciless struggle continued even after the German armies had swept over Latvia into Estonia in pursuit of the Red Army (see WORLD WAR). According to a statement issued

by the Latvian Minister in Washington June 25, Soviet rule had been marked by "communistic terrorism," destruction of the social, political, and economic order, and suppression of religious life, all of which produced "indescribable, inhuman sufferings."

Apparently the Latvian exiles in Germany believed the Reich would assist in restoring Latvia's freedom. A Latvian "government in exile" proclaimed the country's independence over the Koenigsberg (Germany) radio on June 23. But when German military control was established, the Latvian nationalists met the same fate as those in the other Baltic republics (see ESTONIA under *History*). After the Latvian exiles in the Reich refused to form a German-controlled regime at Riga, Latvia became a district in Germany's new Ostland Province, with Otto Drechsler, former Mayor of Lubeck, as German Commissioner General.

Looking to Britain and the United States for support, Latvian patriots commenced a struggle to throw off German rule. On June 25 the Latvian Minister in Washington formally repudiated German as well as Soviet control over the republic. He continued to be recognized by the U.S. Government as the legal representative of the Latvian Government.

Washington. "Legislation," 16 *Wash. L. Rev.* 59. The reapportionment act of Congress, based on the 1940 census, requires redistricting in many states. Some, like Nebraska (which lost a member) have already performed this duty, others, like Pennsylvania, leave it to special sessions, but the Council of State Governments finds that 17 States "have neglected this basic responsibility for 20 years or more, several others . . . for a shorter period."

British Empire and Commonwealth. "Crisis Legislation in Britain," 40 *Columbia L. Rev.* 1309, "Laws of the British Empire," 4 *U. of Toronto L. Jnl.* 167

Canada. "Survey of Legislation," *ib.* 172-79. Legislative approval of administrative practice, inferred from appropriation of funds derived therefrom. *Brooks v Dewar*, 313 *U.S.* 254.

Executive. "Constitutional Powers of the President," 27 *A.B.A. Jnl.* 485 (E. Foley, Jr.); "The President, Congress and Foreign Relations," 29 *Cal. L. Rev.* 565 (H. W. Jones); "Veto of the Logan-Walter Bill," 6 *Jno. Marshall L. Quar.* 269 (Cf. Pound, 27 *A.B.A. Jnl.* 133); "Illinois Governor's Veto Power," *ib.* 277 (H. A. Peterson).

Up to Apr. 11, 1941, President Roosevelt had made 75,984 nominations to office, of which 29,068 were of postmasters, most of whom are now under a modified civil service. Congress, by its defense legislation, especially the "Lease-Lend Law," has greatly extended executive power. On February 19, the Missouri Supreme Court in an unanimous opinion, ordered the legislature to seat Forest C. Donnell as governor.

Judicial. "Look at the Law," (1940, pp. 377. P. E. Jackson; a criticism of the American judicial system); "Non-Partisan Selection of Judges," 16 *Ind. L. Jnl.* 57 (L. L. Bomberger); Cf. 24 *Jnl. Am. Jud. Soc.* 194. In *Whitaker v. McLean*, 73 *D.C. App.* 259 (118 *Fed. 2d*) 596 because the trial judge (Goldsborough) had called the plaintiff "a son of a b—," the judgment was reversed.

Supreme Court. On January 20, Justice McReynolds, a member of the court since 1914, resigned,

effective February 21; on June 2 the court adjourned for its summer recess and Chief Justice Hughes, after serving as such since 1930, resigned, effective June 30. To succeed him the President, on June 12, nominated Justice H. F. Stone, thus following the precedent set in the appointment of Chief Justice White, and later in that of C. J. Hughes himself, of selecting as head of the court, one who was or had been a member thereof. For the two vacancies the President named Senator James F. Byrnes of South Carolina (27 A.B.A. Jnl. 475) and Attorney General Robert H. Jackson of New York, both taking office at the opening of the October, 1941-42 term, on the 6th of that month, the day following the death of former Justice Brandeis at the age of 85. "Mr Justice Black and the Supreme Court" 8 U. of Chicago L. Rev. 20, (V. M. Barnett) discusses favorably the justice's record and analyzes his judicial philosophy; work of the court for the 1939-40 term 27 Va. L. Rev. 253, 983 (Moore & Saks); "Business Law (except tax) Decisions," 1940-41 (Commerce Clearing House), "Suits by States," 26 Wash. U. Law Quar. 61 (C. F. Heady, Jr.). The U.S. Government is immune from suit in any court except as Congress has expressly consented thereto. *U.S. v. Sherwood*, 312 U.S. 584, (Cf. "U.S. Court of Claims," 29 Georgetown L. Jnl., 719 (E. E. Naylor)).

Constitutional Decisions. (See 14 So Cal L. Rev. 492, numerals at left indicate, art, sec, & par. of U.S. Const.) For decisions, see also articles on subject.

I, 2, makes no distinction between a primary, and a general, election, where the former is an integral or controlling feature of the procedure of choice, and a conspiracy to deprive an elector of his rights at such primary is punishable under secs. 19, 20 of the Federal Criminal Code. *U.S. v. Classic*, 313 U.S. 299.

I, 8 (3, interstate commerce). In segregating white and colored passengers, equality of service must be maintained, one furnished inferior facilities because of color is entitled to relief by the ICC *Mitchell v. U.S.*, 313 U.S. 80.

I, 8 (3) & Amendment X, authorize the Flood Control Acts of 1938 and 1940, in providing for construction of the Red River Denison Reservoir in Texas and Oklahoma. *Oklahoma, ex rel. Phillips, v. Atkinson Co.*, 313 U.S. 508.

I, 8 (3, 4). Regulation of aliens is an exclusively Federal prerogative and a State statute requiring them to register is invalid. *Hines v. Davidowitz*, 312 U.S. 52.

IV, 1, requiring "full faith and credit . . . to the . . . judicial proceedings of every other state," justifies a federal district court in declaring "satisfied," one of its judgments which had been attached and collected in another State. *Huron Holding Corp. v. Lincoln Mine Operating Co.*, 312 U.S. 183. (Cf. "Circumventing the 4th Amendment," 14 So. Cal. L. Rev. 359 [A. C. Grant].)

I, 8 (3) and Amendment XIV. A State statute penalizing the induction into the state of a non-resident "indigent person" is not a valid exercise of police power and obstructs interstate commerce. *Edwards v. California*, 313 U.S. 545.

I, 8 (4) & Amendment XIV. A discharge under the Bankruptcy Act, though it purports to release the debtor "from all of his provable debts," does not entitle one whose driver's license has been suspended under a State statute, for nonpayment of a judgment for damages caused by his operation of a car, to prevent the enforcement of such suspension. *Rettz v. Mealey*, 313 U.S. 542 (reaffirmed 62 S. Ct. Rep. 24).

Amendment XIV; not infringed by a State statute prohibiting parades or processions, though of religious groups, on public streets without "a special license." *Cox v. New Hampshire*, 312 U.S. 569.

Miscellaneous Decisions. Acts committed more than 100 miles from where the court sits are not "so near thereto as to obstruct the administration of justice," within the statutory definition of contempt (Fed. Jud. Code, sec. 268) *Nye v. U.S.*, 313 U.S. 33, criticizing, if not overruling, *Toledo Newspaper Co. v. U.S.*, 247 U.S. 402.

Under the War Claims Settlement Act of 1938, a certificate (for payment of Mixed Claims Commission awards) by the Secretary of State, is conclusive as against other awarders. *Z. & F. Assets Realization Corp. v. Hull*, 311 U.S. 470.

Lower Federal Courts. "District Courts: Jurisdictional Chaos," 35 Ill. L. Rev. 566.

Where a Federal court's jurisdiction is invoked for diversity of citizenship, it will follow the rule of the State wherein it sits, in awarding interest. *Klaxon v. Stentor etc. Co.*, 313 U.S. 487.

Before the American Law Institute on May 6, Chief Justice Hughes reported on the actual workings of the Administrative Office of United States Courts, which, he said, seeks to standardize and unify the mechanism of Federal judicial administration.

Juries. Right of Trial by, *Corcoran v. Chicago*, 373 Ill 367 (Comment, 19 Chicago-Kent L. Rev. 91); in civil actions, 47 W.Va. L. Quar. 13, "Exclusion of Negroes from," 9 Int. Jurid. Ass'n. Bull. 77; "State's Peremptory Challenges," *State v. Bohanon*, 64 Ohio App. 431 (Comment, 7 Ohio St. U. L. Jnl 80), "Jury Trials Compared," (Federal and Louisiana practice) 3 La. L. Rev. 422 (E. R. Deutsch); "Improper Communications to," *Stone v. U.S.*, 113 Fed. (2d) 70 (Comment, 14 So. Cal. L. Rev. 196); "Impeachment of Verdicts by Jurors," 13 Miss. L. Jnl. 257 (M Williams); 12 Rocky Mt. L. Rev. 222 (reviewing *Wharton v. People*, 104 Colo. 260.); "The Jury's Agreement—Ideal and Real," 20 Oreg. L. Rev. 189 (J. D. Barnett); "Secrecy of Grand Jury Proceedings," *Goodman v. U.S.*, 108 Fed. (2d) 516 (Comment, 16 Notre Dame Lawyer, 66).

Under the N.Y. Act of 1938, authorizing the jury, in convicting of first degree murder, to make a recommendation of clemency which the judge "may" accept, a notorious offender, Stanley Cole, despite such recommendation, was given the death sentence on February 17. Two other cases of 1941 are cited by critics of the jury system as illustrating its weakness, where prejudice or misplaced sympathy may figure. Joseph Spell, a Negro butler, was acquitted of criminally assaulting his employer, Mrs. J. K. Struber, Jr., his defense being that she had invited him. J. Warren Davis, retired judge of the third Federal circuit court of appeals, was tried twice for "selling justice." Each time the jury disagreed and one of the jurors, a Negro, gave as a reason that defendant "was an old man."

Other Causes Célèbres. "The Bertrand Russell Case," is the title of a volume "by nine scholars, edited by John Dewey and H. M. Kallen." The case is also the subject of legal articles in 53 Harv. L. Rev. 1192; 8 U. of Chicago L. Rev. 316; 10 Fordham L. Rev. 196. The deportation proceeding against Harry Bridges resulted in a finding by Presiding Inspector Sears that Bridges was a member of the Communist party and, therefore, subject to deportation. This was rejected by the Board of Immigration Appeals.

Other Courts. The 1941-42 juridical year of *Sacra Romana Rota* (1940 Y.B. 168) was opened at

Rome on October 3 with an address by Pope Pius XII, who disclosed that the court had applied recent psychological theories and declared that ecclesiastical jurisprudence should not neglect the advances of science. Doyen Grazibli had reported the disposition of 82 matrimonial causes in the preceding year, in 30 of which annulment was decreed (17 being handled gratuitously) 16 for lack of consent and 9 for impotence, irregular marriage, etc. The 12 *auditores* (judges) included one American priest. The 800-year-old English Court of Arches, which exercises final appellate jurisdiction over ecclesiastical causes in the province of Canterbury, held its first session, in nearly three years, at that city in 1941. An historic silver oar made in 1715, formerly the symbol of the colonial admiralty court in New York City, was presented to its successor, the U.S. District court on February 14.

Legal Profession. (Literature): In Germany, 27 A.B.A. Jnl. 294 (A. A. Herzberg; regards the profession as ruined); in the Civil Service, 15 St. John's L. Rev. 220 B. Rothman); in Court, *ib.* 5 (E. R. Buckner) "Report of the Conference on Law and Lawyers in the Modern World," 15 U. of Cincinnati L. Rev. 127. In *Gustafson v. V. C. Taylor & Sons, Inc.*, 138 Ohio St. 392, it was held that realtors might draft papers in property transfers without infringing the prohibition against practicing law. Mrs. Agnes M. Mulligan is about to observe her 50th anniversary as the first woman to receive a law degree in New York. On December 3 a Brooklyn grand jury recommended the disbarment, on 11 charges, of Alfred E. Smith, Jr., former City Councilman.

Legal Education. It is reported that enrollment in American law schools for the current academic year is 29.1 per cent less than for the preceding year. Part of this is doubtless due to the draft; but even before that there had been a decrease of 60 per cent in New York alone from 1928 (with 11,511 students) to 1940 with 4,608, which must be largely attributed to higher standards. At the March bar examination in that state, out of 772 applicants, only 317 were certified for admission.

Literature: "The Universities and the Law," 26 Ia. L. Rev. 691 (R. Pound); 7 Ohio St. U. L. Jnl. 3 (Id.); "The Law Student, 1941" 27 A.B.A. Jnl. 187 (L. Green; a brief review of legal education in the United States). "Law Schools and Reviews in England," *ib.* 431 (A. L. Goodhart); "English Lawyers and Law Schools," 7 Ohio St. U. L. Jnl. 164 (G. W. Rightmire); "The Problem of Teaching Private Law," 54 Harv. L. Rev. 775 (K. L. Llewellyn); "The Content of Courses in Legislation," 8 U. of Chicago L. Rev. 280. In the *Bar Examiner* (X, 84), J. E. Brenner, Secretary of the National Conference, proposes "a standard bar examination," patterned on those of the medical and accountants' professions.

Procedure. New rules of procedure, framed under state supreme court supervision, came into force on September 1 in Texas and Maryland. An article urging similar action by the Texas Criminal Appeals Court, appears in 27 A.B.A. Jnl. 91 (G. Simpson); another on the Maryland rules, *ib.* 558 (W. C. Chesnut); a third on "The Rule Making Power" in 2 Federal Rules Decisions, 67 (S. A. Harris) traces the history of authorized rule making by courts and finds it conferred in 21 states, but actively exercised in not more than 11. LEAD. Lead is one of the most plentiful of U.S.-produced metals and lead imports in 1940 increased 5.92 per cent: two facts which turned the United States into the custom smelting center of the world. Exports also were lower in 1940, hence the end of that year saw the United States with a reservoir in bonded warehouses of enough tonnage to meet all foreseen requirements of 1941.

Early in 1941 lead consumption began to increase with startling rapidity as defense industries expanded and non-defense industries began to substitute lead and its alloys for scarcer metals. Lead foil to wrap candy, cigarettes, and chewing gum was substituted for tin and aluminum foil; by the end of the year foil-makers had tripled their consumption. Paint and copper pipe manufacturers also turned to lead. It was put under export control, March 1941, to conserve supplies and to prevent its being acquired by unfriendly nations. Lead ore, matte, pigs, bars, and manufactures could not be exported to foreign countries without government license; lead pigments were added to the list in May. By the end of the year there was as grave a shortage in lead as in other non-ferrous metals. In October it was included in OPM's General Preference Order which covered the distribution of both imported and domestic lead and created a pool system for emergencies; and the price was fixed at

5.7¢ a lb. by the OPA. Since the entry of the United States into World War II the military demand for lead has increased so greatly that by the end of 1942 it is foreseen that no lead at all will go to civilian uses.

Total domestic production in 1941 was about 461,749 tons, a 1 per cent increase over 1940. More lead was imported in 1941 from foreign sources than ever since the domestic industry started. Imports of refined lead increased 60 per cent; exports fell 63 per cent. The Metal Reserve Co. imported 336,000 tons of pig lead from Mexico, Canada, Australia, and Peru:— 150,000 tons from Mexico, 40,000 from Peru, 96,000 from Canada. All of this was allocated along with domestic output by the OPM. Tonnage rate per year from Australia was 44,000 tons, but the November and December shipments did not arrive. The spread of the war to the Pacific bespoke more acute delays and even non-arrivals. There was a total available supply of lead in 1941 of 1,086,000 tons including imported and domestic ores and imports of pig recovered from scrap. In 1941 consumption was 1,000,000 tons, 25 per cent more than in 1940. The 1942 needs were estimated at 1,200,000 tons, of which 50,000 tons each month will have to go into Army, Navy, and Marine orders.

The United States has sufficient lead mining and smelting facilities to step up production for 1942 in large percentages. The price was the problem at the end of 1941. Producers claimed that raising the price from 5.7¢ to 7.5¢ a lb would make it possible for them to produce 100,000 tons more each month. Congress began investigations to ascertain whether or not this increase in price was actually needed to keep lead production in step with consumption demands. For production index, see BUSINESS REVIEW under *Minerals*.

LEAGUE OF NATIONS. The League of Nations experienced during 1941 the most difficult year in its history. As the war spread ever more widely over the world, its work was almost completely suspended except for certain limited activities in Geneva, Princeton, and Washington. Meetings had become almost impossible; the nations had chosen the extreme opposite method of settling their differences. Despite this, however, the League remained in being, with forty-eight nations still members, all its agencies subject to call, some of its more detailed work continuing slowly, and, by a war paradox, a considerably quickened discussion of the fundamental principles which had led to its creation.

The year also marked a certain drift on the part of the League back towards the American Continent whence it had drawn its original inspiration. As Europe became more and more overrun, Geneva increasingly cut off, the seat of the Court at the Hague occupied, and communications rendered extremely difficult, parts of the technical work and even of the general direction of the League moved towards the freer atmosphere of the New World.

The only regular meeting held during the year, indeed, was that in Montreal when the Supervisory Commission came together in July for the first time it had ever met outside Europe. The membership of this body, which had been given emergency powers over League affairs for the period of the war, also reflected the changed conditions, for its Continental European members were either unable to attend its sessions or were incommunicado, and new members were added, particularly from amongst representatives in the United States, to give a majority quickly available from North and South America and Britain. The Commission took the necessary steps for the continuation of League work,

fixed the budget for 1942 at 9,647,462 Swiss francs, about a million less than in 1941, and urged on Member States that it is "of the greatest importance for the future to keep up the framework of the League and not to lose the accumulated experience of more than twenty years of international cooperation and administration."

Another meeting in the Americas, which was an outgrowth of League work, was the Second American Conference of National Committees on Intellectual Cooperation in Havana in November. The seat of the central international agency in Paris having been taken over by the Nazis, representatives from all but two of the American Republics met to decide what course of action should be followed. Steps were taken for continuing regional cooperation pending the reestablishment of a universal system, as well as for improving cultural relations.

Meanwhile, the remaining permanent staff, despite the stringent economies of the two previous years, continued its activities in three different centers. The headquarters remained in Geneva, despite all difficulties, with some eighty officials actively on duty in the League's magnificent building which stands today as the sole common possession of practically all the world's nations. Notwithstanding the suspension of the League's normal work, there remained a considerable amount of technical work in connection with the maintenance of the central organization of the League and the fulfillment of various treaty and other obligations. Certain officials were following general developments, particularly as regards postwar problems, and others continued technical responsibilities in economics, finance, health, epidemics, mandates, and the like.

The two groups transferred to the United States in 1940 had fully resumed their work during 1941. The Economic, Financial, and Transit Department at Princeton concentrated on attempting to trace the major changes that were taking place in the economic structure of the world and on considering in advance some of the innumerable problems which will arise at the peace, while at the same time continuing its long-term studies on economic crises, population pressure, taxation, and other matters. Similarly, the anti-drug group became well established in Washington (see *NARCOTIC DRUGS CONTROL*).

Though most of the League's regular work had been suspended in a world at war, the discussion of the fundamental principles of international cooperation and organization upon which it had been based became greatly quickened as the war extended and people the world over began to ask whether it was leading. The most official expression of this preoccupation appeared in the Atlantic Charter which forecast "the establishment of a wider and permanent system of general security." Subsequently, also, the promulgation of the United Nations was interpreted in many quarters as another step in the same general direction. By the middle of the year a Gallup Poll brought out that "unnoticed and unheralded by even the shrewdest political observers over the past months, public opinion has undergone a marked reversal on the question of American membership in a League of Nations." Shortly after, Under-Secretary of State Sumner Welles expressed a widely developing view when he said, "I cannot believe that peoples of goodwill will not once more strive to realize the great ideal of an association of nations through which the freedom, the happiness, and the security of all peoples may be achieved."

ARTHUR SWEETSER.

LEASE-LEND. See under LEND-LEASE.

LEATHER. International trade in leather and skins was still further curtailed in 1941. Owing to a scarcity of shipping space, countries that raise large quantities of leathers and skins had difficulty in getting their products to manufacturing countries, causing surpluses in some places and scarcities in others. This caused many producing nations to go into the processing and manufacture of leather products and many manufacturing nations to develop the raising of hides and leathers. In Europe, raw material shortages, government regulation, scarcity of skilled labor, high production costs, and loss of foreign markets has made it impossible to maintain normal production of leather. Military requirements have been met at cost of civilian shortages.

In the United States, sale of wet salted and dry hides was constant and the flow from abroad augmented our greatly increased domestic slaughter giving us a record year's workings. Approximately 28 million cattle hides were sold, an increase of one-third over the previous five-year average, about 14 million calfskins and kips; sheep and lamb, 52 million skins, against the previous five year average of 32 million skins, and 50 million goats against a previous average of 40 million. A record U.S. Production of 500 million pairs of shoes (see SHOE INDUSTRY) has been responsible for the increased domestic production and importation of leather. The United States military forces have bought 16 million pairs of shoes using top grades of leather, but with little disruption of supply to civilians.

There were two significant events in the industry during the year. In June the Office of Production Management placed a ceiling on hides, kips, and calfskins in order to control the price of leather and shoes. It was successful and prevented any important increase in prices. In December OPM asked leather dealers to discontinue dealing in foreign hides and skins and assumed control of all imports. This is interpreted in official circles as a move to prevent speculative buying from forcing foreign hide and skin prices too high above domestic ceilings.

Light cow hides, the industry's barometer of prices, opened the year at 13 cents, rose to 17½ cents in May, then the government established a ceiling of 16 cents in June and the price closed at 15½ cents for the year. See SHOE INDUSTRY.

JOHN F. W. ANDERSON.

LEBANON, Republic of. See SYRIA AND LEBANON.

LEeward ISLANDS, British. A British West Indian colony, consisting of a federation of the four presidencies shown in the accompanying table.

Presidency (Capital)	Sq. mi.	Pop. (1939)
Antigua (St. John)	171	35,527
Barbuda and Redonda	69	1,000
Montserrat (Plymouth)	32½	13,670
St. Kitts* and Nevis (Basseterre)	152	37,569
Nevis	50	13,900
Anguilla	34	6,717
Virgin Islands ^b (Road Town)	67	6,364
Leeward Islands^c (St. John)	422½	93,130

* Also known as St. Christopher. ^b Including Sombroero
^c The presidency of Dominica was transferred from the Leeward Islands to the Windward Islands on Jan. 1, 1940.

Chief towns (approximate 1938 populations): St. John, 10,000; Basseterre, 8,000; Plymouth, 2,000; Charlestown, 1,200; Road Town, 400. Education (1938): 112 schools and 17,659 pupils.

Production and Trade. Sugar, limes, oranges, lemons, grapefruit, cotton, bananas, coconuts, salt, and tobacco are the principal products. Trade (1939): £591,034 for imports and £713,734 for exports. Sugar, cotton, and limes were the main exports. Shipping (1939): 6,409,408 tons entered and cleared the ports. At the end of 1940 there were 750 miles of roads.

Government. Finance (1939): £396,197 for revenue and £411,789 for expenditure; public debt, £330,276. The administration for the whole colony is headed by a governor, assisted by a federal executive council and a general legislative council. For local government each of the presidencies of Antigua, Montserrat, and St. Kitts-Nevis have their own executive and legislative councils while the Virgin Islands has an executive council. Governor and Commander-in-Chief, Sir Douglas Jardine (appointed July 4, 1941). For an account of proposals for agricultural development and welfare in the Leeward Islands, consult the *Crown Colonist* (London, June, 1941; p. 261). See ANTIGUA; BRITISH WEST INDIES.

LEGISLATION. See UNITED STATES, the articles on the States and foreign countries; LABOR LEGISLATION, TAXATION, ETC.

LEND-LEASE ADMINISTRATION. The Lend-Lease Act was designed and enacted by the Congress in order to enable the President effectively to carry out the desire of the American people to furnish material aid to all nations resisting Axis aggression. With the United States now actively engaged in the war on the side of those same nations the lend-lease program continues to be a means by which the vast material resources of the United States may be pooled with those of our Allies throughout the World.

From the beginning the lend-lease program has been the joint responsibility of a central administrative unit and of the various procuring agencies of Government. The present organization, known as the Office of Lend-Lease Administration, was established by the Executive Order of Oct. 28, 1941. Under that Order the Administrator was given authority, within the limits of such general policies as the President might from time to time prescribe, to exercise all of the powers of the President under the Lend-Lease Act "with respect to any country whose defense the President shall have found to be vital to the defense of the United States"

In order to insure that the Lend-Lease program will continue to be in accord with American foreign policy and economic defense the Executive Order of October 28 also provided that the master agreements which are from time to time entered into with the various countries receiving lend-lease aid shall be negotiated by the State Department with the advice of the Board of Economic Warfare and the Lend-Lease Administration, and that all matters affecting the economic defense of the United States are to be cleared with the Board of Economic Warfare.

The broad delegation made to the Lend-Lease Administrator under the October 28 Executive Order has materially speeded up the operation of the lend-lease program.

Legal Requirements. The Lend-Lease Act set forth several conditions precedent to furnishing aid to any country. Probably the most important of these is that such aid shall be made available only to those countries whose defense the President finds to be vital to the defense of the United States. Such findings have so far been made by the President

with respect to the following countries: Argentina, Bolivia, Brazil, British Empire, Chile, China, Colombia, Costa Rica, Cuba, Czechoslovakia, Dominican Republic, Ecuador, Egypt, El Salvador, Free Belgium, Free France, Greece, Guatemala, Haiti, Honduras, Iceland, Mexico, The Netherlands, Nicaragua, Norway, Panama, Paraguay, Peru, Poland, Russia, Turkey, Uruguay, Venezuela, Yugoslavia.

Other legal prerequisites to the extending of lend-lease aid are the requirement, contained in Section 3(a) (2) that the Chief of Staff or the Chief of Naval Operations be consulted with respect to transfers of materials procured out of appropriations made before the passage of the Lend-Lease Act, and the stipulations, contained in Sections 4 and 7, that assurances be obtained from lend-lease aid recipients that materials received under the Act will not be allowed out of their immediate control and that American patent rights in articles or information transferred will be protected. Section 5(b) requires that a report to the Congress be made every ninety days.

Funds. Appropriations made specifically for lend-lease purposes totaled about 13 billion dollars on Jan. 15, 1942, with additional authority, as set forth in Section 3(a) (2) of the Lend-Lease Act, as amended by the Third Supplemental National Defense Appropriation Act, 1942, for transfers of up to \$2,800,000,000 of material procured out of non-lend-lease appropriations. Two billion dollars of this sum is made available for transfers from War Department stocks, and the remaining 800 million is available for all other lend-lease procuring agencies, such as the Navy, Treasury, and Agriculture Departments and the Maritime Commission. The latter, however, may lease to lend-lease nations any ships built with the \$698,650,000 appropriated for the construction of vessels in the First Supplemental National Defense Appropriation Act, 1942.

Lend-Lease Methods. The Lend-Lease Administration is not a purchasing agency. Its task is to coordinate and expedite the Lend-Lease program. The task of supplying the items transferred falls upon the War, Navy, Treasury, and Agriculture Departments, the Maritime Commission and any other agencies which might be appropriate. The requests of foreign governments for aid are submitted to the Lend-Lease Administration and the various governmental procuring agencies by the representatives of the Lend-Lease countries. If such requests are approved, funds are then allotted to the procuring agencies by the Lend-Lease Administration to cover the expense of procuring, packing, storing, and transporting the materials authorized to be transferred to the places where they are most needed. Such allotments of funds are, of course, not necessary where the item in question may be transferred from stock already on hand.

Requisitions for defense aid are submitted, wherever possible, in the form of comprehensive programs, rather than singly, so that the lend-lease needs of our allies may be more accurately surveyed and fitted into America's total war program. Provision is made, of course, for individual items, the need for which cannot be foretold in advance, to be separately submitted and reviewed. All requests for aid, however, whether submitted upon a program or individual basis, are carefully appraised, and approved only if they conform to the following standards:

1. The defense aid requested must be for a specific use essential to the war or defense effort of a country whose defense the President has found vital to the defense of the United States.

2. Funds must be available for the defense aid requested and must be expended for the items most urgently needed in the war effort.

3. The defense aid requested must be scheduled for use where it can best contribute to the total war effort.

4. The defense aid requested must be obtainable at as low a cost, in terms of Lend-Lease funds and of component critical materials, as is consistent with the needs which it is designated to meet.

5. The defense aid requested must not be obtainable, as a practical matter, by payment therefor in American dollars or other currency available to the requisitioning country.

Lend-Lease Agreements. In addition to the commitments required by Sections 4 and 7 of the Act, formal agreements have been concluded by the State Department with a number of countries, and negotiations with others are in process. These agreements are designed to record the understanding between the United States and the nations receiving lend-lease aid with respect to such matters as the terms and conditions of repayments under the Act, the protection of American interests, including patent rights, in the articles or information transferred, matters pertaining to the common defense of the signatories, and the supply and distribution abroad of materials transferred.

Examples of Lend-Lease Aid. Over 11 billion dollars had been allocated on Jan. 15, 1942, for the procuring of war supplies, and aid actually rendered equaled over a billion and a half dollars of this amount on that date. The arms, ammunition, planes, tanks, ships, motor vehicles, raw materials, tools, food, medicine, and defense articles of all sorts which this money is paying for is flowing in great quantities to the British, the Russians, the Chinese, the Dutch, the Australians, the Latin Americans, and the other allies of America all over the world.

In addition, lend-lease funds are maintaining military missions in the Middle East, in Russia, and in China. The Air Corps Ferrying Command has been established, and delivers aircraft to lend-lease nations around the world. British and Dutch and other allied ships are being repaired in American ports. Thousands of R.A.F. pilots are being trained in U.S. Army and Navy flying schools. Technicians have been sent to Britain, to China, to Africa, and to the Middle East, to assist in the assembling, repairing, and maintaining of military equipment supplied under the lend-lease program. Ships carrying lend-lease cargoes are sailing all the seas. The productive capacity of factories built with lend-lease funds is swelling the total output of the United States. These are but examples of the way in which, through the Lend-Lease Act, the resources of America have been dedicated to the cause of victory and freedom.

See BUSINESS REVIEW; UNITED STATES under *Foreign Affairs, Latin America, Defense*. See also the industries and products affected, as AGRICULTURE, DAIRYING, LIVESTOCK, SHIPBUILDING; the countries which received lend-lease aid, notably BOLIVIA, BRAZIL, CANADA, CHILE, CHINA, COSTA RICA, GREAT BRITAIN, GREECE, MEXICO, NETHERLANDS INDIES, NEW ZEALAND, TURKEY, URUGUAY, YUGOSLAVIA, under *History*.

E. R. STETTINIUS, JR.

LIAONING. See CHINA under *Area and Population*.

LIBERIA. A Negro republic, founded in 1847 by freed slaves from the United States, on the west coast of Africa between Sierra Leone and French Ivory Coast. Capital, Monrovia (pop. about 10,000).

Area and Population. With 350 miles of coastline and a total area of about 43,000 square miles, Liberia has a population estimated at between 1,500,000 and 2,000,000. Only about 60,000, residing mainly along the coast, may be considered civilized.

Among them are some 12,000 American-Liberians, who form the governing and intellectual class. The primitive natives of the interior belong to six main and numerous smaller tribes, each with its own language. English is the language of government and commerce. There were 261 United States citizens in Liberia on Jan. 1, 1941.

Education and Religion. About 10,000 pupils were attending 70 government and 80 mission schools in 1938. There are two colleges at Monrovia (one government and one Methodist) and an industrial and vocational school at Kakata. The American-Liberians are Protestant Christians; the indigenous tribes, mainly pagans and Moslems, with some Christian converts.

Defense. There is an enlisted Frontier Force of 750 men and a militia of some 4,000 men, organized in 7 infantry regiments.

Production. Rubber, produced on the Firestone Company's 1,000,000-acre concession at Marshall, on the coast 40 miles south of Monrovia, is the chief export crop. The 77,000 acres under cultivation in 1941 produced more than 14,000,000 lb. of dry rubber annually. Native coffee, cacao, sugar cane, cotton, passava fiber, palm oil and kernels, kola nuts, rice, oil seeds, and gold are produced in relatively small quantities. There are rich undeveloped forest, mineral, and agricultural resources.

Foreign Trade. Merchandise imports in 1940 were \$2,235,961 (\$2,002,864 in 1939); exports, \$3,242,290 (\$2,714,133 in 1939). The United States supplied \$1,509,608 worth of imports and took exports worth \$2,895,312 in 1940. Rubber exports were 14,015,614 lb. valued at \$2,645,573. Machinery and apparatus, motor trucks, automobile accessories, chemicals, and iron and steel containers were the leading imports.

Finance. The 1941 budget estimates balanced at \$674,800. The largest appropriations were: Debt service, \$149,800; War Department, \$91,237. Actual collections in 1940 were \$898,617 (estimated receipts, \$675,000). External bonded debt, \$1,486,000 on Dec. 31, 1939; internal floating debt, \$200,100. The unit of currency is the Liberian dollar, which was pegged to sterling at 4 shillings 2 pence. Under the terms of a loan contract, the government has an American financial adviser.

Transportation. Transportation in the interior is carried on mostly by porters. There are no railways, only about 300 miles of road suitable for motor traffic, and little animal transport. The St. Paul River is navigable for 25 miles. In 1941 Monrovia became an alternate stopping point in the ferry service for military planes established between the United States and Egypt, and a regular station on the new Pan American Airways route between New York and Leopoldville, Belgian Congo. Marshall and Monrovia are the principal harbors. All cargoes must be loaded or unloaded by surfboats or lighters.

Government. While the Constitution is modeled on that of the United States, suffrage is restricted to Negro landowners. The True Whig party, dominated by a small oligarchy of American-Liberian families at Monrovia, has controlled all branches of the government since 1878. President in 1941, Edwin Barclay, inaugurated Jan. 6, 1936, for an eight-year term.

History. President Roosevelt's announcement, in August, 1941, of a new air line to be operated by Pan American Airways between New York and Leopoldville, Belgian Congo, created a role for Monrovia as the natural landfall and first African station for eastbound airplanes on the new route (see AERONAUTICS). For the first time in a long and close relation with the United States Liberia

assumed a specific usefulness for carrying out American external policy. The treaty of conciliation that the United States and Liberia had signed in 1939 came into force in 1941 by the exchange of ratifications in March and was proclaimed at Washington April 4. It provided a permanent international committee for the investigation of any cause of dispute between the two governments. A legation building, the first owned there by the U.S. Government, was opened at Monrovia, March 31. The Firestone interests, American makers of tires, found their developing plantation in Liberia much enhanced in importance at the end of 1941, as Japanese invasion in the East Indies threatened much of the Occident's main source of crude rubber. The Firestones' Liberian enterprise promoted the cultivation of rice to feed its native workers.

LIBRARY PROGRESS. The end of the year 1941 found libraries adjusting their services to emergency conditions produced by the declaration of war. The mobilization of the civilian population of the country for defense activities at home, and for better understanding of democracy's meaning and place in a world at war, afforded libraries a new opportunity to serve, through the use of books, in a national crisis. Physical fitness, social welfare, participation in civilian defense, training for defense industries were recognized as objectives which could be achieved more swiftly through wide use of printed materials, and libraries immediately turned their energies to supplying literature on these subjects in great volume.

War-information centers in libraries were in process of establishment all over the country as the year closed, notably in cities such as New York, Denver, Portland, Ore., and Gary, Ind. Technical services to industry continued. Almost every library reported increased demand for books on industrial topics, skills essential in manufacturing necessary materials, and reports which save duplication of effort in cases where independent research workers are aiming at similar results. Portland, Ore., reported highly confidential investigations on behalf of the U.S. Army, in addition to services to the local shipbuilding industries, and to municipal officials responsible for safeguarding necessary public utilities. Many attempts were made to obtain government funds to make these special emergency services immediately available. It was impossible in most communities to satisfy the demands fully because book supply was inadequate.

Bills introduced into Congress which contained enabling legislation for Federal aid to libraries were the Harrison-Thomas Bill, the Lanham Bill, its successor, H.R.4545 and H.R.4926. Efforts to have libraries specifically included in the Lanham Bill and in H.R.4545 (for community facilities in defense areas) were ably supported by Charles P. Taft, Assistant Coordinator of Health and Welfare, but proved unsuccessful. Libraries in camps and army hospitals have been established under the Morale Division of the U.S. Army, however, and a book fund of \$400,000 was appropriated for this purpose. Technical libraries for the Army Air Corps are under separate organization. Libraries at naval stations and on ships have been in operation by the Navy Department for several years, but have undergone marked expansion. A national book drive to supplement the resources of the Army and Navy was organized late in 1941 by the American Library Association, the United Service Organizations, and the American Red Cross, under the direction of Miss Althea Warren, librarian of the Los Angeles Public Library.

State Aid. In State aid, more legislative progress was made than in any previous year. Arkansas, Louisiana, Pennsylvania, and Vermont increased their State appropriations for public library service. Michigan voted \$500,000 for a two year period, after State aid had lapsed for the previous biennium. For the first time, Michigan appointed a professionally qualified State librarian. North Carolina earmarked \$200,000 for the development of libraries in that State, and Ohio, Nova Scotia, and British Columbia continued public support on a State-wide basis.

Regional library service shows definite progress. Massachusetts, Vermont, and New Hampshire have bookmobile services that cover large areas. Libraries to serve the Cherokee Dam area in Tennessee (Jefferson, Grainger, Hamblen, and Hawkins Counties) constitute the fifth regional library demonstration organized by the Tennessee Valley Authority and operated under contract with an established local library agency. WPA demonstrations are responsible for regional service in Georgia. Official WPA figures in April, 1941, show forty-one State-wide library projects now in operation. Louisiana, Virginia, California, British Columbia, Prince Edward Island, and the British West Indies provide library service on the regional plan in all or part of their territory. (For fuller information see *A.L.A. Bulletin*, Oct. 15, 1941.)

Statistics of Service. The most recent statistics for library coverage in the United States were compiled in 1939 and are based on the 1930 census. These figures show 47,000,000 people in the United States and Canada were without easy access to public libraries. New figures, based on the 1940 census, will be available early in 1942. The February number of the *A.L.A. Bulletin*, 1941, carried a tabulation of college and school library statistics for 1940, and a similar tabulation for public libraries appeared in the April number. Statistics of library income per capita show that, among 89 libraries serving populations of more than 100,000, only eight meet the minimum income desirable for good service, as prescribed by the American Library Association. These are Bridgeport, Conn., Cleveland, Ohio, Fort Wayne, Ind., Newark, N.J., Pittsburgh (Old City), Penn., Providence, R.I., Rochester, N.Y., and Toledo, Ohio.

Adult Education. Education for economic security and a tenable world peace based on democratic principles has become a major influence in shaping library service to adults. The American library as a whole has been fitting itself into the overall educational picture, by cooperating with other agencies in focussing all educational forces on the same objective. New library methods have been evolved, such as the film forum, which combines documentary films, supplementary reading, and public forum discussion in programs sponsored by libraries and open to all members of a community. These have been successfully tried in cities such as Knoxville, Tennessee, Cleveland, Minneapolis, and New York, under the joint sponsorship of the American Film Center, the American Library Association, the American Association for Adult Education, and the American Association for Applied Psychology.

Special Services and Activities. Surveys of library needs related to defense were based on data gathered by the American Library Association from representative libraries all over the country, and were summarized in four reports: (1) Use of Library Materials in Vocational or Trade Training at Lower Levels, by R. Russell Munn; (2) Public Library Service and Needs, by R. Russell Munn;

(3) Study of Defense Activities of College and University Libraries, by a committee of the Association of College and Reference Libraries, Charles M. Mohrhardt, chairman; (4) Study of Book Needs, by Walter H. Kaiser.

The second annual report on notable acquisitions to American libraries, covering the period July 1, 1939 to June 30, 1940 was completed and was published in the *Library Quarterly*, July, 1941. The Union Catalog of the Library of Congress is making successful progress in centralizing information concerning the availability of American research materials.

Gifts, Grants, and Buildings. During 1941, the American Library Association continued to administer funds provided by the Carnegie Corporation (q.v.) for defense activities and for aid to libraries in war areas. Development of Latin American relations in the library field progresses with the financial aid of the Rockefeller Foundation (q.v.). A Carnegie Corporation grant of \$100,000, during 1941, was devoted to the development of libraries in colleges for Negroes, through the purchase of books.

Gifts of unusually valuable private collections were made during the year. The Boston Public Library received the Mathematics and Mathematical Physics Library, numbering several hundred volumes, given to the Library by Paul S. Bauer in memory of his father. The collection of Americana accumulated by Judge E. E. Robinson of San Francisco was given to Stanford University Library. The collection includes a large group of Colonial and Revolutionary newspapers. The Donald R. Dickey Library of Vertebrate Zoology, numbering 10,000 volumes, was presented to the University of California by the explorer's widow. The New York Public Library received the Beethoven Association's collection of music, pictures, manuscripts, musical instruments, and contract rights, as well as the residue of its funds. One of the finest and most valuable Conrad collections in existence went to Dartmouth College Library as the gift of George Matthew Adams. A collection of the works of Sarah Orne Jewett and the bulk of the estate of Jane Burbank were left to the Public Library of Portland, Me.

Gifts for library buildings include a children's library for Palo Alto, Calif., provided by Mrs. Lucie Stern. A \$2,000,000 trust fund was established for the Linda Hall Library at the University of Kansas City. Henry Edwin Sever left \$110,000 to the public library of Kahoka, Mo., of which \$100,000 must be spent on a library building; \$57,000 for a memorial library building in Liberty, Mo., was provided in the will of Frank Hughes.

The Ingersoll Memorial Building of the Brooklyn Public Library, begun in 1912, and rebuilt in 1938-39 at a cost of about \$5,000,000 was finished in 1941. Other new buildings completed during the year were Harvard University's Howard-Tilton Memorial Library at Tulane University, the Georgia State Women's College Library, the Hood College Library, the Joint University Libraries at Nashville, Tenn., and public libraries of White Plains, N.Y., Jacksonville, Fla., Passaic, N.J., and Glencoe, Ill.

Library Training and Personnel. Numerous institutes offering in-service training to librarians were conducted by library schools, State library extension agencies, and groups of members of the American Library Association. New courses were offered at the library schools of Louisiana State University, Drexel Institute of Technology, New Jersey College for Women, George Peabody College for Teachers, and Pratt Institute. Beginning in 1941, the first

year curriculum at Simmons College and the University of Michigan may be completed in summer sessions. The University of Illinois and the University of Michigan are helping to coordinate the library training programs given by all institutions in their States. About 1,500 students were graduated from accredited library schools during 1941, and of these approximately 100 received degrees for more than one year of graduate study.

A library school for Negroes was organized at Atlanta University, with the aid of a grant from the Carnegie Corporation. The first survey of a library school is in progress at the University of Illinois. Indiana was the only State to pass a general certification law which prescribes standard qualifications for librarians. Certification for school librarians became effective in the State of Michigan in July, 1941.

International Activities. Under terms of a grant from the Rockefeller Foundation, books continued to go to popular libraries in Europe, in spite of increasing transportation difficulties. The grant is administered by the American Library Association. For the first time, the Association was permitted under the grant to use funds for books for Greenland and Canada. Reading material from the United States was sent to internment camps in Canada. Books and magazines for research are being purchased and stored in the United States for delivery to scholarly European libraries after the war. Reciprocal arrangements are being considered, because of the difficulty of importing foreign research periodicals and books for American libraries. An American Library Association committee is negotiating for permission to buy important research literature in countries with which the United States is now at war, and is investigating the possibility of insuring the shipment of material detained at ports because of British and American regulations. The American Library in Paris is still operating under the supervision of the board of trustees, but the professional staff has been forced to return to the United States. A similar library, the Benjamin Franklin Library in Mexico City was established by the American Library Association in 1941, and is due to open in February, 1942. It will be a typical American public library, designed to serve a community of medium size, but there will be special emphasis on services of international importance, such as English and Spanish classes, recordings of readings of poetry and prose expressive of the American spirit. The library will act as an exchange center for research material from Mexico and the United States.

For statistics on college libraries, see table under UNIVERSITIES AND COLLEGES. See also *Library* under SOCIETIES.

Publications. Two Spanish texts in the library field were issued by the American Library Association during the year *Introducción a la Práctica Bibliotecaria en los Estados Unidos*, by Marion Carnovsky, and *La Biblioteca Pública en los Estados Unidos*, based on an earlier publication by Arthur E. Bostwick. Other publications are *Teacher-Librarian's Handbook*, by Mary P. Douglas, *Subject Index to Poetry*, by Herbert Bruncken, *Library Discount Control*, by Oscar Orman, *Principles of College Library Administration*, by William M. Randall and F. L. D. Goodrich, and *Cataloguers' and Classifiers' Yearbook No. 9*. The Association continues to issue six periodicals, the *A. L. A. Bulletin*, the *Booklist*, *College and Research Libraries*, the *Journal of Documentary Reproduction*, the *Hospital Book Guide* and the *Subscription Books Bulletin*.

Other publishers produced *School Library Service in the U.S.*, by A. L. Cecil and W. A. Hoops; *American Public Library Buildings*, by Joseph Wheeler and Alfred Githens; *Library Costs and Budgets* by Emma V. Baldwin and W. E. Marcus; and *The Bookman's Manual*, by Bessie Graham.

OLGA M. PETERSON.

LIBYA. An Italian colony in North Africa. Area, 679,358 square miles; population (Jan. 1, 1939), 888,401, including 793,225 natives (763,179 Moslems and 30,046 Jews), 89,098 Italians, and 6,078 other Europeans. Chief towns (with Jan. 1, 1939, populations): Tripoli, the capital (108,240), Bengasi (64,641), Misurata (45,097), Homs (34,940), and Derna (21,547). Ghadames, Sinauen, Mizda, Murzuk, and Ghat are important caravan stations in the interior.

Production and Trade. Barley, dates, olives, oranges, lemons, almonds, vegetables, salt, sponges, fish, and tobacco were the main products. Livestock (1938): 820,323 sheep, 726,006 goats, 69,670 cattle, 91,782 camels, 55,676 donkeys, mules, and horses. Trade (1938): 882,057,532 lire for imports and 108,961,545 lire for exports (lira averaged \$0.0526 for 1938, \$0.0520, 1939). Shipping (1938): 5,545 ships entered and landed 696,890 tons of freight and 127,458 passengers; 2,549 ships left with 76,190 tons of freight and 122,521 passengers. Roads (1940): 8,342 miles.

Government. Budget (1939-40): 600,115,000 lire. The colony comprises four provinces (Bengasi, Derna, Misurata, and Tripoli), and a military territory in the south (capital, Hun). During October of 1938, by decree, the four provinces were incorporated in the national territory of Italy. Governor and Commander of Armed Forces in Libya, Gen. Ettore Bastico, who was appointed July 26, 1941.

History. Early in 1941 the British Imperial Forces continued to make gains in Libya, the town of Bengasi being captured on Feb. 6, 1941. German air forces entered the campaign in January and German land forces, under the command of Gen. Erwin Rommel, commenced to enter Libya during the latter part of February. The German units began to attack on Mar. 24, 1941, and in about two months had reached the Egyptian border after having by-passed the fortified port of Tobruk, Libya, which was held by British Imperial troops. Many of the British troops had been withdrawn from Egypt and sent to Greece. Later the Germans penetrated into Egypt to Solum and Halfaya and then there was limited military action until Nov. 18, 1941, when the British launched a surprise offensive on a 130-mile front westward into Libya, which by the end of the year 1941, had reached Agedabia where British tanks and airplanes were engaging the remnants of General Rommel's Libyan army. See WORLD WAR.

LIECHTENSTEIN. A principality of Central Europe, adjoining Switzerland on the east. Area, 65 square miles; population (1938 estimate), 12,000. Capital, Vaduz. Corn, wine, fruit, wood, marble are the chief products. Main industries: Cotton spinning and weaving, leather goods, pottery, and livestock raising. Liechtenstein belongs to the Swiss Customs Union; Swiss currency is used. Budget estimates (1941): Revenue, 1,937,200 francs; expenditure, 1,918,705 francs. Public debt (Dec. 31, 1939), 5,600,000 francs (franc averaged \$0.2253 for 1939). Reigning Prince, Francis Joseph II (succeeded Aug. 25, 1938); Administrator, Dr. Joseph Hoop (appointed Aug. 4, 1928).

LIFE SAVING. See COAST GUARD, U.S.; RED CROSS Compare FIRST AID.

LIGHTHOUSES. See COAST GUARD, U.S.

LIGHTING. See ILLUMINATION.

LIPPE. See GERMANY under *Area and Population*.

LIQUOR LEGISLATION. See articles on States as COLORADO and IOWA under *Legislation*; TAXATION.

LIQUOR PRODUCTION. According to the report of the Commissioner of Internal Revenue, total United States tax collections on alcoholic beverages in the fiscal year 1941 amounted to \$829,056,178, as compared with \$624,253,156 in 1940. The increase of \$195,803,022 or 31.4 per cent was due principally to the higher rates imposed by the Revenue Act of 1940. A breakdown of the total shows that \$484,163,478 came from distilled spirits, \$13,186,464, from wines, and \$322,706,236 from fermented malt liquors. Taxes from distilled spirits came to 59 per cent of the total (55.6 in 1940), a record attributed by the Distilled Spirits Institute to imposition of additional Federal taxes for national defense, to concurrent increases of taxes by some States, and to the general upturn in business conditions. The Institute in a press release stated "... the Federal Government's share of the [distillers'] 1940 revenue would provide ten such battleships as the recently launched North Carolina, or fifteen modern aircraft carriers, or ninety-five destroyers or 125 submarines. This single year's collection by the Federal Treasury would provide a fleet of 1,500 huge four-motor bombing planes . . ."

During the fiscal year 11,826 stills were seized by Government officers, having an aggregate mash capacity of 2,056,230 gal., 6,868,078 gal. of mash were destroyed. Also, 275,396 gal. of spirits and 4,752 automobiles and trucks were seized. Total value of private property seized was \$2,424,565. Federal liquor law violators were arrested to the tune of 26,010 persons.

Regulations were altered in 1941 to permit the Basic Permit and Trade Practice Division of the Treasury's Alcohol Tax Unit to deal more stringently with liquor advertisements, especially with objectionable advertising containing patriotic themes, references to the Army or Navy, or appeals to the defense forces. The Division reviewed 76,849 advertisements appearing in 24,787 publications, making a slight increment over that of 1940. Reviews of 4,803 radio programs and 4,250 pieces of point-of-sale advertising were also made.

The accompanying table, condensed from *Industrial Reference Service*, U.S. Department of Commerce, shows the eight-month total, in the major categories, of all alcoholic beverage industries in the United States. According to the Women's Christian Temperance Union, the consumption of legally-sold liquor for the 1941 fiscal year was 1,834,392,741 gal., as compared with 1,849,970,467 in 1940, a decline of 15,577,726 gal. Per capita consumption dropped from 14.077 gal. to 13.96.

UNITED STATES SALES OF ALCOHOLIC BEVERAGES*

Beverage	[1,000 units]		% Change
	1941	1940	
All spirits (tax gal)	93,112	81,134	+14.8
Whisky	77,469	67,139	+15.4
Gin	9,642	9,230	+4.5
Rum	2,675	1,670	+60.2
Brandy	1,210	1,232	-1.1
Cordials and liqueurs	1,560	1,470	+6.1
All malt liquors (bbl)	38,098	35,711	+6.7
	January-July		
	1941	1940	
All wines (wine gal.)	54,112	47,216	+14.8
Still wines	52,574	45,452	+14.6
Vermouth	1,088	1,299	-17.0
Sparkling wines	449	465	-3.4

* Apparent total sales by manufacturers and importers of United States and Foreign Beverages

were made in technical books and poetry and drama.

British book production, much restricted by government control of paper, was 7,581 titles, about half of 1939's output, and about 63 per cent of 1940's. Against the trend, however, books of humor, aeronautics, and topography were more numerous than in either 1940 or 1939. At the year's end publishers were agitating for more liberal paper allowances.

Biography. Of American political figures: volumes 1 and 2 of Irving Brant's *James Madison*; Kenneth B. Umbreit's *Founding Fathers*; Henry Villard's *Lincoln on the Eve of '61*; George Dudley Seymour's *Documentary Life of Nathan Hale*; Alice Lounsberry's *Sir William Phips*; autobiographies: Florence Jaffray Harriman's *Mission to the North*; Hugh R. Wilson's *Diplomat between Wars*; *Holmes-Pollock Letters*, by Justice Holmes and Sir Frederick Pollock, *Backbone of the Herring*, by Curtis Bok; *Pillar to Post*, by Henry H. Curran. English political persons: *Catherine of Aragon*, by Garrett Mattingly; *America's Last King* (George III), by Manfred S. Guttmacher, *Victoria's Heir*, by George Dangerfield; *The Life of Francis Drake*, by A. E. W. Mason; autobiography: Viscount Cecil's *A Great Experiment*. Other political figures: *Grey Eminence* (Father Joseph), by Aldous Huxley; *Hernán Cortés*, by Salvador de Madariaga; *Amazon Throne*, Brazil's royal family, by Bertita Harding; *The Soong Sisters*, by Emily Hahn; autobiographies: Jan Valtin's *Out of the Night*, a revolutionary, *Toward Freedom*, by Jawaharlal Nehru; *Scum of the Earth*, by Arthur Koestler, a French concentration camp; *Men and Politics*, by Louis Fischer; *Ambassador Dodd's Diary*, edited by William E. Dodd, Jr., and Martha Dodd.

American literary figures: Arthur Hobson Quinn's *Edgar Allan Poe*, Frances Winwar's *American Giant* (Whitman), Whitman Bennett's *Whittier*; Forrest Wilson's *Crusader in Crinoline* (Harriet Beecher Stowe); autobiographies: H. L. Mencken's *Newspaper Days*; Ray Stannard Baker's *Native American*, Bayard Veiller's *The Fun I've Had*. About British literary: Peter Quennell's *Byron in Italy*; *The Letters of Joseph Addison*, edited by Walter Graham; Malcolm Elwin's *Savage Landor*; Hugh Kingsmill's *Johnson without Boswell*; Denis Mackail's *Barrie*, Jean Burton's *Sir Richard Burton's Wife*, autobiographies: John Masefield's *In the Mill*; G. B. Stern's *Another Part of the Forest*; Richard Aldington's *Life for Life's Sake*. Others: Crane Brinton's *Nietzsche*; E. M. Butler's *Rainer Maria Rilke*.

Also notable were: *The Secret Diary of William Byrd of Westover*, edited by Louis B. Wright and Marion Tilling; *Alfred I. du Pont*, by Marquis James; *William Henry Welch*, by Simon and James Thomas Flexner; *The Astors*, by Harvey O'Connor; *Tomorrow Will Come*, youth in Russia, by E. M. Almedingen; *Low Man on a Totem Pole*, by H. Allen Smith.

Criticism and History of Literature. Among general works were: *The Intent of the Critic*, edited by Donald A. Stauffer, *The New Criticism*, by John Crowe Ransom; *The Wound and the Bow*, by Edmund Wilson; *Invitation to Learning*, radio talks by Huntington Cairns, Mark Van Doren, Allen Tate; *Reason in Madness*, by Allen Tate; *Ten Heroes*, by David Malcolmson. Histories included: F. O. Matthiessen's *American Renaissance*, the age of Emerson and Whitman; Oscar Cargill's *Intellectual America*, 19th century and contemporary; René Willek's *The Rise of English Literary History*. Reference works: *The Cambridge Bibliography of Eng-*

LITERATURE. English and American. American book production fell off slightly during 1941, with 11,112 titles, 216 fewer than in 1940. Greatest losses were in religious books and histories, while gains

lish Literature, by F. W. Bateson; *The Concise Cambridge History of English Literature*, by George Sampson; *The Oxford Companion to American Literature*, by James D. Hart. About poetry: Louis MacNeice's *The Poetry of W. B. Yeats*; Logan Pearsall Smith's *Milton and His Modern Critics*; Richard Church's *Eight for Immortality*, modern poets. About fiction: Joseph Warren Beach's *American Fiction 1920-1940*; Howard Haycraft's *Murder for Pleasure*, about the detective story; Fannie E. Ratchford's *The Brontës' Web of Childhood*. About drama: *The Dramatic Imagination*, by Robert Edmund Jones; *New Theatres for Old*, by Mordecai Gorelik; *Advance from Broadway*, by Norris Houghton; *History of the Theatre*, by George Freedley and J. A. Reeves; *The Drama of Euripides*, by G. M. A. Grube.

Drama. A nice crop of comedies during 1941: *My Sister Eileen*, by Joseph Fields and Jerome Chodorov; *Arsenic and Old Lace*, by Joseph Kesselring; *The Beautiful People*, *Sweeney in the Trees*, *Across the Board on Tomorrow Morning*, in one volume by William Saroyan; *Claudia*, by Rose Franken; *Lady in the Dark*, by Moss Hart, *Old Acquaintance*, by John van Druten. Plays reflecting war and politics included: Lilliam Hellman's *Watch on the Rhine*; Maxwell Anderson's *Candle in the Wind*; Frederick Hazlitt Brennan's *The Wookey*, Philip Barry's *Liberty Jones*; Elmer Rice's *Flight to the West*. Historical were: *Gracious Majesty*, by Laurence Housman, about Queen Victoria; *The Highland Call*, about the Revolution in North Carolina, by Paul Green, who also published, with Richard Wright, *Native Son*, based on the latter's novel. S. N. Behrman published *The Talley Method* also as *The Mechanical Heart*. See THEATER.

Economics. James Burnham's *The Managerial Revolution* showed the divorce of ownership and control. Harry Scherman's *The Last Best Hope of Earth* established its economic unity. The Nazi economic system was discussed in Thomas Reville's *The Spoil of Europe* and Douglas Miller's *You Can't Do Business with Hitler*. Seymour E. Harris considered *The Economics of American Defense*, as did I. F. Stone in *Business as Usual*. Kemper Simpson, in a book entitled *Big Business, Efficiency, and Fascism*, attacked the first named. Alvin H. Hausen's *Fiscal Policy and Business Cycles* showed how the latter could be controlled. Also: *A Primer of Economics*, by Stuart Chase, and *The Cambridge Economic History of Europe*, vol. i, edited by J. H. Clapham and Eileen Power. Manya Gordon's *Workers Before and After Lenin* found no improvement.

Essays. These included: *The Opinions of Oliver Allston*, by Van Wyck Brooks, mainly literary; *Ideas for the Ice Age*, by Max Lerner, mainly political; *Legal Miscellanies*, by Henry W. Taft; *Of Men and Women*, by Pearl S. Buck; *An Adventure in Education*, by the Swarthmore College Faculty; *The Bachelor Life*, by George Jean Nathan; *1001 Afternoons in New York*, by Ben Hecht; *How to Become Extinct*, by Will Cuppy; and the anthology *A Subtreasury of American Humor*, edited by E. B. and Katherine S. White.

History. In American history appeared: *Reveille in Washington, 1860-1865*, by Margaret Leech; *Secret History of the American Revolution*, by Carl van Doren; *Dictionary of American History*, edited by James Truslow Adams; *The American Nation 1865-1940*, by John D. Hicks; *Everyday Things in American Life, 1776-1876*, by William Chauncy Langdon; *The Army of the Tennessee*, by Stanley F. Horn; *Hands Off*, a history of the Monroe Doctrine, by Dexter Perkins; two river histories: *The*

Colorado Conquest, by David O. Woodbury, and *The Charles*, by Arthur Bernon Tourtellot; *Louisiana Hayride*, by Harnett T. Kane, about the Huey Long episode. In European history: Carlton J. H. Hayes' *A Generation of Materialism, 1871-1900*; Jacques Barzun's *Darwin, Marx, Wagner*, a history of ideas; Edward S. Forster's *A Short History of Modern Greece, 1821-1940*, *The Cambridge History of Poland, 1697-1935*, edited by W. F. Reddaway and others; two studies in the French Revolution: Ralph Korgold's *Robespierre and the Fourth Estate*, and R. R. Palmer's *Twelve Who Ruled*. In English history: Arthur Bryant's *Pageant of England, 1840-1940*; Robert Graves and Alan Hodge's *The Long Week End, 1918-1939*, a social history; Walter S. Hinchman's *England*. Others were: C. W. de Kiewet's *A History of South Africa*; William H. Chickering's *Within the Sound of These Waves*, about Hawaii; Lesley Bird Simpson's *Many Mexicos*; and M. Rostovtzeff's *The Social and Economic History of the Hellenistic World*.

Juvenile. Children might read about animals, as *My Friend Flicka*, a horse, by Mary O'Hara, or *Adolphus*, a dolphin, by William Rose Benét; or biography, as *Poor Richard*, by James Dougherty, history, as *Lake of Gold*, Canadian, by John Buchan, or economics, as *From Man to Machine*, by Agnes Rogers; or folklore, as *Paul Bunyan*, by Esther Shepherd; or a locality, as *The Luck of the Comstocks*, about Block Island, by Maribelle Cormack and William P. Alexander, or fantasy, as *The Story of Simpson and Sampson*, by Munro Leaf, or *The Flying Locomotive*, by William Pène du Bois.

Novels. Remarkable successes were few, but A. J. Cronin's *The Keys of the Kingdom*, about a modern saint, came as close as any. F. Scott Fitzgerald's unfinished *The Last Tycoon* and Budd Schulberg's *What Makes Sammy Run?* were about Hollywood. Marcus Goodrich's *Delilah* was a Navy destroyer. Edna Ferber's *Saratoga Trunk* revealed the resort. George Stewart's *Storm* was meteorological. Alvah Bessie gave an unskilled worker's tragedy in *Bread and a Stone*, while William McFee dissected writers in *Spenlove in Arcady*. James Hilton's *Random Harvest* involved loss of memory. Gertrude Stein puzzled in *Ida*. Neurotics appeared in Mark Schorer's *The Hermit Place* and Carson McCullers' *Reflections in a Golden Eye*. James M. Cam's *Mildred Pierce* mothered a coloratura. Virginia Woolf's *Between the Acts* was her last. Ben Ames Williams' *The Strange Woman* bothered men.

Reflecting the war were: Eric Knight's *This Above All*, about Britain; Robert Nathan's *They Went On Together*, about suffering children; Lin Yutang's *A Leaf in the Storm*, about a Chinese girl; Frederic Prokosch's *The Skies of Europe*, just before the war; Maurice Hindus' *To Sing with the Angels*, the Nazis in Moravia; Storm Jameson's *Cousin Honoré*, the Nazis in Alsatia. Satirical novels included: John P. Marquand's *H. M. Pulham, Esq.*, on Bostonians; and Dalton Trumbo's *The Remarkable Andrew*, on politicians. Regional novels: Mary Ellen Chase's *Windswept*, Maine; Barbara Tunnell Anderson's *The Days Grow Cold*, the deep South; Robert Faherty's *Big Old Sun*, the Florida keys; August Derleth's *Village Year*, Wisconsin.

Historical: Louis Bromfield's *Wild Is the River*, New Orleans in the Civil War; John Masefield's *Conquer*, revolt in Byzantium; Eleanor Dark's *The Timeless Land*, settlement of Australia; Marguerite Steen's *The Sun Is My Undoing*, slave trade; C. S. Forester's *The Captain from Connecticut*, war of 1812; Allis McKay's *They Came to a River*, the Columbia; John Cowper Powys' *Owen Glendower*; Stuart Cloete's *The Hill of Doves*, South Africa, the

1880's; Vardis Fisher's *City of Illusion*, Virginia City; Upton Sinclair's *Between Two Worlds*, Peace Conference to market crash; Clifford Dowdley's *Sing for a Penny*, Virginia, late 19th century. Ellen Glasgow showed Richmond society in *In This Our Life*. A notable first: *Whistle Stop*, by Maritta M. Wolff. Charles Nordhoff and James Norman Hall gave adventure in *Botany Bay*. Fantasy combined with humor in *The Incomplete Enchanter*, by L. Sprague de Camp and Fletcher Pratt.

Poetry. A number of collections appeared, such as: Louis MacNeice's *Poems 1925-1940*, *Poems*, by Ridgely Torrence; *Poems 1930-1940*, by Horace Gregory; John Peale Bishop's *Selected Poems*; Louise Bogan's *Poems and New Poems*; *Collected Poems*, by Walter de la Mare, who also published *Bells and Grass*. Narratives included: *The Dust Which Is God*, semiautobiography by William Rose Benét; *The Mayfield Deer*, by Mark van Doren; *Shenandoah*, by Delmore Schwartz; *The Nine Days' Wonder*, by John Masfield, about Dunkirk. Other important books of poetry were: W. H. Auden's *The Double Man and New Year Letter*; Marianne Moore's *What Are Years*, Robinson Jeffers' *Be Angry at the Sun and Other Poems*; T. S. Eliot's *The Dry Salvages*; Frederic Prokosch's *Death at Sea*; Selden Rodman's *The Airmen*, Siegfried Sassoon's *Rhymed Ruminations*; E. E. Cummings' *50 Poems*; Marya Zaturenska's *The Listening Landscape*, Dilya Bennett Lang's *Another England*, Paul Engle's *West of Midnight*, Alfred Noyes' *Shadows on the Down*; John Gould Fletcher's *South Star*. Important anthologies were: Richard Aldington's *The Viking Book of Poetry*, and C. Day Lewis and L. A. G. Strong's *A New Anthology of Modern Verse, 1920-1940*.

Politics. Asian affairs were discussed in: William C. Johnston's *The United States and Japan's New Order*; Edgar Snow's *The Battle for Asia*, especially the communists'; Mark J. Gayn's *The Fight for the Pacific*, Woodburn Remington's *Cross Winds of Empire*, Felix M. Keesing's *The South Seas in the Modern World*; Virginia Thompson's *Thailand*; Florence Horn's *Orphans of the Pacific*, the Philippines; Joseph Barber, Jr.'s *Hawaii*, Hallett Abend's *Japan Unmasked*; Wilfrid Fleisher's *Volcanic Isle*, Japan. Latin America was dealt with in: *Meet the South Americans*, by Carl Crow, *The Other America*, by Lawrence Griswold, *Inside Latin America*, by John Gunther; *Central America*, by Charles Morrow Wilson, *The Caribbean Danger Zone*, by J. Fred Rippey; *Good Neighbors*, by Hubert Herring.

Many books on Europe seemed out-of-date at year's end, but they included: *Night Over Europe*, by Frederick L. Schuman; *Versailles Twenty Years After*, by Paul Birdsall; *Problems of Modern Europe*, by J. Hampden Jackson and Kerry Lee, pictograms; *Dictators and Democrats*, interviews with leaders, edited by Lawrence Fernsworth; *Turkey*, by Emil Lengyel, *The Untamed Balkans*, by Frederic W. L. Kovacs, *Spurs on the Boot*, about Italy, by Thomas B. Morgan, *The Myth of the Total State*, by Guenther Reimann; *Metapolitics*, the Nazis' intellectual origins, by Peter Viereck; *Finland Forever*, by Hudson Strode, *Undefeated*, the Zionist case, by Solomon Goldman.

World-wide views were taken in: William Henry Chamberlin's *The World's Iron Age*; Laurence Housman's *The Preparation of Peace*; Julian S. Huxley's *Democracy Marches*; Louis Adamic's *Two Way Passage*, for postwar American administration of Europe; C. D. H. Cole's *Europe, Russia, and the Future*; John Strachey's *A Faith to Fight For*.

Most concerned with the United States were: four more volumes of *The Public Papers and Ad-*

dresses of Franklin D. Roosevelt, for 1937-1940; *Public Policy and the General Welfare*, by Charles A. Beard, isolationist; *The Struggle for Judicial Supremacy*, by Robert H. Jackson; *Our Constitution*, by Beryl Harold Levy, *Roosevelt. Dictator or Democrat?* by Gerald W. Johnson; *The New Centralization*, the decay of state powers, by George C. S. Benson; *Administration and the Rule of Law*, by J. Roland Pennock; *The Ground We Stand On*, by John Dos Passos, *The Atlantic System*, by Forrest Davis. Innumerable pamphlets gave programs for democracy, whose ideal was also explained in two anthologies: *Fountainheads of Freedom*, by Irwin Edman and Herbert W. Schneider, and *The Democratic Spirit*, by Bernard Smith. Clarence Streit advocated *Union Now with Great Britain*. Notable was W. Ivor Jennings' *The British Constitution*.

Religion. Much influenced by current events were: *The Nature and Destiny of Man*, by Reinhold Niebuhr; *The Theology of Politics*, by Nathaniel Micklem, *Christian Truth in History*, by Hugh Miller; *Faith for Today*, edited by George V. Denny, seeking common ground among Protestants, Catholics, Jews, Hindus; *The Creed of Christ*, by Gerald Heard, advocating mysticism. Dorothy L. Sayers, in *The Mind of the Maker*, compared God to the creative artist. Kenneth Scott Latourette published vol. iv of *A History of the Expansion of Christianity*, and Robert H. Pfeiffer *Introduction to the Old Testament*.

Short Stories. These included: Elizabeth Bowen's *Look at All These Roses*; Pearl S. Buck's *Today and Forever*, laid in China; Elizabeth Madox Roberts' *Not By Strange Gods*; James Reid Parker's *Attorneys at Law*; Sally Benson's *Junior Miss*, Ludwig Bemelmans' *Hotel Splendide*, Martha Gellhorn's *The Heart of Another*; Thomas Wolfe's *The Hills Beyond*, Christopher La Farge's *The Wilsons*; Jesse Stuart's *Men of the Mountains*.

Sociology. General works included: Michael Roberts' *The Recovery of the West* and Pitruum A. Sorokin's *The Crisis of Our Age*, both concerned with future social transformations; J. G. Crowther's *The Social Relations of Science*, Julian Huxley's *Man Stands Alone*. Dixon Wecter studied hero-worship in *The Hero in America*, as W. J. Cash exposed *The Mind of the South*. Eleven experts reported *British Life and Thought*. Histories included: Mauritz A. Hallgren's *Landscape of Freedom*, about personal liberty, and V. F. Calverton's *Where Angels Dared to Tread*, about communistic experiments. Eugene Lyons' *The Red Decade* exposed communism in America.

Field studies included: Leo C. Rosten's *Holly-wood*; Jonathan Daniels' *Tar Heels* (North Carolinians); Heath Bowman's *Hoosier*; Edwin Corle's *Desert Country*; James Agee and Walker Evans' *Let Us Now Praise Famous Men*, about three tenant families; Erskine Caldwell and Margaret Bourke-White's *Say, Is This the U.S.A.?*; Frances Cooke Macgregor's *Twentieth Century Indians*; Arthur Raper and Ira de A. Reid's *Sharecroppers All*; James C. Furnas and others' *How America Lives*; Oliver Pilat and Jo Ransom's *Sodom by the Sea*, about Coney Island.

Travel. The western hemisphere was highly favored, as in: William Lytle Schurz's *Latin America*; Margaret Culkin Banning's *Salud!* about South America; Nicol Smith's *Bush Master*, about Surinam; Louis J. Halle's *River of Ruins*, about Central America; Dorothy Duncan's *Here's to Canada!*; Kim Schee's *Cantina*, about Mexico, as was John Steinbeck and Edward F. Ricketts' *Sea of Cortez* and Clifford Gessler's *Pattern of Mexico*. Concerned with the United States were; Stanley Vestal's

Short Grass Country; Nancy Wilson Ross's *Farthest Reach*, about Washington and Oregon, and the Writers' Program guides to *Alabama*; *Arkansas*; *Colorado*; *Indiana*; *Louisiana*; *Michigan*; *Missouri*; *Nevada*; *South Carolina*; *Utah*; *Wisconsin*; *Wyoming*; *West Virginia*, *Washington*; and pictorial guides to *Vermont*; *Virginia*; *Montana*. Krishnalal Shridharani compared *My India*, *My America*. Frederic M. Gardiner went *Cruising North America*.

Impressive was Rebecca West's *Black Lamb and Grey Falcon*, about Yugoslavia. Owen Lattimore took *Mongol Journeys*, and Eileen Bigland went *Into China* in war-time. Negley Farson found Africa *Behind God's Back*. James Ramsey Ullman's *High Conquest* was about mountaineering.

War. The year's great success was William L. Shirer's *Berlin Diary*, to the spring of 1941. Others dealing with Germany were: Joseph C. Harsch in *Pattern of Conquest*, and Wythe Williams and Albert Parry in *Riddle of the Reich*. War on the Low Countries was described in *Juggernaut over Holland*, by E. N. van Kleefens, and *Under the Iron Heel*, about Belgium, by Lars Moen. Foreign correspondents' reports included: Virginia Cowles' *Looking for Trouble*; Leland Stowe's *No Other Road to Freedom*; Robert J. Casey's *I Can't Forget*; Pierre van Paassen's *That Day Alone*; these covered more than one country. Fifth Columns were described in Richard Wilmer Rowan's *Terror in Our Time*. Britain's war life was revealed in: *Blood, Sweat, and Tears*, Winston S. Churchill's addresses; *The Wounded Don't Cry* and *A London Diary*, by Quentin Reynolds; *Their Finest Hour*, edited by A. Michie and W. Graebner; *England's Hour*, by Vera Brittain; *War Letters from Britain*, edited by Diana Forbes-Robertson and Roger W. Straus, Jr.; *Out of the People*, by J. B. Priestley; *Strictly Personal*, by W. Somerset Maugham; *Digging for Mrs. Miller*, by John Strachey; *Where Stands a Winged Sentry*, by Margaret Kennedy; and many others.

Technical studies included: *Sea Power in the Machine Age*, by Bernard Brodie; *War in the Air*, by David Garnett; *What the Citizen Should Know about the Army*, by Harvey S. Ford; *the Navy*, by Hanson W. Baldwin; *the Coast Guard*, by Hickman Powell; *The Armed Forces of the Pacific*, by W. D. Puleston; *Hitler Cannot Conquer Russia*, by Maurice Hindus; *Fishermen at War*, by Leo Walmsley; *America and Total War*, by Fletcher Pratt. Historical were: *From Gibraltar to Suez*, by Lord Strabolgi; *The Armed Horde 1793-1939*, by Hoffman Nickerson; and *Great Soldiers of the Two World Wars*, by H. A. De Wield.

America was exhorted in *What Mein Kampf Means to America*, by Francis Hackett; *If War Comes to the American Home*, by S. F. Porter, and Pendleton Herring's *The Impact of War*, besides numerous pamphlets. Asia's war was described in *Dawn over Chungking*, by Adet, Amor, and Meimei Lin; *Dawn Watch in China*, by Joy Homer; and *War and Diplomacy in Eastern Asia*, by Claude A. Buss. Fallen France appeared in: C. Denis Freeman and Douglas Cooper's *The Road to Bordeaux*, and Thomas Kernan's *France on Berlin Time*. Vivid personal narratives were *Two Survived*, by Guy Pearce Jones, and *We Escaped*, by Twelve Refugees. Also: *Low on the War*, cartoons by David Low.

LITHOGRAPHY. See the article ART under *Prints*.

LITHUANIA. A former Baltic republic, which proclaimed its independence from Russia on Feb. 16, 1918, and was reannexed by the Soviet Union Aug. 3, 1940, as a constituent republic. In June-July, 1941, it was occupied by German forces. Kaunas was the provisional capital of Lithuania prior to Aug. 15, 1940, when Vilna was proclaimed capital of the Lithuanian Soviet Republic.

Area and Population. Including the Vilna territory acquired from the Soviet Union Oct. 10, 1939, and excluding Memel Territory (q.v.), ceded to Germany Mar. 22, 1939, Lithuania had an area of 22,964 square miles and an estimated population of 2,879,070 on Dec. 31, 1939. The newly annexed Vilna territory comprised 2,570 square miles with 457,500 inhabitants. Estimated populations of the chief cities on Jan. 1, 1939, were: Vilna (Vilnius), 208,900; Kaunas, 152,365; Šiauliai (Shavli), 31,299; Panevežys (Poneviej), 26,508.

Education and Religion. About 15 per cent of the adult population was illiterate in 1939. Educational statistics for 1938-39 were: Primary, 2,335 schools with 298,429 pupils; secondary, 83 schools with 19,539 pupils; normal, 5 schools with 605 students; special, 147 schools with 11,198 students; university, 1 (at Kaunas) with 3,041 students in 1938. In January, 1940, the University of Vilna was established. Roman Catholics formed 80.5 per cent of the population at the 1923 census, Protestants, 9.5, Jews, 7.3; Greek Orthodox, 2.5.

Production. About 77 per cent of the population in 1939 was engaged in agriculture and 10 per cent in commerce, industry, and transportation. Yields of the chief crops in 1939 were (in metric tons): Wheat, 251,200; barley, 246,700; rye, 653,400; oats, 401,700; potatoes (1938), 2,118,231; flax fiber (1938), 25,784. Livestock on June 30, 1939, included 1,103,550 cattle, 1,223,600 sheep, 1,117,080 swine, and 520,710 horses. Forests, mostly pine, covered 2,645,000 acres. Industrial establishments (1938) numbered 1,441, with 40,818 employees and an output valued at 480,000,000 lits.

Foreign Trade, etc. Imports in 1939 were 169,400,000 lits; exports (chiefly butter, grain, bacon, lard, meats), 203,200,000 lits. Great Britain was the leading pre-war export market, Germany the chief source of imports. Budget returns for 1939 were: Receipts, 361,780,000 lits; expenditures, 356,550,000 lits. Public debt on Jan. 1, 1940, 134,146,600 lits (domestic, 65,231,200; foreign, 68,915,400). The lit exchanged practically at par (\$0.1693) during 1936-38 and at \$0.1674 in 1939. Previous to the Russian annexation, Lithuania had 1,680 miles of railway line, 20,272 miles of roads and highways, and about 1,600 miles of waterways; its only port was lost with the cession of Memel to Germany.

Government. The democratic system established by the Constitution of Aug. 6, 1922, collapsed on Dec. 17, 1926, when the conservative Nationalist Union party established a single-party dictatorship, headed by President Antanas Smetona. He was re-elected by a board of electors Dec. 11, 1932 and Nov. 14, 1938. The Nationalist Union adopted fascism as its ruling principle Dec. 16, 1933. A new Constitution promulgated Feb. 12, 1938, was drawn up by a parliament (*Seimas*) chosen entirely from members of the Nationalist Union. It vested wide executive powers in a President, elected by parliament for seven years, and his Council of Ministers. Members of parliament were elected for five years from a one-party list by universal, secret suffrage. Representatives of two outlawed opposition parties, the Christian Democrats and Agrarian So-

cialists, gained representation in the new cabinet formed by Premier Antanas Merkys (Nationalist Union) on Nov. 21, 1939, as a result of the crisis precipitated by the conclusion of the Soviet-Lithuanian mutual assistance pact of Oct. 10, 1939 (see *YEAR BOOK*, 1939, p. 443).

This pact authorized the establishment of Soviet military and air bases in Lithuania, but safeguarded the republic's independence and social-economic system. However, on June 15, 1940, Soviet troops occupied the remainder of the country, and established a pro-Soviet government. Controlled elections, held July 14-15, produced a pro-Communist parliament, which on July 21 unanimously adopted a resolution for union with the U.S.S.R. Its petition was accepted by the Supreme Soviet in Moscow August 3, when Lithuania became the 14th constituent republic of the Soviet Union. On August 24-25 the newly elected parliament approved a soviet constitution, under which the elimination of the capitalist, bourgeois institutions was carried out (see *YEAR BOOK* for 1940, p. 416-417). See below for developments in 1941.

History. Germany's attack upon Russia on June 22, 1941, was the signal for a revolt of Lithuanian anti-Communist elements against the Soviet garrison and Communist regime. The revolt was led by the so-called Lithuanian Freedom Fighters, an underground organization established with German assistance by the former Lithuanian Minister to Berlin, Kazys Skirpa. Rallying some 125,000 Lithuanians to their cause, the Freedom Fighters gained control of Kaunas before German troops entered that city on June 24. They assisted the Germans in clearing Soviet troops from the rest of the country (see *WORLD WAR*) and in suppressing Communist partisan bands.

On June 23 the Lithuanian patriots proclaimed over the Kaunas radio their independence from Russia and the establishment of a free government. It was headed by Prapolernis, the leader of the Freedom Fighters, pending the arrival of Kazys Skirpa from Berlin. When this new government refused to play the role of puppet to Berlin, the Germans on August 6 dissolved it and made Lithuania a district in the newly-created Ostland Province of the Reich. (Ostland consisted of the three Baltic republics and White Russia.) A German, Dr. Adrian von Renteln, was appointed Commissioner General for Lithuania under the Reich Commissioner for Ostland.

Lithuania was not only deprived of its political independence but also subjected to the same economic demands as the other two Baltic States (see *ESTONIA under History*). Resentment at this treatment spread. The Lithuanian Freedom Fighters began an agitation for the termination of German rule. This led the German authorities on October 11 to "liquidate" the organization and arrest its leaders. The Germans were said to have declared that there could be "no more question of the Baltic States recovering any kind of political life." Lithuanian nationalists thereafter based their hope of independence upon the United States and Britain, which refused to recognize either the Soviet or German conquests of the Baltic States. After the entrance of the United States into the war, the Lithuanian Minister to Washington formally aligned his country with the United Nations. "Lithuania's prime and ultimate task," he said on December 23, "is to get rid of German enslavement and to restore sovereign rights to her people."

Antanas Smetona, President of Lithuania, who fled to Germany upon the Soviet annexation in 1940, arrived in the United States in March, 1941,

He said the German Government had forced him to leave Berlin for Switzerland in September, 1940, because his presence endangered Russian-German amity. The Vatican radio reported February 28 that former Premier Leonas Bistras of Lithuania had died in a Soviet prison. A typhus epidemic was reported in Lithuania toward the end of 1941.

See *GERMANY under History*.

LIVESTOCK. Strong consumer demand for meat products, coupled with heavy government purchases of certain items, particularly pork and lard, pushed the cash farm income from meat animals during 1941 to approximately three billion dollars, a figure attained only twice before (1928 and 1929) during the past twenty years. This represents a sharp increase over the 1940 total of 2,390 million dollars, although far short of the four billion dollar level reached in 1918 and 1919.

The farm production campaign for 1942 announced by the U.S. Department of Agriculture (qv) in September, 1941, placed major emphasis on increased production of animal products. The 1942 goals called for the slaughter of 793,288, and 229 million hogs, cattle, and sheep respectively, increases of about 15, 15, and 2 per cent over 1941 levels. It appears certain that total meat production in 1942 will be the greatest in history, probably close to 21 billion lb. as compared to the 1941 total of about 19 billion lb. and the 1936-40 average of 17.2 billion lb. Per capita consumption of all meats both in 1940 and 1941 was approximately 140 lb., but promised to be considerably higher in 1942.

Conditions for livestock production were generally favorable during 1941. Feed supplies were abundant, with the drought-stricken east, the only section of the country generally short on pasture and hay crops. The 1941 production of the four principal feed grains was estimated by the U.S. Department of Agriculture to total 106.6 million tons, or 7 per cent above that of 1940. Total hay production was placed at about 94 million tons which, coupled with a substantial carryover, gave the largest supply in twenty years. The production of wheat millfeeds and protein concentrates ranged from slightly below to 40 per cent above 1940 levels for the various products. The total supply was adequate, but prices advanced sharply in the closing months of the year. The ratio of hog prices to feed prices was far more favorable to the swine producer in 1941 than during the preceding year, while the beef-feed price ratio was similar for most months of the two years, but somewhat less favorable for the cattle feeder near the close of 1941.

The total number of cattle of all ages in the United States stood at about 71,660,000 on Jan. 1, 1941, an increase of 2.9 million head during 1940. Slightly over half of this total was kept for milk, the remainder primarily for beef production. With the upswing in numbers continuing during the year, it was estimated that the total on Jan. 1, 1942, closely approached the pre-drought (1934) peak of 74.2 million head. The marketing of cattle and calves for slaughter ranged above 1940 levels throughout the year. Cattle and calves slaughtered under Federal inspection totaled 10,945,906 and 5,461,042 head respectively, 12 and 2 per cent larger than in 1940. Total dressed weight of approved carcasses included 5,739.2 million lb. beef and 599.1 million lb. veal, 15 and 5 per cent respectively greater than in 1940, indicating that both the cattle and calves marketed in 1941 were somewhat heavier than in 1940.

The July-December movement of stocker and

feeder cattle into Corn Belt feed lots was about 17 per cent smaller than during the corresponding period of 1940, with only November and December shipments exceeding the 1940 levels. Feeding operations in states west of the Corn Belt promised to be larger, but the total number of cattle finished in the spring and summer of 1942 will probably be below the record level of 1941, although still large compared with other recent years. The general level of cattle prices averaged about \$1 per hundred lb. higher in 1941 than in 1940. Farmers received 9.38 cents per lb for cattle and 11.22 cents per lb. for veal calves in mid-December as compared with 7.84 and 9.01 cents respectively a year earlier.

The down swing in hog production, which started in 1940, was quickly checked as sharply increasing prices made it a more profitable farm enterprise. The spring pig crop numbered slightly over 50 million head or about the same as in 1940. The number of pigs raised in the fall of 1941 was placed at 35.5 million or 18 per cent larger than the 1940 fall crop. The total 1941 pig crop exceeded 85 million head, about 6.5 per cent larger than that of 1940 and only 2 per cent below the record crop of 1939. Exceptionally heavy marketing in the closing months of 1940 reduced the number of hogs available for slaughter in 1941 below the 1940 level. A total of 46,519,757 hogs were slaughtered under Federal inspection, yielding a total dressed weight of about 8,434.4 million lb. Numbers and dressed weight were 8 and 3 per cent respectively below those of 1940. U.S.D.A. estimates placed the number of sows to farrow in the spring of 1942 at nearly 10 million head, an increase of about 28 per cent over 1941, which points to an all time high in swine numbers during the coming year. Hog prices, which persisted at a disastrously low level during 1940, soared to the highest point in over four years, with Chicago prices ranging above \$10 per 100 lb. after June. Farmers received an average of \$10.21 per cwt in mid-December against \$5.59 a year earlier. To stimulate continued high production, the government, in September, 1941, guaranteed to support hog prices at not less than 85 per cent of parity to the end of 1942.

The number of stock sheep on farms and ranches on Jan. 1, 1941, approached 56 million head, an increase of about 2 per cent during 1940. The 1941 lamb crop of 34.5 million head set a new high record, exceeding the previous record crop of 1940 by 5 per cent and the 1930-39 average by 13 per cent. Federally inspected slaughter of sheep and lambs totaled 18,124,531 head or 4 per cent more than in 1940, while the total dressed weight of 750.1 million lb. was 7 per cent more than for 1940. Evidence at the end of the year indicated that a considerably larger number of sheep and lambs would be fattened during the 1941-42 feeding season than a year earlier. Movement of feeder lambs into the Corn Belt feedlots from July to the end of the year was about 5 per cent higher than in 1940 and feeding operations were increased in a number of Western states, particularly Colorado. Prices of slaughter lambs were substantially higher throughout 1941 than in 1940. The mid-December price of lambs on farms averaged \$9.86 per 100 lb. against \$7.88 a year earlier.

Cold storage stocks of meat products at the end of the year included 135,813,000 lb. frozen and cured beef, 469,056,000 lb. frozen and cured pork, 7,951,000 lb. frozen lamb and mutton, and 185,445,000 lb. lard and rendered pork fat. These quantities represented 136, 89, 149, and 121 per cent respectively of the 1937-41 average. The encourag-

ing feature of this situation was the materially lower stocks of pork and lard than a year earlier when these surpluses created an annoying problem. Direct government purchases of pork products from March to December, 1941, mainly for lend-lease shipments, included about 243 million lb. cured and frozen pork, 230 million lb. canned pork, and 326 million lb. of lard, quantities equivalent to about 10 per cent of the pork and 22 per cent of the lard produced under Federal inspection during this period. An Aug. 1, 1941, pork and lard were removed from the list of foods purchasable with Blue Stamps under the Surplus Food Removal Program. During the period May, 1939, to July, 1941, the sale of pork and lard under this plan totaled about 34½ million dollars, or nearly one third of all food purchases.

Government price control of animal products entered the picture late in the year when ceiling prices were placed on lard and other fats and oils (except butter), wool, and hides.

While the total number and value per head of all other types of livestock were higher in 1941 than in 1940, the number of horses and mules on farms was about 309,000 less, and the average value per head \$9 less on Jan. 1, 1941, than a year earlier. This trend has been under way for the past two decades, while the use of tractors for farm power has steadily increased. The national armament program may result in a growing shortage of mechanical power on farms and an increasing dependency on animal power.

Foreign Trade. The balance of trade in animals and animal products during 1941 shifted to an excess of exports over imports whereas in recent years imports have exceeded exports by a considerable margin. According to data compiled by the U.S. Department of Commerce, the total value of export items, both edible and inedible, not including fish, fur, and wool, during the first 9 months of 1941 was \$156,945,832 as compared with \$65,928,387 for the corresponding period of 1940. Imports for the same period totaled \$131,589,777 in 1941 and \$102,492,718 in 1940. Exports of meat products, including edible fats and oils, for the same period in 1941 were valued at \$72,280,953 against imports of \$16,855,094. Corresponding values for 1940 were \$29,623,929 and \$14,159,604. Lard was again the largest single export item. Heavy lend-lease shipments plus increased sales in the Western Hemisphere raised the export of this commodity 90 per cent above the 1940 total of 201 million lb. Canned pork was a close second in value, the export of which was nearly ten times greater in 1941 than in 1940. Hides and skins led all other import items, accounting for about 42 per cent of the total value. The import of canned beef, mainly from Argentina, Brazil, and Uruguay, was about 37 per cent above the 1940 total of \$6,911,000. Approximately 17 per cent more cattle, mainly from Canada and Mexico, were imported for slaughter in 1941 than the 630,211 brought in during 1940. The new U.S.-Argentina agreement, effective Nov. 15, 1941, provided for significant reduction in the duty on such important animal products as canned, pickled, and cured beef, hides, coarse wool, casein, and Italian type cheese, pointing to a greater volume of import of these items during the coming year.

World Conditions. Reliable data on 1941 livestock populations in European countries were not generally available. All indications, however, pointed to steadily decreasing meat supplies on the continent. Denmark, one of the most important exporting countries, reported about 37 and 7 per cent fewer hogs and cattle respectively in the summer of 1941

than a year earlier, and even more drastic reductions appear to have taken place in the Netherlands. The hog situation appeared somewhat better in the Danube Basin countries which are less dependent on feed imports than those in northern Europe. Late reports from Hungary, however, showed a scarcity of fat hogs and an acute lard shortage despite relatively large stocks of feeder pigs. The number of hogs in Germany is believed to have been reduced considerably from the high level of 1940, and stocks available in surrounding countries for import were certainly much lower. Cattle, sheep, and hog numbers in Sweden were significantly lower at the beginning of 1941 than a year earlier and since Apr. 1, 1941, all meat products have been strictly rationed. Livestock numbers, particularly hogs and poultry, in the United Kingdom have been systematically reduced in the face of dwindling feed supplies. Dairy cattle have been in a favored position in an effort to maintain a fairly adequate supply of fresh milk. The Empire Countries, South America, and the United States contributed heavily to Britain's meat supply during the year. New Zealand and Australia, faced with a severe shipping problem, made marked improvement in dehydrating processes, removing of bone and canning of meat so that a greater amount of food is being stored and shipped in a smaller space. Storage stocks were reduced and the meat situation in both countries was improved in the closing months of the year. The United Kingdom tentatively agreed to purchase around 275,000 tons of New Zealand meat during the 1941-42 meat year. Canadian pork production continued at a high level under the stimulus of the contract to supply Great Britain with 8 million lb. of bacon weekly. A new agreement for the year beginning November 1 called for an increase in bacon delivery to an average of 11.5 million lb weekly. Important meat exporting countries of South America found more favorable market outlets in 1941 than in the previous year. British purchases of Argentine meat for the year ending Aug. 31, 1941, included about 375,000 tons of fresh and cured beef, 30,000 tons of mutton, and 10,000 tons of pork. Uruguay faced a shortage of slaughter cattle late in the year, largely due to heavy slaughtering to fill British orders. A considerably greater volume of animal products moved from these countries to the United States during the year than in 1940, with wool and hides being particularly in demand.

See AGRICULTURE, U.S. DEPARTMENT OF under *Animal Industry Research*; DAIRYING; LEATHER; VETERINARY MEDICINE; countries under *Production*.

E. C. ELTING.

LIVING COSTS AND STANDARDS. Living costs in the large cities of the United States rose almost 10 per cent in the year 1941. Since the outbreak of the war in Europe, the increase has reached 12.1 per cent, as compared with the slightly greater advance (14.5 per cent) in the first 28 months of the last World War. For many families, incomes increased more rapidly than the cost of living over the last year. According to figures from the Department of Commerce, the total national income was 22.6 per cent larger in 1941 than in 1940. (See NATIONAL INCOME.) Employment and overtime work in manufacturing industries increased greatly in 1941, resulting in correspondingly large increases in the earnings of most factory wage earners. The Department of Commerce figures show total wages and salaries in manufacturing and in other types of employment in 1941 as 24.8 per cent greater than in

1940. The percentage rise in farm incomes was even larger. Total farm incomes in 1941 were 41.2 per cent above the 1940 total. Corporate profits were 30.3 per cent, and payments in interest and dividends, 5.3 per cent higher in 1941 than in 1940. These figures must not be interpreted, however, to mean that all families had increased incomes in the last year. Many did not and those with fixed incomes have suffered a decrease in purchasing power because of higher living costs. See LABOR CONDITIONS under *Wages*.

There has been a tremendous variation in the movement of living costs in different cities. In towns especially affected by defense activities, the advances have been much larger than in centers like New York and Kansas City where the relative increase in employment has not been so great. In shipbuilding centers like Norfolk and Mobile the cost of living rose by 14-16 per cent in 1941, and in Seattle, Jacksonville, and Savannah the increases were more than 12 per cent. The advances have also been large in the smaller defense centers where an influx of defense workers has resulted in greatly increased demand for housing and in an unusually large rise in rents. For example, in Clinton, Ia., a town of about 26,000, with a number of defense contracts where employment has been increasing rapidly living costs rose 10.7 per cent over the year. The total rental bill to moderate-income families in Clinton was up 7 per cent over the year; food costs were up 15.6 per cent, clothing, 13.1 per cent, housefurnishings, 12 per cent, while miscellaneous goods and services and fuel, electricity, and ice rose 8.6 and 4.1 per cent respectively. In general the rise has been greater in the Southeast than in other sections of the country as large military encampments there, as well as increased industrial activity, have considerably increased demand for housing and for consumers' goods. See DEFENSE HOUSING.

Food prices, which increased 16.2 per cent over the year from Dec. 15, 1940, were the most important factors in determining the rise in living costs during 1941. Food purchases make up more than one-third of the expenditures of moderate-income families, and the increase in food prices has borne heavily on the pocket books of the families whose earnings have not kept up with the rise in living costs. Increased consumer incomes, government purchases of food for the army under the Lend-Lease Act, shortages in shipping facilities and some speculative activity combined to produce the rise in food costs. Beginning in November, 1940, food prices began a rapid rise which continued until November, 1941. From mid-November to mid-December, 1941, little change occurred in the total food bill of moderate-income families since increases in many prices were offset by large seasonal declines in prices for pork, eggs, and oranges and lower prices for butter. Very large increases have occurred in the prices of commodities for which the country is dependent on imports such as coffee, tea, and sugar. Government purchases for the Army and for shipment abroad contributed largely to the advances in prices for meats and dairy products, fats and oils, eggs, dried fruits, vegetables, and canned fish. See AGRICULTURE

Clothing costs increased 13 per cent over the year with much higher prices for men's work shirts and trousers, work shoes, overalls, women's hosiery, and percale and woolen dresses. Prices of work shirts and overalls increased by more than 25 per cent and percale dresses by almost 38 per cent. Silk hose were up by almost 20 per cent. The shortage caused by cessation of silk buying early in the year was

met in part by the great increase in nylon production. Increased diversion to defense needs in most articles of clothing resulted in a decrease in supplies available for civilian use. See **GARMENT INDUSTRY**; **SHOE INDUSTRY**; **TEXTILES**.

Housefurnishings which ordinarily take about 4 per cent of the average family's expenditures were 16.3 per cent higher on Dec. 15, 1941, than on Dec. 15, 1940. Increases in prices of wool rugs and wool blankets which began in the fall of 1940 continued with the decline in imports of wool (q.v.) and army purchases of wool blankets. Large increases in costs were also reported for furniture, electrical equipment, sheets, and mattresses. Excise taxes on electrical equipment added to the increased cost of housefurnishings. The goods in this category are manufactured largely from raw materials needed in equipping the army.

Rents moved steadily upward throughout 1941 with the lower income groups bearing the largest per cent increases. In the larger cities of the country, the increase in the total rent bill of moderate-income families amounted to 3 per cent. In many defense cities the migration of workers caused acute housing shortages and average rents rose more than 10 per cent over the year in such cities as Birmingham, Mobile, Norfolk, and Seattle. The construction of new dwellings for defense workers has relieved the situation somewhat in a number of cities where housing previously built was inadequate to care for the influx of defense workers.

Fuel prices did not show the usual seasonal decline during the middle of 1941 but increased slightly from month to month. At the end of 1941 prices of fuel were 3.4 per cent higher than the year before. Coal prices rose by 7.9 per cent and prices of gasoline, 11.2 per cent. See **COAL**; **PETROLEUM**, ETC.

The cost of miscellaneous goods and services ordinarily is more stable than that of any other group of family purchases. During 1941, however, these costs increased 5.8 per cent, with increased prices for drugs, tires, automobiles, and soaps being largely responsible for the rise. Defense excise taxes effective Oct. 1, 1941, also caused a slight increase in this group.

LOUISIANA. A west south central State. Area: 48,523 sq. mi., including 3,346 sq. mi. of inland water, but excluding Gulf of Mexico coastal waters, 1,016 sq. mi. Population: (1940 census) 2,363,880. The urban population comprises 41.5 per cent of the total (U.S. average, 56.5 per cent); non-white population, 36.0 per cent (U.S. average, 10.2); elderly (65 years and over), 4.9 per cent. Louisiana ranks 30th among the States in area, 21st in population, and 24th in density, with an average of 52.3 per-

sons per square mile. The capital is Baton Rouge with 34,719 inhabitants; largest city, New Orleans, 494,537. There are 64 counties and 10 cities of more than 10,000 inhabitants (see article on **POPULATION** in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see **VITAL STATISTICS**.

Education. According to the latest Biennial Survey of Education, there were 460,946 pupils enrolled in the State School System during the school year 1937-38. Of this total, 374,203 were enrolled in kindergartens and elementary schools and 86,743 in secondary schools; 166,754 were in separate Negro schools. (In 1939-40, 298,455 white pupils were enrolled.) The instructional staff comprised 14,115 persons, who received an annual average salary of \$982 (U.S. average: \$1,374); 2,588 or 18.5 per cent were men. Expenditures for all public schools in 1937-38 were \$26,506,797, making a total cost per capita of \$12.36 (U.S. average: \$17.15). There were 3,521 school buildings in the State, of which 972 were one-room, one-teacher schools. The value of public property used for school purposes was \$57,198,447. For higher education, see under *Louisiana* in the table of **UNIVERSITIES AND COLLEGES**.

Transportation. State highway mileage in 1939, including streets under State control, totaled 18,222, of which 14,712 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 372,830, 280,663 were private and commercial automobiles, 2,973 busses, and 81,793 trucks and tractor trucks. Gross motor-fuel consumption was 278,083,000 gal. Net motor-fuel tax receipts were \$18,671,000, the rate being seven cents per gal. (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$5,392,000.

Railways of all classes extended 4,422 miles (Dec. 31, 1939) 1.88 per cent of the total mileage in the United States. Class I steam railways (3,318 miles) reported 15,041,697 tons of revenue freight originating in Louisiana in 1940 and 15,601,985 tons terminating in Louisiana. There are 26 airports and landing fields in the State (13 lighted fields) and 11 seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 253 civil aircraft in the State and 1,239 airline transport, commercial, and private pilots (1,073 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 4,164,000, as compared with 4,253,000 acres in 1940. According to the latest census, there are 150,007 farms, valued at \$353,873,506, averaging 66.6 acres each. Farm population numbered 857,475 or 36.3 per cent of the total. Leading crops with production were: Cotton lint, \$26,302,000, 315,000 bales; rice, \$24,882,000, 19,906,000 bu.; corn, \$16,585,000, 22,260,000 bu.; sugar cane, \$14,599,000, 3,978,000 short tons; cottonseed, \$6,698,000, 141,000 tons.

Manufacturing. According to the 1939 Census of Manufactures, there were 1,861 manufacturing establishments in Louisiana, employing 71,218 wage earners who received \$55,083,540 in wages during the year. The total value of products was \$565,265,273 and the value added by manufacture was \$200,085,837.

Mineral Production. Leading mineral products are: Petroleum, of which 103,961,000 bbl. were produced in 1940 (93,646,000 bbl. valued at \$98,000,000 in 1939); natural gas, 294,370,000 M cu. ft. valued at \$53,835,000 in 1939. The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$168,902,949 or 3.99 per cent of the United States total. Louisiana ranks seventh

among the States in value of mineral production. See ZINC.

Trade. According to the 1940 census there were 2,391 wholesale establishments in Louisiana, employing 23,777 persons, reporting net sales for 1939 of \$706,402,000 and annual pay roll of \$32,822,000. There were 25,469 retail stores with 63,638 employees, reporting sales of \$486,250,000 and pay roll of \$49,000,000. Service establishments numbered 6,887, employing 18,552 persons for \$12,786,000 per year, and reporting a business volume amounting to \$36,402,000. The leading business center of the State is New Orleans which reported wholesale sales of \$437,639,000, retail sales of \$157,062,000. Orleans Parish, which is coextensive with the city of New Orleans, is the leading parish in the State in receipts for its service establishments (\$19,223,000).

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Louisiana was \$35,281,000. Under the Social Security program, financed by Federal funds matching State grants, 36,099 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$13.37 (U.S. average pension, \$21.08); 39,658 dependent children in 15,812 families received average monthly payments of \$27.13 per family (U.S. average, \$32.73), and 1,260 blind persons received \$17.22 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 12,244 and received \$15.89 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses). CCC, 5,795 (\$384,000); NYA student work program, 6,162 (\$43,000); NYA out-of-school work program, 10,207 (\$181,000); WPA, 28,736 (\$1,493,000), regular Federal construction projects, 21,355 (\$3,389,000) The Farm Security Administration certified subsistence payments totaling \$25,000 for the month to 1,106 cases.

Legislature. The Legislature convenes in regular session on the second Monday of May in even years (There was no session in 1941) It is composed of 39 Senators and 100 Representatives, all of whom are Democrats. The President of the Senate is Marc M. Mouton; President Pro Tem, Frank B. Ellis, Speaker of the House, R. Norman Bauer.

Finances. Total tax collections in Louisiana for the fiscal year ending in June, 1940, were \$81,420,000 (partial report for 1941: \$67,303,000). Total sales taxes in 1941 amounted to \$37,459,000, including motor fuel, \$21,223,000. Taxes on specific businesses (1940) ran to \$7,014,000, general and selective property, \$7,723,000, unemployment compensation (1941), \$7,918,000. The net income taxes (1941) were \$5,996,000. Cost payments for the operation of general government totaled \$67,184,000 in 1939, the latest year available. (Revenues for the general government for that year were \$96,830,000.) Cost of operation per capita was \$28.67. Total gross debt outstanding in 1941 was \$185,464,000, as compared with \$83,884,000 in 1932.

Officers and Judiciary. The Governor is Sam Houston Jones (Dem.), inaugurated in December, 1939, for a four-year term; Lieutenant Governor, Marc M. Mouton; Secretary of State, James A. Gremillion; Attorney General, Eugene Stanley; State Treasurer, A. P. Tugwell, State Auditor, L. B. Baynard. Chief Justice of the Louisiana Supreme Court is Charles A. O'Niell; there are six associate members elected by popular vote for 14-year terms. See PRISONS.

LOYALTY ISLANDS. See NEW CALEDONIA.

LÜBECK. See GERMANY under *Area and Population*.

LUMBER. Lumber in 1941, according to year-end estimates, was expected to approximate thirty-two billion board feet. Softwood lumber production was under heavy demand during the year, but demonstrated (especially in the latter months) sufficient flexibility to adapt itself to the demand. The hardwood industry was not able to reach a satisfactorily level balance between production and demand. Although output of hardwood in the last three months overcame demand, stocks continued their downward plunge begun in May, 1940, and dry wood was difficult to obtain.

PRODUCTION BY QUARTERS OF HARD AND SOFT LUMBER, 1941 (ESTIMATED)

	First quarter	Second quarter	Third quarter	Stocks October 31
Southern Pine ..	2,173,000	2,182,000	2,190,000	1,350,000
West Coast ..	2,095,000	2,101,000	2,237,958	
Western Pine	870,000	1,652,000	1,823,000	1,740,000
Calif Redwood	112,000	129,000	150,800	254,000
Southern Cypress ..	49,000	41,000	40,533	203,000
Northern Pine ..	32,000	13,000	21,376	
Northern Hemlock ..	110,000	93,000	95,326	
Appalachian	29,000	28,000	30,656	40,000
Other Softwoods ...	385,000	394,000		1,134,000
Total Softwoods	5,858,000	6,635,000	7,213,649	4,721,000
Southern Hardwoods	483,000	549,000	635,000	650,000
Appalachian Hard- wood	180,000	211,000	194,222	250,000
Northern Hardwoods	173,000	171,000	111,583	130,000
Other Hardwoods				110,000
Total Hardwoods	1,011,000	1,122,000	1,131,859	1,140,000
Total Lumber	6,869,000	7,757,000	8,345,508	5,861,000

^a Based on figures released by the National Lumber Manufacturers Association.

^b Derived from figures in the Industrial Reference Service, U S Department of Commerce

Army purchases of softwood totaled over 250 million feet in September, 1940, the highest volume since the army construction program was initiated, and totaled over 1,626 million feet from September, 1940, to September, 1941. Purchases of hardwood for lend-lease use totaled over six million feet, with continued buying anticipated.

Lumber Trade. Figures from the *Monthly Summary of Foreign Commerce* (September, 1941) showed a distinct decline in exports, due, of course, to the war. Imports, on the whole, showed relatively little change. The total values for the nine months ended September, 1941, were as follows: Imports, \$211,555,726; exports, \$104,694,320. A breakdown of this shows the following:

Wood product	Imports	Exports
Wood, Unmanufactured	\$ 8,100,194	\$ 1,806,118
Wood, Sawmill Products	32,449,124	21,650,242
Wood, Manufactures	10,059,585	15,084,684
Paper Base Stocks	60,562,721	17,181,429
Paper and Manufactures	100,384,103	48,971,847

LUTHERAN CHURCH. The year 1941 was filled with activities that sprang directly from the exigencies of the world emergency. As in 1940, Lutherans of America bore the responsibility of maintaining all orphaned Lutheran mission fields and for this purpose raised \$400,000 in the first 11 months of 1941. For the missions of the Church of Norway came the grant of £50,000 from the Norwegian Government-in-Exile, to be administered by J. A. Aasgaard, president of the Norwegian Lutheran Church of America. Mission board problems included the withdrawal of all missionaries from Japan and of wives and children from China, and the difficulties of securing passage for missionaries going out from America.

The Lutheran Refugee Service served about 250

newcomers in 1941, making a total of 1,361 persons with whom it has had contact since June, 1939. Placements have been arranged for about 900 of these. The Service is trying more than ever to fit the refugee into the American and the church community.

The most important 1941 project attendant to the national emergency was the inauguration of a ministry to spiritual and religious needs of Lutheran men in the United States Armed Forces. The Service Men's Division of the National Lutheran Council and the Army and Navy Commission of the Missouri Synod are the two agencies heading this work. Starting in January, by December they had set up 27 centers in camp communities, each with a full-time service pastor. They also render service to the 185 Lutheran chaplains in the Army and Navy.

Again the National Lutheran Council sponsored WRUL broadcasts directed to Lutherans in Europe. The "Lutheran Hour," originating from station KFVO, St. Louis, is rapidly becoming a world-wide program, because in 1941 it was carried in English by 15 foreign stations and in Spanish by 70. For the first time a Yiddish New Testament has been translated and published in America. This 1941 accomplishment was the climax of many years of work by Dr. Henry Einspruch, head of the Lutheran Jewish Mission in Baltimore. Full-time pastors for Lutheran students were installed at the Universities of Minnesota and Wisconsin. In the United Lutheran Church 6 colleges and 4 theological seminaries realized more than \$1,000,000 in special fund-raising campaigns.

Large 1942 conventions for young people were those of the Luther League in Kitchener, Ontario, and the Walther League in New Orleans. Some of the smaller Lutheran bodies held annual meetings, and the Evangelical Lutheran Synod of Missouri, Ohio, and Other States (the "Missouri" Synod) had 1,000 persons attending its triennial convention in Ft. Wayne, Ind. A feature of this meeting was the commemoration of F. C. D. Wymken's great ministry of a century ago in the Mississippi Valley.

The year 1942 is the 200th anniversary of Henry Melchior Muhlenberg's arrival in America. As he is considered the father of the Lutheran Church in America, extensive plans have already been laid for recognizing this event; participation of the U.S. Government in the celebration has been assured by congressional resolution.

The various Lutheran church bodies drew closer together in work and study in 1941, though not by formal doctrinal declarations. Out of a notable all-Lutheran conference in Columbus, Ohio, in January, came the cooperation of almost all American bodies in the support of orphaned missions and in the service to men in the Armed Forces. Encouraging intersynodical conferences and six noteworthy seminars brought Lutheran laymen and pastors together with excellent results.

The latest available figures show that Lutherans in the United States and Canada have 4,990,893 baptized and 3,514,799 confirmed members in 15,796 organized congregations. The total of ordained ministers is 13,038. In 1940 these Lutherans raised \$43,092,392 for local congregational expenses and \$10,072,822 for work at large.

LUXEMBURG. A grand duchy of Western Europe, occupied by German troops on May 10, 1940. Bounded by Germany, France, and Belgium, Luxembourg has an area of 999 square miles and a population estimated at 301,000 on Dec. 31, 1938. Most of the

inhabitants profess the Roman Catholic faith. They speak a Germanic dialect, with French as their secondary language. Chief towns; Luxembourg (capital), 57,740 inhabitants; Esch-Alzette, chief mining center, 27,517; Differdange, 15,945; Dudelange, 13,572. There is no illiteracy.

Production, Trade, etc. Agriculture normally supports some 32 per cent of the population. Yields of the chief crops in 1939 were (in metric tons): Wheat, 27,000; barley, 3,400; rye, 12,400; oats, 45,000; potatoes, 285,600 (1938). Mining and metallurgical industries are important, production figures for 1939 (in metric tons) being: Pig iron and ferroalloys, 1,776,000; steel ingots and castings, 1,824,000; iron ore, 5,140,632 (1938). A Belgo-Luxembourg customs union, established May 1, 1922, ended Aug. 15, 1940, when Luxembourg was incorporated in the German customs area. In 1940 there were 2,558 miles of highway and 318 miles of railway line open to traffic.

Government. Budget revenue for 1940 was estimated at 352,600,000 francs; expenditure, 369,000,000 francs; public debt on Dec. 31, 1939, 134,100,000 francs (Luxembourg franc equalled 1.25 Belgian francs before May 10, 1940; it was pegged to the reichsmark at 1 franc=RM 0.10 on Aug. 26, 1940, and ceased to be legal tender on Mar. 1, 1941).

Previous to the German invasion, executive power and the right to organize the government rested with the Grand Duchess Charlotte, who succeeded to the throne on Jan. 9, 1919. Legislative power was vested jointly in the Grand Duchess and the Chamber of Deputies (lower chamber) of 55 members (comprising in 1940, 25 Catholic-Conservatives, 18 Socialists, 6 Radical-Liberals, and 6 others), elected for a term of six years by universal suffrage. The Council of State (upper house) of 15 members was appointed for life by the sovereign.

Upon the German invasion, Grand Duchess Charlotte and four of the five Cabinet Ministers escaped to France. When France collapsed the Grand Duchess and two members of her Cabinet established themselves in November, 1940, in Montreal, Canada. Members of the Cabinet in 1941 were hold-overs from the Catholic, Socialist, and Radical-Liberal coalition government formed Nov. 5, 1937. They included: Minister of State, President of Government and Minister of Treasury, Pierre Dupong (in Montreal); Foreign Affairs, Joseph Bech (in London); Social Welfare and Labor, P. Krier (in London); Justice and Public Works, Victor Bodson (in Montreal); Education, Agriculture, and Commerce and Industry, N. Margue (prisoner of war in Germany).

Reichsfuehrer Hitler appointed Dr. Gustav Simon as Chief of Civil Administration in Luxembourg on July 25, 1940, and he undertook the progressive incorporation and assimilation of the grand duchy in the Reich (see YEAR BOOK for 1940, p. 424).

History. The reorganization of Luxembourg as an integral part of the Reich was carried rapidly forward during 1941. The grand duchy was included in the German province of Coblenz-Trier when that province was renamed Moselland by a decree of Feb. 8, 1941. It was announced in Berlin February 16 that all citizens and "stateless persons" residing in Luxembourg must Germanize their first names. The decree covering this action required that where last names were French or other foreign versions of original German names, the German names must be restored.

Extreme pressure was placed upon Luxembourg parents to force their children to join the Hitler Youth Organizations. Many hundreds of workmen

and other people, their employment application papers having been falsified by the German authorities, were reportedly subjected to forced deportation and sent to work in Cologne and Trier. Members of the Luxemburg bar who refused to join the local Nazi organization were disbarred from practicing their profession, indiscriminately sentenced to perpetual hard labor, and deported to Germany to work on the roads (see *The Inter-Allied Review*, New York, Aug. 15, 1941, p. 8). On July 5, 1941, information was received by the provisional Luxemburg Government in Montreal that Luxemburg was being stripped by the Nazis of all its leaders, leaving the country "virtually without a head." Among the leaders imprisoned or taken away to Germany was the former mayor of the city of Luxemburg who was said to be working with a road gang in Germany. Church leaders were prominent among the persecuted, because of their opposition to the invaders. Many priests, monks, and nuns were jailed or deported.

The Luxemburg Government-in-Exile continued its struggle to restore the grand duchy's independence. Premier Dupong represented Luxemburg at the gathering of representatives of the 14 Allied powers in London on June 12, where all gave formal pledges to "continue the struggle against German or Italian aggression until victory has been won." Grand Duchess Charlotte, her consort, Prince Felix, and their son, Grand Duke Jean, were guests of President and Mrs. Roosevelt at the White House in Washington on February 12-13. On February 23 they were feted by the Luxemburg societies of New York during a visit to that city. Several hundred Luxemburgers reached British shores and were serving with the British, Free French, and Belgian forces.

See GREAT BRITAIN under *History*.

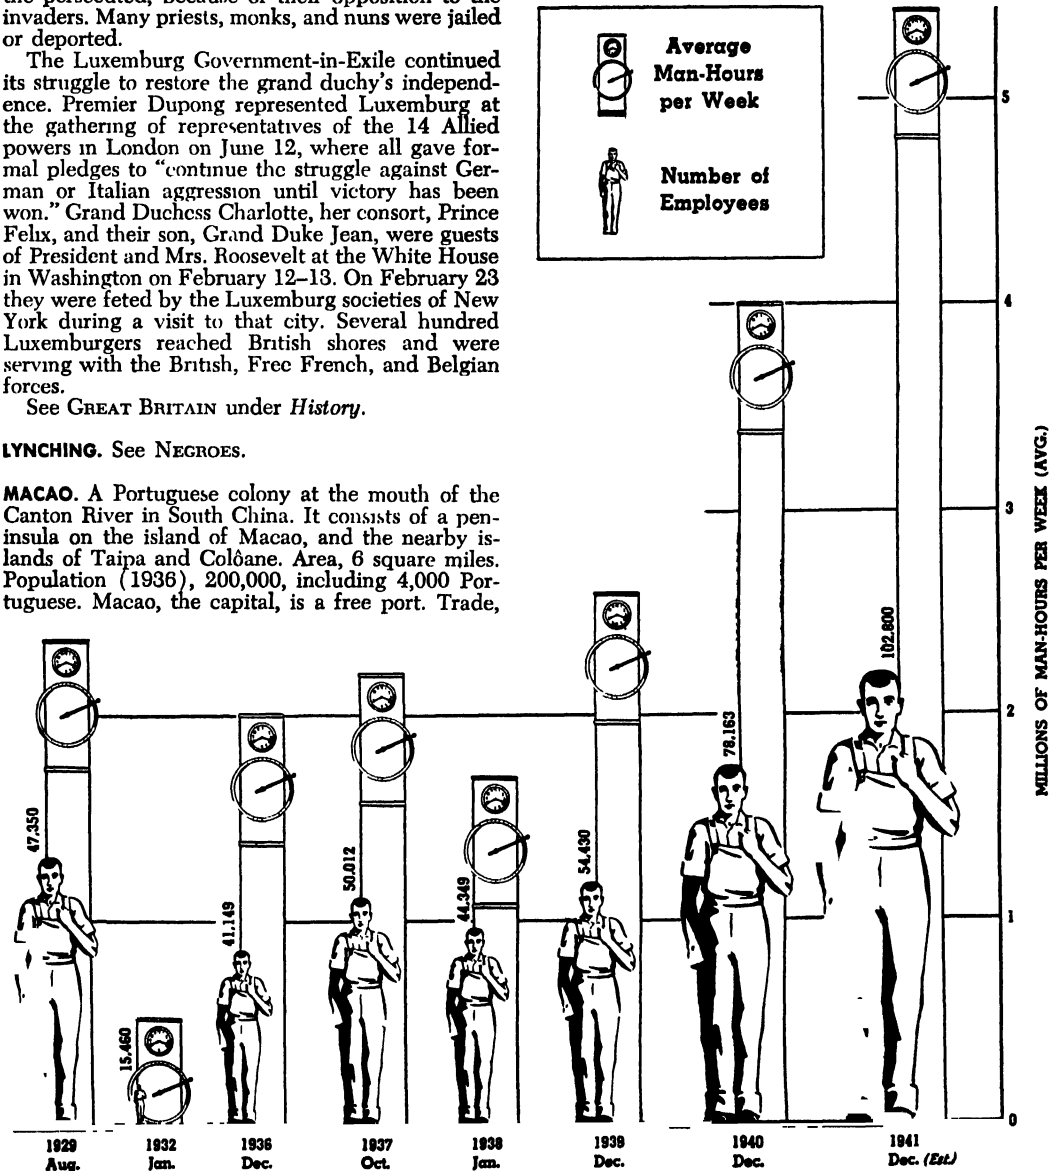

LYNCHING. See NEGROES.

MACAO. A Portuguese colony at the mouth of the Canton River in South China. It consists of a peninsula on the island of Macao, and the nearby islands of Taipa and Colôane. Area, 6 square miles. Population (1936), 200,000, including 4,000 Portuguese. Macao, the capital, is a free port. Trade,

mainly transit, is in the hands of the Chinese. Budget (1939): 44,937,126 escudos (escudo averaged \$0.0404 for 1939). Shipping (1937): 2,298,285 tons entered and cleared.

MACEDONIA. See BULGARIA, GREECE, and YUGOSLAVIA, under *History*.

MACHINE BUILDING. Development along machine building and other engineering lines has been largely affected by the war, as was to be expected. Aside from direct war orders for airplanes, ammunition, machine guns, tanks, and field guns, the effect on builders of machine tools and similar products has been marked. The volume of machine tool business dropped from 185 millions in 1929 to 22 million in 1932. It crawled back to 195 million in 1937, dropped to 145 million in 1938 and

Courtesy of American Machinist

EMPLOYMENT IN MACHINE TOOL PLANTS

in 1941 will reach an estimated all time high of 800 million.

Put in another way, it is estimated that in January, 1940, we had a total of about 930,000 machine tools of all kinds in this country. Normal production of machine tools averages about 25,000 units, a year, large and small. But during 1940 we produced over 100,000 machine tools, four times the usual number, and the 1941 output, it is estimated, will reach a total of 200,000 new machines.

Mere numbers however, do not begin to tell the whole story. Many improvements have been made which greatly increase the capacity of the machines. Cutting tools are now more efficient. This coupled with increased power, makes it possible to produce much more work than ever before. These changes have made these new machines at least three times as productive as the average machine in use at the beginning of 1940. On this basis we can assume that the machine tools built during 1940 and 1941 alone have a production capacity practically equal to all the 930,000 machine tools in the shops of the country at the end of 1939.

This increased productivity is being reflected in the greatly increased number of airplane engines, of rifles, machine guns, tanks, and other equipment, much of which goes overseas. It also helps greatly in increasing the number of machine tools that can be built in the various shops. Add to this the greatly increased man-hours now being expended in the machine tool shops and the greatly increased production becomes more understandable. For the man hours per week in the machine tool shops have increased from 4 million in 1940 to 5½ million in 1941.

Sub-contracting has become a much greater factor in the production of machinery of all kinds than ever before in our history. It is being extended to all kinds of machine work. It differs from the established practice of the automobile builders in many ways. In that industry it has been common to purchase complete units, such as transmissions and axles from those who specialized in those parts.

In order to speed production we have copied to some extent what the British have called "bits and pieces," which means that a mechanism is dissected, so to speak, and its units are farmed out to small shops which have no facilities for making complete units but which can make some of the parts. This has been extended to the building of machine tools as well as to other products.

This farming out of parts is likely to have its effect on industry after the war, and in several ways. Small shops are getting experience in work that is new to them, which should help to widen their activities in several ways. Large shops which have made all their own parts may find it advantageous to confine themselves to the major parts of their machines and to continue some of the outside sources they have acquired. This may at times be cheaper than maintaining small, special departments which may represent considerable investment but which are normally idle part of the time.

Shortage of some alloys has led to substitutions in steels which may have a lasting effect. Some of the changes are claimed to be an advantage in several ways. Plastics are taking the place of steel in more parts of the automobile. They are also being tried in the construction of some training planes to lessen the time required to build them.

Among the new devices which have been brought out to facilitate manufacture of airplanes, nothing is more striking than the explosive rivet, designed for use in blind riveting jobs. This rivet requires no backing up or hold-on. Each rivet contains a

small amount of explosive in the small end. It is inserted in its hole, with the sheets clamped together by suitable means, and heat applied to the head of the rivet. This explodes the charge and mushrooms the inside end into a head that holds the sheets together perfectly.

New processes are being applied to the making of guns and other munitions. Bores of barrels of larger guns are being honed to secure greater smoothness than was possible with the former practice of boring. It also saves time. One of these honing machines can now finish the bore of guns up to 70 feet long. Smaller bores are also being honed satisfactorily.

Rifling grooves are now being cut with broaches instead of the older rifling method. This cuts all the grooves at once and saves considerable time. New methods of measuring both the bores and the depth of the rifling grooves have also been developed which secure greater accuracy in much less time. This is accomplished by what is known as the "air-gage" method.

FRED H. COLVIN

MACKENZIE, District of. See NORTHWEST TERRITORIES

MADAGASCAR. A French island colony near the southeast coast of Africa. Area, 241,094 square miles. Population, including that of the Comoro Islands (1936 census), 3,797,936 (3,758,338 Malagasy, 25,255 French, and 14,343 foreigners. Chief towns (1936 census): Tananarive (Antananarivo), 126,515; Majunga, 23,684; Tamatave, 21,421; Antsirabe, 18,215; Tulear, 15,180; Fianarantsoa, 14,740. Education (1939): 1,717 schools and 221,179 students.

Production and Trade. Maize, rice, coffee, sugar, copra, potatoes, manioc, groundnuts, vanilla, cacao, graphite, mica, phosphates, gold, precious stones, and hides are the important products. On Jan. 1, 1937, there were 6 million cattle on the island. Many valuable timbers are produced from the forests. Silk and cotton weaving, metal working, and the making of straw hats are carried on. Trade (1938): 602,710,000 francs for imports and 819,397,000 francs for exports (franc averaged \$0.0288 for 1938; \$0.0251, 1939). Shipping (1938): 7,364 vessels of 4,306,309 aggregate tons entered the ports.

Government. Budget (1939): 343,660,000 francs. Public debt (Dec. 31, 1938), 823,866,684 francs. The government is headed by a governor general, assisted by a consultative council. Gov. Gen., M. Annet (appointed Dec. 13, 1940).

Comoro Islands. A region or province under the general government of Madagascar, consisting of the archipelago formed by the islands of Mayotte, Anjouan, Grande Comore, and Mohéli. Area, 790 square miles; population (1936), 128,608. Capital, Zandzi.

History. A German military mission was reported to be in Madagascar during 1941.

MADEIRA. An administrative district of Portugal, consisting of a group of islands (Madeira, Porto Santo, and three uninhabited isles) in the Atlantic about 600 miles southwest of Lisbon. Area, 314 square miles; population, about 217,000, of whom 70,000 reside in Funchal, the capital, on the island of Madeira. Normally Funchal is an important port of call for shipping lines and pleasure cruises, but as a result of the war the number of vessels enter-

MACHINE BUILDING

ing the port declined from 1,316 in 1938 to 381 in 1940. The tourist trade practically disappeared. The other chief occupations are embroidery (by hand) and wine making. The 1940 exports of these products were less than one-fourth those of 1939. Sugar, bananas and other fruits are grown. See PORTUGAL.

MADOERA. See NETHERLANDS INDIES under *Area and Population*.

MAGAZINES. See NEWSPAPERS AND MAGAZINES.

MAGNESIUM. Magnesium is no longer classed among the minor metals. In March, 1941, it was put on the mandatory priority list, the second metal (aluminum was first) to be so listed, and this in spite of the all time high of 6,250 tons produced in 1940. In November it was put on a monthly allocation basis.

Magnesium and aluminum are the cardinal metals of airplane construction. The two alloyed together make a light tough metal which is considered responsible for the wonderful performance of American airplanes everywhere. A half ton of magnesium goes into the making of one fighter plane; a bomber takes more. One hundred eighty pounds of magnesium in an airplane engine replaces 270 lb. of aluminum. In a big bomber it makes possible a 360-lb. load of extra bombs. The munitions industry also makes extraordinary demands on the magnesium supply for its increased and increasing needs for pyrotechnic materials. Magnesium is needed by the millions of pounds in the manufacture of ammunition, flares, star shells, incendiary bombs, and also for naval, artillery, and anti-aircraft tracer shells.

Production of magnesium in 1941 was 30,000 tons. Of this amount 15,600 tons went into airplane construction, 1,500 tons into the manufacture of pyrotechnics and chemicals, about 19,500 tons to the manufacture of fabricated products, 9,000 tons to aluminum, copper, and zinc alloys.

The United States has access to plentiful ores, especially since magnesium is the third most frequent element in the earth. The war problem was to increase the manufacture. On Jan. 21, 1941, the Dow Chemical Co. plant at Freeport, Texas, made its first solid bar of magnesium out of sea water. The Dow Chemical Co. at Midland, Michigan was the only magnesium producer until 1940; but the expansion of its two plants and the advent of several newcomers in the field will bring U.S. production up to some 200,000 tons a year by the end of 1942. Consumption is expected to reach or exceed that figure at about the same time. According to the U.S. Bureau of Mines this amount will be taken from five principal sources: underground brines (the only source, 1927-41), sea water, magnesite, dolomite, Langbeinite. Forty per cent of the nation's magnesium will be produced from magnesite in 1942, 27 per cent from sea water, 23 per cent from dolomite, 10 per cent from brine and potash salt.

No magnesium was imported in 1940; exports fell 59 per cent. In March, 1941, 200 short tons were made available for export to Great Britain by the Priorities Division of the OPM. The price was 27¢ a lb. throughout 1941.

MAINE. A New England State. Area: 33,215 sq. mi., including 2,175 sq. mi. of inland water, but excluding Atlantic coastal waters, 1,102 sq. mi. Population: (1940 census) 847,226. The urban population comprises 40.5 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 0.3 per cent (U.S. average, 10.2); elderly (65 years and over), 9.4 per cent. Maine ranks 38th among the States in area, 35th in population, and 33rd in density, with an average of 27.3 persons per square mile. The capital is Augusta with 19,360 inhabitants; largest city, Portland, 73,643. There are 16 counties and 10 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Harry V. Gilson, Commissioner of Education, there were 171,434 pupils enrolled in the public schools of Maine during the school year 1939-40, 133,718 in elementary schools and 37,716 in secondary schools. Teachers numbered 5,978 and received an annual average salary of \$823 in elementary schools and \$1,377 in secondary schools. Total expenditures for the year were \$11,254,441.

Transportation. State highway mileage in 1939, including streets under State control, totaled 8,771, of which 8,625 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 208,595; 161,792 were private and commercial automobiles, 190 busses, and 43,914 trucks and tractor trucks. Gross motor-fuel consumption was 157,361,000 gallons. Net motor-fuel tax receipts were \$5,940,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$4,162,000.

Railways of all classes extended 1,881 miles (Dec. 31, 1939) .80 per cent of the total mileage in the United States. Class I steam railways accounted for 1,503 miles. There are 16 airports and landing fields in the State (five lighted fields) and 23 seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 176 civil aircraft in the State and 451 airline transport, commercial, and private pilots (360 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 1,164,000, as compared with 1,172,000 acres in 1940. According to the latest census, there are 38,980 farms, valued at \$124,082,841, averaging 108.3 acres each. Farm population numbered 177,106 or 20.9 per cent of the total. Leading crops with production in 1941 were: Potatoes, \$32,664,000, 44,745,000 bu.; hay, \$9,067,000, 650,000 tons.

Manufacturing. According to the 1939 Census of Manufactures, there were 1,210 manufacturing establishments in Maine, employing 75,655 wage earners who received \$68,434,288 in wages for the year. The total value of products was \$345,368,595; value added by manufacture, \$152,423,414.

Mineral Production. Minerals are of relatively little importance in the output of Maine, their total value in 1939 being only \$3,769,671, according to the U.S. Bureau of Mines; about one-third of this sum was accounted for by stone.

Trade. According to the 1940 census there were 1,032 wholesale establishments in Maine, employing 7,286 persons, reporting net sales for 1939 of \$165,848,000 and annual pay roll of \$10,135,000. There were 13,455 retail stores with 28,113 employees, reporting sales of \$281,356,000 and pay roll of \$26,079,000. Service establishments numbered 4,303, employing 4,642 persons for \$3,814,-

000 per year, and reporting a business volume amounting to \$14,701,000. The leading business center of the State is Portland which reported wholesale sales of \$61,479,000, retail sales of \$45,895,000, and \$3,648,000 receipts for its service establishments. Bangor reported sales of \$20,022,000 wholesale and \$20,312,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Maine was \$14,457,000. Under the Social Security program, financed by Federal funds matching State grants, 12,502 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$20.84 (U.S. average pension, \$21.08); 3,864 dependent children in 1,545 families received average monthly payments of \$39.60 per family (U.S. average, \$32.73); and 1,071 blind persons received \$22.72 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 6,898 and received \$21.33 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 849 (\$56,000); NYA student work program, 2,355 (\$20,000); NYA out-of-school work program, 3,228 (\$94,000); WPA, 4,602 (\$321,000); other Federal emergency projects, 13 (\$2,000); regular Federal construction projects, 8,218 (\$978,000). The Farm Security Administration certified subsistence payments totaling \$6,000 for the month to 204 cases.

Legislation. The Legislature convenes in regular session on the first Wednesday of January in odd years. It is composed of 33 Senators (2 Democrats, 30 Republicans, and 1 vacancy in 1941) and 151 Representatives (22 Democrats, 127 Republicans, and 2 vacancies).

Among the more important bills passed during the 90th session was an Act relating to the conservation of soil and soil resources and the prevention and control of soil erosion. Under the Act, a State soil conservation committee was established, consisting of the directors of the State agricultural extension service and experiment station and three farmers appointed by the Governor. Creation of soil conservation districts was provided for upon petition of any 25 occupiers of land and pending a referendum of all land occupiers in the proposed district.

A Maine State Guard was established, to be maintained whenever the National Guard of the State is in active Federal service. There were established also the Maine Mining Bureau, in an Act regulating prospecting and establishment of mining claims, and a Sanitary Water Board to control, prevent, and abate pollution of certain waters in the State. (The latter board resulted from the pollution of the Androscoggin River.)

The Model Airport Zoning Act permitted political subdivisions to make zoning regulations in the areas around airports, specifying the land uses permitted and restricting the height of structures and trees. Under other Acts, municipal airports were declared to be agencies of the State, and the aviation laws of the State were consolidated.

A Use Fuel Tax Act levied a four cents per gallon tax on users of fuel in internal combustion engines propelling motor vehicles; proceeds of the tax were to be used for highways only. The Gasoline Tax Act, as amended, required distributors of internal combustion engine fuel to make reports on or before the last day of each month, at which time they should pay four cents upon each gallon reported as sold, distributed, or used. Also affecting high-

ways was an Act designed to remove the menace of junkyards, a city or county permit was required for the establishment of a junkyard (three or more cars) and they could not be established within 500 feet of highways unless screened from view or adequately fenced.

Another important tax law created a tax of one mill for each cigarette sold. Dealers and distributors were required to secure annual licenses at the rate of \$25 per year for each wholesale outlet and \$1 per year for retail outlets including vending machines. This tax was designed to finance the program of aid to aged and dependent persons. (See above under *Social Security and Relief.*)

Premarital medical examinations were required within 30 days prior to the date on which a marriage license was applied for, the examination to include a test for syphilis; free blood tests were provided for those unable to pay. Representatives to Congress were reapportioned in three districts, elections to Congress to be held on the second Monday of September, 1942, and thereafter biennially. The Inheritance Tax Law and the Financial Responsibility Law (relating to motor-vehicle accidents resulting in death) were amended, and the laws pertaining to narcotic drugs and declaratory judgements and decrees were made uniform. The incorporation of credit unions and the organization of Rural Electrification Cooperatives were authorized, the latter requiring the participation of five or more persons or two or more other cooperatives.

A referendum measure submitted to the voters of Maine on December 10 would have increased the tax on gasoline from 4 to 4½ cents per gallon and would have increased from 3 to 3½ cents the rebate per gallon on gasoline used otherwise than in motor vehicles operated on public highways. The measure was overwhelmingly defeated, preliminary returns of the Associated Press showing 20,361 votes against to 4,823 for the increase.

Finances. Total tax collections in Maine for the fiscal year ending in June, 1940, were \$24,646,000. Total sales taxes amounted to \$7,399,000, including motor fuel, \$6,133,000. Taxes on specific businesses ran to \$2,897,000, general and selective property, \$5,044,000, unemployment compensation (1941), \$4,216,000. Cost payments for the operation of general government totaled \$26,950,000 in 1939, the latest year available. (Revenues for the general government for that year were \$33,919,000.) Cost of operation per capita was \$32.08. Total gross debt outstanding in 1941 was \$22,011,000, as compared with \$27,462,000 in 1932.

Officers and Judiciary. The Governor is Sumner Sewall (Rep.), inaugurated in January, 1941, for a two-year term; Secretary of State, Frederick Robie; Attorney General, Frank I. Cowan; State Treasurer, Belmont Smith; State Auditor, William D. Hayes; State Comptroller, Harold E. Rodgers. Chief Justice of the Maine Supreme Judicial Court is Guy H. Sturgis; there are five associate members appointed for seven-year terms.

See PORTS AND HARBORS.

MALACCA. See BRITISH MALAYA.

MALAY STATES. See BRITISH MALAYA.

MALDIVE ARCHIPELAGO. See under CEYLON.

MALTA. A British colony in the Mediterranean, consisting of the islands of Malta (95 sq. mi.), Gozo (26 sq. mi.), and Comino (1 sq. mi.). Civil population (Jan. 1, 1939), 268,668. Capital, Valletta. Vital statistics (1938): 8,704 births, 5,399 deaths, and 1,778 marriages. Education (1938-39): 168 schools of all kinds and 34,846 students. *Malta is*

an important naval base for the British Mediterranean Fleet.

Production and Trade. Barley, wheat, potatoes, maize, oranges, figs, honey, grapes, and cotton are the main products. Livestock (1939): 34,470 goats, 15,936 sheep, 6,707 swine, 4,540 cattle, and 8,799 horses, donkeys, and mules. Trade (1939): £4,167,465 for imports and £659,812 (including reexports of £433,756) for exports. Shipping (1938): 2,512 ships aggregating 4,488,153 tons entered the ports. Roads (1940): 521 miles.

Government. The deficit for the year 1940-41 of £1,012,000 was met by an Imperial government grant of £1,000,000. For the year ending Mar. 31, 1942, the deficit was estimated at £662,000. Malta is governed according to Letters Patent of Feb. 14, 1939, promulgated on Feb. 26, 1939, which granted a new constitution under which there is a council of government of 20 members (5 ex-officio, 3 official, 2 unofficial nominated by the governor, and 10 elected) presided over by the governor who has a casting but no original vote. English and Maltese are the official languages of Malta. Governor and Commander-in-Chief, Maj.-Gen. Sir William Dobbie (appointed May 20, 1941); Lieutenant Governor, Sir Edward Jackson (appointed Jan. 12, 1940).

History. It was announced in January, 1941, that air-raid shelters were available for all the inhabitants of Malta. Along all the main roads slip trenches had been cut in the rock at five-minute intervals. The increased garrison and the thousands of local men in the armed forces receiving good wages was an offset to any depression which might have resulted from the complete interruption of foreign trade. A decree, announced on Feb. 20, 1941, was issued mobilizing all men in Malta between the ages of 16 and 56 years, for either military or noncombatant service. Those called up for immediate military service were the six classes of 20 to 25 years, inclusive.

On July 26, 1941, British artillery and aircraft repelled an Italian naval attack, by small craft, on the harbor at Valletta. It was revealed during September that Malta, which had been raided over 773 times by enemy aircraft since the start of the war, had become a base for British aircraft operating against enemy land targets and shipping. Some 316 persons were killed and 265 seriously injured by air raids since the beginning of the war, according to a report issued in August, 1941.

Commodities placed under a uniform rationing system on Apr. 1, 1941, were sugar, laundry soap, matches, and coffee. Other restrictions prohibited the sale of tinned beef, tinned milk (except for babies and invalids), sugar for making confectionery, and coal. Gasoline and kerosene continued under severe restriction. See **WORLD WAR**.

MAMMALS. See **ZOOLOGY**.

MANADO. See **NETHERLANDS INDIES** under *Area and Population*.

MANCHOUKUO. An empire in northeastern Asia established under Japanese protection Mar. 1, 1932; comprising the former Chinese provinces of Fengtien, Kirin, and Heilungkiang in Manchuria, and Jehol and the six northern counties of Chahar in Inner Mongolia. Capital, Hsinking (formerly Changchun). Ruler, Emperor Kangtê, who was enthroned Mar. 1, 1934.

Area and Population. Including the South Manchuria Railway Zone under direct Japanese jurisdiction but excluding Kwantung (q.v.), the area of Manchoukuo is estimated by Japanese sources at

503,013 square miles. The population on Dec. 31, 1937, was estimated at 36,949,975, including 35,533,729 Manchoukuoans (predominantly Chinese, with Manchu and Mongol minorities), 931,300 Koreans, 418,300 Japanese, and 66,326 others, mainly Russians. The population of Mukden on Dec. 31, 1938, was 810,465, and of the other chief cities on June 30, 1938: Harbin, 467,483; Hsinking, 360,294; Antung, 210,759; Kirin, 132,272; Yingkow, 159,470. The net immigration of Chinese laborers in 1938 was 291,097; of Korean peasants, 15,850.

Defense. The regular army of Manchoukuo, officered and trained mainly by Japanese, numbered about 80,000 in 1939. A law of Apr. 11, 1940, provided for a compulsory three-year term of military service for all men between 19 and 40. The navy comprised 1 destroyer, 15 gunboats, 6 patrol vessels, and various smaller craft, most of them modern.

Education and Religion. Education statistics for June, 1939, showed 15,877 primary schools with 1,579,169 pupils; 254 secondary schools, with 60,368 pupils; 14 colleges, with 4,372 students; 16 normal schools, with 4,045 students; and 65 vocational schools, with 5,043 students. According to a Japanese source, there were on Dec. 31, 1937, 1,770,692 Buddhists, 377,337 Taoists, 153,844 Roman Catholics, 132,636 Mohammedans, and 51,393 Protestants. Lamaism was believed to have far more adherents than Buddhism, but no statistics as to their number were available.

Production. Agriculture supports about 85 per cent of the population. Yields of the chief crops in 1940 were officially estimated to total 18,000,000 metric tons, divided as follows: Soybeans, 3,800,000; kaoliang, 4,407,000; millet, 3,900,000; corn, 3,100,000; wheat, 807,000; perilla seed, 47,000; cotton, about 75,000 bales (of 500 lb.), beet sugar, 25,800; rice, 870,000; tobacco, flue-cured, 12,000 to 14,000; flax, 3,000. Livestock in September, 1937, included 1,683,200 cattle, 1,965,900 sheep, 5,335,800 swine, 1,243,000 goats, and 12,800 camels. The wool clip in 1937 was about 7,000,000 lb. Coal and lignite output in 1937 was about 14,100,000 metric tons; iron ore, pig iron, steel, magnesite, gold, lead, and oil shale are the other chief minerals and metals (for latest available figures, 1936, see **YEAR BOOK**, 1938). On Dec. 31, 1938, there were 3,900 industrial establishments and business concerns, including 712 manufacturing plants, 186 mining and ceramics concerns, 28 electric and gas industries, and 2,062 banking and commercial enterprises.

Foreign Trade. Imports in 1939 totaled 1,783,366,000 yuan (1,274,748,000 in 1938); exports, 826,190,000 yuan (725,454,000). Of the 1939 imports, Japan supplied 1,505,011,000 yuan; United States, 87,739,000; China, 64,226,000; Germany, 51,786,000. Japan took 516,792,000 yuan worth of exports in 1939, China, 165,207,000; Germany, 50,358,000. Leading 1939 exports: Soybeans, 206,378,000 yuan; bean cakes, 123,958,000 yuan; coal, 24,059,000 yuan.

Finance. The general accounts or administrative budget for 1941 balanced at 649,220,000 yuan (642,832,000 yuan in 1940, final returns). The 1941 special accounts budget placed revenues at 1,849,077,161 and expenditures at 1,758,175,290 yuan (1,997,000,000 and 1,905,000,000, respectively, in 1940). Excluding transfers between general and special accounts, net revenue in 1941 was estimated at 1,800,000,000 and net expenditure at 1,787,000,000 yuan. Of the total net revenue, 386,000,000 yuan were to be borrowed and the balance met by taxes and receipts from government enter-

prises. Public debt on Dec. 31, 1938, was 858,918,-000 yuan (346,750,000 borrowed in Japan). The Manchoukuoan yuan was pegged to the yen (1 yuan equals 1 yen) on Oct. 28, 1935.

Transportation. In May, 1940, Manchoukuo had 7,380 miles of railway line, an increase of 1,500 miles in the preceding three years. A total of 210 miles were completed during 1940 (calendar year). All lines were owned or operated by the South Manchuria Railway Co., controlled by the Japanese Government. The company's total revenues in 1940 were 799,000,000 yen; expenditures, 722,000,000; profits, 77,000,000. Highways suitable for motor traffic extended about 27,960 miles in 1940; bus routes in operation Jan. 1, 1941, about 27,838 miles. Construction of highways of strategic importance was pushed during 1941. A network of airlines connects all of the principal cities with those of Japan, Korea, and North China. A twice-weekly express air service between Hsinking and Tokyo was inaugurated in 1941. Steamer services are maintained over 4,222 miles of inland waterways. Normally three-fourths of Manchoukuo's trade passes through Dairen. New trade outlets are being developed at Rashin, Korea, and Tatung, situated at the mouth of the Yalu River.

Government. Under the Constitution of Mar. 1, 1934, as amended July 1, 1937, Manchoukuo is a monarchy in which the Emperor exercises both executive and legislative powers, the latter being subject to the approval of the Legislative Council, an advisory body appointed by the Emperor. There is also a Privy Council of five members; a State Council, or cabinet, of six departments; and a General Affairs Board, attached to the State Council, which supervises budgets and national policies.

Under a protocol signed Sept. 15, 1932, Manchoukuo and Japan agreed "to cooperate in the maintenance of their national security; it being understood that such Japanese forces as may be necessary for this purpose shall be stationed in Manchoukuo." Actually, the government is controlled by the Japanese Ambassador to Manchoukuo, who is also commander-in-chief of the Japanese and Manchoukuoan troops in Manchoukuo and Kwantung (q.v.). Japanese Ambassador and commander-in-chief in 1941, Lieut. Gen. Yoshikiro Umezu (appointed, September, 1939). Prime Minister, Marshal Chang Ching-hui (appointed Mar. 21, 1935).

History. Great and fairly successful efforts on the part of the Japanese authorities drew out of Manchoukuo the highest output of needed goods that the incompletely developed industries of the region could deliver. The mining of coal attained a rate said to approximate 12 or 13 times that of ten years earlier. While a great part of the coal went to Japan, rising domestic industries—particularly steel-making—consumed more of Manchoukuo's coal than before. The lack of an established industrial population limited the possibility of bigger production in the one direction, while German failure to deliver previously ordered heavy machinery delayed the alternative possibility of making great and intricate mechanism fill the place of workmen. President Aikawa of the Manchuria Industrial Development Corporation told in September, in a Tokyo newspaper, of the need for large-scale machinery in Manchoukuo and of his vain attempts to get such machinery, first in the United States, then in Germany.

Leading Manchoukuoan crops totaled less than the quantities at which Japanese economic planners had aimed despite the state bounties offered. In connection with the mediocre crops, lack of available labor, and pressure on producers, there oc-

curred a rise during 1941 in Manchoukuoan wholesale prices; in April, these reportedly averaged 10 per cent higher than one year before.

Various Japanese measures sought to speed the rate of Manchoukuoan development. Not only did a law regulating labor undergo such amendment as would permit requisitioning needed workers, but according to report the government planned to introduce compulsory labor early in 1942. Meanwhile the importation of a great variety of goods for common consumption—such as watches, spectacles, and shoes—was put in the hands of monopolies.

Discoveries of platinum in the valley of the Muta River were reported. The mining of copper ore was stimulated by bounties. The country continued to absorb all available investing power. The amounts and placements of yearly investments were planned, like other features of the land's development; according to report in June, the plan for investments in the year beginning with April, 1941, called for 2.2 billions of Manchoukuoan yuan, of which half from Manchoukuo, half from Japan. The two chief purveying bodies—the Government and the Industrial Development Corporation—were to provide between one-fifth and one-sixth apiece of the total.

During August and September the borders of Manchoukuo and Siberia passed through more of their familiar experience of that confused condition which was neither war nor peace. Encounters were reported, a Japanese movement in force against Vladivostok was made imminent by the Japanese preliminary dispositions, and inhabitants were ordered at one time from the northwestern corner of Manchoukuo's territory.

See CHINA, JAPAN, MONGOLIA, and UNION OF SOVIET SOCIALIST REPUBLICS, under *History*; *FASCISM*; *SEISMOLOGY*.

MANDATED TERRITORIES. Following is a list (as of Dec. 31, 1941) of territories conquered from the German and Turkish empires during World War I and mandated by the League of Nations to various of the Allied Powers under the terms of the Treaty of Versailles.

Mandated Territory*	Mandatory Power	Former Owner
Camerouns, British	Great Britain	Germany
Cameroun, French	France	Germany
Japanese Pacific Islands	Japan	Germany
Nauru	British Empire	Germany
New Guinea, Territory of	Australia	Germany
Palestine . . .	Great Britain	Turkey
Ruanda-Urundi . . .	Belgium	Germany
Samoa, Western	New Zealand	Germany
South-West Africa	Union of South Africa	Germany
Syria and Lebanon	France	Turkey
Tanganyika Territory	Great Britain	Germany
Togo, French	France	Germany
Togoland	Great Britain	Germany

* Iraq, a territory mandated to Great Britain, became an independent State by treaty with the mandatory power on June 30, 1930.

See the separate article on each mandated territory.

MANGANESE. Manganese was one of the most vital strategic metals for the United States in 1941 and of them all was needed in the largest quantities. About 12½ lb. go to desulphurize and deoxidize every short ton of steel; and the United States produces only 3 per cent of its own total needs. Ninety-seven per cent has to be imported; and very little ore arrived from Russia in 1941, which supplied 25 per cent of the United States' imported manganese in 1940. There were no imports from Puerto Rico in 1940 or '41. Only high-grade ore, like the Russian, containing 48 per cent plus of manganese is

used to make ferromanganese, the form in which it is added in the manufacture of steel. Although the United States possesses large deposits of low-grade ores they could not be tapped for any emergency, because the industry had never developed a process for producing suitable ferromanganese from them.

Imports, therefore, were stepped up enormously in 1941, especially from Brazil and Cuba. Cuba sent the United States 245,000 tons, 85 per cent more than in 1940. Cuban ore contains few impurities and is therefore valuable for the manufacture of ferromanganese. Brazilian shipments showed a 70 per cent increase, British Indian, 15 per cent, and South African shipments went up 10 per cent. Total imports of manganese ore for 1941 were 794,516 long tons, January–September. Shipments of manganese ore containing over 35 per cent of natural manganese from domestic mines were about 76,000 long tons, 35,877 long tons more than in 1940. Domestic ferruginous manganese ore was about 459,000 long tons; manganiferous iron ore about 820,000 long tons.

Since high-grade manganese ore is rare in the United States and low-grade deposits plentiful, large-scale domestic production is possible only through beneficiation of low-grade materials. The government appropriated an annual \$500,000 (1940–43) to the U.S. Bureau of Mines and Geological Survey to search for and examine manganese ore deposits. By the end of spring, 1941, 375 deposits were examined. An additional \$2,000,000 was appropriated to the Bureau to construct and operate pilot plants to beneficiate low-grade manganese ores. By September definite success was reported. Concentrates with high manganese content ores were produced from the low-grade deposits in the Las Vegas, Nevada area. And laboratory tests definitely proved that a process could be applied which would enable the United States to supply more than half of its war requirements of manganese from its own resources.

The following table from the U.S. Bureau of Census shows the imports of metallurgical manganese ore (35 per cent or more Mn) during the nine months ending Sept. 30, 1941, in long tons:

Country	Imports for consumption ^a		General imports ^b	
	Gross weight	Manganese content	Gross weight	Manganese content
Belgian Congo			19,482	9,741
Bolivia	95	50	95	50
Brazil	208,970	94,106	235,103	101,996
Chile	8,431	3,969	8,498	3,971
Cuba	164,819	78,115	164,819	78,115
Gold Coast	138,301	69,714	28,434	14,496
India, British	149,604	75,790	177,729	88,452
Mexico	458	226	672	314
Morocco	113	51	25	14
Netherlands				
Indies	3,511	1,873	3,511	1,873
Peru				
Philippine Islands	46,274	22,213	46,274	22,213
U.S.S.R.	28,122	14,589		
Union of South Africa	45,818	21,202	153,597	72,506
	794,516	381,898	838,239	393,741

^a Comprises ore withdrawn from bonded warehouses, irrespective of the year of importation, and ore received in this country during first 9 months of 1941 for immediate consumption.

^b Comprises ore received in this country during first 9 months of 1941, of which part went into immediate consumption and the remainder entered bonded warehouses.

^c Less than one-half ton.

See CHEMISTRY, INDUSTRIAL under *Metals*; GEOLOGICAL SURVEY.

MANITOBA. A prairie province of Canada, between Ontario and Saskatchewan. Area, 246,512 square miles, including 26,789 sq. mi. of fresh water. Pop-

ulation (1941 census), 722,447, compared with (1936 census) 711,216. Vital statistics (1940): 14,771 living births, 6,339 deaths, 8,349 marriages. Chief cities (1941 census figures): Winnipeg, capital (217,994), St. Boniface (17,995), Brandon (16,975), Portage la Prairie (7,095). Education (1939): 157,438 students enrolled in schools and colleges.

Production. The 1940 gross value of agricultural production was \$102,253,000 (field crops \$59,800,000, farm animals \$17,065,000, dairy products \$16,990,000, poultry products \$4,622,000, fruits and vegetables \$2,244,000, fur farming \$754,000). Wheat (66,000,000 bu.), oats (33,000,000 bu.), barley (27,500,000 bu.), rye (2,250,000 bu.), flaxseed (800,000 bu.), potatoes (89,200 tons), roots (21,850 tons), hay (751,000 tons), fodder corn (358,000 tons), and sugar beets (95,100 tons) were the main crops (1940). Livestock (June 1, 1940): 772,700 cattle (including 350,400 milk cows), 462,700 swine, 323,000 horses, 234,000 sheep, 6,351,000 poultry. Fur production (1938–39): 475,406 pelts worth \$1,267,664. The forestry output for 1939 was valued at \$2,672,000. Fisheries catch (1940): 1,750 short tons valued (as marketed) at \$1,988,500.

Mineral production (1939) was valued at \$17,137,930 of which copper (70,458,890 lb.) accounted for \$7,110,711, gold (180,875 fine oz.) \$6,537,003, zinc (40,302,747 lb.) \$1,236,891, silver (1,028,485 fine oz.) \$416,413. Manufacturing (1939): 1,087 factories, 23,910 employees, \$48,810,544 net value of products.

Government. Revenue and expenditure for the year ended Apr. 30, 1940, was estimated to balance at \$20,223,411. Net funded debt (Apr. 30, 1940): \$116,227,084. The executive power is vested in a lieutenant governor who is advised by a ministry, or cabinet, of the legislature. In the legislative assembly there are 55 members elected for a five-year term by popular vote of the adult population (on Apr. 22, 1941, the provincial general election returned to power the coalition government of John Bracken). Six senators (appointed for life) and 17 elected commoners represent Manitoba in the Federal parliament at Ottawa. Lieutenant Governor, R. F. McWilliams (appointed Nov. 1, 1940); Premier, John Bracken (Liberal-Progressive).

MARKETING. The rise in the national income to the highest level yet recorded and the rapid shift in the national economy from a peace to a war basis expanded the physical volume of wholesale and retail trade to record proportions. Prices were regulated in many instances by ceilings set by the Office of Price Administration (q.v.) or by the action of other Government agencies, such as the Department of Agriculture and import organizations like the Rubber Reserve Company and the Metals Reserve Com-

pany. Sellers' markets prevailed generally, as demand surpassed the volume of production and shortages developed. However, priority restrictions limited the ability of sellers to dispose of their goods as they preferred. In some fields, such as copper and other strategic metals and tires and tubes, available supplies were being strictly rationed by the end of the year for the benefit of defense and essential civilian users.

Purchasing agents were confronted with particularly difficult decisions. The rising price trend and the difficulty of obtaining deliveries would ordinarily have made desirable a very aggressive forward buying policy. However, even where goods could be secured, many purchasing men were inclined to hesitate about ordering ahead liberally. In the case of strategic materials and products, the OPM commandeered stocks in the hands of manufacturers and distributors when real shortages developed. Thus, when new car production was halted in December, even stocks in dealers' hands were frozen and could be disposed of only with the approval of the OPM (q.v.) to specified groups of buyers. Secondly, there was the ever-present uncertainty as to the likely duration of the war and the great probability of a sharp decline in commodity prices when the stimulus of armament had been withdrawn. Even those who looked for a "reconstruction boom" immediately after the war were far less sanguine about economic prospects thereafter.

Raw Materials Marketing. The marketing of raw materials was more affected by the war, and the Government controls to which it gave rise, than any other branch of the field of distribution. The demand for agricultural commodities expanded, due both to higher domestic consumption and lease-lend needs. The Department of Agriculture urged farmers and livestock producers to expand their output, and favored a higher price policy to stimulate output. The marketing of a number of crops was dominated by Government buying and loans to growers. Congress in May passed a resolution requiring the Commodity Credit Corporation to lend farmers 85 per cent of parity (prices that give the farmer the same purchasing power for industrial products that he possessed in 1910-14), thus placing a floor under the quotations for cotton, wheat, corn, rice, and tobacco. The farm bloc in Congress fought stubbornly against any price control legislation that would permit the placing of ceilings on agricultural commodities at a level of less than 110 per cent of parity, and some members of the bloc sought even a higher schedule of ceilings. At the same time, the Commodity Credit Corporation sought to prevent prices of basic farm products from rising too far above parity, offering some of its holdings of cotton, wheat, and corn in the market for sale late in the year when prices displayed marked strength.

The marketing of virtually all imported commodities was disrupted by the war. The outbreak of hostilities in the Pacific in December made further receipts of rubber and tin from the British and Dutch possessions and of sugar and coconut oil from the Philippines highly uncertain. The Government had taken over in full the importation of crude rubber earlier in the year, and extended its control over other imported products important to the defense program. The shipping shortage limited imports of other commodities, the U.S. Maritime Commission assuming full control over the allocation of ship space to different types of imports. This control was implemented by Congress through the enactment of the Ship Warrant Act, which prevented any vessel from utilizing port facilities in this country unless it had obtained a warrant to do so from the

Commission. In some cases, Government agencies bought supplies of raw materials abroad, regardless of price considerations, to keep them from finding their way into the Axis countries. The purchase of the Argentine tungsten supply was a case in point.

The establishment of price ceilings brought about a cessation of trading on a number of commodity futures exchanges. In other cases, trading was halted by a lack of supplies, as in raw silk. These markets, as a result, were largely concerned with liquidation of old contracts by the end of the year. The turnover on all futures exchanges aggregated 2,349,000 contracts, which compared with 2,135,000 contracts in 1940. Once price ceilings have been established, the need for hedging facilities disappears for the time being, while there is also no speculative incentive to trade in such markets. Hence, the extension of Government price control indicated that, as in the first World War, these markets would gradually cease to function until restrictions could be relaxed.

Wholesale Trade. Various branches of wholesale trade were affected differently by the nation's adjustment to a war economy. Some dealers in strategic materials, such as rubber, became Government agents, performing services for a commission. Other wholesale groups found their volume of business declining during the year, but were able to widen profit margins where ceilings were not placed upon their resale prices. Government purchases of defense and other supplies directly from manufacturers adversely affected the business of a number of wholesalers. (See BUSINESS REVIEW.)

Retail Trade. Department store sales increased 17 per cent as compared with 1940, according to the Board of Governors of the Federal Reserve System. (See BUSINESS REVIEW.) Dealers in durable consumer goods, particularly automobiles, were seriously affected at the close of the year by the curtailment and final halt of production of such products. At the same time, OPA intervened to discourage or prevent price increases which would offset the severe decline in sales volume of retailers in this

Source: U.S. Department of Commerce

CONSUMER INSTALMENT DEBT

field. Retailers handling imported goods were similarly hampered where they could not obtain domestic products to sell in their place.

Instalment sales terms were brought under Federal Regulation for the first time when the President, by an Executive Order issued August 9, authorized the Board of Governors of the Federal Reserve System to set minimum down payments and

maximum maturities on instalment paper. This action was taken under the Trading with the Enemy Act of 1917, and was based on the national emergency. The Board of Governors issued Regulation W, which went into effect September 1, which set minimum cash down payments of 33½ per cent on new and used cars, 20 per cent on refrigerators and 10 per cent on new household furniture. The maximum maturity on all instalment paper was made 18 months. The effect of this regulation, which presumably will expire at the end of the emergency, will be obscured by the fact that production limitations prevent the sale of goods customarily sold on the instalment plan.

The Department of Justice pursued its broad investigation into food distribution for the avowed triple purpose of ending violations of the anti-trust laws, reducing the cost of living, and increasing farmers' incomes. An outgrowth of this investigation was the indictment of a number of grocery concerns in Connecticut for alleged horizontal price fixing and a group of bakeries and chain stores in Washington, D.C., for allegedly conspiring to fix the price of bread sold in these stores.

MARQUESAS ISLANDS. See OCEANIA, FRENCH.

MARRIAGE. See BIRTH CONTROL; ARKANSAS under Legislation, VITAL STATISTICS

MARSHALL ISLANDS. See JAPANESE PACIFIC ISLANDS.

MARTINIQUE. A French island colony in the West Indies, between the British islands of Dominica and St. Lucia Area, 385 square miles; population (Jan. 1, 1938), 255,000. Fort-de-France, the capital, had 52,051 inhabitants; Le Lamentin, 16,303. Education (1938): 32,870 pupils in schools of all kinds. Sugar, cacao, bananas, pineapples, and rum are the main products. Trade (1938): U.S.A. \$6,756,000 for imports and U.S.A. \$8,918,000 for exports. Budget (1937): 101,100,000 francs. Governor, Yves Nicolle (appointed Dec. 13, 1940).

History. On May 21, 1941, a report from Panama stated that Martinique had become a propaganda center for the Caribbean area and Latin America in the distribution of Vichy "information" that aided the Axis Powers. Among mailed propaganda was a thirty-page weekly bulletin printed in Fort-de-France and issued by the Central Information Service of the French West Indies.

In a letter to Senator James M. Mead of New York, dated June 2, 1941, the U.S. Secretary of State wrote that ". . . the policy of this Government as regards the French West Indies, which includes all territories subject to the jurisdiction of the High Commissioner for French territories in the Western Hemisphere, is governed by an agreement entered into at the Havana Conference in 1940 by all the American Republics, including the United States, as well as by the arrangement entered into between the High Commissioner and Admiral Greenslade, U.S.N., and later confirmed by both Governments. This arrangement provides certain guarantees regarding the movement of French vessels in American waters and commits the French Government to prior notification regarding any shipments of gold. It also permits the establishment of a daily patrol by vessel and by plane of the Islands of Martinique and Guadeloupe, and a Naval observer is at present stationed at Fort-de-France, Martinique, to check its observance.

"This government is also releasing on a monthly

basis a restricted amount from French funds blocked in this country to permit the Islands to make purchases in this country of foodstuffs and essential supplies to maintain the economic structure of the Islands and French Guiana. . . ." For the full text of the foregoing letter see the *Department of State Bulletin* (Washington, June 14, 1941; p. 720).

A new naval accord was reached, Dec. 18, 1941, between the United States (represented by Rear Admiral Frederick Horne) and Martinique (represented by Admiral Georges Robert, French High Commissioner at Martinique). This new agreement constituted a continuation of the status quo agreement reached with officials of the islands at the time the United States acquired bases in British West Indian colonies. There were supplements in the new agreement regarding shipping facilities for the continued supply of food and other vital commodities to the people of Martinique.

MARYLAND. A South Atlantic State. Area: 10,577 sq. mi., including 690 sq. mi. of inland water; but excluding part of Chesapeake Bay, 1,726 sq. mi. Population (1940 census): 1,821,244. The urban population comprises 59.3 per cent of the total (U.S. average, 56.5 per cent); non-white population, 16.7 per cent (U.S. average, 10.2); elderly (65 years and over), 6.7 per cent. Maryland ranks 41st among the States in Area, 28th in population, and 7th in density, with an average 184.2 persons per square mile. The capital is Annapolis with 13,069 inhabitants; largest city, Baltimore, 859,100. There are 23 counties and nine cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to the latest Biennial Survey of Education, there were 293,686 pupils enrolled in the State School System of Maryland during the school year 1937-38. Of this total, 232,423 were enrolled in kindergartens and elementary schools and 61,263 in secondary schools; 58,531 were in separate Negro schools. The instructional staff comprised 8,962 persons, who received an annual average salary of \$1,564 (U.S. average: \$1,374); 1,566 or 18.3 per cent were men. Expenditures for all public schools in 1937-38 were \$24,409,537, making a total cost per capita of \$14.49 (U.S. average: \$17.15). There were 1,402 school buildings in the State, of which 558 were one-room, one-teacher schools. The value of public property used for school purposes was \$81,336,202. For higher education, see under *Maryland* in the table of UNIVERSITIES AND COLLEGES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 4,187, of which 4,187 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 450,169; 383,974 were private and commercial automobiles, 1,136 busses, and 59,422 trucks and tractor trucks. Gross motor-fuel consumption was 314,606,000 gal. Net motor-fuel tax receipts were \$11,448,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$6,698,000.

Railways of all classes extended 1,374 miles (Dec. 31, 1939). 58 per cent of the total mileage in the United States. Class I steam railways (584 miles) reported 9,145,081 tons of revenue freight originating in Maryland in 1940 and 18,121,734 tons terminating in Maryland. There are 21 airports and landing fields in the State (four lighted fields) and four seaplane bases and anchorages. On July 1, 1941,

according to the Civil Aeronautics Authority, there were 316 civil aircraft in the State and 899 airline transport, commercial, and private pilots (764 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 1,594,300, as compared with 1,620,400 acres in 1940. According to the latest census, there are 42,110 farms, valued at \$273,980,352, averaging 99.7 acres each. Farm population numbered 244,900 or 13.4 per cent of the total. Leading crops with production in 1941 were: Commercial truck crops, \$11,961,000; corn, \$11,676,000, 15,164,000 bu.; tobacco, \$10,438,000, 29,833,000 lb.; wheat, \$7,752,000, 7,245,000 bu.; hay, \$6,918,000, 475,000 tons.

Manufacturing. According to the 1939 Census of Manufactures, there were 2,893 manufacturing establishments in Maryland, employing 141,643 wage earners who received \$156,782,654 in wages for the year. The total value of products was \$1,027,354,074; value added by manufacture, \$422,849,359.

Mineral Production. The total value of minerals produced in 1939 was \$11,837,593, according to the U.S. Bureau of Mines, less than 1/10 per cent of the United States total. Chief items were stone, sand and gravel, cement, clay products, and slate.

Trade. According to the 1940 census there were 2,464 wholesale establishments in Maryland, employing 23,533 persons, reporting net sales for 1939 of \$688,989,000 and annual pay roll of \$33,412,000. There were 25,566 retail stores with 70,750 employees, reporting sales of \$619,273,000 and pay roll of \$66,079,000. Service establishments numbered 8,497, employing 17,461 persons for \$15,498,000 per year, and reporting a business volume amounting to \$45,218,000. The leading business center of the State is Baltimore which reported wholesale sales of \$578,628,000 and retail sales of \$380,103,000. Cumberland reported sales of \$12,854,000 wholesale and \$21,415,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Maryland was \$24,304,000. Under the Social Security program, financed by Federal funds matching State grants, 17,942 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$17.85 (U.S. average pension, \$21.08); 17,740 dependent children in 6,531 families received average monthly payments of \$30.53 per family (U.S. average, \$32.73), and 671 blind persons received \$21.57 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 7,240 and received \$20.20 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 924 (\$61,000); NYA student work program, 3,382 (\$21,000); NYA out-of-school work program, 6,495 (\$122,000); WPA, 8,172 (\$548,000); other Federal emergency projects, 80 (\$7,000); regular Federal construction projects, 20,059 (\$3,244,000). The Farm Security Administration certified subsistence payments totaling \$3,000 for the month to 158 cases.

Legislation. The General Assembly convenes in regular session on the first Wednesday of January in odd years. It is composed of 29 Senators (23 Democrats and 6 Republicans in 1941) and 120 Representatives (104 Democrats and 16 Republicans).

Conservation was one of the most important subjects among the numerous laws enacted at the 1941 legislative session. Laws were enacted creating the

Board of Natural Resources, Department of Tide-water Fisheries, Department of Game and Inland Fish, Department of Geology, Mines and Water Resources, and the Department of Forests and Parks, all relating to the conservation of natural resources. The Atlantic States Marine Fisheries Commission was established to provide for the better utilization of marine fisheries by agreement with other States. The game laws were generally amended, with provision for the appointment of wildlife technicians. The Conservation Commission was authorized to regulate or prohibit the catching, packing, or shipping of crabs. Fifteen new sections were enacted relating to the licensing and regulation of the taking of fin fish for commercial purposes with nets in tidal waters. The Department of Forestry was granted additional powers relating to use of fire in open air. Provision was made for prosecuting trespass in other persons' blinds. By joint resolution the Governor was requested to appoint a Soil Erosion Commission and the State Department of Health was requested to abate the pollution of the Potomac River.

A number of new laws resulted from the national emergency. A Maryland Council of Defense and a Maryland State Guard were created. An emergency anti-sabotage law provided for the protection of property against unlawful entries, injuries, etc. Housing authorities were authorized to cooperate in providing housing facilities for persons engaged in defense activities. Several laws guaranteed certain rights and privileges for persons serving in the armed forces.

The insurance laws were tightened in several respects, and advertisements were prohibited regarding insurance in unlicensed companies. Incorporated fire companies were exempted from real and personal property taxation. Certain property of certain cooperative associations was also exempted from taxation. Building and loan associations were required to submit reports to the State Tax Commission, and provision was made for licensing those engaged in the sales finance business. The Omnibus Bequest Bill sanctioned certain bequests, conveyances, etc., to certain charitable, religious, and educational institutions.

A Commission was created to investigate the subject of delinquent and dependent children, and the establishment of Juvenile Courts was provided for. The taking of blood tests to determine parentage in bastardy cases was authorized. The period for divorce on account of abandonment was reduced to 18 months, and divorces were legalized in cases where one spouse is incurably insane. The Board of Parole and Probation was supplanted by a Department of Parole and Probation, and the Board of Correction was instructed to establish the Women's Prison.

The Unemployment Compensation laws were amended generally, and five commissioners were provided to administer the State accident fund. Penalties were prescribed for misuse of public assistance lists. A number of local laws regulated the sale or consumption of alcoholic beverages; Sunday sales were prohibited in various counties.

A Commission was created to study the entire subject of motor vehicle registration and control. A Maryland Traffic Safety Commission was created, and motor vehicle license examiners were placed under the Merit System. The license fee for chauffeurs was reduced. Instruction in safe driving was provided in county high schools. Another school law equalized the salaries in the elementary and high schools of the State for white and colored children.

Miscellaneous acts of general interest included ratification of the 19th Amendment; a Fair Trade Act, making it unlawful to advertise or sell merchandise at less than cost, a law against sit-down strikes; fixation of the State tax rate for 1942 and 1943 at 11 and 20 $\frac{1}{4}$ cents respectively; the granting of additional powers to cities and counties to aid housing projects, the creating of a State Employees' Standard Salary Board, a law requiring physicians, hospitals, etc., to report injuries from auto accidents or deadly weapons; a fireworks law. The White Oak was named as the State tree. The Chief of Mine Engineers became Director of the Bureau of Mines. Bingo was legalized in Baltimore County and the city of Baltimore was authorized to issue \$32,000,000 of water bonds.

Reference: *Synopsis of Laws Enacted by the State of Maryland Legislative Session, 1941*, compiled by Horace E. Flack, Department of Legislative Reference.

Finances. Total tax collections in Maryland for the fiscal year ending in June, 1940, were \$56,899,000. Total sales taxes amounted to \$16,792,000, including motor fuel, \$11,232,000. Taxes on specific businesses ran to \$6,576,000, general and selective property, \$5,781,000, unemployment compensation (1941), \$57,208,000. The net income taxes were \$7,637,000. Cost payments for the operation of general government totaled \$42,573,000 in 1939, the latest year available. (Revenues for the general government for that year were \$61,159,000.) Cost of operation per capita was \$23.64. Total gross debt outstanding in 1941 was \$53,485,000, as compared with \$32,096,000 in 1932.

Officers and Judiciary. The Governor is Herbert R. O'Connor (Dem.), inaugurated in January, 1939, for a four-year term, Secretary of State, Francis Petrott, Attorney General, William C. Walsh, State Treasurer, Hooper S. Miles, State Comptroller, J. Millard Tawes, State Auditor, Daniel L. Clayland, 3d. Chief Judge of the Maryland Court of Appeals is Carroll T. Bond, there are seven associate members elected by popular vote for 15-year terms.

See FIRE PROTECTION; LABOR LEGISLATION.

MASSACHUSETTS. A New England State. Area: 8,257 sq. mi., including 350 sq. mi. of inland water, but excluding Atlantic coastal waters, 959 sq. mi. Population: (1940 census) 4,316,721. The urban population comprises 89.4 per cent of the total (U.S. average, 56.5 per cent); non-white population, 1.4 per cent (U.S. average, 10.2); elderly (65 years and over), 8.5 per cent. Massachusetts ranks 44th among the States in area, eighth in population, and third in density, with an average of 545.9 persons per sq. mi. There are 14 counties and 78 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Walter F. Downey, Commissioner of Education, there were 700,305 pupils enrolled in the public schools of Massachusetts during the school year 1939-40, 410,141 in elementary schools, 107,622 in Junior High Schools, and 182,542 in secondary schools. Principals, supervisors, and teachers numbered 25,656 and received an annual average salary of \$1,959 (estimated). Total expenditures for the year were \$69,818,825.88 for support and \$4,586,945.27 for outlay.

Transportation. State highway mileage in 1939, including streets under State control, totaled 1,888, of which all was surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 907,862; 790,312 were private and commercial automobiles, 4,889 busses, and 108,642

trucks and tractor trucks. Gross motor-fuel consumption was 747,204,000 gallons. Net motor-fuel tax receipts were \$21,454,000, the rate being three cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$7,319,000.

Railways of all classes extended 1,792 miles (Dec. 31, 1939) .76 per cent of the total mileage in the United States. Class I steam railways accounted for 810 miles. There are 42 airports and landing fields in the State (five lighted fields) and 40 seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 507 civil aircraft in the State and 1,955 airline transport, commercial, and private pilots (1,592 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 418,900, as compared with 410,900 acres in 1940. According to the latest census, there are 41,897 farms, valued at \$212,014,287, averaging 60.8 acres each. Farm population numbered 140,362 or 3.3 per cent of the total. Leading crops with production in 1941 were hay, with \$8,578,000 and 450,000 tons, and cranberries, with \$6,120,000 and 510,000 bbl.

Manufacturing. According to the latest census (covering the year 1939) the total value of manufactured products was \$2,459,771,043. For details, see 1940 YEAR BOOK.

Mineral Production. The total value of minerals produced in 1939 was \$8,179,860, according to the U.S. Bureau of Mines, less than two-tenths per cent of the United States total. Stone accounted for about half of the total.

Trade. According to the 1940 census there were 5,960 wholesale establishments in Massachusetts, employing 59,155 persons, reporting net sales for 1939 of \$2,232,117,000 and annual pay roll of \$112,302,000. There were 59,217 retail stores with 203,312 employees, reporting sales of \$1,735,028,000 and pay roll of \$212,966,000. Service establishments numbered 24,783, employing 41,030 persons for \$42,566,000 per year, and reporting a business volume amounting to \$138,433,000. The leading business center of the State is Boston which reported wholesale sales of \$1,634,784,000, retail sales of \$487,744,000, and \$51,956,000 receipts for its service establishments.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Massachusetts was \$130,360,000. Under the Social Security program, financed by Federal funds matching State grants, 87,070 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$28.92 (U.S. average pension, \$21.08); 31,234 dependent children in 12,684 families received average monthly payments of \$55.93 per family (U.S. average, \$32.73); and 1,175 blind persons received \$23.73 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 36,732 and received \$23.65 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 2,582 (\$171,000); NYA student work program, 10,389 (\$69,000); NYA out-of-school work program, 11,182 (\$243,000); WPA, 57,142 (\$4,162,000); other Federal emergency projects, 126 (\$14,000); regular Federal construction projects, 29,355 (\$5,900,000).

Legislation. The legislature, or General Court, convenes in regular session on the first Wednesday of January in odd years. It is composed of 40 Senators

(25 Republicans and 15 Democrats in 1941) and 240 Representatives (143 Republicans, 96 Democrats, and 1 vacancy).

The 152d Massachusetts Legislature ended a ten-month session, the longest in its history, at 12.10 a.m. on Nov. 1, 1941, after sitting continuously for 37 hours. The final and most dramatic action of the session was the passage of an old-age assistance liberalization tax plan over the Governor's veto. Under the plan the minimum monthly benefit for a single aged person not living with relatives was increased from \$30 to \$40, and for couples from \$50 to \$65. To finance the increase there were imposed a five per cent tax on meals bought outside the home, costing one dollar or more, and a three per cent surtax on incomes, effective Jan. 1, 1942. The Governor had contended in his veto message that the proposed taxes would fall short of paying for the increased benefits by at least \$1,450,000.

Other results of the session were summarized in part as follows by *The Christian Science Monitor* in its issue of Nov. 1, 1941:

As the 152nd Massachusetts Legislature ended its record-breaking session Gov Leverett Saltonstall was granted extraordinary powers, applicable only in wartime, under which he could take over industrial plants, food, public utilities and other property in the interest of the State and Nation. [Emergency powers were invoked and a state of emergency proclaimed by the Governor on December 29, subject to ratification by the Legislature within 60 days.] Furthermore, added powers were extended to the Massachusetts Committee on Public Safety to conduct blackouts in connection with civilian defense preparations.

During the past year the Legislature considered more than 3,700 measures, a record. From the grist of proposals in the 10-month session came several major results. They included: A record high biennial State budget of approximately \$185,000,000. A \$21,700,000 bond issue program, consisting of \$15,000,000 for elimination of sewage pollution in Boston Harbor, \$4,700,000 for new pier facilities in Boston, and \$2,000,000 for State acquisition and expansion of the East Boston airport. Continuation of the cigarette tax, previously increased liquor levies, and the 10 per cent surtax on incomes. Advancement in State budgetary control through shifting the start of the State's fiscal year from Dec 1 to July 1. This change, effective in July, 1943, was coupled with an allotment system to control quarterly departmental spending. National defense measures, under which a 6,000-man State Guard was established and equipped, and a new defense and commercial airport was established in Bedford to relieve the East Boston airport.

Organized labor gained several labor law improvements, including liberalization of the unemployment compensation law.

Besides the old-age assistance liberalization issue, several other major political issues were set up for the 1942 state-wide campaign. These include the two referenda going on the 1942 State ballot, one for a State fund for workmen's compensation and the other to legalize dissemination of birth control information. Likewise, legislative reapportionment of Massachusetts' Congressional districts to assure election of 10 Republican and four Democrats in 1942 is a major political issue.

A start was made toward reorganization of the much-criticized District Court system. Local school committees were authorized to permit school children to attend religious education classes one hour a week during school hours, while organized school groups blocked attempts to close several Teachers Colleges. Establishment of two voluntary health insurance plans was approved by the Legislature. This action staved off compulsory health insurance bills at this session.

Finances. Total tax collections in Massachusetts for the fiscal year ending in November, 1940, were \$158,726,000. Total sales taxes amounted to \$36,963,000, including motor fuel, \$21,134,000. Taxes on specific businesses ran to \$29,041,000, general and selective property, \$16,030,000, unemployment compensation \$38,323,000. The net income taxes were \$21,044,000. Cost payments for the operation of general government totaled \$142,266,000 in 1939, the latest year available. (Revenues for the general government for that year were \$163,970,000.) Cost of operation per capita was \$32.92.

Total gross debt outstanding in 1941 was \$131,813,000, as compared with \$121,067,000 in 1932.

Officers and Judiciary. The Governor is Leverett Saltonstall (Rep.), inaugurated in January, 1941, for his second two-year term; Lieutenant Governor, Horace T. Cahill; Secretary of State, Frederic W. Cook; Attorney General, Robert T. Bushnell; State Treasurer, William E. Hurley; State Auditor, Thomas J. Buckley; State Comptroller, Walter S. Morgan. Chief Justice of the Massachusetts Supreme Judicial Court is Fred T. Field; there are six associate members appointed for life.

MEDICINE AND SURGERY. Physicians and the War. The formal declaration on December 8 that a state of war existed between the government of the United States and Japan placed new responsibilities on the physicians of the United States. In addition to the thousands already in active service, more than 25,000 have given their services to the selective service boards. Since a minimum of six doctors is required for each 1,000 men under arms it is obvious that with the tremendous expansion of the armed forces, additional thousands of medical men will be required by the army, navy, and marine corps. Fortunately the medical profession is well prepared to answer the demands which may be made upon it. The problem of the appropriate selection and placement of medical personnel is simplified and expedited through the existence of the Procurement and Assignment Service for Physicians, Dentists, and Veterinarians established in the Office of Defense Health and Welfare Services (q.v.) in November. This board will have available detailed information concerning the training, experience, and availability of all physicians in the country and should be able to supply all the medical personnel required by the various branches of the armed services while at the same time insuring that civilian requirements for medical care and the requirements for medical education will be satisfied.

Chemotherapy. Studies with a new sulfonamide compound, 2-sulfanilamido-pyrimidine prepared by Roblin and his associates, have been carried out during the past year. The name sulfadiazine has been given to this compound and has been accepted by the Council on Pharmacy and Chemistry of the American Medical Association. A preliminary report was made for the Council by Dr. Perrin H. Long in May (*J.A.M.A.*, 116, 2,399, 1941). He pointed out that the studies of Feinstone and his

co-workers had shown that the acute and chronic toxicity of sulfadiazine in experimental animals was lower than that of sulfathiazole or sulfapyridine, that higher blood concentrations were obtained after administration of equal doses of sulfadiazine, and that this new compound had a high degree of therapeutic activity in experimental pneumococcal hemolytic streptococcus and staphylococcal infections in mice. Feinstone also found that it was very effective in the treatment of experimental Friedlander's bacillus infections in mice. These results were confirmed by Long, but it was his opinion that sulfadiazine was somewhat less effective in experimental streptococcal infections in mice than sulfanilamide and slightly less effective than sulfathiazole or sulfapyridine in type I pneumococcus infections in mice. In staphylococcal infections in mice, sulfadiazine seemed to be slightly superior to sulfathiazole. In *Cl. welchii* or *Cl. septicum* infections, sulfadiazine was superior to sulfathiazole and sulfapyridine. Klinefelter also found that sulfadiazine was more effective than sulfathiazole in experimental *Escherichia coli* infections in mice. Studies of sulfadiazine in man indicated that it is somewhat less rapidly absorbed than the older sulfonamides but is excreted less rapidly, so that adequate blood concentrations may be maintained with relative ease. In contrast to sulfathiazole it diffuses into the spinal fluid in concentrations of two-thirds to four-fifths of those that exist in the blood. Toxic reactions apparently are rare, and it seems much less likely to cause renal injury than sulfathiazole or sulfapyridine.

One of the first large scale clinical studies of the new compound was that of Finland and his associates at the Boston City Hospital (*J.A.M.A.*, 116, 2,641, 1941). These workers used sulfadiazine in the treatment of 446 patients with various infections. They found that "it appeared to be highly effective in the treatment of the following diseases: pneumococcal, staphylococcal, and streptococcal pneumonias, meningococcal infections, acute infections of the upper respiratory tract including sinusitis; erysipelas; acute infections of the urinary tract, particularly those associated with the *Escherichia coli* bacillus, and acute gonorrhoeal arthritis." Like other sulfonamides it was found to be relatively ineffective in chronic infections of the urinary tract, chronic gonococcal arthritis, subacute bacterial endocarditis, and chronic pulmonary infections. Finland states that "the results in the cases of pneumococcal pneumonia treated with sulfadiazine are comparable in every respect with the best results obtained in this clinic with the use of either sulfapyridine or sulfathiazole. In all the other conditions the numbers of cases are too few to warrant definite conclusions or comparisons. In general, sulfadiazine appeared to be as effective as sulfapyridine or sulfathiazole in every condition in which it was used." Toxic effects from sulfadiazine were mild and infrequent. Its use in a number of patients with renal or hepatic disease caused no further impairment of the function of these organs. In a group of 66 patients who had received both sulfathiazole and sulfadiazine, toxic effects from sulfathiazole were three times as frequent as they were during sulfadiazine therapy.

Although further experiments with the use of sulfadiazine will be required for an accurate estimate of its advantages and limitations, it seems clear that a compound has been found which in many respects seems superior to the sulfonamides which have previously been available.

As valuable as the sulfonamides have proved to be, their effectiveness is largely limited to the treat-

ment of diffuse or spreading infections because necrotic tissue associated with suppuration has been found to contain in large amounts substances which counteract their action. These "sulfonamide inhibitors" are constantly found in pus and in dead tissue in such concentrations as to make the treatment of abscess, carbuncle, empyema, and so on with sulfonamides unsatisfactory. Preliminary experiments with two new substances entirely unrelated to the sulfonamides suggest that they may not have this disadvantage, and may therefore be effective in situations in which little could be expected from the use of sulfanilamide derivatives. It should be pointed out, however, that at the present time the use of these two new substances, penicillin and gramicidin, is still in the experimental stage.

Penicillin, an active principal of unknown composition of the mould "*penicillium notatum*," was first described by Fleming in England in 1929. In 1940 a group of workers at Oxford headed by Chain showed that this substance had potent chemotherapeutic properties. It was not until 1941 however that the Oxford group succeeded in the large-scale production and purification of this material. Their recent report (Abraham et al, *Lancet*, 2, 177, 1941) describes a method by which optimum yields of potent material may be obtained from cultures of the mould, and how it may be purified and preserved. The process, while tedious and complicated (for instance about one hundred liters of medium are required to produce one gram of penicillin, the amount which may be used in one day in the treatment of a severe infection) still seems adaptable for commercial production of the material. It is obvious, however, that until the chemical structure of the principal can be determined and its synthesis achieved, penicillin will not be available in sufficient quantities or at a reasonable enough cost to permit it to be used in such a general manner as are the sulfonamides at the present. Its use will have to be restricted to those cases in which sulfonamide therapy could not be expected to be effective. In vitro experiments of the Oxford workers showed that (1) penicillin, like the sulfonamides, is bacteriostatic not bactericidal; (2) its bacteriostatic action is selective and is particularly manifested against certain gram-positive organisms such as the staphylococcus, streptococcus pyogenes, the anthrax bacillus, and the *welchii* bacillus, organisms which are in general more resistant to sulfonamide therapy than are the gram-negative cocci; (3) its bacteriostatic action is not inhibited by pus, blood, serum, or protein autolysates; (4) in concentrations of 1 to 500-1,000, which are considerably greater than the ones used therapeutically, it had no toxic effects on living cells, and (5) it is destroyed by exposure to highly acid or alkaline reactions.

The amount of penicillin available for clinical trial has been small, but the limited experience of the Oxford group suggests that it is "possible to secure and maintain a bacteriostatic concentration of penicillin in the blood without causing any toxic symptoms." Oral administration is generally unsatisfactory because of the action of the hydrochloric acid of the stomach on the principal. Apparently it may be administered intravenously with safety. In the small series of cases treated a "favourable therapeutic response was obtained in all." Especially interesting was the remarkable amelioration of symptoms in three classical cases of acute staphylococcal pyemia.

Gramicidin is a crystalline substance derived from cultures of an aerobic sporulating bacillus isolated from soil, and it exerts selective bacteriostatic and bactericidal effect against gram-positive microor-

ganisms. Its development has been largely due to the work of Dr. Rene J. Dubos of the Rockefeller Institute for Medical Research whose investigations began in 1939. Recently, Dr. Dubos found that an alcohol-soluble, water-insoluble fraction derived from cultures of bacilli isolated not only from the soil but from sewage, manure, and cheese, yield a fraction, tyrothricin, which is bactericidal for most gram-positive and gram-negative microbial species (*Jour. Exper. Med.*, 73, 629, 1941). Gramicidin is one of the two different crystalline products which have been separated from tyrothricin. The other substance, tyrocidine, while bactericidal in vitro for both gram-positive and gram-negative species, behaves like a protoplasmic poison and seemingly will have little therapeutic importance, since like other antiseptics it loses much of its activity in the presence of animal tissues. Gramicidin on the contrary has been found to be effective against gram-positive microorganisms in vivo as well as in vitro. In experimental pneumococcal and streptococcal infections in mice gramicidin exerts a pronounced protective action. When applied locally at the site of the infected area gramicidin exhibits a definite activity against these gram-negative organisms; but interestingly enough it is almost completely inactive in systemic infection when injected intravenously. No clinical reports of its use are available at the present, and no estimate of its usefulness as a therapeutic agent in man can as yet be made. As a result of his work leading to the development of gramicidin, Dr. Dubos was a joint recipient of the 1941 E. Mead Johnson Awards of the American Academy of Pediatrics.

A New Influenza Vaccine. An advance described by the editors of the *Journal of the American Medical Association* (116, 143, 1941) as "one of the most promising practical leads in research of recent decades," was the development of a new complex influenza vaccine by Horsfall and Lennette of the Rockefeller Foundation which apparently stimulates the development of multivalent immunity. The discovery of this new vaccine came about by accident. Several of a group of ferrets which had been inoculated with one of the strains of viruses responsible for human influenza developed concurrently another virus disease, ferret distemper. In order to prevent the spread of distemper among the stock animals a formalized vaccine was prepared from the lungs and spleen of these ferrets and injected subcutaneously into the other normal ferrets of the colony. When subsequently attempts were made to inoculate the vaccinated ferrets with three antigenically different strains of the human influenza virus, Horsfall and Lennette were surprised to find that none of the animals developed influenza and this in spite of the fact that the second inoculation with influenza virus had been with entirely different strains. In other words, the combination of ferret distemper and experimental influenza resulting from inoculation with one strain of human influenza virus had apparently resulted in immunity against at least three entirely different strains of influenza virus. Later Horsfall and Lennette were able to reproduce this multivalent vaccine and found that it protected ferrets not only against canine distemper but against all the strains of human influenza virus which they were able to test. The development of multivalent immunity is difficult of explanation according to current immunologic theory. Horsfall and Lennette conclude that "under the influence of concurrent distemper infection the human influenza virus undergoes antigenic alterations which render it less virulent, less highly specific, and more broadly antigenic than the

original virus." Clinical trials of the new complex vaccine have been reported during the past year (Horsfall, Lennette, Rickard, and Hirst, *Public Health Reports*, 56, 1,863, 1941).

In 1940 7,907 volunteers in 15 institutions in Florida and Alabama were given single subcutaneous injections of a complex nonviable Influenza A and canine distemper vaccine; 9,688 inmates of the same institutions were not vaccinated. Four months later an epidemic of influenza occurred in ten of the eleven institutions. In all, 1,450 cases of influenza were observed. By a study of serum obtained from patients during the convalescent period it was possible to determine fairly accurately the number of cases in which Influenza A virus was the etiologic agent. The incidence of Influenza A was found to be 50 per cent lower among the vaccinated groups than among the unvaccinated controls. However, the incidence of influenza due to virus strains other than that of Influenza A was not significantly different in the two groups. The authors believe that since the complex vaccine used was nonviable and contained only inactivated virus the protection against Influenza A afforded by vaccination was due to an increased antibody level rather than stimulation of other immune responses.

Similar results with the complex nonviable vaccine were obtained in California by Martin and Eton (*Proc. Soc. Exper. Biology and Medicine*, 47, 405, 1941). However in the epidemic studied in California equally effective results were obtained with living vaccine prepared by growing Influenza A virus on minced chick embryos suspended in saline solution. While routine vaccination against influenza in general medical practice seems not yet justified, results of these studies are encouraging and suggest that the prevention of influenza may be possible in the not distant future.

The Virus of Acute Pneumonitis. Weir and Horsfall, of the International Health Laboratories of New York, have reported the isolation and identification of a virus which is apparently the causative agent of "virus pneumonia" or "acute pneumonitis." This is an epidemic disease which is being recognized with increasing frequency in the United States. It was first described by Bowen in 1935 as "acute influenza pneumonitis," and since that time has been described by numerous other investigators under such names as "acute pneumonitis," "bronchopneumonia of undetermined etiology," "atypical pneumonia," and so on. Characteristic clinical features which distinguish it from pneumococcus pneumonia are its great contagiousness, its tendency to involve first the upper respiratory tract with the production of influenza-like symptoms, the bizarre character of the pulmonary consolidation, and a mild course usually terminating with recovery in from four to eight days. Frequently there is an associated leukopenia, and in most instances pneumococci cannot be found in the sputum.

After vainly attempting to infect the usual experimental animals by intranasal instillation of throat washings from typical clinical cases, Weir and Horsfall hit upon the idea of trying such installations in the mongoose. Importation of this animal into the United States is prohibited, so that in order to carry out this study it was necessary to send preserved throat washings from patients in New York to Kingston, Jamaica, where at the British Tuberculosis Research Station the actual experimental studies were carried out. It was found that more than two-thirds of the inoculated animals developed lesions of the lungs similar in pathologic detail to those observed in "acute pneumonitis" in man. These lesions were found in almost all cases

to be bacteriologically sterile, but serial passage was possible to normal mongooses and filtration studies showed that the etiologic agent passed readily through a Berkefeld filter. Furthermore, the virus could be grown on the chorioallantoic membrane of the chick embryo, and serial passage to other chick embryos was readily accomplished. It may be mentioned that the propagation of viruses on the chorioallantoic membrane of the developing chick embryo, a technique developed by Dr. Goodpasture of the Vanderbilt University School of Medicine, has proved to be an extremely important method of study in virus disease, since in many instances it permits the "culture" of viruses in a manner entirely comparable to the culture of bacteria on usual laboratory media.

Weir and Horsfall also found that neutralizing antibodies which were specifically virucidal could be demonstrated in the serum of convalescing animals. Neutralizing antibodies against the virus also may be found in the serum of patients convalescing from "acute pneumonitis." Cross neutralizing tests indicate that the virus of "acute pneumonitis" differs from the influenza virus and, as a matter of fact, from all the viruses available for cross immunization tests (Weir and Horsfall, *Jour. Exper. Med.*, 72, 595, 1940).

Since "virus pneumonia" is an apparently common disease, which in many districts may assume epidemic or even pandemic proportions, the discovery of its etiologic agent seems to be an advance of considerable importance.

The Treatment of Early Syphilis. Padget, of the Syphilis Division of the Medical Clinic of Johns Hopkins Hospital and University, reported the long term results in a group of patients with early syphilis treated by modern methods and observed for a mean period of 10.8 years. (*J.A.M.A.*, 116, 7, 1941) His study is significant because it is the first in which a large group of patients (551) have been followed for so long a time. He found that of this group 65.7 per cent could be classified as "cured" That is to say, no clinical manifestations of syphilis could be found and serological tests were negative. Another group comprising 14.9 per cent were well clinically, but still gave positive serological tests for syphilis. In 12.3 per cent of the total group, syphilis of the nervous system was present, and in a final group of 7.1 per cent other late manifestations of the disease were found. Of especial significance was the observation that all patients who satisfied the criteria of "cure" when examined after a period of five years, continued to do so when examined ten or more years after the initiation of treatment. This indicates, of course, that in early syphilis a five-year "cure" in all likelihood represents a permanent "cure," and it permits some relaxation of the post-treatment follow-up after the fifth year of observation. Padget found, as had previous workers who had studied smaller groups of patients, that white women achieved the greatest percentage of "cures," 76.1 per cent, and Negro men the least, 58.3 per cent, with the other two race-sex divisions between (63.6 per cent and 68.5 per cent for white men and Negro women respectively). Also, as had been previously observed, among those who did not achieve "cure," neurosyphilis was two and one-half times as frequent among the whites, while cardiovascular syphilis was more common among Negroes. He found further that in the entire group the highest percentage of "cure," 82 per cent, was achieved in patients in whom treatment had been begun in the so-called seronegative primary stage, that is to say, after the primary lesion had appeared but before blood tests were positive.

Interestingly enough the smallest percentage of "cure," 55 per cent, was found in the groups in which treatment had been initiated in the seropositive primary stage. The results of "continuous" treatment, weekly injections of an arsphenamine in courses alternating with courses of weekly injections of an insoluble bismuth compound or daily injections with mercury, were greatly superior to the results from any other plan of treatment. Furthermore, the percentage of "cure" was directly proportional to the number of doses of arsphenamine administered during the first two years and inversely proportional to the time-span during which the injections were given. The results of irregular treatment were so inferior as "strongly to suggest its complete uselessness, especially after the first few injections."

Padget's study gives statistical proof of the efficacy of the present-day methods of treatment of syphilis and confirms previous opinions derived from the study of smaller groups of patients over a shorter period of time.

Coronary Circulation. Because of the recognition of the increasing importance of disease of the coronary arteries, vessels which supply the heart muscle itself with blood, as a cause of serious heart damage resulting in invalidism or death, any study which throws new light upon the relation of clinical symptoms of cardiac circulatory insufficiency and actual anatomical changes in the coronary vessels is of interest. Such a study was that of Blumgart, Schlesinger and Zoll of the Beth Israel Hospital in Boston (*J.A.M.A.*, 116; 91, 1941). In the hearts removed in a consecutive series of 335 necropsies, these workers made careful studies of the patency of the coronary tree by simultaneous injections of the right and left coronary arteries with a colored radiopaque solution. With the heart unrolled so that all the coronary arteries lay in one plane, x-ray films were made. This was followed by a complete dissection of the arteries and by histologic examination of representative sections. The anatomical results were then compared with the clinical signs and symptoms which had been accurately recorded during life.

In normal hearts they found that anastomoses between the right and left coronary systems large enough to be of any functional significance were usually absent. In some long standing obstructive arterial lesions, however, an adequate bypass from one coronary system to the other could be demonstrated, and it was in this type of case that significant damage of the myocardium might be absent. Also clinical symptoms suggesting myocardial damage frequently were not present. However, in every patient suffering primarily from angina pectoris without valvular disease of the heart or high blood pressure, old complete occlusion of one major coronary artery was invariably found. In many cases more than one major occlusion could be demonstrated. The clinical syndrome, usually called "coronary occlusion" (the common "heart attack" of the laity) consisting of prolonged, severe chest pain, falling blood pressure, pallor, fever, and so on, in reality always signified myocardial infarction, that is, actual death of a part of the heart wall. Prolonged attacks of cardiac pain unattended by signs of myocardial infarction are more accurately described, they said, as attacks of coronary failure. Finally they pointed out "the absolute necessity for immediate and complete bed rest, sedation, reduction of excessively high cardiac rates, and other measures designed to reduce the work of the heart in the presence of prolonged cardiac pain, is emphasized as a means of limiting the extent of myo-

cardial necrosis or even preventing its development. Such a regimen also affords an opportunity for the development of a more adequate collateral circulation.

Prophylaxis of Pulmonary Embolism. Pulmonary embolism, blockage of the pulmonary artery by blood clot, is a not uncommon vascular accident which may have serious or even fatal consequences. Such an embolism commonly results from the breaking off and transport to the lungs of clots which have formed in the periphery of the venous system. Embolism may occur after operative procedures, may be associated with an obvious phlebitis of the legs, or may occur in patients confined to bed who have neither been operated on nor have evident disease of the veins of the extremities. When not associated with recognized thrombophlebitis of the leg its occurrence is dramatic and unexpected and in many instances, where the embolism is massive, sudden death results. The abrupt appearance of severe pain in the chest with dyspnea, cyanosis, and collapse, followed shortly by exitus, in patients whose previous postoperative course had been satisfactory, is a tragedy only too well known to surgeons. In the past it had been supposed that such calamities were due to the lodgment in the lung of large clots whose source was in the great veins of the pelvis, and because of the inaccessibility of these veins it was supposed that no satisfactory methods for the prevention of such an accident were available. In the light of recent studies the common source of pulmonary embolism is indicated to be, not the pelvic veins, but rather the venous plexuses of the calf of the leg, that the presence of clotting in these veins may be detected by appropriate clinical and x-ray investigations, and that the pathway which such clots must traverse in order to arrive in the lungs may be blocked by ligation and division of the saphenous vein in the groin, such a pessimistic viewpoint is no longer tenable. Current ideas concerning the prophylaxis of pulmonary embolism are largely based on the work of three groups of Boston surgeons, Homans of the Peter Brent Brigham Hospital, Welch and Faxon of the Massachusetts General Hospital, and Sears and Fine of the Beth Israel Hospital.

The paper of Welch and Faxon presented at the Annual Session of the American Medical Association may be briefly referred to (*J.A.M.A.*, 117, 1,502, 1941). Welch and Faxon point out that no generally acceptable method for the prevention of phlebitis is known at the present, although it is possible that the use of heparin or some other anticoagulant may prove to be of great value. The diagnosis of thrombophlebitis of the deep veins of the leg may usually be made clinically in the absence of gross changes by the demonstration of slight swelling of one leg, slight tenderness in the calf, or pain in the calf on forcible dorsiflexion of the ankle (Homans' Sign). In the cases of pulmonary embolism in which the physical findings are negative, demonstration of thrombophlebitis in one or the other leg may be made by x-ray films of the extremity made after the injection of an opaque dye into one of the ankle veins. This is of importance, since it enables the surgeon to determine from which leg the embolus has come and permits him to direct his operative efforts to the proper group of veins. In the cases studied in the Massachusetts General Hospital pulmonary embolism occurred in one patient in three who had a detectable deep phlebitis. In one case out of twenty-five the embolism was fatal. Further, it is the belief of Welch and Faxon that 95 per cent of all fatal emboli arise from the veins of the lower extremities.

Another finding of interest was that fatal pulmonary emboli are extremely rare under the age of fifty, but that in the older age groups the incidence rises sharply. Seven per cent of the patients between fifty and seventy years of age who had a deep phlebitis and 20 per cent of those over seventy had fatal emboli. It is their opinion then that the detection of deep phlebitis in a patient over fifty justifies the division of the femoral vein as a prophylactic measure against embolism. In younger patients they believe that deep phlebitis may be treated conservatively, but if minor pulmonary embolism should occur femoral division is again indicated. It seems reasonable to suppose that if careful attention to the state of the veins of the extremity in postoperative patients, as well as in other patients confined to bed for a long time (in whom clotting is apt to occur), the presence of thrombophlebitis may be more frequently detected and with its recognition and proper treatment, the incidence of death from pulmonary embolism may be significantly decreased.

Advances in Surgery. A new technic for the parenteral administration of blood and other fluids which gives promise of being of considerable value in a variety of situations, is that devised by Tocantins and O'Neil of the Jefferson Medical College in Philadelphia. In experimental studies they found that when mercury is injected into the marrow cavity of the sternum or into the tibia and humerus, the metal could be seen by fluoroscopy to escape through the emissary veins into the general venous circulation. Also bacteria injected into the bone marrow of guinea-pigs could be found in various organs almost immediately after injection. With this proof of the close anatomical relationship between the vessels of the bone marrow and those of the general circulation, they felt justified in attempting the intramedullary injection of fluids in man. This is usually accomplished by the insertion of a short needle into the sternum. It was found that blood as well as other solutions commonly used intravenously (glucose, saline, and so on) could be administered in this fashion rapidly and with safety. No local or constitutional reactions, either immediate or delayed, were observed. This route of fluid administration is indicated whenever a rapid absorption of substances is desired and the intravenous route is not available. Difficulty in the intravenous administration of fluids frequently occurs in adult patients who are very obese, in those whose subcutaneous tissues are edematous, in the presence of low blood pressure, shock, or hemorrhage, in the presence of extensive cutaneous burns, and after repeated venipunctures have caused thrombosis of the available veins (*Surgery, Gynecology, and Obstetrics*, 73; 281, 1941). It is, however, especially in infants and in young children with poorly developed venous systems that the method would seem to have its chief usefulness. In such patients intravenous therapy using the peripheral veins is always difficult and sometimes impossible. Alternate routes, the superior longitudinal sinus within the cranium or the peritoneal cavity, involve greater risk and for a number of other reasons may be less satisfactory. Tocantins, O'Neil, and Jones report that the administration of blood and physiological solution of sodium chloride through the marrow of the tibia or femur was carried out in nine children with no ill effects, and since in each instance intravenous infusion was urgent but impossible, the intramedullary injection was of great value. (*J.A.M.A.*, 117; 1,229, 1941).

The value of heparin, an anticoagulant previously described in the *YEAR BOOK*, has become well

recognized. Murray of the Toronto group which has been largely responsible for the preparation of a purified product which may be safely used therapeutically, has reported his rather extensive experiences with the substance (*Surgery, Gynecology, and Obstetrics*, 72; 340, 1941). He considers the administration of heparin indicated in all types of surgical procedures involving the blood vessels. This includes the suture of arteries, the grafting of segments of veins to replace arterial defects, the removal of emboli from arteries, and so on. He also states that its use is of value in the treatment of thrombophlebitis in that the course of the disease may be shortened and the disabling aftereffects to some extent prevented. The disadvantages of heparin therapy are its excessive cost, the fact that it must be administered intravenously and preferably by means of a constant infusion, and the necessity for frequent determinations of the clotting time in order that it may be maintained at the proper level of elevation. A new anticoagulant, a derivative of coumarin, which is apparently the substance in spoiled sweet clover responsible for a bleeding tendency in cattle after its ingestion, has been isolated by Link and his coworkers of Wisconsin (*Proc. Staff Meeting of the Mayo Clinic*, 16; 388, 1941). Unlike heparin, it seems to be effective when taken by mouth and produces an inhibition of clotting over a period of several days. In animal experiments it has been administered without any apparent ill effects; since it is effective orally and since presumably it could be prepared inexpensively, its use may not be attended by some of the disadvantages associated with heparin therapy. As yet, whether or not it may be safely administered to man has not been determined.

At the annual meeting of the American Surgical Association, held this year at White Sulphur Springs, W.Va., there were two interesting symposia. The first was concerned with peptic ulcer. Walters and Cleveland of the Mayo Clinic reported that about 90 per cent of patients who had been treated by partial gastrectomy for bleeding peptic ulcer obtained satisfactory results, that is, there was no further hemorrhage and relief was obtained from the ulcer type of distress. Allen and Welch, of the Massachusetts General Hospital, presented an interesting paper in which it was pointed out that gastric ulcer cannot be distinguished from cancer in a high percentage of cases and that, fundamentally, it is therefore a surgical lesion whereas duodenal ulcer, except for its complications, is essentially a medical disturbance. Gastric carcinomas that simulate gastric ulcer, they said, comprised an especially favorable group as regards cure. The second symposium concerned cancer of the pancreas and contained papers by Hunt of Los Angeles, Schnedorf and Orr of Kansas City, and Whipple of New York. In these there was expressed a growing conviction that in spite of the difficulties involved, attempts at excision of such neoplasms is frequently justifiable. This is especially true since the tumors frequently are slow growing and death the result of obstruction of the bile ducts rather than of metastasis. Furthermore the results of palliative operations designed to shunt the bile around by obstructed area are rather unsatisfactory.

Another interesting paper given at the same meeting was that of Cope of the Massachusetts General Hospital who reported experiences with operations for hyperparathyroidism with which condition they have had a greater experience than any other clinic. They have operated upon 60 proven cases of hyperparathyroidism, in 58 of

which the diagnosis was proved at operation. In 54 instances the disease was due to an adenoma of the parathyroid glands (in four cases two adenomata were present). In six cases the increased parathyroid secretory activity was due to hyperplasia of the parathyroids and not to neoplasm. It is of great interest that of the 58 adenomata 16 were found within the thorax, eleven in the anterior mediastinum, and five were found within the posterior mediastinum.

Bibliography. Among the important books published were: *The Pharmacological Basis of Therapeutics*, Louis Goodman and Alfred Gilman, New York, *A History of Medicine*, Arturo Castiglioni, New York; *Infantile Paralysis*, A Symposium Delivered at Vanderbilt University, New York, National Foundation for Infantile Paralysis; *Clinical and Experimental Investigations on the Genital Functions and Their Hormonal Regulation*, Bernhard Zondek, Baltimore; *Sulfanilamide and Related Compounds in General Practice*, Wesley W. Spink, Chicago; *Vitamin K*, Hugh E. Butt and Albert N. Snell, Philadelphia, *Field Surgery in Total War*, Douglas W. Jolly, New York, *Science and Seizures: New Light on Epilepsy and Migraine*, William Gordon Lennox, New York, *Surgery of Modern Warfare*, Edited by Hamilton Bailey, Baltimore, *The Role of the Liver and Surgery*, Frederick Fitzherbert Boyce, Springfield, Ill.; *Medicine and Human Welfare*, Henry E. Sigerist, New Haven, Yale University Press.

H. WALTON COCHRAN.

MELLON INSTITUTE. The aim of Mellon Institute is the creation of new knowledge by scientific investigation, in accordance with the institution's definite fellowship system. According to this procedure the researches are restricted to major problems of the pure and applied sciences and particularly chemistry—problems that require protracted periods of time for solution by specialists. The Institute was founded by Andrew W. Mellon and Richard B. Mellon in 1913 and is located at 4400 Fifth Avenue, Pittsburgh, Pa.

The industrial research of the Institute is organized on a contract basis, the problem being set by a person, firm, or association interested in its solution, the scientific worker being found and engaged by the Institute, and an industrial fellowship being assigned for a period of at least a year. Each holder of an industrial fellowship is given broad facilities for accomplishing the research entrusted to him and all results belong exclusively to the donor of the fellowship. Only one investigation is conducted on a specific subject at any one time and hence there is no duplication of the research activities of the fellowships in operation. At present there are 95 of these industrial fellowships, which employ 300 scientists and engineers. The projects range from steel and concrete to synthetic organic chemicals, new plastics and textiles, and improvements in foods and other essential commodities.

The Institute's department of research in pure chemistry is conducting on a broad scale investigations of cinchona alkaloids and their derivatives in relation to the chemotherapy of pneumonia. During the fiscal year 1940-41 the Institute expended \$1,258,866 in carrying on pure and applied research. See CHEMISTRY, PURE.

The board of trustees is constituted of John G. Bowman, President; Edward R. Weidlein, Vice-President; Henry A. Phillips, Treasurer; Paul Mellon; Richard K. Mellon; and Alan M. Scaife. Edward R. Weidlein is Director.

MEMEL. A German territory on the east coast of the Baltic, created an autonomous district under Lithuanian sovereignty by the Memel Statute of May 8, 1924, and ceded by Lithuania to Germany on Mar. 23, 1939 (see *YEAR BOOK* for 1939, pp. 473-474). Area, 1,099 square miles; population on Jan. 1, 1940, 153,793. See *GERMANY*.

MENCHIANG (MENG CHIANG). See the article on *MONGOLIA*.

MENNONITES. A religious group founded in Switzerland in 1525 in protest against ecclesiastical rule and rigid liturgy. In the United States the Mennonites first settled at Germantown, Pa., in 1683, ultimately dividing into 17 bodies. For statistics, see *RELIGIOUS ORGANIZATIONS*.

MENTAL DISEASES. See *CHILDREN'S BUREAU*; *PSYCHIATRY*; *PSYCHOLOGY*.

MERCHANT MARINE. See *SHIPBUILDING*; *SHIPPING*; *WORLD WAR*.

MERCURY. The production of mercury in the United States in 1941 was about 43,500 flasks (of 76 lb.) some 5,720 more than were produced in 1940 (37,777). This was the highest production mark in 60 years, and the price (\$162 per flask in January, 1941, \$215 in December) the highest since World War I. Domestic consumption, January-October, 1941, was 37,000 flasks, compared to 26,600 flasks for all of 1940.

The need for mercury in the manufacture of munitions placed it among the strategic metals even in 1940, and it was put under export control in July of that year. Early in 1941 the U.S. Navy bought huge amounts of mercuric oxide for antifouling paint. Thirty-nine hundred flasks were consumed in three months. Four mines which had produced 10 per cent of the 1940 total were exhausted by March, 1941. The U.S. Bureau of Mines reported (March, 1941) a reserve of 92,000 flasks: 56,000 in California, 31,000 in Oregon. And in June some very rich strikes in certain areas caused a spurt of increased production. But by October the munitions industry was making such extraordinary demands that it was soon known that the output of domestic mines would not be enough to support the war effort. Imports had been falling off for two years and in 1941 there were no imports of mercury except from Mexico. To protect the nation's vital needs the United States made an agreement with the Mexican government, July, 1941, whereby the United States was to buy the surplus production of certain strategic materials, including Mexican mercury (which had been going to Japan until that date) and whereby Mexico would thenceforth sell only to nations of the Western Hemisphere. Imports and exports of mercury after October, 1941, are not to be made public. The War Production Board ordered the use of mercury for all civilian purposes cut over 50 per cent on Jan. 26, 1942.

Mining experts of the U.S. Bureau of Mines discovered during the year new deposits which can be developed to a point of valuable production if needed. No government action was taken to stabilize prices. See *MINES, BUREAU OF*.

MERIT SYSTEM. See *CIVIL SERVICE COMMISSION*; *SOCIAL SECURITY BOARD*; articles on States under *Legislation*.

MESOPOTAMIA. See *IRAQ*.

METALS. See topics listed under *MINERALS AND METALS*. For *METALS RESERVE COMPANY* see *TIN*; also, *YEAR BOOK* for 1940, p. 649.

METEOROLOGY. Modern statistical machines are helping meteorologists to use records of observations with a high degree of efficiency. Perhaps 50,000 meteorological observations are recorded daily in the world; it can readily be seen that several million are recorded annually. The task of summarizing these observations is a great one, but is being made somewhat easier by the use of machines. Jameson published during the year a paper in which he gives the results of a summary of 360,000 observations made on the oceans over the world. He did not cover the entire oceanic surface, but used only that portion situated between 20 degrees north latitude and 20 degrees south latitude, and he used only those observations made during the years 1920 to 1938, inclusive. The object of Jameson's study, in which the use of machines played so important a part, was to investigate and ascertain the diurnal variation of barometric pressure in the tropical seas. He found the 12-hour oscillation between 10 degrees north and 10 degrees south latitude to be 1.13 millibars (approximately 0.04 inch); the oscillation between 10 and 20 degrees (both north and south) was, of course, slightly less: 1.04 millibars. Jameson's values are about ten per cent less than Simpson obtained in 1918 using land-station records. Jameson's work represents a real contribution to meteorology, for convection has been regarded as a cause of the diurnal pressure oscillation in the atmosphere, and as convection is so much less over water than over land it seems that convection should be discarded as the main cause.

The Civil Aeronautics Authority has published a summary of the wind directions associated with low visibility. Statistical machines were of great importance in this work; 13,000,000 regular hourly airway observations were surveyed and all cases of visibility one mile or less were extracted, together with the cause of the low visibility (smoke, fog, snow, etc.), the wind direction and velocity, and other information. These data were compiled for 182 stations in the United States for the five-year period 1934-38. Surface wind-roses, compiled without regard to visibility, had been available for several years and had enabled airport engineers to design airports and plan runway directions in accordance with the prevailing winds at each location. With the advent of reliable instrument landing equipment, however, it had become necessary to determine the direction and velocity of prevailing winds during conditions of restricted visibility, since these are not necessarily in agreement with surface winds under other conditions of weather. By use of this type of information, which has now been compiled, it is possible to plan new airport runways, runway extensions, instrument landing systems, and other air navigation facilities so that they may be used to the best advantage for bad weather approaches and landings. A wind-rose has been constructed for each of the 182 stations and each wind-rose shows the percentage frequency of each wind direction, and a corresponding table shows the velocity of the wind and the cause of the low visibility.

Five-day forecasts, commenced in 1940 by the Weather Bureau, were continued during 1941. One of the basic discoveries made in this connection was the intensity of the prevailing west-wind circulation in middle latitudes. A measure for the intensity of this 5-day circulation was found in the difference of the mean sea-level pressure at 35 degrees and 55 degrees north taken around the globe. This index has been found to vary about 20 millibars, one extreme is when the pressure is

below normal and indicates east winds in the middle latitudes, and the other extreme is when the pressure is above normal and indicates west winds in the middle latitudes. These fluctuations are thought to be due to the intermittent inflow of true equatorial air into the westerlies of middle latitudes. According to this hypothesis a current of true equatorial air is occasionally injected into middle latitudes; there it interacts with the polar air along the polar front, and because of the enormous amounts of latent heat available, the resulting intense vertical and meridional circulation over the polar front leads to a marked strengthening of the westerlies. This in turn leads to a build-up of the subtropical high-pressure belt, and in this way the equatorial air is shut off from access to higher latitudes. As the westerlies gradually are dissipated the general circulation breaks down into smaller cells and there is renewed opportunity for the air to flow northward. Periods of strong southwest circulation are characterized by intense and large cyclonic centers of action in the North Pacific and North Atlantic, while a weak west circulation is normally accompanied by a breakdown of each of these lows into smaller low pressure centers. For forecasting purposes it is important to establish the relationship between the number, position, and character of the frontal systems associated with periods of strong and weak circulation, and to determine the conditions of weather and temperature characteristic of these different circulation types. In making the forecasts prognostic pressure-charts for sea level and 3 km. elevation are made, once these two pressure distributions have been predicted, the expected temperature anomaly distribution may be forecast, since these two pressures together determine the mean temperature of the vertical air column. While the forecasting of temperature is relatively easy by the above process, the relationship between the distribution of pressure and the precipitation anomaly is not simple and hence its forecasting is not so successful. Efforts are being made to forecast the precipitation by finding the relation between the horizontal convergence of air currents and vorticity and vertical motion and the rainfall.

The issuance of five-day forecasts to the public was suspended in December on account of the war.

Even before the entrance of the United States into the conflict reports in meteorology had suffered due to the war. Weather reports are desired by the air forces of all the warring powers and for this reason each nation attempts to prevent its weather reports from reaching the enemy. Precautions are taken to prevent monthly weather summaries from falling into the hands of the enemy, for fear that some secret method of long-range weather forecasting that might help in the timing of campaigns has been or will be developed. Along with the suppression of the free flow of daily, weekly, and monthly reports there is also a suppression of climatic summaries and perhaps of original contributions to knowledge. However, the actual publication of data and contributions is not so much suppressed as the circulation of that which is published. In December, the U.S. Weather Bureau stopped all radio broadcasts of weather information and suspended the publication of weather maps in newspapers. Other similar steps were taken to prevent weather information from reaching an enemy.

Schell has attempted to apply the methods of Walker to the long range forecasting of the winter precipitation in Montana. He has pointed out that there is an apparent, though as yet unexplained,

relation between the pressure in the western Pacific and the winter precipitation of Idaho, Wyoming, and Montana in the United States and Manitoba, Saskatchewan, and Alberta in Canada. Schell's results are not perfect, but they are very much better than could be obtained by pure chance and are one of the notable advances in long-range forecasting.

New York University commenced measurements of the amount of ozone in the atmosphere at the beginning of the year. Observations are made daily by an instrument using wave lengths 3,110, 3,300, and 4,450 Angstroms, regardless of whether the day is clear or cloudy.

METEORS AND METEORITES. See ASTRONOMY.

METHODIST CHURCH, THE. The processes necessary to the practical organic unification of the Methodist Episcopal Church, Methodist Episcopal Church, South, and Methodist Protestant Church, effected constitutionally in May, 1939, continued through 1941 to a stage of near completion. Remaining undone were only such matters as changes of charter and the legal holdovers involved in the transition.

Unification in the publishing enterprises of the church involved the concentration of printing in three cities: Nashville, Cincinnati, and Chicago. Distribution is through 13 branch houses. The new official Christian Advocate, begun Jan. 1, 1941, under the editorship of Dr. Roy L. Smith and published in Chicago, quickly attained a weekly circulation of nearly 300,000, the largest on record for any Protestant periodical. The consolidation of 55 religious educational periodicals, previously published by the merging denominations, into a new series of 24 closely integrated weeklies, monthlies, and quarterlies was accomplished prior to October 1 when the new series began, with a total print order of 4,540,000 copies. The Publishing House issued during the year 1,500,000 books and 130,000,000 periodicals. Sixty book titles were announced during the year by the new Abingdon-Cokesbury Press. An appropriation of \$200,000 of the produce of the Publishing House was voted for distribution to the Annual Conferences to supplement retired ministers' funds. During the year there was started a monthly periodical for Methodist college students, *motive*, edited by Dr. Harold A. Ehrensperger and published in Nashville.

A renovation and modernization of the fifty-year old New York House at 150 Fifth Avenue, involving a quarter of a million dollars, was completed in November. A new six-story building to house the Publishing House in Nashville was authorized to cost approximately \$700,000.

Changes in the episcopal leadership of the Church included the deaths of three retired Bishops—Horace M. Dubose, Charles L. Mead, and Warren Aiken Candler. Three Bishops were elected by the Eastern Asia Central Conference in April, 1941, their authority being limited to this territory: Rev. Z. T. Kaung, pastor of the Moore Memorial Methodist Church in Shanghai, who ten years previously baptized Generalissimo Chiang Kai-Shek; Rev. W. Y. Chen, secretary of the National Christian Council of China, and the Rev. Carleton Lacy,

a long-time missionary. The Council of Bishops at its annual meeting held at Sea Island, Ga., in December, elected as president of the Council Bishop Ernest G. Richardson of Philadelphia; vice president, Bishop W. W. Peele of Richmond; secretary, Bishop G. Bromley Oxnam of Boston.

War needs were answered by the successful promotion of a "Day of Compassion" offering taken simultaneously in Methodist churches March 2. Proceeds (\$960,000) were divided: one-half to overseas relief, one-fourth to aid British Methodism, one-fourth for camp service. An Overseas Relief organization created in 1940 by the General Conference, continues and with the above amounts, plus funds raised before and since, has contributed \$904,904 for overseas war relief work. The camp service is administered by a Commission headed by Bishop Adna Wright Leonard of Washington, D.C., Dr. Jacob Payton having been made its executive. Bishop Leonard was also made head of the Methodist Commission on Chaplains.

Missionaries in Japan and Korea were recalled by action of mission board executives in February, some to this country, others being assigned to new fields. Strategic war-caused readjustments have been frequent in the total program but no significant changes in personnel or financial totals can be recorded. Soochow University and Lewis Memorial church in Chungking were almost completely destroyed in bombings. Seventeen young men and women were commissioned as foreign missionaries, two as home missionaries, and five as deaconesses, in December.

The reorganization of the young people of the denomination into the Methodist Youth Fellowship was effected in August at Baldwin, Kans., through the calling of a delegated national conference. J. Kempton Jones, a Duke University student, was made national president. A youth headquarters related to the denomination's Board of Education, was established in Nashville, Tenn., with Dr. Harvey Seifert, the executive secretary. This involves the discontinuance of The Epworth League, the National Council of Methodist Youth, and other youth organizations. The year closed with a four-day student conference held at Urbana, Ill., bringing 1,600 Methodist students from about 300 colleges.

Methodist educational institutions in the United States classify as follows: Universities, 9; graduate Schools of Theology, 10; Colleges, 69; Junior Colleges, 27; Secondary schools, 18; Training schools, 2; Professional schools, 3. Of the 138 institutions, 16 are for Negroes. A survey made this year shows that one member in every 35 of the Methodist church is a college student. The ratio of college students to general population is one to one hundred and twenty-five. The Division of Educational Institutions reported that during 1941 a total of \$9,094,750 was given to Methodist educational institutions.

Latest figures are as follows: Membership in U.S., 7,336,263, elsewhere, 354,770; total, 7,691,033. Effective ministers in U.S., 18,375; elsewhere, 1,835; total, 20,210. Retired and supernumerary, 5,925. Total ministers, 261,135. Number of District Superintendents in U.S., 598; elsewhere, 208; total, 806. Pastoral charges in U.S., 21,247; elsewhere, 2,938; total, 24,185. Congregations in U.S., 42,262; elsewhere, 5,737; total, 47,999. Church Schools in U.S., 39,811; elsewhere, 6,101; total, 45,912. Church School Enrollment in U.S., 5,418,798; elsewhere, 314,071; total, 5,732,869. Baptisms in U.S.; children, 125,861; adults, 126,423; total in U.S., 252,284. Baptisms elsewhere: children, 23,786;

adults, 13,272. Grand total baptisms, 289,343. World Service receipts (year ending May 31, 1941) \$4,539,953. Annual Conference benevolences, \$2,368,433. Women's Society of Christian Service, \$3,260,006. Total regular benevolent giving, \$10,168,292. Paid for ministerial support in U.S., \$36,169,245; elsewhere, \$789,669; total, \$36,958,914. Number of churches in U.S., 41,611; elsewhere, 3,161; total, 44,772. Total estimated value of churches, \$613,831,796. Paid for building and improvements in U.S., \$12,812,397; elsewhere, \$552,207; total, \$13,364,604.

The Church in the United States is divided for administration into six Jurisdictions: The Northeastern, Southeastern, North Central, South Central, and Western are geographical. The Central includes the Negro Conferences of The Methodist Church. One hundred and fourteen Annual Conferences are divided into 31 Episcopal Areas over each of which a Bishop is assigned for residence and supervision. In addition there are 2 Missionary Bishops, 10 Central Conference Bishops, and 19 retired Bishops—a total of 63.

METROPOLITAN OPERA COMPANY. See MUSIC.

MEXICO. A Federal republic of North America, comprising 28 States, 2 Territories, and the Federal District (City of Mexico and 11 surrounding villages). Capital, Mexico, D.F.

Area and Population. Area, 763,944 square miles, population, 19,848,322 (estimated) on June 30, 1940 (16,552,722 at 1930 census). Births in 1939 numbered 801,531, deaths, 444,032, entrances into the country, 182,850, departures, 155,879. The racial division of the population (1930 census) was: Indians, 4,630,880, whites, 2,444,466; mixed race, 9,040,590. The population of the city of Mexico in 1940 was estimated at 1,754,355 (1,234,000 in 1930). Populations of other towns (1930): Guadalajara, 175,539; Monterrey, 132,577; Puebla, 114,793; Mérida, 95,015; San Luis Potosí, 74,003; León, 69,238; Tampico, 68,126; Veracruz, 67,494; Torreón, 66,001; Aguascalientes, 62,244. United States citizens resident in Mexico on Jan. 1, 1941, numbered 13,014.

Defense. Military service in the active army or National Guard is compulsory. As of Nov 1, 1940, there were about 62,500 in the active army, 700 in the air force (with about 70 planes), and 63,680 trained reserves. In addition there was a private militia of workers and peasants, estimated to number about 30,000, with some arms and military training. The navy consisted of 6 escort and 10 coastguard patrol vessels. Defense budget for 1941, 110,000,000 pesos (24 per cent of total expenditures).

Education and Religion. In his message to Congress of Sept. 1, 1940, President Cárdenas said illiteracy had declined from 70 to 45 per cent in the preceding 30 years, and that primary school attendance had increased in the preceding five years from 1,400,000 to 1,800,000. Free secondary education was provided for the first time under the law of Dec. 30, 1939. The Federal appropriation for education in the 1941 budget was 77,850,000 pesos or 16 per cent of the total.

Roman Catholicism is professed by over 90 per cent of the population. The 1917 Constitution established State control of all churches. All foreign priests were expelled in 1926. In 1936 all buildings used for religious purposes were nationalized and the number of native priests permitted to officiate was reduced to about 350. In subsequent years a

number of State governments permitted many churches to reopen.

Production. Agriculture, mining, stock raising, and manufacturing are the chief occupations. The principal crops, with latest production figures in metric tons, are: Corn, 1,976,731 in 1939; cotton, 77,290 in 1941; refined sugar, 325,000 in 1940-41; henequen, 124,973 in 1939; coffee, 50,000 in 1940, 31,023 in 1939; alfalfa, 1,736,473 in 1939; rice, 97,508 in 1939; chickpeas, 55,776 in 1939; linseed, 3,135 in 1940; tobacco, about 33,000,000 lb. in 1941.

Petroleum output in 1940 was 40,350,000 bbl., giving Mexico seventh place among world producers; coal, 547,646 metric tons. Excluding petroleum and coal, the value of mineral production rose from 598,626,000 pesos in 1939 to 645,067,000 pesos in 1940. Gold production in 1940 was 27,468 kilograms; mercury, 401,715 kilograms; and that of other minerals (in metric tons) was: Silver, 2,572; lead, 196,252; zinc, 114,955; copper, 37,600; antimony, 12,267; cadmium, 814; iron, 68,163; white arsenic, 9,266. The 1935 industrial census showed 7,050 industrial establishments with an output of at least 10,000 pesos annually; the total value of their output was 656,853,942 pesos. A total of 130,170 foreign tourists visited Mexico during 1940; their aggregate expenditures were estimated at 61,160,300 pesos.

Foreign Trade. Imports in 1940 were valued at 669,016,462 pesos (629,708,225 in 1939); exports, 960,041,432 (914,389,882 in 1939). The increase in 1940 was due in part to depreciation of the peso (see *Finance*). The United States supplied 78.8 per cent of the 1940 imports (66 in 1939) and took 89.4 per cent of the exports (74.2 in 1939). The principal 1940 exports were (in 1,000 pesos): Gold, refined, 126,811; silver, refined, 121,290; lead, refined, 97,125; copper bars and mattes, 75,730; zinc concentrates, 69,060; crude petroleum, 53,120; gold and silver precipitates, 34,379; zinc, refined, 27,573.

Finance. The average exchange value of the peso declined from \$0 1931 in 1939 to \$0 1852 in 1940. Budget estimates for 1941 balanced at 492,931,000 pesos (448,769,000 in 1940). Actual receipts for the first six months of 1941 were 268,139,300 pesos, or 36,278,000 more than the estimates. As of Aug. 31, 1941, there was a Treasury balance of 20,738,267 pesos. The funded debt on July 1, 1937, was 1,133,994,612 pesos. See *History*.

Transportation. Mexico had about 14,500 miles of railway line in 1941. The principal system is that of the National Railways of Mexico, nationalized in 1937. In 1939 the National Railways carried about 9,254,000 metric tons of freight. The highway mileage was 56,923 at the beginning of 1941. Over 20 air lines provide services between the chief towns and to the other American countries. Veracruz and Tampico are the chief of Mexico's 22 ocean ports. Vessels entering and clearing all ports with cargo in 1939 numbered 13,348 of 6,041,299 tons. See **ROADS AND STREETS**.

Government. The Constitution of 1917, as amended in 1929 and 1933, vests executive power in a President elected by direct popular vote for six years and ineligible for reelection. Legislative power rests with an elective Congress of two houses—a Chamber of Deputies of 171 members chosen for three years and a Senate of 58 members renewed every six years. President in 1941. Gen. Manuel Avila Camacho, who assumed office Dec. 1, 1940. Predominant political power had been exercised since 1928 by the National Revolutionary party, organized by President Plutarco Elias Calles, and

its successor, the Party of the Mexican Revolution (PRM), formed at the direction of President Lázaro Cárdenas in 1938.

HISTORY

The approach of war toward the United States rendered Mexico's northern neighbor a suitor, in a sense, for Mexico's favor. With regard to Mexican exports, many commodities that the United States might otherwise not have needed in excess of its own supply became welcome additions to American production in 1941 and moreover, were worth double their purchase price if American purchase kept them from an enemy nation. Mexico under these conditions enjoyed the readiest possible market for a considerable list of its mineral products—those not sufficiently abundant for the needs of warfare.

President Avila Camacho had taken office only a month before the start of 1941, yet had already set a course definitely to the right of that which his predecessor, President Cárdenas, had followed. This new course brought definite changes during 1941 in the Government's bearings toward the United States, labor, management of industry, communism, the conservative political groups, and doctrinal public education. Mexico drew nearer to the United States in a joint opposition to the threat of the German-Italian-Japanese alliance and in commercial alignment. At home, it broadened the demarcation between government and labor, thus moving farther from communism. The Government drew closer to older and less advanced elements of the Revolutionary party, alienated by the previous administration; it labored to mend governmental management of industry in the conspicuous instances of the railroads and of petroleum, and it took steps to limit the inculcation of socialistic belief in the public schools.

Collaboration with the United States. When the United States adopted in 1940 a policy strongly opposed to Germany and her allies the value of a close understanding with Mexico rose sharply. Mexico's own trade with Europe being largely cut off, she had similarly to turn to the United States in order to recoup the loss. The chief outstanding difference between the two countries had been that over compensation for American interests deprived of property, particularly in petroleum-bearing lands and equipment for working them. Now arose new matters so pressing as to put the old difference somewhat into the background, thus favoring a general rapprochement.

Three steps in particular advanced Mexican-American cooperation in 1941. In April the two countries agreed that each might use the other's facilities (airfields essentially) in the movement of its military forces over the other's territory, thus assuring to the United States easy use of the military overland airway between the Union and the Panama Canal. In July Mexico agreed to limit its exports of strategic and critical materials (mainly nonabundant minerals) to the United States and other destinations in the Western Hemisphere, and the United States agreed to take at current market price, for 18 months, any surplus of such commodities that Mexico might offer. On November 19 the two Governments agreed (1) on further moves to settle amounts of compensation to be paid to owners of expropriated Mexican petroleum properties, (2) signed a convention calling for gradual payment by Mexico of \$40,000,000 to satisfy other American claims; (3) determined to negotiate a reciprocal trade agreement; (4) arranged for the U.S. Treasury's buying Mexican pesos, thus keeping them stable in terms of U.S. money, (5) agreed that the

U.S. Treasury should resume the purchase of new-mined Mexican silver as before 1938, and (6) arranged for the Export-Import Bank (U.S.) to lend the Mexican Government money for road-building.

The reciprocal extension of facilities for military aviation, signed April 1 and promptly ratified by the Senate of each contracting Government, marked the substantial growth of a change that had for some time been maturing in the two countries' relations. It was remarkable for committing Mexico to what for practical purposes was an unequal concession of rights within her territory, despite its allowing Mexican flights overland to Lower California. It gave occasion for some display of uneasiness among Mexican advanced liberals. The pro-Soviet labor-leader Vicente Lombardo Toledano a few weeks later questioned President Avila Camacho on the administration's designs toward the United States. The President in reply denied that Mexico had any secret treaty with the United States, that it would automatically go to war if the latter became a belligerent, that it had entered any military alliance or would cede any territory for military purposes. These assurances were borne out; but Mexico, adopting the same course as most of the American nations, seized German and Italian ships at her ports in April. Upon Japan's attack of December 7 on the United States, Mexico severed diplomatic relations with Japan, December 8, and with Germany and Italy, December 11. At the same time the Mexican Government recognized the United States as an American republic subjected to foreign aggression and as therefore entitled under inter-American agreements to the privileges of a neutral. The position that thus developed, particularly as to Japan, impelled Mexico to an effort to strengthen the defenses of the coast of Lower California.

Mexico's Gain by U.S. Bargains. The mutual concessions of facilities for flying helped the United States more than Mexico. The agreement under which the United States must take the surplus of strategic minerals helped both about equally, and the proceedings to indemnify expropriated U.S. nationals at Mexico's obvious expense helped the United States alone. On the other side of the account, the United States renewed purchase of the output of Mexican silver mines at a price above the world's market restored a virtual subsidy to Mexico. The U.S. Treasury's undertaking to hold up the dollar value of the peso relieved Mexican finances of a persistent worry. The proposal of discussions toward a reciprocal trade agreement raised hopes in Mexican quarters for freer access to the U.S. market. The Mexican Government could point to enough possible gain from the relations with the United States to silence much potential criticism.

Financial Policy. The Mexican peso had for some years betrayed the lack of one important feature of acceptable money, the ability to retain its value in terms of goods and of other money. The improved Mexican commercial balance in 1940 and 1941 made it possible to pin the peso at somewhat better than five to the dollar, and the renewal of the U.S. Treasury's support for the peso thereafter took the task off Mexico's hands. The country's financial position was much improved, yet it had not sufficient private capital for the development of promising enterprises. The lack was felt even in the mining field, where the demand for antimony much exceeded the supply, which in turn did not rise as fast as desired, there being little capital to increase it. There was comparatively no demand or expectation at this stage that communistic methods should take the place of private capital. On the other hand

expropriation of foreign capital had gone on for years and the collapse of Mexico's credit as a borrowing government had confirmed investors in wariness toward the Mexican field. While able to borrow money for a few special purposes from the U.S. Government, Mexico had lost the key to private credit. The question of putting the Mexican public dollar debt in order remained in the background as a possible future step.

Government and Labor. As President Avila Camacho found matters on taking office, government and labor were at variance on points where their provinces overlapped. Government ownership and management by organized labor formed a combination that still prevailed, though modified, in the National Railways and went on unmodified in the production of petroleum. The influence of communism remained strong in the Confederation of Mexican Workers (C.T.M.), the most conspicuous and powerful of the nation-wide unions, and those who led this body stood in a position to challenge an administration departing from the broad liberalism of the Cárdenas regime. Early in January a strike of the tramway workers in the city of Mexico put the administration to its first serious test. This union struck for higher wages.

The employer, a private company of foreign—British and Canadian—ownership, submitted that it was already losing heavily, even before it could meet its bill for electricity, by the limitation of passengers fares to 8 centavos (1¾ cents, U.S., in the depreciated state of the peso). The President brought about a quick settlement of the strike, granting an increase in fares to 25 centavos and requiring the company to raise the rates of pay and grant additional back pay as well. The strikers lost a demand for participation in the management of the enterprise. As the strike failed to reveal any man or element able and disposed to use it for thwarting the presidential authority, the settlement was taken as a success for Avila Camacho and for his policy of taking the middle road between the right and left of the Revolutionary party.

A more serious strike, in respect of the violence that it called forth, occurred in September. A union of workers in manufactories of munitions having started a strike, their leader, accompanied by a considerable body of persons, marched on September 23 to the residence of President Avila Camacho and there started a demonstration. A body of troops moved to the spot, opened fire, and reportedly killed 8 persons and wounded 24. The strikers in this case belonged to a union outside of the C.T.M. group, which might have made a stronger protest if its own members had been involved.

Effort to Save the Railroads. The Mexican National Railroads had received their first aid against domination by labor before Avila Camacho's presidency. Cárdenas had ordered, April, 1940, their return under the direction by the Federal Department of Communications and Public Works. This step alone effected nothing; it required supplementing by an administrative reorganization. An article appearing in the periodical review of the Banco Nacional de Mexico indicated that no effective improvement had been made up to April, 1941. This article made it appear that the railways had lost much of their rolling stock since 1915 through wear and tear and failure to renew, and that the money for maintaining the rolling stock, and for the care of line as well, had largely been preempted for meeting payrolls swelled by increases in pay and in unnecessary positions. The railroads had not even been meeting bills for all their current purchases

necessary to operation; yet they were currently paying 1,500,000 pesos more a month for wages than the 6,500,000 budgeted for this purpose. The manager's judgment was reported to be that it would take an outlay of 200,000,000 pesos and a reorganization of the personnel and pay to put the lines in proper order to handle business currently offered.

The problem as thus represented called for weighty measures, not easily to be brought into effect in time to prevent a thorough collapse in the operation of a depreciated system under the strain of higher than normal volume of traffic. Authority over the system early in 1941 rested partly in the administrative Council of the National Railways, a body of seven members, including three representatives of the employees' unions. Early in April, however, the withdrawal of the unions' three members was announced. They alleged that the Council had ignored their demands in its formulation of policies. On October 1 the President made his brother, Gen. Maximino Avila Camacho, Minister of Communications, thus putting the executive department responsible for administration of the railroads in the hands of a man known for more conservative connections than the president's own. The step permitted of the interpretation that President Avila Camacho had decided to override rather than conciliate the unionist element that obstructed steps to improve the railroads' operation. It remained an unsettled question at the end of the year whether, having thus set a course toward the conservative ideal of running the railroads within their income, the President could make the trip to that goal despite ostensible opposition from ex-President Cárdenas, who had established employees' operation of the railroads.

Reform in the Petroleum Industry. The ills of the socialized petroleum industry remained uncured but not wholly untreated. Efforts to make the expropriated companies take what the government offered in the way of compensation dominated policy toward petroleum throughout the year. In February Minister of the Interior Aleman declared that when the expropriated companies had settled for their compensation Mexico would again allow foreign capital to exploit petroleum. The administration procured the enactment in March of an amendment to the petroleum code, striking out the measure (of Cárdenas's proposal) which had excluded foreign capital from this field. In July it appeared that Mexico negotiated unsuccessfully with the United States for the latter to purchase 18 months' output of the Mexican fields—an arrangement that might have enabled Mexico to wait with equanimity for the expropriated companies to take what they could get. In August began Mexican shipments of oil on a moderate scale to Brazil.

The negotiations that eventuated in the general accord signed November 18 were pursued by the Governments of Mexico and the United States through the three months previous. The Mexican negotiators entered on their task expectant that the desire of the United States to secure Mexico's goodwill before having to face enemies elsewhere would help carry Mexico's point against the expropriated American producers of petroleum. The Mexicans made a new offer, to deposit \$9,000,000 in token of willingness to indemnify and then to leave the setting of the proper total of indemnity to future negotiation, presumably after the end of the United States' international difficulties. They continued to insist that Mexico would indemnify only for the loss of assets on the surface and not for the loss of potential petroleum in the depths of the earth.

Washington was reported to have pressed the American claimants to cede the latter part of their claims—about nine-tenths of the commonly estimated whole, but more problematical than the total of the assets on the surface.

The failure of the American claimants to assent was definitely recognized only 11 days before the execution of the agreement of November 19. The new plan for settling the claims, so far as the official U.S. summary of those agreements showed, did not stipulate the exclusion of underground petroleum from such assets as might give substance to a valid claim. It required that an expert for the United States and one for Mexico should be appointed within 30 days. They were to agree on and report within five months the amount of compensation that Mexico must pay, or else each report to his own Government within another 30 days if no agreement proved possible. The Mexican Government meanwhile made the "token" deposit proposed early in the negotiations, in the sum of \$9,000,000.

Education and Cult. President Avila Camacho as a candidate, before taking office, guardedly approved a measure that had originated in his predecessor's time—the provision of free compulsory education, in harmony with the socialistic faith, in governmental schools and a corresponding ban on schools connected with a religious cult. After taking office, he nonetheless took successive steps to limit the work of socialistic indoctrination in the schools. In particular Luis Sanchez Ponton, an intellectualist liberal, withdrew as Minister of Public Education, and the president filled the vacancy in September, 1941, with Octavio Vejar Vazquez. This new head of education applied vigorously to the 80,000 members of the teaching corps a new presidential decree compelling them to abandon all political activity on pain of disqualification.

The decree shut teachers out not only from political activity of a strictly partisan sort but also from the established membership of teaching groups in the Confederation of Mexican Workers and the National Peasants' Confederation. The Communist party organization stood to lose a useful part of its personnel if the decree should remain in force. The schools of the Roman Catholic Church, formerly active in elementary education, remained bereft of the right to teach, but the impression was reported as widespread in Mexico that Avila Camacho was favorably disposed to that church and would not use against it the severity that was contemplated under the anti-religious provisions of laws still unrepealed.

A body known as the Sinarquistas came into note during the year as seeking to conduct a colonization of lands in Lower California. The Chamber of Deputies failed in October to grant to the Sinarquistas the privileges sought for this purpose, but the President authorized their scheme by decree. The organization was regarded as in harmony with some leaders of the Catholic faith and was described by its leader, Salvador Abascal, as anti-Fascist and anti-Communist. Its membership was rated at 150,000 by the most moderate estimate and much higher by others. Some expressions in its periodical *El Sinarquista* were frankly anti-revolutionary. The prevailing type of the members was rural.

Personalities. In addition to making Gen. Maximino Avila Camacho Minister of Communications and thus establishing a tie with former President Portes Gil, the President permitted the return, May 5, of former President Calles from exile. On December 18, he appointed ex-President Cárdenas

to command all Mexican military and naval forces on the Pacific coast.

MICHIGAN. An east north central State. Area: 58,216 sq. mi., including 1,194 sq. mi. of inland water, but excluding parts of: Lake Erie, 216 sq. mi.; Lake Huron, 8,975 sq. mi.; Lake Michigan, 13,037 sq. mi.; Lake St. Clair, 116 sq. mi.; and Lake Superior, 2,212 sq. mi. Population: (1940 census) 5,256,106. The urban population comprises 65.7 per cent of the total (U.S. average, 56.5 per cent), non-white population, 4.1 per cent (U.S. average, 10.2); elderly (65 years and over), 6.3 per cent. Michigan ranks 22nd among the States in area, seventh in population, and 12th in density, with an average of 92.2 persons per square mile. The capital is Lansing with 78,753 inhabitants, largest city, Detroit, 1,623,452. There are 83 counties and 43 cities of more than 10,000 inhabitants (see article on *POPULATION* in 1940 YEAR BOOK). For statistics on births, deaths, accidents, see *VITAL STATISTICS*.

Education. According to Eugene B. Elliott, Superintendent of Public Instruction, there were 973,737 pupils enrolled in the public schools of Michigan during the school year 1939-40, 606,511 in elementary schools and 367,226 in secondary schools. Teachers numbered 32,716 and received an annual average salary of \$1,598.23. Total expenditures for the year including general operating costs, capital outlay and debt service were \$100,725,419.

Transportation. State highway mileage in 1939, including streets under State control, totaled 9,292, of which 8,765 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 1,556,571; 1,400,838 were private and commercial automobiles, 848 busses, and 150,875 trucks and tractor trucks. Gross motor-fuel consumption was 1,253,535,000 gallons. Net motor-fuel tax receipts were \$32,479,000, the rate being three cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$24,115,000.

Railways of all classes extended 7,338 miles (Dec. 31, 1939) 3.12 per cent of the total mileage in the United States. Class I steam railways (4,951 miles) reported 37,788,748 tons of revenue freight originating in Michigan in 1940 and 48,345,432 tons terminating in Michigan. There are 119 airports and landing fields in the State (17 lighted fields) and 31 seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 915 civil aircraft in the State and 3,160 airline transport, commercial, and private pilots (2,755 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 7,728,000, as compared with 7,765,000 acres in 1940. According to the latest census, there are 187,589 farms, valued at \$912,545,223, averaging 96.2 acres each. Farm population numbered 872,775 or 16.6 per cent of the total. Leading crops with production in 1941 were: corn, \$38,426,000, 48,032,000 bu.; hay, \$31,663,000, 3,308,000 tons; dry beans, \$25,960,000, 5,706,000 bags; oats, \$19,278,000, 45,900,000 bu.; wheat, \$17,258,000, 16,594,000 bu.; commercial truck crops, \$14,333,000; potatoes, \$13,614,000, 20,020,-

000 bu.; and apples, \$5,640,000 for 7,520,000 bu. **Manufacturing.** According to the latest census (for the year 1939) the total value of manufactured products was \$4,348,223,244. For details, see 1940 YEAR BOOK.

Mineral Production. Leading mineral products in 1940 (with 1939 figures in parentheses) were: Iron ore, 13,751,970 gross tons valued at \$40,474,951 (11,238,605 gross tons, \$37,026,665); petroleum, 19,764,000 barrels (23,462,000 barrels valued at \$21,350,000); pig iron, 1,340,402 net tons, \$18,472,588 (1,275,640 net tons, \$18,872,150); coke, 2,872,026 net tons (2,430,688 net tons, \$12,408,881); cement, 8,519,416 barrels, \$11,389,191 (8,327,479 barrels, \$10,891,978); copper, 91,486,806 pounds from domestic ores only (87,970,000 pounds from all sources valued at \$9,148,880); natural gas, 1940 figure not available (10,726,000 M cubic feet valued at \$7,411,000 in 1939); salt, 2,506,523 short tons, \$7,123,393 (2,408,872 short tons, \$6,726,912); stone, 13,527,170 short tons, \$6,891,433 (11,138,280 short tons, \$5,890,728).

The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$115,969,514 or 2.74 per cent of the total for the United States. (Duplications are eliminated in State totals; e.g., iron ore is included and pig iron is omitted; coke also is omitted.) Michigan ranks tenth among the States in value of mineral production.

Trade. According to the 1940 census there were 6,908 wholesale establishments in Michigan, employing 52,292 persons, reporting net sales for 1939 of \$1,926,474,000 and annual pay roll of \$88,969,000. There were 67,414 retail stores with 198,018 employees, sales totaling \$1,820,798,000, and pay roll of \$204,026,000. Service establishments numbered 22,624, employing 38,153 persons for \$41,725,000 per year, and reporting a business volume amounting to \$133,271,000. The leading business center of the State is Detroit which reported wholesale sales of \$1,304,451,000, retail sales of \$665,565,000, and \$75,208,000 receipts for its service establishments.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Michigan was \$103,978,000. Under the Social Security program, financed by Federal funds matching State grants, 88,768 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$17.13 (U.S. average pension, \$21.08); 50,768 dependent children in 21,459 families received average monthly payments of \$40.45 per family (U.S. average, \$32.73); and 1,244 blind persons received \$23.93 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 32,829 and received \$19.68 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 4,313 (\$286,000); NYA student work program, 17,659 (\$136,000); NYA out-of-school work program, 11,278 (\$265,000); WPA, 48,838 (\$2,966,000); other Federal emergency projects, 24 (\$2,000); regular Federal construction projects, 6,523 (\$941,000). The Farm Security Administration certified subsistence payments totaling \$20,000 for the month to 413 cases.

Legislation. The Legislature convenes in regular session on the first Wednesday of January in odd years. It is composed of 32 Senators (10 Democrats and 22 Republicans in 1941) and 100 Representatives (32 Democrats and 68 Republicans).

Legislation in 1941. The Legislature recessed on May 27, 1941, having turned out only 250 laws, few of them of any importance. Results prior to the recess were summarized by James M. Haswell in the *Detroit Free Press*, May 28, 1941, in part as follows:

The division of power between the Republican Legislature and the Democratic Governor produced a political stalemate. The Governor didn't get the liberal legislation that he asked for in January, and his veto power kept down the most reactionary proposals under discussion in May Prosperity, public preoccupation with the war, and a swelling State Treasury also had moderating effect.

The Legislature passed and the Governor promptly signed a long-discussed bill creating a central tax collecting department—the major government reform achievement of this session.

The Legislature proposed, and the voters approved in April, a constitutional amendment to put an end to open and notorious fraud in the assembling of initiatory and referendum petitions. The Legislature granted enforcement powers to the State Board of Canvassers and extended the reform by granting enforcement powers over local nominating petitions to county officials.

The Legislature reenacted the Milk Price Control Law which the Supreme Court invalidated, making changes to conform to the court's decision.

Admitting that Detroit and Wayne County took a shelling from the Legislature on the question of school aid, Chairman William Buckley, of the Detroit delegation, in the House pointed out that many bills serving Detroit's interests had passed. Among the bills he listed were measures authorizing "redevelopment" of the city's blighted areas, authorizing the Detroit refunding plan; authorizing construction of public buildings for Wayne University, creating a Wayne University Board of Regents; authorizing development of Federal-city defense housing projects, exempting city accounts from operation of the escheats law. A bill to authorize zoning of land around airports was passed.

Bills vetoed by the Governor included those creating a separate purchasing department and forbidding the creation of intercity banking chains. However, a number of vetoed measures were reconsidered when the Legislature reconvened July 8 after what was described in the *Free Press* (Jan. 4, 1942) as a "veto-recess quarrel" between Gov. Van Wagoner and the Republican legislators. Final results of the year, in addition to those enumerated above, were commented upon by that paper as follows:

New weapons for defense—among them the Brake Act providing drastic felony penalties for sabotage—were forged by the Legislature among the 167 new laws which will confront Michigan citizens January 10. The anti-sabotage act provides five years imprisonment or a \$10,000 fine or both, for "intentionally interfering with, hindering defense materials by destroying property," a similar punishment for intentionally selling defective munitions, defense materials, and machinery to the government, or for intentionally omitting to cite defects found on inspection. Frustrated sabotage attempts will subject the offender to half the penalties, as will incitement of others. Conspirators will be dealt with as firmly.

Acts authorizing issuance of bonds for airport development and giving aeronautics board agents the law enforcing power of deputy sheriffs; a measure making it a felony to damage or destroy State Police fire and police equipment; a law permitting counties to contract with cities for water, sewer, drainage, sewer disposal, or fire protection; a more limited measure applying to townships; a penal code change permitting greater flexibility in the use of police agencies in the suppression of riots and a limited access highway authorization are among the major defense statutes.

Enactment calling for election boards to speed returns to county clerks and the latter to the secretary of state are an interesting prelude to a campaign year. Other election changes give first column on the ballot to the party whose secretary of state candidate received the highest vote, authenticate nonpartisan elections for villages, advance partisan primaries for cities and villages from March to February; permit supervisors to initiate county civil service plans; close registrations of voters 20 days before elections in townships as well as cities.

Most important of a score of laws affecting schools was that authorizing a one-tenth mill tax levy for construction or maintenance and the establishment of sinking funds to escape stringency of tax limits.

An appeal by the people on issues of law is an innovation in court procedure. The residence qualification in divorce petitions was cut from two to one year. New protections are added for the support of children born out of

wedlock and new punishments for contempt in divorce orders affecting children. No-funds check penalties were increased; flings of supplementary information against habitual criminals were provided for, stolen property fences were made subject to felony penalties on a third conviction; and provision was made to legalize retention by the State of cash and property taken in gambling raids. The State's fireworks ban was made more rigid and controls were established for transportation of explosives by truck. Establishment of a crime laboratory by the State Board of Health was ordered. County Boards of Health were provided for. Architects were forbidden to have a pecuniary interest in the sale of building materials. Debt-collecting agencies were ordered to provide bonds. Supervisors were forbidden to hold salaried Road Commission jobs. Uniform bread weight standards were provided. A Fair Trade law forbids false representations that merchandise is being sold "at wholesale."

The question of State finance occasioned innumerable legislative headaches, with Gov. Van Wagoner advocating retirement of half of the accumulated deficit in the ensuing biennium and the Legislature attempting to vote all-time high appropriations, but it was unexpectedly solved by an increase in 1941 receipts. Use tax and sales tax receipts produced \$8,000,000 above estimated and other taxes increased also. As a result, the State ended the calendar year, 1941, with a balance of about \$4,000 (excluding \$6,000,000 appropriations for deficit retirement) as compared with a \$30,000,000 debt three years previously.

Finances. Total tax collections in Michigan for the fiscal year ending in June, 1941, were \$229,368,000 (1940: \$194,199,000). Total sales taxes amounted to \$112,499,000, including general sales, \$73,632,000, motor fuel, \$34,279,000. Taxes on specific businesses ran to \$14,420,000, general and selective property, \$13,442,000, inheritance, estate, and gift, \$4,176,000, unemployment compensation, \$57,208,000. Cost payments for the operation of general government totaled \$208,896,000 in 1939, the latest year available. (Revenues for the general government for that year were \$198,287,000.) Cost of operation per capita was \$40.86. Total gross debt outstanding in 1941 was \$89,140,000, as compared with \$94,040,000 in 1932.

Officers and Judiciary. The Governor is Murray D. Van Wagoner (Dem.), inaugurated in January, 1941, for a two-year term; Lieutenant Governor, Frank Murphy; Secretary of State, Harry F. Kelly; Attorney General, Herbert J. Rushton; State Treasurer, Theodore I. Fry; State Auditor, Vernon J. Brown. Chief Justice of the Michigan Supreme Court is Edward M. Sharpe; there are seven associate members elected by popular vote for eight-year terms.

MIDWAY ISLANDS. A group of islands in the North Pacific (28° 12' N., 177° 22' W.), 1,304 statute miles to the northwest of Honolulu; belonging to the United States. The islands surround a central lagoon. Land area, 28 square miles. Since 1935 the previously uninhabited islands have been used as a station on Pan American Airways' transpacific route to Manila. They are under the jurisdiction of the U.S. Navy Department.

In 1939 Congress authorized commencement of work on naval air and submarine bases at Midway and in March, 1941, the sum of \$9,707,000 was voted for the completion of landing fields, improved airplane repair facilities, and a fully equipped submarine base. The program called for

the cutting of a channel 30 feet deep and 300 feet wide into the central lagoon to accommodate large seaplane tenders and submarines; also the construction of a pier. Effective May 15, 1941, the islands were designated a "naval defensive sea area" by Presidential proclamation. Unauthorized vessels and aircraft were barred from a three-mile zone around the islands. The islands were repeatedly attacked by Japanese planes in December. See WORLD WAR.

MILITARY PROGRESS. The airplane and the armored vehicle, and the art of handling them, tactically and strategically, continued during the year to rise in military importance and popular respect as their worth was further demonstrated on battle fronts from northern Africa to the Pacific. Each possesses those most important elements of warfare, which have become intimately associated with the term "blitzkrieg"—rapidity of movement, capacity for surprise, great firepower, and a relatively high degree of protection (armor and speed in the case of the vehicle, great speed and some armor in the case of the airplane). They are also comparable to the extent that each is best combatted by similar weapons, i.e. a bombing plane by pursuit plane, tanks by other tanks or self propelled or motorized artillery. In North Africa the British, through skillful and daring use of their tanks in the favorable terrain of the desert, drove the Italians back from the Egyptian border and well into Libya. Later, the British north African forces having been weakened by the Grecian campaign, the German armored forces crossed into North Africa and in another instance of tank warfare drove the British nearly back to the Egyptian border. As the year closed, the tide was again turning and the British were driving westward. This field of action favored tank warfare because of the flat, featureless ground which offered no natural barriers to the vehicles and gave no natural cover for unprotected infantry or artillery. Co-operating aircraft acted as eyes for the ground columns, aided in the attack, and fought off enemy airplanes. Infantry and anti-tank artillery were relatively successful in the defense of towns, forts, etc., but the armored vehicle was found to be absolutely essential to the offense.

The high point in the exploitation of the military powers of the airplane was reached Dec. 7, 1941, in the treacherous attack of the Japanese upon the United States Naval Base at Pearl Harbor and the adjoining United States Army airfields. As far as accurate information was available at the end of the year, the sinking of the *USS Arizona* in that attack marked the first destruction of a battleship by an aerial bomb. At the same time the battleships *USS Utah*, which was used as a training ship for anti-aircraft gunnery, was sunk, and the *USS Oklahoma* capsized but was reported to be recoverable. Other lesser vessels in the harbor were sunk and damaged, while Army losses were severe in aircraft and some hangars. In this engagement the Japanese skillfully, though perfidiously, utilized the capabilities of the airplane to deliver rapid, paralyzing blows. So great was the surprise made possible by the airplane, that President Roosevelt appointed a board to determine if there was any error of judgment which contributed to the surprise and if there was any dereliction of duty prior to the attack. Local air superiority was achieved almost at once by destroying many of the defensive planes on the fields and in the hangars. Speaking of the attack, the Secretary of the Navy, Hon. Frank Knox, said: "In its immediate effects and nearby results, it was a successful engagement for the enemy." Two days

later, on December 9, Japanese airplanes with bombs and torpedoes sank the British battleships *HMS Prince of Wales* and *Repulse* which were attempting to repel a landing on the coast of Malaya. The British Prime Minister, Hon. Winston Churchill, in a speech to parliament on December 11 said, "The Japanese onslaught has brought upon the United States and Britain very serious injuries to our naval power. In my whole experience I do not remember any naval blow so heavy or so painful as the sinking of the *Prince of Wales* and *Repulse* on Monday last." While the losses in these instances were naval losses the blows were inflicted by weapons which may operate from the military bases on land as well as from the floating landing fields (aircraft carriers). The land Army's defense against naval attack, or the repelling of transports carrying soldiers, formerly was limited to the range of shore based artillery. Now it is limited only to the ever increasing range of bombing and torpedo launching aircraft.

These two instances are examples of local conditions and skillful employment contributing to the making of the new weapons supreme—the tank in the Libyan Desert and the airplane at Oahu. Nevertheless it must not be construed that they alone can win all battles or wars. There still is to be found a balance between them and the older components of the military machine. In the 2,000-mile front from the Baltic to the Black Sea by far the greatest part of the fighting was by the infantry-artillery team. Thousands of tanks and airplanes were engaged and more will be used as rapidly as they can be produced and taken to the front. The most effective proportion of these new arms to the older ones probably will not be determined until the war has progressed much farther. Because of the effectiveness of these weapons and because their losses in battle are very great, nations today gage military might in terms of capacity to put airplanes and tanks into the field. However, there is every evidence that the mass use of airplanes has changed, and is continuing to change the concept of land and sea warfare. On the land they have resulted in reorganization of virtually every arm of the service. On the sea they have shifted the emphasis from the heavy battleship to the smaller cruiser and destroyer classes. As to what further alterations they will bring about the world will have a foretaste during 1942.

There has been an increasing trend toward the organization and training of troops for specific purposes, to which the term of "task force" has come to apply. This tendency has been necessitated by the world-wide nature of the war and made possible by the enormous size of the armies involved. In this new movement toward military efficiency, the United States has been in the forefront. Two examples are the holding forces sent by the United States to Iceland and to Dutch Guiana. Neither of these was standard military organization with standard equipment. One had been trained in cold weather with clothing and equipment specially designed for low temperatures. The other was prepared by training and equipment to live and fight in torrid temperatures. Each had weapons selected for its specific task. Both had been trained in the technique of landing, unloading, and setting up its living and fighting equipment for the specific mission in the specific zone to which it was to be sent. Another task force has been the British Army's Commandos, designed solely for raiding enemy-held towns and installations along the coast. With rapier-like thrusts, the Commandos have inflicted appreciable losses to the enemy with comparably

small losses themselves. Their greatest value has been to force the Germans to strengthen the garrisons at many important points and thus bring about some dispersion of German force. The German threat of invasion has contained many troops in the British Isles which might well be employed elsewhere. It is to develop for herself this advantage of the initiative that England is building up her Commandos. Another type of task force, which while not new has risen in importance recently, is the mountain troops. Italy, which has virtually no mountain troops, found her offensive against Greece bog down and suffer severe reverses because the latter has especially trained and equipped mountain troops. Greece held the upper hand until Germany, which since the World War has made considerable progress in that line, brought in her mountain divisions and drove the Greeks back.

Army of the United States. The year 1941 saw an enormous expansion in the military forces of the United States. The Army of the United States began the year with a force of approximately 600,000 officers and enlisted men. The last official announcement in 1941 of its strength was issued on October 9. (On Jan. 8, 1942, Secretary of War Stimson in a formal announcement stated that plans had been instituted to increase the Army of the United States from a personnel strength of 1,700,000 to 3,600,000.) The October 9 strength was 1,588,500, distributed as follows:

<i>Officers</i>	
Regular Army	15,000
National Guard	22,000
Reserve Officers	76,000
Total	113,000
<i>Enlisted Men</i>	
Regular Army, 3 year enlistments	505,000
Regular Army Reserve and one year enlistments	17,500
National Guard in Federal service	248,000
Selective Service Trainees	705,000
Total	1,475,500
<i>Total Combined Strength</i>	
Regular Army	537,500
National Guard	270,000
Reserve Officers	76,000
Selective Service Trainees	705,000
Total	1,588,500

The U. S. Army made considerable progress in its air arm. For the first time since 1932 the War Department was given an Assistant Secretary for Air, Mr. Robert A. Lovett, who was confirmed in that post Apr. 18, 1941. In June (1941) a new organization known as the "Army Air Forces" was set up. It is composed of the Headquarters Army Air Forces, the Air Force Combat Command, the Air Corps, and all other air units. Also created was an Air Council to review and coordinate all major aviation projects of the Army. Maj. Gen. Henry H. Arnold, deputy Chief of Staff, was appointed Chief of the Army Air Forces and later elevated to the rank of lieutenant general. Lieut. Gen. Delos C. Emmons, who had been commanding general of the General Headquarters Air Force was made Chief of the Air Force Combat Command, which succeeded it. Following the Japanese attack on Hawaii General Emmons was sent to command the Hawaiian Department, thus becoming the first air

officer to hold that key post. Maj. Gen. George H. Brett remained as chief of Air Corps under the reorganization, although at the beginning of the year 1942 he was made deputy to Gen. Sir Archibald Wavell, Supreme Commander of the sea, land, and air forces of the United Nations in the South West Pacific Area—another recognition of the importance of the American air forces.

The reorganization came at a time when there had been considerable agitation in Congress for the creation of a separate and independent air force. The War Department was strongly opposed to such a step. Therefore at the time of the reorganization of the air component of the Army, the Secretary of War, Hon. Henry L. Stimson, wrote a letter to the Chairmen of the Military Affairs Committees of the House and Senate in which he characterized the independent air force as neither "prudent nor desirable . . . in the midst of a national emergency." He explained the War Department's action in respect to its air forces as follows.

"The measures which we have taken are designed to integrate all factors which will promote air power. We are more concerned with accomplishing the desired results than we are with the language used to describe the process. However, we think it is a fair description of the method of obtaining successful results at this critical stage of air power to say that we favor autonomy of the air arm rather than segregated independence. Such autonomy will facilitate and ensure the joint action of air, ground, and naval forces which the progress of the present war is so clearly demonstrating.

"I have, therefore, issued orders establishing the Army Air Forces, which will embrace the existing GHQ Air Force and the Air Service Branches of the Air Corps in a single unified organization. This will thus combine both combat units and service units and the entire organization will be under a high ranking air officer who will be responsible only to the Chief of Staff of the United States Army.

"Furthermore, an Air Staff has been established in connection with this new organization.

"By these moves the air activities of the Army, both in the elements cooperating with ground forces and those comprising long range striking forces, would in effect constitute a Unified Force from which trained units could be dispatched, as elements of a task force, to the Commanding Officer in charge of any theater of action, whether he might be an Army Officer, a Navy Officer, or an Air Officer."

Four Air Forces were set up in the continental United States, corresponding generally to the four field armies. The First Air Force has headquarters at Mitchel Field, Long Island, N.Y.; the Second at Spokane, Wash., the Third at Tampa, Fla., and the Fourth at Riverside, Calif. Each Air Force has an Interceptor Command, a Bomber Command, an Air Support Command, and a Base Command. An additional Air Support Command was organized to cooperate with the Armored Force.

Other phases of the employment of air power also were developed. Prior to our entry into the War, the newly created Provisional Parachute Group was increased to four battalions, the 501st, 502d, 503rd, and 504th. Facilities for transporting regular ground troops by air were increased through the development of the cargo type of airplanes. The training of personnel in the operation of gliders was pressed and experimentation carried forward in the design and construction of large transport gliders.

Secretary Stimson, in his annual report for the fiscal year 1941, treated of the Army's plans for and attitude toward its air component as follows:

"Acting in well-trained cooperation with our ground forces, our shorter ranged dive and attack bombers are supplementing and expanding in warfare of rapid movement the demolition and counter-battery work formerly the exclusive role of our heavy artillery. And, guided by the carefully worked out detection systems of home defense which are now being installed throughout our seacoast states, our swift interceptors and fighting planes are planning to defend our large cities from approaching enemy bombers.

"Naturally such a revolutionary growth of air power

could not take place without differences of opinion as to its proper organization and control. These differences of opinion have been world-wide and the air power of different nations has been developed on patterns and under methods which have differed from each other. In America we have had the advantage of studying the effect of the test of war upon these differing theories and methods.

"We are trying to give the organization of our own air force the full benefit of the lessons which have been thus learned. From them there seem to stand out certain clearly demonstrated principles. An air force should have the freedom through independent experimentation and research to develop new forms of aircraft which will embody the latest improvements in the manufacturing art as well as the power to procure for its own force such new types of planes. It should also have the freedom to plan for their effective use and to select and train the special personnel—pilots, bombardiers, navigators, observers, and mechanics, necessary to operate the planes. It should have the power to create an air staff to plan air strategy and effective cooperation with ground and naval forces, and it should have the power to insure the permanence of the technique which it thus creates by the training and creation of an adequate permanent force of regular officers.

"On the other hand, when it performs its final and most critical function, namely, that of fighting in cooperation with armies on the surface of the land or navies on the surface of the sea, it must submit itself to the conditions which make that cooperation as perfect as possible. And the experience of this war has fully demonstrated that such cooperation cannot be perfected without a unity of command and that this unity of command cannot be successful unless it extends to combined training taken in preparation for cooperation as well as to the acts of cooperation themselves.

"In our recent revision of the organization of the Air Corps we have endeavored to carry out these guiding principles. The rival views formerly held in the air and ground forces have, I believe, been thoroughly reconciled and the soundness of the new organization is now cordially acquiesced in by both sides."

The Armored Force began the year with two Armored Divisions and completed the year with five. Early in March, the Armored Force Replacement Center was activated at Ft. Knox, Ky, and filled with Selective Service men, these men being used later for the newly activated Armored

Force units, including the 3rd Armored Division, Camp Beauregard, La., the 4th Armored Division, Pine Camp, N.Y., and the 5th Armored Division, Ft. Knox, Ky. The 1st GHQ Reserve Tank Group Headquarters was activated at Ft. Knox in February and all GHQ reserve tank battalions placed under it.

Maj. Gen. Adna R. Chaffee (see NECROLOGY), a pioneer in Army mechanization and first commanding general of the Armored Force, died in August and Maj. Gen. Jacob L. Devers, a field artilleryman, succeeded to that post. Near the end of the year, as a result of General Devers' recommendations, authority was given to reorganize the Armored Divisions effective Jan. 1, 1942. Principally, the reorganization provides more medium tanks than light tanks, self-propelled assault artillery, and substitution of armored cars for scout cars. A partial comparison of weapons in the old and new Armored Division organization is as follows.

	New	Old
Light tanks	158	273
Medium tanks	232	108
Scout cars	None	97
Armored cars	79	None
105-mm. Howitzers (Self-propelled)	54	36
75-mm. Howitzers, Self-propelled (in addition to 75-mm. in tanks)	39	None
75-mm. guns	None	8
37-mm. Anti-tank guns, Self-propelled (in addition to 37-mm. in tanks)	27	None

Coincidental with the development of the newer arms, the Army of the United States carried forward with vigor the building up of the older infantry and artillery components on the bases of the lessons learned from the war in Europe. The replacement training center system was established to

-  ORGANIZED REGULAR ARMY AND NATIONAL GUARD UNITS

ENLISTED PERSONNEL OF THE UNITED STATES ACTIVE ARMY
June 30, 1941—1,418,097

give the new recruits the basic school of the soldier. To supply the large numbers of junior officers needed for the new units, Officer Candidate Schools were established to which selected enlisted men (both from the Selective Service men and from voluntary enlisted men) are being sent for three months' courses, upon successful completion of which they are commissioned second lieutenants in the Army of the United States.

Extensive field exercises were held in the summer and fall for the training of the divisions, corps and armies. Of these, the one conducted in Louisiana and Texas in which the Second and Third Armies participated, was the largest peace time maneuver ever held.

In its physical establishment, men under training, and legislative authority, the United States found itself better prepared for the war that was forced upon it, on Dec. 7, 1941, than for any other war in its history—that is, in comparison with its own previous states of preparedness, not in comparison with the other powers involved.

See AUSTRALIA under *History* Matters affecting the U.S. Army are discussed also under DEFENSE HEALTH AND WELFARE SERVICES; PETROLEUM; PRISONS, PAROLE, AND CRIME, PSYCHOLOGY (testing of recruits); SELECTIVE SERVICE ADMINISTRATION; SOCIETIES under *United Service Organizations*, etc. For army appropriations see UNITED STATES under *Legislation* For the establishment of State Guards, see the articles on the States under *Legislation* For the building and equipping of Army camps, see ARCHITECTURE under *Defense Housing*, CIVILIAN CONSERVATION CORPS, CONSTRUCTION INDUSTRY, GEOLOGICAL SURVEY, LIBRARY PROGRESS; PUBLIC HEALTH SERVICE; WATER WORKS, WORK PROJECTS ADMINISTRATION.

See CHEMISTRY, INDUSTRIAL, CUSTOMS, BUREAU OF; GEOLOGICAL SURVEY; MINES, BUREAU OF, STRATEGIC AND CRITICAL MATERIALS. Compare MINES.

MINES, Bureau of. Fortified by 31 years experience in the conservation and development of the Nation's mineral resources and the protection of life in the mineral industries, the Bureau of Mines, U.S. Department of the Interior, readily adjusted itself to emergency conditions in 1941 and shifted the emphasis on all its work to aid in successful prosecution of the war.

At the beginning of the defense program much of the Bureau's vast storehouse of factual information and scientific and technologic data was applied to the problem of bringing the United States nearer to self-sufficiency in vital minerals—the foundation stone of our defense structure. The year 1941, ending with America's entrance into World War II, saw an even greater expansion of the Bureau facilities in an all-out effort to contribute to an unimpeded supply of strategic, critical and essential minerals, including solid fuels and petroleum, and to conservation of manpower through accident prevention.

Designated early as a national defense agency, the Bureau cooperated fully with the Army, the Navy, the State Department, the Office of Production Management, and other principal fighting and supply branches of the Federal Government, in many important undertakings.

Upon the declaration of the existence of a state of war, the Bureau was charged immediately with administration of the Federal Explosives Act which governs the manufacture, storage, distribution, trade, possession or use of non-military explosives. A system of licensing, designed to keep explosives and their ingredients from getting into the hands of hostile or disloyal persons or those not capable of handling explosives, was initiated. The Bureau drafted rules and regulations, undertook to appoint licensing officers in almost every county in the nation, selected inspectors, and otherwise commenced strict and efficient enforcement of this important defense measure.

Outstanding among the Bureau's accomplishments in 1941 directly relating to national defense were determination of new or additional sources of strategic minerals, together with development of improved methods for treating low-grade domestic ores of metals vital to the country's defense. More than 500 possible sources of antimony, chromite, manganese, mercury, tungsten, nickel and tin were investigated, and with the exception of the last two, the results of the examinations were satisfactory. A striking example of successful work was the discovery of a high-grade deposit of tungsten ore in Idaho, which now is rapidly being developed for commercial production. In another area, two million tons of chromite were added to our known reserves. Bureau experts also found deposits of antimony, mercury and manganese which, although of a low grade, are considered valuable in the war emergency.

Methods of treatment, beneficiation and recovery of low-grade domestic ores to render them available for pressing current needs were improved. A process for the production of high-purity manganese by the electrolytic method, developed by the Bureau beginning in 1935, was further improved, and preparations were made to produce manganese on a small commercial scale. Other metallurgical studies on the production of ferro-manganese from the abundant, low-grade manganese ores of this country revealed possibilities that the United States may be able to free itself from dependence upon foreign sources. Especially significant was the laboratory and pilot plant work on the large low-grade deposit of manganese in the Chamberlain, S.D., area, and on ores from other localities. The Bureau also developed a process for the production of magnesium, a metal greatly in demand by aircraft industries, and this work was expanded during the year. Several pilot plants to serve as guides for possible future production of strategic materials from low-grade ores were constructed under the Bureau's direction.

The Bureau operates the only helium plant in the world, and the production of this lightweight, non-inflammable gas was stepped up to 16¼ million cubic feet in the fiscal year 1941, with 15 million feet being used by the Government, primarily for military and defense purposes. At the end of the calendar year the production rate was almost doubled and by the drilling of additional wells and expansion of plant facilities production capacity is expected during 1942 to reach 36 million cubic feet annually.

Realizing the importance of high-test gasoline for airplane and other mechanized equipment in

time of war, the Bureau surveyed certain petroleum fields in this country, and by testing the various crude oils and their light distillates, discovered potential new sources of aviation gasoline. A study was made of the location, type and capacity of existing oil refineries in relation to national defense. The Bureau further improved its methods of producing gasoline, oil, and other products from domestic coals by hydrogenation.

Investigations of materials such as clays, graphite, and high-temperature refractories were made, and possible substitutes for materials normally imported from abroad were found in the cases of graphite, special clays, mica, and kyanite. An intensified effort to treat domestic low- or off-grade bauxites for production of aluminum was launched. A survey of Western coals disclosed that coals mined in Washington, Oklahoma and Kansas could be used for making coke to supply the growing iron and steel and other metallurgical industries of the West.

To implement the Bureau's methods of reducing injuries and fatalities in coal mines—an important undertaking because of the demand for uninterrupted production of coal for defense industries—the Bureau began administration of the Federal Coal Mine Inspection Act of 1941. More than 100 coal mine inspectors were selected and trained to go into the field after Jan. 1, 1942, to inspect and investigate conditions and practices in coal mines, and to recommend ways to improve health and safety factors. The threefold aim is to reduce loss of life and limb, lighten the economic burden of mine accidents, and permit a maximum production of coal for defense needs.

First-aid training, of great importance in civilian defense at this time, was given by the Bureau to nearly 100,000 persons, raising the total who have received first-aid certificates to more than 1,500,000. In addition, about 75,000 persons have received instruction in the use of gas masks and other breathing apparatus. During the year the Bureau investigated mine fires and explosions as usual, reporting in detail on the probable causes and effects. Investigations of explosibility of metal dusts was continued, and as part of this work, the Bureau recommended methods for extinguishing magnesium fires and incendiary bombs in plants.

Government defense agencies and private firms concerned with defense drew upon the Bureau's reservoir of economic and statistical facts for data on the amounts and trends of production, consumption, prices, stocks, technologic progress, world conditions and international trade, for more than 100 metal and other mineral commodities. Many special and expanded surveys were made to supply demands for up-to-the-minute information.

Although the Bureau was engaged almost wholly in defense work, the staff endeavored to carry on as fully as possible the regular duties designed to provide a more efficient and economical mining, preparation and utilization of the Nation's mineral resources. The Bureau's watchwords have been "National defense and conservation of vital resources." In 1942 it will deliver 100 per cent effort to help our Nation to win the war.

MINIMUM WAGE. See under **WAGES.**

MINNESOTA. A west north central State. Area: 84,068 sq. mi., including 4,059 sq. mi. of inland water,

but excluding part of Lake Superior, 2,212 sq. mi. Population: (1940 census) 2,792,300. The urban population comprises 49.8 per cent of the total (U.S. average, 56.5 per cent); non-white population, 0.8 per cent (U.S. average, 10.2); elderly (65 years and over), 7.6 per cent. Minnesota ranks 11th among the States in area, 18th in population, and 31st in density, with an average of 34.9 persons per square mile. The capital is Saint Paul with 287,736 inhabitants; largest city, Minneapolis, 492,370. There are 87 counties and 15 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. There were 531,781 pupils enrolled in the public schools of Minnesota during the school year 1939-40, 333,017 in elementary schools, 188,718 in secondary schools, 7,106 as special students, and 2,940 in junior colleges. Teachers numbered 22,252 and received an annual average salary of \$693 in the ungraded elementary schools and \$1,440 in the graded elementary and secondary schools. Total expenditures for the year were \$58,420,911—\$45,373,826 for maintenance, \$7,758,454 for capital outlay, and \$5,288,631 for debt service.

Transportation. State highway mileage in 1939, including streets under State control, totaled 11,328, of which 11,242 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 879,862; 746,289 were private and commercial automobiles, 599 busses, and 124,463 trucks and tractor trucks. Gross motor-fuel consumption was 593,842,000 gallons. Net motor-fuel receipts were \$18,526,000, the rate being three cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$10,305,000.

Railways of all classes extended 8,458 miles (Dec. 31, 1939) 3.60 per cent of the total mileage in the United States. Class I steam railways (7,895 miles) reported 67,991,599 tons of revenue freight originating in Minnesota in 1940 and 21,617,111 tons terminating in Minnesota. There are 29 airports and landing fields in the State (nine lighted fields) and seven seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 551 civil aircraft in the State and 1,764 airline transport, commercial, and private pilots (private 1,435).

Agriculture. Acreage harvested in principal crops in 1941 totaled 18,775,600, as compared with 19,153,000 acres in 1940. According to the latest census, there are 197,351 farms, valued at \$1,443,021,290, averaging 165.2 acres each. Farm population numbered 915,230 or 32.8 per cent of the total. Leading crops with production in 1941 were: corn, \$123,634,000; oats, \$40,607,000; hay, \$34,881,000; soybeans, \$16,019,000; flaxseed, \$25,704,000; wheat, \$20,301,000; potatoes, \$9,632,000.

Manufacturing. According to the 1939 Census of Manufactures, there were 4,008 manufacturing establishments in Minnesota, employing 79,753 wage earners who received \$96,886,925 in wages for the year. The total value of products was \$845,771,514; value added by manufacture, \$310,628,396.

Mineral Production. Iron ore is Minnesota's important mineral product, production in 1940 amounted to almost two-thirds of the United States total, 47,904,137 gross tons valued at \$118,947,968 (32,370,241 gross tons, \$97,113,591, in 1939). The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$106,427,607 or 2.51 per cent of the total for the United States.

Minnesota ranks 12th among the States in value of mineral production.

Trade. According to the 1940 census there were 6,460 wholesale establishments in Minnesota, employing 37,523 persons, reporting net sales for 1939 of \$1,458,228,000 and annual pay roll of \$60,716,000. There were 40,448 retail stores with 106,282 employees, reporting sales of \$1,017,195,000 and pay roll of \$104,204,000. Service establishments numbered 14,063, employing 18,606 persons for \$18,111,000 per year, and reporting a business volume amounting to \$63,963,000. The leading business center of the State is Minneapolis which reported wholesale sales of \$716,894,000, retail sales of \$269,391,000, and \$24,216,000 receipts for its service establishments. St Paul reported sales of \$131,228,000 wholesale, \$167,691,000 retail, and \$11,787,000 for its service establishments.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Minnesota was \$67,714,000. Under the Social Security program, financed by Federal funds matching State grants, 63,081 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$21.39 (U.S. average pension, \$21.08), 22,284 dependent children in 9,398 families received average monthly payments of \$34.16 per family (U.S. average, \$32.73); and 975 blind persons received \$26.87 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 23,303 and received \$20.48 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 4,447 (\$295,000); NYA student work program, 9,084 (\$61,000); NYA out-of-school work program, 8,254 (\$175,000); WPA, 36,941 (\$2,103,000); regular Federal construction projects, 4,451 (\$429,000). The Farm Security Administration certified subsistence payments totaling \$49,000 for the month to 1,075 cases.

Legislation. The Legislature convenes in regular session on Tuesday after the first Monday of January in odd years. It is composed of 67 Senators and 131 Representatives, elected without party designation.

Legislation in 1941. At the close of the 90-day session of the Minnesota Legislature, M. W. Halloran commented as follows in the Minneapolis *Star Journal*, Apr. 24, 1941:

The legislators started the session on Jan. 7 without any very definite idea of where they were going. And that's where they arrived when time came today to ring down the curtain.

Every Stassen law of 1939 stands with only slight modifications of one or two. And that in the face of pre-session loud talk about "what we're going to do to some of those laws" by critics of the governor.

Almost the entire membership from the districts outside the three big cities of Minneapolis, St. Paul, and Duluth, came to St. Paul with at least one main objective. That was to put through an increase of the gasoline tax from three cents to four cents for the benefit of the secondary roads. Efforts of this gas bloc to enact this measure—in the face of the governor's coolness and insistence of powerful members that repeal of the one-mill road tax on property be voted as an offset—was marked by many a spectacular and bitter debate. But the 4-cent gas tax was voted. And members CAN point to that as a decided victory.

It was about a standoff between the liquor bloc and the temperance bloc—the one heading off wet bills, the other preventing dry legislation—though there were more measures of this type than in any session for years.

The bitterest fight of the entire session was that over the bill to limit tank trucks to 3,000-gallon loads on the highways. The measure—denounced as a railroad measure, supported as a safety measure—had many lives. It was brought up in one form or another at least three times

and angrily debated for hours each time. In the end it was cast aside and allowed to die quietly.

One of the outstanding features of the session was the successful fight waged by the minority against the so-called "Grapes of Wrath" bill, the measure providing compulsory deportation of non-resident poor from the state. That and the affirmative victory in upping the iron ore tax to 15 per cent (even though this was rubbed out by the senate) were the two main accomplishments of the minority. No little furor was stirred up by the anti-fireworks bill and one of the most active and persistent lobbies of the session had to be beaten back to get it through. Lobbyists, by the way, were thicker and more urgent than had been the case for some years. A fact that added not a little to the annoyance of legislators and helped bring about the chaotic situation of the closing days of the session.

Other measures passed included the first Bank Tax Act since 1926, providing for an eight per cent income levy; establishment of Susan B. Anthony Day, February 15, and "I Am an American Day" on the third Sunday in May; proposal for a constitutional amendment on repeal of the State tax on real and personal property, to be voted on in 1942; legalization of crude oil tractor fuel, tax free, but not to be used on highways; a Motion Picture Regulation Bill requiring that producers and distributors of films allow exhibitors to cancel up to 20 per cent of the films offered on moral, racial, or religious grounds, recodification of educational laws, a bill outlawing common law marriages by requiring that, to be valid, marriage licenses must be secured; prohibiting consolidated income tax returns by corporations; permitting payment of State income tax in four installments; imposing life sentence for fatal rape; permitting minors in bowling alleys.

Finances. Total tax collections in Minnesota for the fiscal year ending in June, 1941, were \$92,059,000 (1940: \$89,470,000). Total sales taxes amounted to \$24,037,000, including motor fuel, \$18,879,000, alcoholic beverage, \$5,158,000. Taxes on specific businesses ran to \$10,854,000, general and selective property, \$13,725,000, unemployment compensation, \$11,041,000. The net income taxes were \$12,758,000. Cost payments for the operation of general government totaled \$97,797,000 in 1939, the latest year available. (Revenues for the general government for that year were \$122,971,000.) Cost of operation per capita was \$35.42. Total gross debt outstanding in 1941 was \$112,818,000, as compared with \$98,162,000 in 1932.

Officers and Judiciary. The Governor is Harold E. Stassen (Rep.), inaugurated in January, 1941, for his second two-year term; Lieutenant Governor, C. Elmer Anderson; Secretary of State, Mike Holm; Attorney General, J. A. A. Burnquist; State Treasurer, Julius A. Schmah; State Auditor, Stafford King. Chief Justice of the Minnesota Supreme Court is Henry M. Gallagher, there are six associate members elected by popular vote for six-year terms.

See COMMUNISM; CONSUMERS' COOPERATIVES, FIRE PROTECTION; LABOR LEGISLATION; PLANNING, ROADS AND STREETS.

MINORITIES. See ARGENTINA, BELGIUM, BRAZIL, BULGARIA, CANADA, CZECHOSLOVAKIA, HUNGARY, PERU, POLAND, RUMANIA, SLOVAKIA, SOUTH AFRICA, UNION OF SOVIET SOCIALIST REPUBLICS, and YUGOSLAVIA; FASCISM; REFUGEES.

MIQUELON ISLANDS. See ST. PIERRE AND MIQUELON.

MISSIONS, Foreign. See the articles on the churches.

MISSISSIPPI. An east south central State. Area: 47,716 sq. mi., including 296 sq. mi. of inland water, but excluding Gulf of Mexico coastal waters, 556 sq. mi. Population: (1940 census) 2,183,796. The urban population comprises 19.8 per cent of the total (U.S. average, 56.5 per cent); non-white pop-

ulation, 49.5 per cent (U.S. average, 10.2); elderly (65 years and over), 5.2 per cent. Mississippi ranks 31st among the States in area, 23rd in population, and 25th in density, with an average of 46.1 persons per square mile. The largest city and capital is Jackson with 62,107 inhabitants. There are 82 counties and 12 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS

Education. According to J. S. Vandiver, Superintendent of Education, there were 610,150 pupils enrolled in the public schools of Mississippi during the school year 1940-41, 533,467 in elementary schools and 76,683 in secondary schools. Teachers numbered 16,112 and received an annual average salary of \$580. Total expenditures for the year were \$14,380,734.01. For higher education, see *Mississippi* in the table of UNIVERSITIES

Transportation. State highway mileage in 1939, including streets under State control, totaled 6,106, of which 6,090 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 264,439, 196,473 were private and commercial automobiles, 1,608 busses, and 60,927 trucks and tractor trucks. Gross motor-fuel consumption was 214,538,000 gal. Net motor-fuel tax receipts were \$11,931,000, the rate being six cents per gal. (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$3,009,000

Railways of all classes extended 3,921 miles (Dec. 31, 1939) 1.67 per cent of the total mileage in the United States. Class I steam railways (2,866 miles) reported 7,413,225 tons of revenue freight originating in Mississippi in 1940 and 6,151,108 tons terminating in Mississippi. There are 33 airports and landing fields in the State (14 lighted fields) and three seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 148 civil aircraft in the State and 663 commercial and private pilots (574 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 7,297,000, as compared with 7,247,000 acres in 1940. According to the latest census, there are 291,092 farms, valued at \$474,986,062, averaging 65.8 acres each. Farm population numbered 1,405,749 or 64.4 per cent of the total. Leading crops with production in 1941 were: Cotton lint, \$126,380,000, 1,420,000 bales; corn, \$37,929,000, 51,255,000 bu.; cottonseed, \$31,523,000, 633,000 tons, hay, \$13,395,000, 1,280,000 tons; sweet potatoes, \$6,460,000, 6,460,000 bu.

Manufacturing. According to the 1939 Census of Manufactures, there were 1,294 manufacturing establishments in Mississippi, employing 46,355 wage earners who received \$27,437,088 in wages for the year. The total value of products was \$174,937,294; value added by manufacture, \$73,462,419.

Mineral Production. The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$5,192,156, less than two-tenths per cent of the total for the United States; natural gas accounted for more than half of the total.

Trade. According to the 1940 census there were 1,425 wholesale establishments in Mississippi, employing 7,028 persons, reporting net sales for 1939 of \$245,154,000 and annual pay roll of \$8,182,000. There were 18,032 retail stores with 32,514 employees, reporting sales of \$282,440,000 and pay roll of \$22,735,000. Service establishments numbered 6,389, employing 11,991 persons for \$6,261,000 per year, and reporting a business volume amounting to \$20,834,000. The leading business center of the State is Jackson which reported whole-

sale sales of \$37,098,000, retail sales of \$29,093,000, and \$2,432,000 receipts for its service establishments.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Mississippi was \$26,399,000. Under the Social Security program, financed by Federal funds matching State grants, 26,621 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$8.76 (U.S. average pension, \$21.08); 2,713 dependent children in 999 families received average monthly payments of \$20.57 per family (U.S. average, \$32.73), and 1,071 blind persons received \$8.66 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 745 and received \$3.77 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 6,919 (\$458,000); NYA student work program, 4,261 (\$30,000); NYA out-of-school work program, 7,685 (\$144,000); WPA, 28,483 (\$1,245,000); other Federal emergency projects, 19 (\$1,000); regular Federal Construction projects, 15,966 (\$1,699,000) The Farm Security Administration certified subsistence payments totaling \$10,000 for the month to 370 cases.

Legislature. The Legislature convenes in regular session on Tuesday after the first Monday of January in even years. (There was no session in 1941) It is composed of 49 Senators (all Democrats) and 140 Representatives (139 Democrats and one vacancy in 1941). The President of the Senate is Dennis Murphree, President Pro Tem, W. B. Roberts; Speaker of the House, Sam Lumpkin.

Finances. Total tax collections in Mississippi for the fiscal year ending in June, 1941, were \$37,685,000 (1940: \$35,185,000). Total sales taxes amounted to \$24,692,000, including motor fuel, \$13,095,000, general sales, \$7,407,000. Taxes on specific businesses ran to \$3,005,000, general and selective property, \$2,583,000, unemployment compensation, \$2,881,000. The net income taxes were \$2,639,000. Cost payments for the operation of general government totaled \$27,316,000 in 1939 the latest year available (Revenues for the general government for that year were \$39,813,000.) Cost of operation per capita was \$12.65. Total gross debt outstanding in 1941 was \$83,746,000, as compared with \$36,504,000 in 1932.

Officers and Judiciary. The Governor is Paul B. Johnson (Dem.), inaugurated in January, 1940, for a four-year term; Lieutenant Governor, Dennis Murphree; Secretary of State, Walker Wood, Attorney General, Greek L. Rice; State Treasurer, Lewis S. May; State Auditor, J. M. Causey. Chief Justice of the Mississippi Supreme Court is Sidney Smith, there are five associate members elected by popular vote for eight-year terms.

MISSOURI. A west north central State. Area: 69,674 sq. mi., including 404 sq. mi. of inland water. Population (1940 census): 3,784,664. The urban population comprises 51.8 per cent of the total (U.S. average, 56.5 per cent); non-white population, 6.5 per cent (U.S. average, 10.2); elderly (65 years and over), 8.6 per cent. Missouri ranks 18th among the States in area, 10th in population, and 21st in density, with an average of 54.6 persons per square mile. The capital is Jefferson City with 24,268 inhabitants; largest city, St. Louis, 816,048. There are 114 counties and 22 cities of more than 10,000 inhabitants (see article on POPULATION in 1940

YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Lloyd W. King, Superintendent of Public Schools, there were 692,703 pupils enrolled in the public schools of Missouri during the school year 1940-41, 505,253 in elementary schools and 187,450 in secondary schools. Teachers numbered 26,266; average annual salaries for white men and women in high schools were \$1,618 and \$1,412 respectively; in elementary schools \$870 and \$960. Total expenditures for the year were \$55,374,776.40. For higher education see *Missouri* under UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 15,533, of which 15,353 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 926,715; 768,345 were private and commercial automobiles, 3,429 busses, and 150,026 trucks and tractor trucks. Gross motor-fuel consumption was 697,545,000 gallons. Net motor-fuel tax receipts were \$13,455,000, the rate being two cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$10,750,000.

Railways of all classes extended 7,076 miles (Dec. 31, 1939) 3.01 per cent of the total mileage in the United States. Class I steam railways (6,542 miles) reported 16,125,705 tons of revenue freight originating in Missouri in 1940 and 20,817,083 tons terminating in Missouri. There are 38 airports and landing fields in the State (19 lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 616 civil aircraft in the State and 2,680 airline transport, commercial, and private pilots (2,103 private). See FLOODS.

Agriculture. Acreage harvested in principal crops in 1941 totaled 11,970,000, as compared with 12,204,000 acres in 1940. According to the latest census, there are 256,100 farms, valued at \$1,107,302,598, averaging 135.6 acres each. Farm population numbered 1,126,871 or 29.8 per cent of the total. Leading crops with production in 1941 were: Corn, \$83,780,000, 113,216,000 bu.; cotton lint, \$41,650,000, 490,000 bales; hay, \$32,754,000, 3,554,000 tons; oats, \$19,587,000, 52,938,000 bu.; wheat, \$18,397,000, 18,936,000 bu.; cottonseed, \$9,766,000, 218,000 tons.

Manufacturing. According to the latest census of Manufactures (covering the year 1939) the total value of manufactured products was \$1,388,056,267. For details, see 1940 YEAR BOOK.

Mineral Production. Leading mineral products in 1940 were (with 1939 figures in parentheses): Lead, 172,052 short tons (156,281 short tons valued at \$14,690,414); cement, 4,867,799 bbl. valued at \$7,616,247 (4,702,259 bbl., \$7,420,013); coal, 1940 figure included with Kansas, (q.v.) (3,275,000 short tons valued at \$6,124,000 in 1939); stone, 6,085,790 short tons, \$6,176,867 (3,958,470 short tons, \$4,589,986). The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$45,619,104 or 1.08 per cent of the total for the United States.

Trade. According to the 1940 census there were 7,649 wholesale establishments in Missouri, employing 64,373 persons, reporting net sales for 1939 of \$2,261,256,000 and annual pay roll of \$106,362,000. There were 53,196 retail stores with 132,583 employees, reporting sales of \$1,102,503,000 and pay roll of \$119,237,000. Service establishments numbered 20,498, employing 34,832 persons for \$31,378,000 per year, and reporting a business volume amounting to \$98,936,000. The leading business center of the State is St. Louis which reported

wholesale sales of \$1,164,102,000, retail sales of \$353,860,000, and \$43,939,000 receipts for its service establishments. Kansas City reported sales of \$762,069,000 wholesale and \$224,986,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Missouri was \$82,843,000. Under the Social Security program, financed by Federal funds matching State grants, 113,787 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$17.93 (U.S. average pension, \$21.08); 32,297 dependent children in 13,937 families received average monthly payments of \$29.76 per family (U.S. average, \$32.73); and an estimated 3,200 blind persons received (without Federal aid) an approximate total payment of \$84,000. General relief cases, which are supported by State and local funds only, numbered 19,879 and received \$13.32 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 7,493 (\$496,000); NYA student work program, 8,088 (\$57,000); NYA out-of-school work program, 14,874 (\$275,000); WPA, 51,871 (\$2,907,000); other Federal emergency projects, 111 (\$10,000); regular Federal construction projects, 22,987 (\$3,511,000). The Farm Security Administration certified subsistence payments totaling \$32,000 for the month to 1,384 cases.

Legislation. The General Assembly convenes in regular session on Wednesday after January first in odd years. It is composed of 34 Senators (28 Democrats and 5 Republicans in 1941 with one seat contested) and 150 Representatives (85 Democrats and 65 Republicans). The 61st General Assembly, in session for a little over six months, was distinguished rather for its omissions than for its enactments. Thirty-six constructive recommendations had been placed before it by retiring Governor Stark, Democrat, and incoming Governor Donnell, Republican; of these 20 were either ignored, defeated, or killed in committee.

Measures enacted included the following: Provision for a secret ballot; provision that the Board of Health comply with Federal standards, creation of a Commission on Interstate Cooperation (the Truck Fee reciprocity bill, also aimed at elimination of interstate trade barriers, was killed); appropriation of \$100,000 for activities for the blind, doing away with the surplus in the blind pension fund, virtual limitation of appropriations to revenues; provision for secrecy of old-age assistance records; appropriation of \$150,000 for the Missouri National Guard, authorizing training of volunteer reserves with Federal aid; a bindweed eradication law; creation of a State Council of Defense; submission of a constitutional amendment to set the pay of legislators at \$1,500 a year; tightening the qualifications for State liquor inspectors with the bi-partisan requirement; health and housing legislation.

Defeated measures included a teachers' pension law for large cities, a survey of the State government, investigation of alleged padding in social security rolls, limit of tenure of State executive officers to one term. Proposals for reform of the criminal code, as recommended by the State Bar Association, revision of the State constitution, change of the fiscal year, legalizing the use of ballots in judicial inquiry, amelioration of the State printing racket, and a soil conservation bill were among the measures which never left the committees for action. Altogether ignored were the problems of reapportionment of legislative seats, a general State merit system, consolidation of tax

collection agencies, and abolition of the "lug" (enforced political contributions).

Finances. Total tax collections in Missouri for the fiscal year ending in December, 1940, were \$92,825,000. Total sales taxes amounted to \$41,724,000, including general sales, \$23,019,000, motor fuel, \$13,904,000. Taxes on specific businesses ran to \$6,071,000, general and selective property, \$5,233,000, unemployment compensation, \$19,688,000. The net income taxes were \$6,945,000. Cost payments for the operation of general government totaled \$76,611,000 in 1939, the latest year available. (Revenues for the general government for that year were \$114,591,000.) Cost of operation per capita was \$20.32. Total gross debt outstanding in 1941 was \$95,650,000, as compared with \$105,162,000 in 1932.

Officers and Judiciary. The Governor is Forrest C. Donnell (Rep.), inaugurated in January, 1941, for a four-year term; Lieutenant Governor, Frank G. Harris; Secretary of State, Dwight H. Brown, Attorney General, Roy McKittrick; State Treasurer, Wilson Bell; State Auditor, Forrest Smith. Chief Justice of the Missouri Supreme Court is C. A. Leedy, Jr.; there are six associate members elected by popular vote for 10-year terms.

MOLDAVIAN SOVIET SOCIALIST REPUBLIC. See UNION OF SOVIET SOCIALIST REPUBLICS, under *Area and Population*.

MOLLUSKS. See ZOOLOGY.

MOLOTOV BREADBASKETS. See BOMBS.

MOLUCCA ISLANDS. See NETHERLANDS INDIES under *Area and Population*.

MOLYBDENUM. Molybdenum, called "moly" in the steel industry, is the only one of the five vital steel-alloying elements which the United States possesses and produces in plenty. More and more of it is being substituted for the scarce strategic metals (chromium, tungsten, nickel) to make hard steel for high-speed tools, armor plate, cannon and cannon mounts, rifle barrels, truck, plane, and tank parts, and other war requirements. "Moly" is a whitish metal which not only makes steel tougher, but also increases its elastic limit and its resistance to impact and abrasion. Molybdenum steels began to be recognized during the first World War. They have been used to some extent in aircraft construction for the last ten years, but are attaining greater and greater favor.

With chromium and tungsten imports from the Philippines and China dwindling to the vanishing point in 1941-42, and the demand for molybdenum for both war and non-war uses rapidly growing, the government made regulations increasing the substitution of molybdenum steels everywhere except in certain imperative government high-speed steels. In June, 1941, the OPM ordered all buyers of high-speed tungsten tool-steels to take half their requirements in molybdenum steels; by the end of the year 75 per cent of the orders filled had to be of the molybdenum type.

When the President of the United States in December, 1939, put a "moral embargo" on the export of airplanes and materials used in aircraft construction to all nations guilty of the bombing of civilians from the air, molybdenum was put on the embargo list. It was not listed with the strategic metals in 1941 because the United States still had abundant supplies; but it continued to gain in importance because of the increasing demand for it as a substitute for the strategic alloying elements. The nations consuming United States molybdenum in 1941, in addition to the United States, were

Canada, Great Britain, and Russia. The only molybdenum supply known to be available to the Axis powers is the Knaben mine in Norway, which was producing about 1,000,000 lb. a year before the German occupation. No data has come from Norway since then.

Domestic production of molybdenum rose to about 40,000,000 lb. in 1941, a figure which overtopped 1940's peak of 34,313,000 lb. by almost 6,000,000 lb. The United States produces about 93 per cent of all molybdenum produced in the world. And the Climax Molybdenum Company's big mine in Colorado on the Continental Divide is the principal producer. In 1941 this mine brought forth 32,000,000 lb., an amount equal to the world's total production in any previous year. The Climax Company enlarged its plant facilities during the year, and expected to reach a 37,000,000-lb. yearly capacity in May, 1942, when the new mill unit will be ready for operation. Climax estimated its ore reserves at the end of 1941 at 200,000,000 tons of ore, which, with the yield estimated at 10-11 lb. per ton of ore, would contain about one billion lb. of molybdenum. The other 13,000,000 lb. of United States molybdenum not supplied by Climax were produced as a by-product of copper-mining in Utah and of the tungsten and lead production in California and Arizona.

Exports of molybdenum ore and concentrates dropped 71 per cent in 1940 to 6,684,714 lb. contained molybdenum. Exports in 1941, January-September, amounted to 4,778,419 lb. The total for the year would be about the same as the 1940 figure. No imports were recorded for 1940 or 1941. The price for molybdenum ore throughout 1941 remained at 45¢ a lb. contained MoS₃ for 90 per cent concentrates. See GEOLOGICAL SURVEY.

MONACO. A Mediterranean principality surrounded on its land sides by the French department of Alpes-Maritimes. Area, 370 acres; population (1939), 23,973. Chief towns: Monaco (capital), La Condamine, Monte Carlo. During peacetime the main sources of revenue were the tourist traffic and the gambling concession at Monte Carlo. Budget (1939): 38,892,921 francs (franc averaged \$0.0251 for 1939). A ministry assisted by a council of state administers the country under the authority of the Prince. Legislative power rests with the Prince and the national council of 12 members elected by universal suffrage for a four-year term. Ruler, Prince Louis II (succeeded June 26, 1922).

MONETARY UNITS. See the countries under *Finance; BANKS AND BANKING*.

MONGOLIA. An extensive, vaguely defined region of east-central Asia, bordered by the Soviet Union and Tannu Tuva on the north, Manchuria on the east, China proper on the south, and Sinkiang (Chinese Turkestan) on the west. It is divided by an irregular east-west line through the Gobi desert into Outer Mongolia, on the north, and Inner Mongolia, on the south.

Inner Mongolia. Following the establishment of the puppet state of Manchoukuo in Manchuria in 1931, the Japanese added to it the Inner Mongolian Province of Jehol in 1935 and the six northern counties ("hsien") of the Inner Mongolian Province of Chahar in 1936. The Inner Mongolian area remaining under direct Chinese jurisdiction then consisted of the 10 southern counties of Chahar and the provinces of Suiyuan and Ningsia. Beginning in 1937 the Japanese occupied this part

of Chinese Inner Mongolia to a point west of Paotow, the western terminus of the Peiping-Suiyuan Railway.

With the cooperation of some Mongol and Chinese leaders, the Japanese established at Kalgan on Nov. 22, 1937, the so-called Federated Council of Meng Chiang under the leadership of Prince Teh Wang, leader of the "young Mongol" movement and a lineal descendant of Genghis Khan. The Council assumed general supervisory functions over Chinese and Mongol communities within the 10 southern counties of Chahar, practically all of Suiyuan, and 13 counties in northern Shansi Province of China proper. This region was divided into "federal autonomous governments" as follows: (1) United Leagues of Mongolia (capital, Kweisui—renamed Hohohoto by the Japanese), comprising the leagues (banners) of Ulanchab, Yegkejo (Yekhejo), Payental, Silingol, and Chahar; (2) Chin-Pei (North Shansi), with its capital at Tatumg; and (3) South Chahar, with its capital at Kalgan. On Sept. 1, 1939, the Meng Chiang Federated Council was reorganized as the "Federal Autonomous Government of Mongolia."

The area under the jurisdiction of the Japanese-protected "government" at Kalgan in 1941 was approximately 200,000 square miles, with a population of 5,000,000 to 7,000,000 Chinese and Mongols and about 36,000 Japanese civilians. There were a few European missionaries, traders, and railway guards. Stock raising and agriculture are the chief occupations and rye, potatoes, buckwheat, and wheat are the main crops. The once active caravan trade with Outer Mongolia and Central Asia was cut off and Inner Mongolia's foreign commerce during 1937-41 was confined largely to the Japanese-controlled districts of China.

The Japanese imposed increasingly severe restrictions on trade, travel, prices, and foreign-exchange transactions. Coupled with rapid currency and credit inflation, these developments were reported in 1941 to have caused a marked decline in all economic activities. A considerable quantity of cultivated land was allowed to revert to pasture. Forced sales at officially fixed low prices allegedly kept products of the nomadic Mongol herdsmen and Chinese farmers away from the railway centers. Inner Mongolian exports passing over the Peiping-Suiyuan Railway during 1940 were reported at 113,308,000 Meng Chiang yuan against imports of 157,700,000 yuan, leaving a visible import excess of 41,398,000 yuan. (Meng Chiang yuan equals Japanese yen at par.)

The Japanese established the Meng Chiang Bank at Kalgan as the keystone of their new currency and banking system. The note issue of the bank rose from 12,966,000 yuan in December, 1937, to 70,886,000 in July, 1940. In the same period reserves declined from 76.9 to 28.7 per cent of the notes in circulation. The bank's ratio of loans and investment to deposits rose from 109.8 in July, 1939, to 199.0 in July, 1940. The Japanese have built strategic highways into Inner Mongolia and on June 1, 1940, opened direct telephone service between Kalgan and Japan.

Outer Mongolia. A Chinese estimate placed the area of Outer Mongolia at 625,946 square miles and the population at 2,077,669. A British estimate gives the population as 540,000, a Japanese estimate as 840,000. Ninety per cent of the inhabitants are Mongols, chiefly nomads, and the rest Russians and Chinese. The capital, Ulan Bator Khoto (Urga), has about 70,000 population; Altanblak, 20,000.

Outer Mongolia is a soviet republic, the independence of which is guaranteed by the Soviet Union under a mutual assistance pact signed Mar. 12, 1936. However the Soviet Union in 1924 recognized the suzerainty of the Chinese Republic over the region. The political and economic systems have been reorganized on the soviet model. Ownership of lands, forests, mineral resources, and factories has been collectivized. The foreign and domestic trade is a monopoly of People's Central Cooperative; foreign trade is carried on exclusively with or through the Soviet Union. Soviet instructors are said to have trained and equipped with modern arms a Mongol army of 250,000 men. The government is in the hands of the Mongolian People's Revolutionary Party. The only political party permitted, it had about 12,000 members in 1939 and was controlled by the Comintern. Supreme authority rests in an elective assembly (Great Huruldand), which meets at least once annually and while in recess delegates executive powers to a Little Huruldand of 30 members, which in turn appoints a Premier and executive committee.

Stock-raising, game hunting, agriculture, manufacturing, and mining, in the order named, are the chief occupations. Meat, milk products, hides and skins, wool, furs, wheat, rye, millet, and coal are the main products. Extensive mineral resources remain undeveloped. State factories, all erected since 1924, produce machinery, washed wool, wool textiles, felt, leather, sheepskin coats, shoes, and electric power.

The first railways in Outer Mongolia—connecting Ulan Bator Khoto with the Nalaha coal mine 22 miles distant and linking Kiakhta with the Trans-Siberian Railroad at Ulan Ude—were reported to have been completed in 1939. The capital is connected with Ulan Ude by truck road and airline. Steamers ply the Selenga and Orkhon Rivers. However caravans still handle the bulk of internal transport. There is a state banking and monetary system, the unit of currency being the tukrik containing 17 grams of pure silver.

For developments affecting Mongolia in 1941, see CHINA, JAPAN, MANCHOUKUO, and UNION OF SOVIET SOCIALIST REPUBLICS under *History*.

MONTANA. A mountain State. Area: 147,138 sq. mi., including 822 sq. mi. of inland water. Population: (1940 census) 559,456. The urban population comprises 37.8 per cent of the total (U.S. average, 56.5 per cent); non-white population, 3.4 per cent (U.S. average, 10.2); elderly (65 years and over), 6.3 per cent. Montana ranks third among the States in area, 39th in population, and 46th in density, with an average of 3.8 persons per square mile. There are 56 counties and six cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Elizabeth Ireland, Superintendent of Public Instruction, there were 107,254 pupils enrolled in the public schools of Montana during the school year 1940-41, 75,209 in elementary schools and 32,045 in secondary schools. Teachers numbered 5,195 and received an annual average salary of \$1,117.50. Total expenditures for the year were \$15,805,458. For higher education see *Montana* under UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 6,420, of which 5,491 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 196,116; 143,068 were private

and commercial automobiles, and 47,964 trucks and tractor trucks. Gross motor-fuel consumption was 137,639,000 gallons. Net motor-fuel tax receipts were \$5,074,000, the rate being five cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$1,721,000.

Railways of all classes extended 5,191 miles (Dec. 31, 1939) 2.21 per cent of the total mileage in the United States. Class I steam railways (5,027 miles) reported 5,977,607 tons of revenue freight originating in Montana in 1940 and 4,600,283 tons terminating in Montana. There are 75 airports and landing fields in the State (21 lighted fields) and one seaplane anchorage. On July 1, 1941, according to the Civil Aeronautics Authority, there were 167 civil aircraft in the State and 719 commercial and private pilots (640 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 6,526,000, as compared with 6,708,000 acres in 1940. According to the latest census, there are 41,823 farms, valued at \$350,178,461, averaging 1,110.7 acres each. Farm population numbered 175,271 or 31.3 per cent of the total. Leading crops with production in 1941 were: Wheat, \$59,368,000, 68,239,000 bu.; hay, \$15,365,000, 2,318,000 tons, oats, \$5,090,000, 14,544,000 bu.

Manufacturing. According to the 1939 Census of Manufactures, there were 585 manufacturing establishments in Montana, employing 9,170 wage earners who received \$12,148,428 in wages for the year. The total value of products was \$151,885,026, value added by manufacture, \$39,790,182.

Mineral Production. Leading mineral products are (with figures for 1941 except as otherwise noted): Copper, 255,000,000 lb. valued at \$29,835,000; gold, 246,500 fine ounces, \$8,627,500; zinc, 111,800,000 lb., \$8,496,800; silver, 11,304,000 fine ounces, \$8,038,400; natural gas (1939) 23,178,000 M cu. feet valued at \$6,486,000; petroleum (1940) 6,768,000 bbl., as compared with 5,960,000 bbl. valued at \$5,860,000 in 1939. As compared with 1940 copper production showed only a slight increase, 1 per cent, zinc increased 6 per cent, but gold and silver decreased 10 and 9 per cent respectively. The total value of mineral production in 1939, according to the U. S. Bureau of Mines, was \$63,354,645 or 15 per cent of the total for the United States. Montana ranks 18th among the States in value of minerals produced. See GEOLOGICAL SURVEY.

Trade. According to the 1940 census there were 1,336 wholesale establishments in Montana, employing 4,132 persons, reporting net sales for 1939 of \$130,584,000 and annual pay roll of \$6,130,000. There were 8,481 retail stores with 19,963 employees, reporting sales of \$222,008,000 and pay roll of \$21,505,000. Service establishments numbered 2,632, employing 2,522 persons for \$2,413,000 per year, and reporting a business volume amounting to \$10,358,000. The leading business center of the State is Butte which reported wholesale sales of \$24,452,000 and retail sales of \$25,080,000. Silver Bow County, including the city of Butte, is the leading county in the State in the volume of receipts for its service establishments (\$1,576,000). Billings reported sales of \$20,513,000 wholesale and \$18,576,000 retail; Great Falls, \$15,808,000 and \$20,422,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Montana was \$15,688,000. Under the Social Security program, financed by Federal funds matching State grants, 12,464 elderly persons were re-

ceiving (as of June, 1941) an average monthly old-age pension of \$20.35 (U.S. average pension, \$21.08); 6,411 dependent children in 2,643 families received average monthly payments of \$29.36 per family (U.S. average, \$32.73); and 260 blind persons received \$22.17 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 3,004 and received \$14.91 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earning for the month in parentheses): CCC, 1,511 (\$100,000); NYA student work program, 2,601 (\$16,000); NYA out-of-school work program, 1,602 (\$33,000); WPA, 8,415 (\$598,000); other Federal emergency projects, 52 (\$5,000); regular Federal construction projects, 2,251 (\$290,000). The Farm Security Administration certified subsistence payments to the amount of \$30,000 for the month to 835 cases.

Legislation. The Legislative Assembly convenes in regular session on the first Monday of January in odd years. It is composed of 56 Senators (35 Republicans and 21 Democrats in 1941) and 102 Representatives (47 Republicans and 55 Democrats). The legislative achievements of the 1941 Assembly were summarized as follows by the Montana Taxpayers' Association:

The 27th Legislative Assembly is to be congratulated on the completion of a constructive session in which it met the strong demands for increased financial support for public welfare, public schools, custodial institutions, and higher education without inflicting additional tax burdens on the people of the State of Montana.

In his message at the opening of the session Governor Ford definitely asserted that no new taxes or increased rates were necessary and emphatically stated that no legislation should be passed calling for expenditures that could not be financed out of present sources of revenue. At the same time he clearly and specifically indicated that the Legislature should give careful consideration to laws that might enable State government to function more efficiently and economically. . . .

For the first time in nearly ten years no bills were passed that started off with the declaration of an "emergency due to drought, severe unemployment, and economic depression." Notice was definitely served that there must be a tapering off in such legislation. At the same time quite a number of constructive laws were enacted that will insure more efficient and economic government procedure and organization.

Specific measures enacted included the following: Provision that all revenue go into the State general fund (eliminating the numerous special allocations which had made expenditure control difficult); authorizing the Governor, with an advisory committee, to study complete State reorganization; substituting for the three-man Highway Commission a five-man board with each member representing certain counties; reapportionment of the House of Representatives to consist of 90 members (which would save an estimated \$15,000 a year); liberalization of the unemployment compensation law (but not to an extent which would endanger reserve funds or require a higher tax); provision of \$7,100,000 for public welfare in the next two years and introduction of a new system for making relief grants to counties (in inverse proportion to their taxable valuation per capita instead of on the basis of need); amendments to the Public Welfare Act to conform to Federal laws and also to prevent county debts to the State, to relieve counties of most of the medical costs, and to increase resident requirements for general relief from six months to one year; a new city budget law which would make padding unnecessary and stabilize city tax levies; removal of abuses in apportioning school funds; authorizing a Montana State Guard, and creating an

eleven-member Preparedness and Advisory Commission to assist in the Federal defense program.

Finances. Total tax collections in Montana for the fiscal year ending in June, 1941, were \$16,304,000 (1940: \$14,954,000). Total sales taxes amounted to \$6,170,000, including motor fuel, \$5,373,000. Taxes on specific businesses ran to \$1,499,000, general and selective property, \$1,819,000, unemployment compensation, \$2,845,000. The net income taxes were \$1,276,000. Cost payments for the operation of general government totaled \$14,932,000 in 1939, the latest year available. (Revenues for the general government for that year were \$22,874,000) Cost of operation per capita was \$26.86. Total gross debt outstanding in 1941 was \$12,024,000, as compared with \$10,834,000 in 1932.

Officers and Judiciary. The Governor is Sam C. Ford (Rep.), inaugurated in January, 1941, for a four-year term; Lieutenant Governor, Ernest T. Eaton; Secretary of State, Sam W. Mitchell; Attorney General, John W. Bonner; State Treasurer, Thomas Carey; State Auditor, John J. Holmes. Chief Justice of the Montana Supreme Court is Howard Johnson; there are four associate members elected by popular vote for six-year terms.

MOROCCO. A former Moslem empire of northwestern Africa, still under the nominal rule of a sultan, but divided since 1912 into French and Spanish protectorates. The city and district of Tangier on the Strait of Gibraltar was internationalized and demilitarized by a series of agreements beginning in 1906, but was incorporated in Spanish Morocco, over the protests of Great Britain and the United States, on Nov. 23, 1940 (see TANGIER). The Sultan resides in the French Zone, usually at Rabat, seat of the French administration. Capital of the Spanish Zone, Tetuán.

Area and Population. The area of French Morocco is estimated at 153,870 square miles. The population at the 1936 census was 6,298,528 (5,874,888 native Moslems, 173,533 French, 161,312 native Jews, and 59,058 other Europeans). Excluding Tangier, the Spanish Zone has an area estimated at 13,125 square miles and an estimated population (1936) of 795,202 (about 738,000 Moslems, 44,379 Europeans, 12,918 Jews). Populations of the chief cities of the French Zone (1936) were Casablanca, 257,430 (72,762 Europeans); Marrakech, 190,314 (6,849 Europeans); Fez, 144,424 (9,623 Europeans); Rabat, 83,379 (26,256 Europeans); Meknes, 74,702 (12,310 Europeans). In the Spanish Zone, the principal towns were: Tetuán, 49,535 (1936); Alcazar, 30,762; Larache, 29,477. The Spanish garrison towns of Ceuta (1936 pop., 38,945) and Melilla (64,328) on the African Mediterranean coast are not included in the protectorate. French and Spanish are the official and business languages in the French and Spanish Zones, respectively, but the natives speak mainly Moorish-Arabic and the various Berber dialects.

Production. Agriculture and stock raising are the chief occupations of the French Zone. Yields of the chief crops in 1939 were (in metric tons): Wheat, 1,055,000; barley, 2,128,000; oats, 76,000;

corn, 217,400 in 1938; olive oil, 8,000 in 1938. The wool clip in 1938 was 20,300 metric tons. Livestock in the same year included 10,152,000 sheep, 1,910,000 cattle, 191,000 horses, 775,000 mules and asses, 147,000 camels, and 5,800,000 goats. Output of the chief minerals in 1938 (metal content, in case of ores) was in metric tons: Coal, 123,000; natural phosphates, 1,447,000; manganese ore, 39,000; iron ore, 140,000; lead ore, 17,100; zinc ore, 2,500. Yield of sea fisheries, 1938, 30,300 metric tons, valued at 33,300,000 francs. Industries include flour mills, breweries, cement factories, soap works, sardine and tuna canning plants, Moorish handicraft.

The Spanish Zone raises much the same crops as the French Zone, but in limited quantities. Iron ore (805,000 metric tons in 1938), lead and some antimony are exported. Stock raising and tunny fishing are other occupations.

Foreign Trade. Publication of trade statistics for French Morocco was suspended upon the outbreak of the European War. Merchandise imports in 1938 were 2,184,900,000 francs; exports, 1,512,400,000 francs. France supplied 733,343,000 francs of the imports and took 676,248,000 francs of the exports. Imports into the Spanish Zone in 1938 were valued at 123,146,184 pesetas, exports, 71,143,224 pesetas.

Finance. The 1939 budget estimates for the French Zone were: Receipts, 1,185,054,070 francs, expenditures, 1,184,958,430. The Moroccan franc was unpegged from the French franc after June, 1940, and fluctuated widely in accordance with supply and demand. The 1938 budget for Spanish Morocco balanced at 111,785,245 pesetas.

Transportation. French Morocco in 1939 had about 1,150 miles of railway line, 3,690 miles of highways and roads, and air lines connecting Casablanca with Algiers, Oran, Tunis, Toulouse (France), and Dakar (French West Africa). These air services were interrupted by the military collapse in France in June, 1940, but were resumed. In 1938, 3,352 vessels of 5,640,397 tons entered French Moroccan ports. In the Spanish Zone there were about 72 miles of railway and 1,400 miles of roads.

Government. The Sultan Sidi Mohammed (proclaimed Nov. 18, 1927) maintains a separate government in French Morocco, headed by a Grand Vizier. However all effective authority is exercised by the French Resident General, who is Foreign Minister to the Sultan and head of the French administration at Rabat. The Resident General of French Morocco in 1941 was Gen. Auguste Noguès (appointed Sept. 16, 1936) who also was commander-in-chief until Aug. 27, 1941, when he was succeeded by General Jun. In the Spanish Zone the Sultan delegates his authority to a Khalifa, named by him from a list of two candidates submitted by the Spanish Government. Actual authority is exercised by a Spanish High Commissioner residing at Tetuán. Lieut. Gen. Luis Orgaz Yoldi replaced Gen. Carlos Asensio Cabanillas as High Commissioner for Spanish Morocco May 12, 1941. Khalifa for the Spanish Zone, Sidi Muley Hassan Ben el Mehedi.

History. A statement issued on Mar. 6, 1941, announced that the Italian members of the armistice commission had left French Morocco and that their duties had been taken over by the German members of the commission. On May 22, 1941, a London report stated that the Germans had recently established military-naval and industrial-economic missions, comprising several hundred men, at different points in French Morocco. In addition, there had been a steady infiltration of Germans who were

in close contact with the missions. In a residential order of Feb. 10, 1941 (published in the *Bulletin Officiel* of Feb. 12, 1941), the Director of Communications, Industrial Production, and Labor of French Morocco was authorized to control trade in raw materials and foodstuffs for which he was responsible. He could require a declaration of goods under his control, regulate the use of stocks, their circulation, and permits to export.

Dispatches to Vichy, France, Aug. 2, 1941, reported the arrest of 172 persons in French Morocco for activities against the state. Many were imprisoned and others were sent to concentration camps. On Aug. 11, 1941, some 14 soldiers and civilians, who were arrested in July and charged with plotting against the government, received sentences ranging from 5 to 15 years of hard labor, plus military degradation, loss of civil rights, and confiscation of their property. At a conference attended by Gen. Auguste Noguès and the Sultan on Aug. 19, 1941, it was decided that Jews in French Morocco who had established themselves in European sections of towns since September, 1939, will be ordered to live in the Jewish districts. See FRANCE under *History*.

In Spanish Morocco, economic conditions failed to show any improvement during the third quarter of 1941. Business was hampered by the lack of sea-borne goods required for local consumption. There were shortages of flour, automobile tires and tubes, oils and fats, and lubricating oils. Gasoline was under strict rationing. Crops were good but insufficient for local needs. A report published on June 9, 1941, stated that General Franco had 350,000 soldiers in Spanish Morocco.

MOTION PICTURES. It took a young novice to show the way for films in 1941. At a time when the industry was faced with one major crisis after another, Orson Welles demonstrated that daring and imagination were the best antidotes for general discouragement. With his brilliant production of *Citizen Kane*, he served notice that the medium had lost none of its latent power. Foreign markets, which had started to freeze two years earlier, were nonexistent. The Government cracked down on the screen in its investigation of monopolistic practices and finally this country went to war. In the face of these hurdles, one would scarcely have expected Hollywood to turn out a truly great motion picture while keeping the general level of film production at a remarkably high point.

The fact remains that *Citizen Kane* is certain to be remembered as a milestone in the history of the cinema while the troubled period in which it was presented was generally distinguished for its screen offerings. The Orson Welles production, which the celebrated theatrical and radio showman directed and in which he starred, explored film technique anew in an exciting manner. This biography of an American newspaper publisher and financier, who destroyed himself in a confused quest of power, showed depth of characterization in film narrative which was striking. Arriving in Hollywood with no pre-conceived ideas about the medium, the author, director, producer, actor conceived and executed one of those rare artistic achievements which es-

tablish new horizons for a form. Like *The Birth of a Nation*, in which D. W. Griffith struck out a bold idiom for the silent cinema, or John Ford's *The Informer*, which did the same for the early period of talking pictures, *Citizen Kane* constituted a synthesis of technical developments as well as an exceptional photoplay.

Welles, the actor, proved the equal of Welles, the author-director, in his masterly production. His splendidly modulated portrayal of the publisher-potentate, who could buy everything but happiness and friendship belongs in the gallery of outstanding film performances. Meanwhile his supporting cast, drawn from the New York theater, was extremely artful in contributing characterizations which had substance and meaning as well as superficial glamor. Among the technical innovations to be noted were the shooting of scenes in solid, roofed-in sets; the focussing of the camera on several planes of action simultaneously and a brilliant treatment of lighting.

Although the war was uppermost in the minds of most people during the year, it had less effect than one might have expected on the character of screen offerings. John Ford, in his brilliant staging of *How Green Was My Valley*, contemplated the revolutionary social and industrial changes in a Welsh coal-mining town at the turn of the century. Walt Disney, in his delightful full-length color cartoon, *Dumbo*, demonstrated an increasing mastery of the peculiar animated picture form. *Here Comes Mr. Jordan*, in which Robert Montgomery gave new evidence of his acting skill, was sheer fantasy on a theme concerning the hereafter.

Nevertheless, one of the best and most successful films of the year was *Sergeant York*, which went back to the first World War to celebrate the background and martial exploits of its most celebrated American hero. With Gary Cooper giving one of his finest performances in a role which suited him perfectly, it proved an impressive record of human experience, as well as a challenging reaffirmation of democratic ideals and a tribute to fighting courage. *Man Hunt* dealt with the current conflict in exciting melodramatic terms, as it described the ruthless pursuit, by the Gestapo, of an Englishman who had attempted to assassinate Hitler.

Comedy bulked large in the offerings of 1941. The able writer-director, Preston Sturges, contributed a fabulous and funny show in *The Lady Eve*. Garson Kanin used all his staging skill to make a merry film in *Tom, Dick and Harry*, which merely described the romantic complications of a young girl wooed by three quite different suitors. *Major Barbara* proved another delightful translation of a Shaw play, although not up to *Pygmalion* in entertainment content.

For the most part, it was a directors' year. Few of the outstanding productions shown were dominated by stars or story rather than staging. Alfred Hitchcock, the great English director of melodrama, once more combined romance with violence in *Suspicion*, in which Cary Grant and Joan Fontaine appeared. Frank Capra looked at the contemporary social scene with brilliant, if somewhat confused, camera reporting in *Meet John Doe*. William Wyler turned out a consummate screen transcription of Lillian Hellman's somber drama, *The Little Foxes* and Walter Huston's son, John Huston, did a first-rate first job of direction with *The Maltese Falcon*. Together with Welles, Ford, and Fritz Lang, who staged *Man Hunt*, these craftsmen reminded one very forcibly that the all-important artist in a screen enterprise is the director.

Musical comedies, which one might have ex-

pected to flourish, fared poorly during the year. The best of them contrived a free interpolation of songs and dance numbers in a comic narrative. *The Road to Zanzibar*, for example, satirized the whole field of African adventure films with pleasant musical interludes. *Birth of the Blues*, with the great Bing Crosby in the leading role, traced the rise of ragtime, jazz, swing or whatever you care to call the musical idiom, while making an engaging recapitulation of famous popular songs of an earlier period. Musical spectacles, chiefly for financial considerations, were rare and inconsequential.

Historical subject matter still engaged the attention of the studios. *One Foot in Heaven* found Fredric March giving a superlative performance as an itinerant preacher during the first decades of this century. *All That Money Can Buy* was a charming adaptation of Stephen Vincent Benet's *The Devil and Daniel Webster*, with Walter Huston contributing an engaging portrayal of Satan. *H. M. Pulham, Esq.* revived the pre-World War era in Boston and added footnotes on the early years of Prohibition in New York.

There was fine acting, as well as directing during the year. The most popular star was unquestionably Gary Cooper, who appeared in both *Meet John Doe* and *Sergeant York*. Mickey Rooney maintained his box-office draw and the team of Abbott and Costello established itself as a new clowning combination. Bette Davis, in *The Little Foxes*, won new laurels; Greta Garbo gave another delightful comic portrayal in *Two-Faced Woman*; Ida Lupino was splendid in *Ladies in Retirement*; Ginger Rogers gave new evidence of her comic skill in *Tom, Dick and Harry*; Robert Young turned in a brilliant portrayal in *H. M. Pulham, Esq.* and James Gleason added immeasurably to the captivating qualities of *Here Comes Mr. Jordan*.

The documentary field of screen production was well represented. Both *The Forgotten Village*, made in Mexico by Herbert Kline and John Steinbeck, and *The Land* proved that there were excellent craftsmen working in the field of camera rapportage. From abroad came such stirring documentaries as *Channel Incident* and *Target for Tonight* to give one striking account of England's all-out warfare against Nazi aggression.

From the business standpoint, Hollywood weathered a period of crisis remarkably well. By making excellent entertainments at reduced budgets, it succeeded in off-setting the loss of revenue from foreign markets. It adopted the new consent-decree ruling, which limited distribution, without any dislocation of existing market agencies. Over 19,000 motion picture theaters operated during the year, marking a high point in cinematic history while 546 features were released. The estimated average weekly attendance at film playhouses was 85,000,000. See BUSINESS REVIEW under *Other Industries*; COORDINATOR OF INTER-AMERICAN AFFAIRS; PHILANTHROPY; PHOTOGRAPHY under *Military and Motion-Picture*. For the Browne-Bioff case see LABOR CONDITIONS under *Union Movements*.

France. Although the French cinema, as a French cinema was nonexistent in 1941, a brilliant French film was released in this country *Pepe le Moko*, directed by Julien Duvivier with Jean Gabin in the starring role, recalled the hey-day of Gallic screen production during the decade of the thirties. Both Duvivier and Gabin are now working in Hollywood.

Great Britain. The brilliant Gabriel Pascal screen version of George Bernard Shaw's *Major Barbara* was the chief contribution of the embattled English screen. In addition it sent us a splendid photo-

play about an English coal-mining district, *The Stars Look Down*, and the afore-mentioned documentaries.

U.S.S.R. Several fine Russian films were shown in this country during the year. *Wings of Victory* celebrated the exploits of the daring aviator Valeri Chkalov, who flew across the Polar Circle to this country. *Girl From Leningrad* was a stirring screen dramatization of woman's part in the Russian-Finnish war.

Awards. The New York Film Critics voted *Citizen Kane* the best picture of 1941. It selected John Ford as the best director for his staging of *How Green Was My Valley*; Gary Cooper as the best actor, for his performance in *Sergeant York* and Joan Fontaine as the best actress, for her portrayal in *Suspicion*. There was no foreign award.

See SOCIETIES under *Review*.

HOWARD BARNES.

MOTORBOATING. The sport of speeding through the water behind a powerhouse engine was the worst hit of all sports in the pre-war days. The gasoline shortage scare and the fact that many of the boats were commandeered by, or handed over to, the Navy accounted for a "flop" season. The Gold Cup, annually the big race, was a walkover for Zalmon Simmons's *My Sin*, only boat to appear at the starting line down at Red Bank. The boat made the necessary thirty-mile run to win the ancient urn. The usual big outboard shows at Boston and Chicago were abandoned and the President's Cup speedboat carnival at Washington was cancelled.

The National Sweepstakes race itself was up to standard, with the 225-cubic-inch hydroplanes putting on a spectacular show for the trophy. The winner was George Schrafft's *Chrissie IV*. Fred Jacoby stamped himself as top outboard man by winning his second Albany to New York race in May and going on to win his fifth high point medal in seven years. Frank Desmond of Villanova retained the intercollegiate championship and outscored all other amateur drivers in the competition for the Col. E. H. R. Green Round Hill Trophy, and won the National Class B title at Austin, Tex.

MOTOR VEHICLES. A huge volume year in production, second only to the peak period of 1929, was attained by the automotive industry in 1941. A large percentage of manufacture was registered in the first seven months, before the full application of restrictions designed to conserve materials needed for national defense. After the declaration of war by the United States the vehicular output dropped abruptly. Cessation of passenger-car production was foreseen on the eve of 1942. For the first time since World War I, the National Automobile Show was called off in 1941. Instead, most of the manufacturers displayed their national defense products for the press, demonstrating their new cars merely as sidelights to the main show. A few local automobile shows, sponsored by dealers in various parts of the country, were held on a modest scale.

An outstanding event, from the automotive research standpoint, was the 500-mile Memorial Day race at Indianapolis under the auspices of the Indianapolis Motor Speedway of which Capt. E. V. Rickenbacker is president. Of principal interest to the engineers in attendance was stress given to speed in its effect on component parts of cars. (See AUTOMOBILE RACING.)

Material Substitutions in 1942 Cars. Mechanical changes in the 1942 models were limited to those that could be effected without overloading the machine-tool industry.

Though striking in appearance, the 1942 models were built with the idea of releasing essential materials to the national defense program. Because of changes to alternate materials for those used in past years' cars, millions of pounds of aluminum, zinc, nickel, and other substances were saved for defense needs.

Fortunately, the basic steps in making the change already had been mapped out by the motor industry's research laboratories, which over the years had developed optional materials and techniques for virtually all the functional parts of the car. Great quantities of nickel-steel were saved by use of other alloys. Plastics were given greater use for the decorative parts, and particularly in instrument panels, interior hardware, and exterior trim. Steel stampings replaced zinc die-castings, iridescent lacquers took the place of chrome-plating in decorative exterior pieces. Among the features of the plastics emphasized by the automotive industry are greater durability, new color and beauty, lighter weight, and greater economy.

Mechanical Advances. On the mechanical side, particularly notable were transmission advances. Reduction in foot-and-hand-work while changing speeds was experienced by buyers of Oldsmobile, Cadillac, Chrysler, Dodge, DeSoto, and Studebaker lines, all of which offered variations of the fluid-oil drive principles. Gains in engine economy and power were featured by Buick, Chevrolet, Ford, Hudson, Lincoln, Lincoln-Zephyr, Pontiac, Plymouth, and Packard units. Nash introduced an all-welded Monocoque type car. In appearance, the 1942 cars were lower, racier, and contained numerous body interior changes. Greater use of color combinations gave emphasis to the bodies.

Further alterations in the 1942 cars were being made at the close of the year, as the OPM (q.v.) ordered bright decorative metals removed from radiator grilles, running boards, mouldings, and other parts of the car. This order was given to save additional amounts of chromium, copper, zinc, and other vital metals. Functional parts, such as bumpers and door handles, which might corrode if made of baser metals, were exempted from the order. This bright work order went into effect in December.

Under the stimulus of anticipated higher prices, stiffer taxes, and other factors, the automobile industry's sales reached exceptionally good levels in the spring and summer months. In the closing months, sales tapered off considerably. For the year as a whole, motor vehicle production was 8 per cent higher than in the preceding year. Factory sales totaled approximately 3,744,300 passenger cars in the United States and 1,094,230 motor trucks. Partly due to military production 1941 proved to be one of the best years in history, being approximately on a par, production-wise, with 1937 which in turn was exceeded only by 1929.

AUTOMOBILE SALES, 1941

Months	Passenger Cars	Trucks
January	411,233	89,630
February	394,513	91,109
March	410,196	97,636
April	374,979	87,291
May	417,698	101,072
June	418,983	101,542
July	343,748	100,493
August	78,529	89,071
September	187,790	66,465
October	295,568	86,432
November	256,101	96,246
December	174,962	107,243

A series of curtailment orders initiated by the OPM limited production of civilian motor vehicles

in the last five months of the year. The first order, applied to August, September, October, and November production, curtailed the industry's passenger-car and station-wagon output 26.5 per cent from the level prevailing in the preceding year. This announced cut was intended to hold this production to a ceiling of 818,369 passenger vehicles, compared to 1,113,344 vehicles produced in the corresponding months of the 1941 model year. Later on, a December quota of 204,848 passenger vehicles was announced, which was the equivalent of a 48.4 per cent curtailment for the industry. Right after the outbreak of war with the Axis powers, however, an additional 25 per cent cut in the December quota was put into effect. This new order caused a number of plants to close almost immediately, as their new quotas already had been produced in the first few days of December.

From Wheels to Wings. Passenger-car, truck, and defense production kept an average of 516,000 workers on the payrolls of automobile, body, and parts plants during 1941. Engineering staffs of the companies devoted their major efforts to defense work. On many defense projects, 1941 marked the transition from the tooling up stage to actual production of war products. As soon as machine tools were built or converted for special jobs, men and women were transferred from automotive production lines, retrained, and put to work on defense jobs. This defense personnel grew rapidly with each succeeding month.

While thousands of workmen are rated as skilled mechanics in automobile plants, a large part of these have had to go "back to school" for several months to learn new methods. The training period begins with introduction of the man to the metal which he must handle. From that point he progresses until his education is complete. "Behavior of the metals being bent, shaped or machined or riveted to make parts for bombers is entirely different from that of automobile steel when being processed, so that entirely new kinds of skill are required," says the Automobile Manufacturers Association. "When, therefore, several automobile manufacturers prepared to undertake manufacture of airplane fuselage, tail, nose, or wing sections, the first step faced by the directors of training was their own education in the arts of aluminum-alloy fabrication."

With almost half of its defense orders pertaining to aircraft, the automobile industry became one of the major factors in America's efforts to build up an air-fleet of bombers and pursuit ships. The Allison division of General Motors, builder of the liquid-cooled Allison engine used in various types of Army pursuit planes, reached its full scheduled production rate in the late fall. The Memphis plant of Fisher Body, also a General Motors unit, began shipping fuselage and other airframe sections of the North American medium bomber to the government assembly plant at Kansas City for assembly into the complete bomber. Both Buick and Chevrolet have tooled up for production of Pratt and Whitney air-cooled airplane engines, Buick having built a new plant near Chicago which is now producing aircraft parts and Chevrolet converting its Tonawanda plant at Buffalo for its job.

Chrysler and Hudson are building airframes for the Martin two-engine bomber, while Ford is making both the complete assembly and parts for the Consolidated heavy bomber. Ford also is in production on the Pratt and Whitney engine. Packard turned its first Rolls-Royce liquid-cooled engine off the production line in August, having previously built a number by hand. Studebaker is putting up

three plants, in Chicago, Fort Wayne, and South Bend, for production of the Wright air-cooled engine. Nash-Kelvinator has an airplane-propeller contract.

Tanks and Guns. In its quarter-mile long arsenal, largest tank building in the world, Chrysler is rolling out medium tanks of tremendous striking power. Mack manufactures huge tank transmissions. In 1942, General Motors and Ford will produce light, medium, and heavy tanks.

At the edge of Detroit, Hudson has built one of the world's largest naval arsenals, composed of 15 buildings covering 1,000,000 square feet and manned with automotive personnel. Among many Naval products, the Oerlikon anti-aircraft gun is being made here. Pontiac also manufactures this gun. At AC Spark Plug, Frigidaire, and the Brown-Chapin plants of General Motors, Browning machine guns for aircraft and ground use are being turned out by the hundreds daily. Chrysler is in production on the Bofors anti-aircraft gun, while Oldsmobile makes the Hispano-Suiza 20-mm gun for aircraft, and late in the year, took on a 75-mm tank-gun job. Millions of shells have been produced by International Harvester, Oldsmobile, Chrysler, Budd Wheel, and other companies. Torpedo boats are powered by Packard engines, Sea Otters by Chrysler motors and submarines by General Motor Diesel engines.

Keeping in step with the Army's expanding needs, the motor truck manufacturing companies are delivering military vehicles at the rate of 25,000 or more a month.

Among the tire companies, Goodyear is manufacturing tail surfaces, outerwings and other subassemblies for war-planes. Firestone has contracts for anti-aircraft gun carriages, machine gun clips and barrage balloons. Goodrich, General Tire, and U.S. Rubber are constructing and will operate arsenals that load shells, that bag powder and that make small ammunition.

Subcontracting. Following normal practices in its automobile and truck business, the industry in 1941 farmed out a large part of the defense job to subcontractors and suppliers. An analysis of 104 random defense contracts showed 45 per cent of the dollar volume assigned to outside concerns.

White Motor Co., for example, with orders for scout cars and personnel carriers for the U.S. Army, buys materials from 186 primary suppliers scattered throughout the nation. In turn, a questionnaire study shows an estimated 7,812 secondary suppliers furnish these primary companies with materials. Oldsmobile, engaged in making a gun with 125 parts, has farmed out to 45 suppliers all but three of these parts.

With the passing of 1941 the creation of an Automotive Council for War Production was announced by Alvan Macauley, president of the Automobile Manufacturers Association. The purpose of the organization was to pool production facilities, technical experience, and managerial talent to further the output of national defense materials.

Mr. Macauley emphasized that the formation of the council recognized that, with the country looking to mass-production industries for the utmost contribution to victory, it was imperative that, in addition to what had been done, every cooperative facility should be utilized, at once, to attain maximum volume.

Statistics. Figures released by the Automobile Manufacturers Association at the close of the year showed the wholesale value of cars produced during 1941 was \$2,610,000,000 and that of motor trucks was \$1,020,000,000. These figures include

vehicles produced for the U.S. armed forces and non-axis governments. Motor vehicle users paid \$2,100,000,000 in taxes, or 11 per cent of all taxes from all sources in the United States. Gasoline taxes—Federal, State, and local—amounted to \$1,325,000,000. Only five per cent of all automobile production went to export markets, the total units being 245,000 cars and trucks.

Motor vehicle registrations in the United States totaled 33,725,000 at the year's end, of which 28,875,000 were passenger cars and 4,850,000 were trucks. (See also table under ROADS AND STREETS.) Forty per cent of these motor vehicles were on farms or in villages under 2,500 in population. Motor buses in use reached the 145,000 mark; the number of boys and girls transported to classes in school buses totals 3,975,000 children.

Importance of the motor truck to the nation's economy was seen by the fact that trucks pay \$550,000,000 in special truck taxes, give employment to 4,300,000 truck drivers, and transport 57 per cent of the nation's livestock to market. There are 1,047,084 trucks on farms.

Automobile, body and parts plants employ 516,000 workers, receiving \$20,800,000 in weekly paychecks and wages. In addition, many jobs existed in the motor-vehicle retail business where 38,836 dealers sold passenger cars, 87,452 repair shops were operated, and 400,000 retail gasoline outlets did business.

An idea of the dependence of Americans upon cars is given in these figures from the Automobile Manufacturers Association:

A total of 2,320 American towns and cities have dispensed with mass-transportation systems (street car, bus, etc.) of their own. Their combined populations of 12,000,000 persons now depend wholly upon private passenger cars for transportation. An additional 872 towns and cities, ranging up to the 250,000 population class, are also wholly motorized, having motor buses as their sole adjunct to private car operation.

These surveys couple with other findings that, even in cities of the 100,000 to 500,000 population group—including Oakland, Calif.; Portland, Ore.; Houston, Tex.; etc.—as many as 70 per cent of the people entering the business sections of the city on a typical day, do so by private passenger car.

Facts, obtained primarily from the U.S. Public Roads Administration and other official governmental sources, and tabulated by the Automobile Manufacturers Association show that, in a normal year, automobiles make approximately 15 billion round trips, which add up to 498 billions of passenger-miles of travel, according to analysis of latest car use studies. Three-fourths of those trips, and more than half the mileage, are for purposes connected with earning a living, or closely related economic pursuits, classified as "necessity driving." Ninety-six out of every 100 cars on the road today engage in such necessity driving. On the basis of a normal year's total travel, private car owners amassed 274 billion passenger-miles of necessity usage in more than 11 billion round trips.

Analyzed by occupational groups the findings show that the traveling salesman's average annual mileage is 18,791 miles, or more than double the average per car of all drivers. The average for medical men also is very high—12,932 miles—and doctors top the analyzed occupations in the number of round trips, having an average of 947 trips yearly per car.

Farmers, industrial workers, and construction men make up the largest occupational groups of car owners. Drivers in these groups make short trips, piling up a relatively low annual mileage per

car. Farmers, according to the 1940 Census, operate 4,144,136 passenger cars, or 15 per cent of the total registered. Of every 100 miles of driving, the farm car puts in 66.8 miles on business and other necessity purposes. A sample covering of farm cars in Georgia, Michigan, Nebraska, Indiana, and Oregon showed that 98 farm cars out of 100 are used for purposes connected with earning a living. The typical farmer rolls up only 12.5 miles per trip on the average. His total annual driving amounts to 5,750 miles.

A study of wage earners' cars in the same five States showed that they devoted slightly more than half their mileage to necessity uses. Drivers making up this occupational group were unskilled as well as skilled factory workers and building tradesmen of all types. Two-thirds of these cars were used primarily for driving to places of employment.

MOZAMBIQUE (Portuguese East Africa). A colony in East Africa, comprising (1) Province of Mozambique (245,773 sq. mi.), administered by the state, and (2) Manica and Sofala (51,881 sq. mi.), administered by the Mozambique Company under charter for 50 years from 1891 to 1941. Total area, 297,654 square miles. Total population (1936), 4,995,750, including 4,950,000 natives. Chief towns: Lourenço Marques (capital of the Province), 47,390 inhabitants; Beira (capital of Manica and Sofala), 12,988.

Production and Trade. Sugar, groundnuts, maize, cotton, copra, sisal, and gold were the main products. Livestock (1937): 553,531 cattle, 270,833 goats, 85,549 sheep, 72,254 swine. Trade for 1940 (in United States dollars): \$15,762,700 for imports and \$6,493,000 for exports, compared with \$19,422,900 and \$7,289,000 respectively, for 1939 (the foregoing trade figures are for the whole country). Portugal, Great Britain, the United States, and the Union of South Africa were leading countries of supply for imports. The main export markets were Portugal, the Rhodesias, the Union of South Africa, and British India. The ports of Lourenço Marques and Beira do a large transit trade for Swaziland, Transvaal, the Rhodesias, Belgian Congo, and Nyasaland. In 1940 the total volume of transit trade was 1,060,611 metric tons. Roads (1940): 17,545 miles.

Government. Budget (1939): 589,383,545 escudos. The Province of Mozambique (consisting of the districts of Cape Delgado, Inhambane, Lourenço Marques, Mozambique, Nyasa, Quelimane, and Tete) were under the control of a governor general, assisted by an executive council and government council. Manica and Sofala, the two districts under charter to the Mozambique Company, were under the control of a governor. Governor General, Gen. João Tristão de Bettencourt. Governor of Manica and Sofala, Rear Admiral Luis A. de M. Correia.

MUNICIPAL GOVERNMENT. About twenty cities and towns in the United States adopted the council manager plan of government during 1941; half as

many rejected it; there were no abandonments. The following list of places that acted on the plan has been compiled from lists supplied for use in the *Year Book* by the International City Managers' Association and the National Municipal League: nine small towns in Maine; Manchester, Northfield, Poultney, and Windsor, Vt.; Wilmington, N.C.; Tarpon Springs, Fla.; Port Huron, Mich.; Palm Springs, Calif.

Votes against the council manager plan were registered at Bar Harbor, Me.; Canton, Mass.; Enfield, Conn.; Margate, N.J.; Opelousas, La.; Cheboygan, Mich.; Ottumwa, Iowa; Mankato, Minn.; and Ennis, Texas. Five towns already under the plan voted against abandonment: Middlebury, Vt.; Vinton, Va.; Washington Court House, Ohio; Rapid City, S.D.; Burbank, Calif.

Approved council-manager cities at the close of 1941, according to the revised Directory of the International City Managers' Association, totalled 544. A few of these were in Puerto Rico, Canada, and Ireland.

The downward trend of municipal bonded debt continued for some 300 of the larger cities of the United States as the Federal debt soared with war expenditures. The municipal decrease had not yet offset the increase in the first half of the decade 1931-40. Cities under 100,000 did not contribute to the decrease. For municipal bonds, see FINANCIAL REVIEW under *Security Markets*.

M. N. BAKER.

MUNICIPAL OWNERSHIP. The year was a discouraging one for advocates of municipal ownership of utilities. In March, Spokane, Wash., cast a large vote against buying and distributing hydro-electric power from the Grand Coulee dam either by acquiring the distribution system of the Washington Power Company or by building one at city expense. The cost of the alternative plans was about \$4,200,000 and \$6,500,000 respectively. A few months earlier Spokane voters refused to approve a county-wide public utility district to take power from the same source. Outside the city the voters endorsed the project. In April, a referendum vote at Detroit, Mich., was strongly against the acquisition and operation of the property of the Michigan Consolidated Gas Company.

In November, the voters of the city and county of San Francisco voted heavily against buying the privately owned electric light and power distribution system. This was the eighth defeat of the plan in 14 years. The situation of the city is peculiar. Under the Congressional Act authorizing it to take water from the Yosemite National Park to supply the city and to develop power San Francisco agreed to distribute power within its limits. It has developed power from the Hetch Hetchy project for years and sold it wholesale for private distribution. Cincinnati voted, about three to one, against buying the property of the Cincinnati Gas & Electric Company, or

in lieu of that duplicating the system. Springfield, Mo., voted down a proposal to buy the privately owned water works at a price fixed by a board of arbitration.

Changes from private to public ownership occurred in 1941 in several places. The most important of these was at Miami, Fla., which acquired the distribution system of the Miami Water Company, a subsidiary of the Florida Power & Light Company. Associated with this was the acquisition by the city of minor street transportation property. Miami already owned a group of wells, pumping plant, water softening, and filtration works. It is said that a large part of the steam used for pumping is derived from the city refuse incinerator. Beaver Falls, Pa., bought the water works by which it is supplied. The city of Carrolton, Mo., has constructed an electric generating plant and bought the privately owned water mains. Ketchikan, Alaska, is doubling the capacity of its municipally owned water, lighting, and heating system. The Tennessee Valley Authority made contracts to supply electric power to a half dozen additional Electric Cooperatives in Alabama and Tennessee.

MUSIC. Patronage of musical events in the United States was well maintained during 1941. Managers of the principal orchestras, meeting in New York in mid-December, thought that an increase, rather than a falling off of attendance was to be expected after this country's entrance into the second World War, apart from the possible effects of blackouts and air raids. Except for a few blackouts in Pacific Coast cities, musical activities followed a normal course during the first three wartime weeks. New legislation imposed a Federal 10 per cent tax on concert and opera tickets after October 1.

For several years the Columbia Concerts Corporation and the N.B.C. Concert Service, two major managerial groups affiliated with the two largest radio chains, had controlled much of the concert field. This arrangement drew the fire of the Federal Communications Commission, and plans for ending this affiliation were announced late in May. The Columbia Concerts Corporation became an independent group in June, and the N.B.C. Concert Service was separated from the National Broadcasting Company at the end of the year and renamed the National Concert and Artists Corporation.

In August, 1940, James C. Petrillo, president of the American Federation of Musicians, ordered that all instrumental solo artists must join the Federation or cease to take part in any activities in which Federation members were concerned. The American Guild of Musical Artists, which represented many of the soloists, failed to reach a compromise and went to law, but its application for a final injunction restraining Mr. Petrillo from enforcing his demands was turned down in the New York Supreme Court in November of 1940 and by the Appellate Division in January. However, on July 29, the Court of Appeals ruled that the Guild was en-

titled to a trial on this question. Although the new deadline announced by Mr. Petrillo was not enforced, several prominent concert artists joined the Federation during February and March.

In July, Mr. Petrillo ordered orchestras and bands under his jurisdiction to begin and end their programs with *The Star Spangled Banner*. The stipulation of a final performance was not enforced, but the anthem was heard thereafter at the beginning of all orchestral and band concerts and, after December 7, also after certain recitals. Igor Stravinsky's new harmonization and orchestration of the anthem was first played at Los Angeles in October.

The disagreement between the American Society of Composers, Authors, and Publishers and the radio broadcasting companies, which had kept music by A.S.C.A.P. members off the air since January 1, was ended by the signing of new contracts on October 29. These gave the A.S.C.A.P. a smaller percentage of the networks' receipts than under the old arrangement.

On February 25, Randall Thompson announced his resignation as director of the Curtis Institute of Music in Philadelphia, and was succeeded by the violinist, Efrem Zimbalst. In August, Reginald Stewart, Canadian conductor and pianist, succeeded Otto Ortmann as director of the Peabody Conservatory in Baltimore. Bruce Simonds was appointed dean of Yale University's School of Music.

The prize of \$500 offered by the Chicago Symphony Orchestra for an American work was won by Carl Eppert for his Symphonic Suite. Howard Shapero, a Harvard student, won the \$1,000 cash award which the American Academy in Rome had substituted for its peacetime residential fellowship. His prize-winning *Nine-Minute Overture* was first played in a Columbia radio program on June 8.

The two principal anniversaries of the year were Mozart and Dvorak. The 150th anniversary of Mozart's death (December 5) was widely observed in America and Europe, while the observance of Dvorak's 100th birthday (September 8) centered in Great Britain and the United States. But the composer of the year in this country was Peter Tchaikovsky. The introduction to his piano concerto in B flat minor, thanks to Freddy Martin's popularized version, was played, sung, hummed, or whistled virtually everywhere.

Organization of the New York Music Critics' Circle, with Virgil Thomson of the *Herald Tribune* as president, was completed in June. It was planned, as a stimulation to the performance of American music, to make annual awards for the best American works of various kinds introduced to New York during a given season, and also to single out for distinction a previously heard American work performed in the season under consideration.

Artists. The United States was well supplied with both American and European talent during 1941. But a substantial loss, primarily in the opera field, was caused by Kirsten Flagstad's decision not to return from her native Norway until after the war. The eminent soprano had gone to Europe by air in April, but had planned to return for 1941-42 American engagements. Another prominent opera singer, Jussi Bjoerling, Swedish tenor, went home in the spring and, early in the fall, canceled his plans for returning to America.

Fritz Kreisler was seriously injured on April 26, when he was knocked down by an automobile in New York, and at first prospects for his recovery were doubtful. The noted violinist gradually regained his health, but his doctors decided that he should not resume his career before February, 1942,

at the earliest. Marian Anderson, Negro contralto, who was born in Philadelphia, received that city's annual Bok award for noteworthy achievement in art or science and significant contribution to Philadelphia's prestige.

Chamber and Choral Music. A noteworthy feature in the American chamber music field was a gain in the number and popularity of small orchestras and chamber music ensembles, which proved to be an important source of new or unfamiliar works. In New York, the New Friends of Music added modern works to their repertoire for their chamber music series of 1940-41, but returned to the classic and romantic repertoire for the following season. Thanks to the concerts sponsored by the Elizabeth Sprague Coolidge Foundation at the Library of Congress, Washington was an important chamber music center during the regular season, and was also the scene of a successful experiment with outdoor concerts of this kind for six weeks in the summer. Other summer activities in this field centered mainly in southwestern New England and the San Francisco area in California.

Many new works were introduced during the year. Among these were Aaron Copland's *Quiet City*, Anis Fulcihan's *Epithalamium*, Emerson Whithorne's *Promenade*, Arthur Shepherd's piano quintet, Artur Schnabel's fifth quartet, Benjamin Britten's string quartet, and Dmitri Shostakovitch's piano quintet.

One of the year's principal choral novelties was Honegger's dramatic legend, *Nicolas de Flue*, introduced to America by the Dessoff Choirs and New Friends of Music Orchestra in New York on May 8. On the whole, the principal choral societies of the larger cities preferred the classic repertoire, and devoted much attention to Bach. Handel's *Messiah* had its usual quota of Christmastide performances by choral groups, large and small, throughout the country. The Yale Glee Club, under Marshall Bartholomew, toured Argentina, Brazil, and Uruguay in July, and included South American music in its programs.

Festivals. The eighteenth festival of the International Society for Contemporary Music, which was the first to be held in America, took place in New York from May 16 to 27. Twenty-six composers from ten or more countries were represented in three programs at Columbia University, the New York Public Library, and the Museum of Modern Art and seven programs or parts of programs presented by the National Broadcasting Company and Columbia and Mutual Broadcasting Systems. Several composers of Germanic origin now living in the United States entered as "independents."

A few orchestral works were played in the radio concerts, but the bulk of the repertoire consisted of solo works, sonatas, and music for chamber ensemble. Seven of the composers represented were from the United States and four from Mexico and Argentina. One of the most consequential works to be introduced was Benjamin Britten's *Les Illuminations* for tenor and small orchestra.

Programs of symphonic and choral works, including a concert for young people, were performed in the long-established large scale festivals at Cincinnati, May 6-10, under Eugene Goossens; Ann Arbor, May 7-10, under Eugene Ormandy, Saul Caston and Thor Johnson, and Worcester, October 6-11, under Albert Stoessel. The Philadelphia Orchestra again played at Ann Arbor. The Worcester programs included stage performances of two operas, *The Devil and Daniel Webster*, by Douglas Moore and Stephen Vincent Benet, and *La Traviata*.

At Rochester, N.Y., the Eastman School of Music held its annual American festival April 28 to May 2 under Howard Hanson's direction. In addition to the famous series at Bethlehem, Pa., May 16-17, Bach festivals were held at Berea, O., in June, and Carmel, Calif., in July. An American music festival series was held in Los Angeles in June in connection with the convention of the National Federation of Music Clubs.

Nine concerts were given by the Boston Symphony Orchestra under Serge Koussevitzky's direction in the eighth annual Berkshire Symphonic Festival at Lenox, Mass., July 31-August 17. Modern composers represented included Villa-Lobos, Shostakovitch, Hindemith, Samuel Barber, Aaron Copland, Hanson, Prokofieff, and Vaughan Williams. The opera department of the allied Berkshire Music Center gave two performances of *Costi fan tutte* in its new theater. Attendance broke all records, exceeding the 1940 total by 14,000.

In Canada, Sir Thomas Beecham conducted the sixth annual Montreal Festival in June, offering Bach's Mass in B minor, Faure's Requiem, Elgar's *Dream of Gerontius* and Mozart music.

Opera. The fifty-sixth regular season at the Metropolitan Opera House in New York opened a sixteen week course on Dec. 2, 1940. At home, the company gave 116 performances of 35 operas, and made 49 appearances in ten other cities. Wagner again was the most represented composer, followed by Verdi.

Gluck's *Alceste* had its first Metropolitan performance on January 24 with Marjorie Lawrence in the title role. Verdi's *Un Ballo in Maschera*, unheard since 1916, was revived on the opening night with Jussi Bjoerling as Riccardo, or King Gustavus III. Announcing a policy of giving more attention to comedy in stressful times, General Manager Edward Johnson revived Donizetti's *Don Pasquale* (December 21) and *La Fille du Régiment* (December 28), the latter as a new vehicle for Lily Pons. *Il Trovatore* had a restudied production with new sets December 12, and six operas returned to the active list after relatively brief absences.

As a new feature, the Metropolitan engaged four guest conductors, Bruno Walter, Ferruccio Calusio of Buenos Aires, Edwin McArthur, and Italo Montemezzi who conducted his *L'Amore del Tre Re*. The performances under Mr. Walter, including *Fidelio*, *Don Giovanni*, and *The Bartered Bride*, this last sung in English, were among the most memorable features of the season.

Salvatore Baccaloni, Italian basso buffo, who exhibited a notable character as a singing actor, was the season's most notable vocal acquisition. Eleven others, including six Americans, sang at the Metropolitan for the first time: Norina Greco, Eleanor Steber, and Josephine Tuminia (Americans) and Stella Roman (Rumanian), sopranos; Elsa Zebranska, Latvian contralto; Emery Darcy (American) and John Dudley (Australian), tenors, and Arthur Kent, Francesco Valentino (Americans) and Alexander Sved (Hungarian), barytones. For 1941-42, Lothar Wallerstein, noted Czech regisseur, was engaged as a stage director, and Laurent Novikoff succeeded Boris Romanoff as ballet master. Bruno Walter returned for a longer guest engagement, and Sir Thomas Beecham, hitherto known in America as a symphonic leader, also accepted a Metropolitan invitation to appear as guest conductor. Paul Breisach was added to the regular conductorial staff.

The loss of Kirsten Flagstad's services and, as the result of a long illness, those of Marjorie Lawrence as well, left Helen Traubel, American so-

prano, as the only member of the company whose voice was well suited to roles such as the Brunnhildes of the Ring cycle. *Tristan und Isolde* was dropped from the repertoire, and the number of Wagnerian performances reduced. But there was more Mozart; *Le Nozze di Figaro*, the first Mozart work to open a Metropolitan season, was given on the first night of the regular 16 week series, November 24. *Don Giovanni* was sung December 5, the 150th anniversary of the composer's death, and *The Magic Flute* had a new production under Mr. Walter's direction (December 11) in an English translation by Thomas P. Martin, a new member of the musical staff, and his wife. Rosa Bok, Austrian soprano, made her American operatic debut as the Queen of the Night, with Jarmila Novotna, Charles Kullman, John Brownlee, and Alexander Kipnis in other leading roles. Donizetti's *L'Elisir d'Amore* had its first performance since January, 1933, on November 28 with Bidu Sayao, Bruno Landi, and Messrs. Valentino and Baccaloni as the principals.

Astrid Varnay, a talented Swedish-American soprano, 23 years old, helped the Metropolitan to meet its Wagnerian problem, although some critics considered her voice a little too light for Wagner's dramatic roles. Other singers who made Metropolitan debuts before December 31 were Nadine Conner and Maria Van Delden, sopranos; Mona Paulce, mezzo-soprano; Mary Van Kirk, contralto; Jan Pearce and Kurt Baum, tenors, and Lansing Hatfield and Gerhard Pechner, bassos.

Improved artistic standards and increased ticket sales had marked the Chicago Opera Company's 1940 season, but a \$100,000 deficit led to another reorganization. Fortune Gallo, impresario of the long-established touring San Carlo company, became general manager and the noted veteran Italian tenor, Giovanni Martinelli, artistic director. The 1941 season was cut to five weeks, opening November 8, and from six to five weekly performances. This had an unexpectedly successful record, with a deficit of \$20,000—a small figure as opera deficits go. Sixteen of the 26 performances were sold out. One reason for this improved showing was the restriction of the repertoire mainly to well known works and the absence of the usual previous competition of the San Carlo company's fall visit.

The San Francisco Opera Association held its longest and busiest season thus far, giving 31 performances between October 2 and November 9. In addition to a week in Los Angeles and two performances in Seattle, it paid its first visits to Portland and Seattle. The repertoire was conservative. The Metropolitan was well represented in the San Francisco casts and also in those of the short spring and fall seasons in St. Louis.

Experiments with new or unfamiliar operas were left for more or less new organizations and for chamber opera groups, especially those associated with colleges. In New York, the New Opera Company made a promising start with a six weeks' season, including a fortnight of performances by the American Ballet Theater, which opened October 14. Mozart's *Costi fan tutte* and Verdi's *Macbeth* were sung in Italian with Fritz Busch conducting and his son, Hans, as stage director. Tchaikovsky's *Pique Dame* and Offenbach's *La Vie Parisienne* were sung in English. The casts were composed of young American singers. The Philadelphia Opera Company gave all its performances in English, including the first translated performances in this country of *Pelléas et Mélisande*, February 25, and *Rosenkavalier*, December 2. In the latter the role of Octavian was assigned to a tenor instead of the usual soprano or mezzo-soprano.

The Philadelphians gave the stage premiere of Menotti's *The Old Maid and the Thief* and the first American performance of Reznicek's *Fact or Fiction* in January. Cincinnatti had a six week summer season, and Rossini's *The Barber of Seville* and Gluck's *Orpheus* were sung in English in the summer festival at Central City, Col.

Among modern works produced for the first time were Marc Blitzstein's *No for an Answer*, Arthur Benjamin's *The Devil Take Her* (American premiere), and Vittorio Giannini's *Blennerhasset* (stage premiere), and Benjamin Britten's *Paul Bunyan*, all in New York; George Kleinsinger's *Victory Against Heaven* (Hartford), and Paul Nordoff's *The Masterpiece* (Philadelphia).

The new Opera de Mexico, which President Avila Camacho had helped to finance, gave 19 performances in its first season in July at Mexico City with Mexican singers and others brought from the United States. South America's principal opera season at the Teatro Colon in Buenos Aires ran from May 20 to September 21 with a repertoire of French, Italian, and German works. An Argentine work, Arnaldo d'Esposito's *Lin Calel*, was first produced August 12. A popular season followed, and a spring season opened November 4. Oscar Lorenzo Fernandez's *Malazarte* was produced September 30 at the end of the seven week winter season in Rio de Janeiro, with the New York tenor, Frederick Jagel, in a leading role. Although its subject was Brazilian, it was sung in Italian. A new Chilean opera, Carlos Melo Cruz's *Maurico*, was produced in Santiago September 28.

Orchestras. The Philharmonic-Symphony Society of New York began its 100th season in October. The Chicago Symphony Orchestra completed its fiftieth season in April. The Chicago orchestra, under Frederick A. Stock and, as associate conductor, Hans Lange, observed the anniversary by presenting an unusual number of new works. The Philharmonic featured its celebration by inviting eight guests to share the conductorship with its regular leader, John Barbirolli. Those who appeared between the opening of the season, October 9, and the end of the year were Leopold Stokowski, Bruno Walter, Artur Rodzinski, and Dimitri Mitropoulos. Messrs. Mitropoulos and Walter had also made guest Philharmonic appearances in the winter. Walter Damrosch, the dean of American conductors, conducted two concert performances of the revised version of his second opera, *Cyrano de Bergerac*, February 20 and 21.

Dr. Stock began his 37th consecutive Chicago season in October, when Serge Koussevitzky opened his 18th season with the Boston Symphony Orchestra. Most of the other major orchestras continued under the same conductors as before. These included Eugene Ormandy in Philadelphia, Hans Kindler in Washington, Fritz Reiner in Pittsburgh, Artur Rodzinski in Cleveland, Eugene Goossens in Cincinnati, Fabien Sevitzky in Indianapolis, Vladimir Golschmann in St. Louis, Dimitri Mitropoulos in Minneapolis, Karl Krueger in Kansas City, and Pierre Monteux in San Francisco. The Detroit Symphony and Los Angeles Philharmonic Orchestras divided their seasons among guest conductors. Sir Thomas Beecham became conductor of both the Seattle and the Vancouver orchestras for 1941-42.

Fifty-six scores were submitted in a competition for American works held by the National Symphony of Washington. The ten chosen by Dr. Kindler were played in a special concert for the subscribers, who awarded the first prize to Arnold Cornelissen's symphony and the second to Robert O. Barkley's *Sunday Evening in Bloomfield*.

Among the concerts held by the various Work Projects Administration orchestras, the most ambitious series was that held by the New York City Symphony in Carnegie Hall, with Sir Thomas Beecham as one of the guest conductors. Here the programs were relatively conservative. More modern works were played by WPA orchestras in other cities, especially the Illinois Symphony of Chicago under Izler Solomon's direction.

Arturo Toscanini, who completed his fourth season with the N.B.C. Symphony of New York in the spring, undertook no long engagements for 1941-42, but appeared with the Philadelphia Orchestra November 14-15. Leopold Stokowski, who ended his connection with the Philadelphia Orchestra in April, assembled a second All American Youth Orchestra for a transcontinental tour from May until July, and conducted five of the N.B.C. Symphony's concerts in October.

Of the many summer orchestral series, the most ambitious were the New York Stadium Concerts, in their 24th season, the Robin Hood Dell concerts in Philadelphia; the Ravinia Festival, near Chicago, and the Hollywood Bowl concerts near Los Angeles. At the Stadium, weather permitting, concerts took place every evening for eight weeks. The others had a less intensive schedule.

In Canada, Sir Ernest MacMillan continued as conductor of the Toronto Symphony Orchestra for its nineteenth and twentieth seasons. Reginald Stewart, who opened Toronto's weekly Promenade series May 1, resigned June 25, and guest conductors completed the series. The Belgian leader, Désiré Defauw, became regular conductor of Montreal's Les Concerts Symphoniques.

Carlos Chavez conducted the Orquesta Sinfónica de México in the usual summer series in Mexico City, with Igor Stravinsky and Sir Thomas Beecham as guest leaders. Massimo Freccia continued as conductor of the Havana Philharmonic Orchestra, which increased its number of subscribers from 600 to 2,500. Arturo Toscanini went to Buenos Aires to conduct the orchestra of the Teatro Colon in June and July. In Rio de Janeiro, the Municipal Orchestra under Albert Wolff gave the first complete performance of Villa-Lobos's *Fantasia de Movimentos Mixtos*.

Music in Europe. One effect of the war in England was a decentralization and spreading of musical activities; the London Philharmonic and London Symphony Orchestras and the Halle Orchestra of Manchester made extensive tours, reaching places which had had no symphony concerts in prewar days. London's foremost concert auditorium, Queen's Hall, was destroyed by bombing in May. The large Albert Hall then became London's principal orchestral center; the historic Promenade series was held there from July 12 to August 23, with Sir Henry Wood, assisted by Basil Cameron, as conductor. Various experiments were made towards improving the Albert Hall's acoustics.

Despite the air raids of the winter and spring, London kept up a remarkably vigorous musical life, maintaining several orchestral series as well as chamber music, choral programs, and recitals. Considerable attention was paid to British and other modern works, both by the British Broadcasting Corporation, and by concert groups and soloists. A series of concerts specializing in contemporary music was launched by Boosey and Hawkes in October. The notable series of popular-priced concerts organized by Myra Hess, who received the title of Dame in recognition of her services, completed its second year in October, with programs including all kinds of solo and chamber music.

Russia's entry into the war against Germany resulted in increasing interest in Russian music; Moussorgsky's opera, *Fair at Sorotchintsi*, had a three weeks' run at the Savoy Theater October 6 to 25. Regular orchestral series, as well as concerts of music in smaller forms, were presented in other large British cities, such as Birmingham, Manchester, and Liverpool.

The Sadler's Wells company appeared in London for two weeks in February and three in the spring. In a summer tour of provincial towns which it had not visited before, it gave acts from various operas rather than complete performances. In Oxford R. Vere Simpson's opera *The Imbroglia*, in 18th century style, had its first performance late in May.

Little musical news came from France. Early in the spring, it was reported that programs in Paris had to be approved by a special commission, and that orchestras were not allowed to play German music. In the fall, the Paris Opera was said to be giving its usual classic repertoire, and that opera had been resumed in Lyons and Marseilles. The repertoire of a six weeks' summer series at Vichy included several German works.

Wagner's *Parsifal* was the last work to be performed at the State Opera in Berlin before it was set on fire and virtually destroyed in an air raid April 9. Musical activities in Germany, including Austria, were said to be continuing at their usual pace. A Wagner festival was held in the summer at Bayreuth, and Vienna was the center of a Mozart anniversary festival early in December.

Francesco Malpiero's new three act opera, *Ecuba*, was produced in Rome January 13, and favorably received. Other novelties scheduled for the principal Italian winter seasons were Gerstner's *Enoch Arden* and Persico's *La Locandiera* in Rome, Porrino's *Gli Orazi* in Milan, Kempff's *Famiglia Gozzi* and Filiasi's *Mattutino d'Assisi* in Naples, and Mario Persigallo's *Lo Stendardo di San Giorgio* in Genoa.

In Switzerland, Zurich had its annual opera festival, which included the local première of Strauss's *Daphne*, in addition to *Pelléas et Mélisande*, *Tristan und Isolde* with Germaine Lubin, *Die Walkure*, *Die Meistersinger*, *La Traviata*, and Hans Haug's *Tartuffe*. The orchestra of Milan's La Scala played in the annual summer festival at Lucerne under Italian and Swiss conductors. Rossini's *William Tell* received an outdoor festival production at Geneva, and in Winterthur Hermann Scherchen directed a summer festival series illustrating four centuries of orchestral music.

The 1940-41 opera season in Stockholm began in September with a revival of Peterson-Berger's *Prophets of World's End*. Another Swedish work, Kurt Atterberg's *Aladdin*, had its first production in March. Among the new operas produced in Moscow were a work by Kriukov based on a Pushkin story, Khrennikov's *In the Tempest*, and Einatov's *The Family*. Dimitri Shostakovich completed his 7th symphony and Nicolai Miaskovsky added a 20th and 21st symphony to his long list of works in this form.

NARCOTIC DRUGS CONTROL. *International.* Establishment of branch offices of the Permanent Central Opium Board and the Drug Supervisory Body in Washington, D.C., early in 1941 have made it possible for the nations outside war torn Europe to keep international control functioning. These two organs created under the 1925 and 1931 Narcotic Conventions continue supervision of international trade in dangerous narcotic drugs through the offices set up in the capital of the United States. Estimated needs of the nations of the Western Hemisphere are transmitted to the newly established branch offices. In 1941, 25 Latin American countries obtained more than 20,000 kilograms of opium derivatives and 50 kilograms of cocaine salts for medical needs. The system of import certificates and export authorizations in force for the control of imports and exports of opium and coca leaves and their salts, derivatives and preparations continued to operate successfully during 1941.

National. Reports received from many reliable sources indicate that drug addiction in the United States is steadily decreasing, and that there are few instances where an individual has recently acquired a drug habit. The police of many cities report that there were few arrests of drug addicts; that most of the users arrested showed no signs of acute withdrawal symptoms as compared to several years ago when very acute withdrawal symptoms were evident; that many of the addicts resorted to the use of barbituric acid derivatives as substitutes for morphine and heroin; and that cocaine addiction had practically disappeared.

There were few heavy arrivals of raw opium in the United States. The opium traffic from the Far

East fell off considerably. There was a considerable increase in seizures of raw opium from Mexico. This opium is grown clandestinely. The Government of Mexico has been vigorous in destroying known plantings.

The heaviest arrivals of prepared opium occurred in the Pacific Coast Area as in the past, and a great deal of this opium bore evidence of having been prepared in the French Leased Territory of Kwangchow-wan. Some prepared opium was seized bearing the imprint of the British Opium Monopoly in Singapore which has in the past been distributed to British colonies and possessions in the Far East.

Seizures of morphine were rare.

Heroin was found in many parts of the United States but was adulterated up to 99 per cent. The price in the illicit traffic based on purity was about \$2,000 per oz. which represented the largest spread between licit and illicit value of any known commodity.

Marihuana (*Cannabis Sativa L.*) continued to be a problem. There was an appreciable increase in petty smuggling of marihuana into the United States by seamen on vessels touching at Central American, South American, and other ports. There was likewise an increase in smuggling over the border from Mexico. Due to the ease with which the plant can be cultivated domestically, the smuggling of marihuana was of relatively small importance. During the months of May and June, 1941, approximately 33,000 acres of this plant were destroyed throughout the United States.

The abuse of marihuana consists principally in the smoking for the narcotic effect of the resinous flowering tops and crushed portions of the plant, rolled into cigarettes.

The shortage in many sections of smuggled drugs has resulted in additional efforts being made by peddlers and addicts to divert drugs from medicinal sources. Some five years ago 99 out of 100 addicts obtained their drugs from smuggled sources. Out of 100 cases examined recently about 70 received their drugs through forged prescriptions and robberies. Robberies of drug stores continue at an alarming rate, approximately 100 a month. For the purpose of obtaining narcotic drugs to gratify addiction, there are many cases where a physician has had his medical kit stolen from his parked automobile.

The abuse of paregoric became so persistent that it was necessary during the past year for twelve States to pass legislation removing it from the exemption provision of the State narcotic acts. Because of its deviation to illicit uses, in Canada paregoric is now on doctor's prescription, whereas in the United States it can still be sold across the counter in most states. The per capita consumption of paregoric in the United States is fifteen times that of Canada. See CUSTOMS, BUREAU OF.

NATAL. See SOUTH AFRICA, UNION OF under *Area and Population*.

NATIONAL BUREAU OF STANDARDS. The Constitution of the United States provides that "the Congress shall have Power to coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures." Under this authority on Mar. 3, 1901, Congress passed an act establishing the National Bureau of Standards.

The Bureau's functions are the development,

construction, custody, and maintenance of reference and working standards needed in science, engineering, industry, and commerce. This requires research on a broad scale, which is usually conducted in cooperation with Governmental agencies or with scientific and industrial groups, often through a research associate arrangement. Routine tests involving at least indirect comparisons with the National Standards are made for the general public, but the bulk of the Bureau's test work is in connection with the purchase of supplies by the Federal Government, the tests covering almost everything except food and drugs. Information obtained as a result of the Bureau's studies is made available through a monthly *Journal of Research* and other series of non-periodical publications, as well as by articles in the newspapers and magazines. A small monthly *Technical News Bulletin* carries announcements of all publications and describes progress of work in the laboratories.

The Bureau's organization is made up of nine scientific and technical divisions, and three engaged in commercial standardization, as follows: Electricity, Weights and Measures, Heat and Power, Optics, Chemistry, Mechanics and Sound, Organic and Fibrous Materials, Metallurgy, Clay and Silicate Products, Simplified Practice, Trade Standards, and Codes and Specifications. Each division, in turn, is divided into sections which are the working units covering specialized fields, as for instance the length section of the Weights and Measures Division.

The Bureau occupies a tract of 67.8 acres in the northwest suburbs of Washington. The plant consists of 20 major buildings, and the regular staff numbered 1,204 on June 30, 1941. The appropriation for the fiscal year which ended on that date was \$2,037,500.

Since a great deal of the Bureau's work during the past year was on confidential problems connected with the National Defense Program, it is impossible to report upon all of its activities at this time. It may be said, however, that the development of mechanized warfare has greatly increased the importance of uniform standards in the manufacture of military equipment, and the Bureau has been called upon to test many materials and devices, and to investigate new production processes. Members of its staff are cooperating with the Army, Navy, the National Advisory Committee for Aeronautics, and the National Defense Research Committee. The chief of the Bureau's Division of Simplified Practice has been selected to head the new Bureau of Industrial Conservation under the Office of Production Management.

In spite of the attention given to military problems, the Bureau has continued to serve American industries. Thus, the broadcasting of standard frequency signals has been improved by introducing an accurate five-minute time interval between announcements.

Cooperative work with the Textile Foundation has yielded important basic data on the properties of wool and other fibers. As an example, a solution of the problem of moth-proof fabrics may result. A cooperative project, now being started with the Copper and Brass Research Association, deals with copper vats, tanks and containers in general, the object being to improve their mechanical construction which is at present based on rule-of-thumb methods.

The five-year vehicle scale testing program in which the Bureau cooperated with the State Governments, was completed ahead of schedule. The Bureau's equipment visited every State that did

not have adequate facilities. As a result of this work, at least 15 more States now have suitable equipment for testing motor truck scales.

Tests of materials and constructions suitable for low-cost housing were continued. A so-called "streamlined" plumbing code for use in connection with housing projects was issued and has been in great demand. A revised edition of the Handbook on *Screw Thread Standards for the Federal Services* is now being printed. A report combining the results of fire-tests on various types of partitions was published as part of the structural materials program.

The Bureau cooperated with the U.S. Coast Guard and the Carnegie Institution of Washington in developing a program for, and in equipping the Louise A. Boyd Arctic Expedition which spent the summer in the vicinity of Greenland studying ionosphere conditions, geomagnetism and auroral phenomena. Two members of the radio section accompanied the expedition and obtained valuable data on radio transmission conditions between the United States and Europe.

A complete report of the Bureau's work on dental materials, which was started in 1919 at the request of the War Department and for many years has been conducted in cooperation with the American Dental Association, has been prepared and will soon be available. Through this work, and the certification plan which has been developed in connection with it, the quality of dental supplies has been greatly improved.

Great attention is being given to improving the performance of motor vehicles so as to get more work out of a gallon of gasoline. Devices designed to promote fuel economy are being examined for the office of the Petroleum Coordinator.

The Bureau has continued to aid the Treasury Department in the preparation of Federal Specifications, with particular emphasis on the use of substitutes for strategic materials, such as aluminum and copper. In order to promote efficiency in the expenditure of public funds, lists of manufacturers who certify that their products meet the requirements of nationally-recognized specifications and Commercial Standards are sent on request to Governmental purchasing agents.

All the parts of the new National Electrical Safety Code are now available, and the complete code in one volume will be ready early next year. The carrying of this revision to a successful conclusion has required months of effort, dozens of conferences and the adjustment of many differences of opinion held by widely diversified groups.

During the year, several important meetings took place under the Bureau's auspices, including the 31st National Conference on Weights and Measures, the usual spring meeting of the American Physical Society, and the Nineteenth Annual Conference of State Utility Commission Engineers.

Effects in Other Fields. The effects of the war and the defense program are discussed in one way or another in almost every article in this volume. For example: for rising living costs, see LIVING COSTS AND STANDARDS; for dislocation of employment, see LABOR CONDITIONS; for restrictions on business, see BUSINESS REVIEW; for the conversion of peacetime industry to defense, see MACHINE BUILDING, MOTOR VEHICLES, etc.; for research, see CHEMISTRY, INDUSTRIAL and the other sciences; for war psychosis, see PSYCHOLOGY; for war risk insurance, see INSURANCE; and so on. Also see the article on each country and territory under *History*; COMMUNISM; FASCISM; PAN AMERICANISM; SOCIALISM.

NATIONAL DEFENSE ADVISORY COMMISSION. Formerly, a United States administrative agency dealing with defense matters. For the agencies now administering its various functions, see NATIONAL DEFENSE AND WAR AGENCIES.

NATIONAL DEFENSE AND WAR AGENCIES. A thoroughgoing reorganization of national defense operations was initiated on Jan. 7, 1941, when the President, by executive order, directed that the activities and agencies of the Advisory Commission to the Council of National Defense should be coordinated through the *Office for Emergency Management*, a division of the Executive Office of the President. The Advisory Commission gradually became inoperative as its functions were absorbed by the new divisions under OEM.

On the same day that the Office for Emergency Management replaced the Advisory Commission as the over-all coordinating defense organization, the *Office of Production Management* (q.v.) was created as the primary operating agency under OEM. OPM was given responsibility for accelerating defense production, supervising the flow of materials into supplies needed by the Army, the Navy, and essential civilian services, planning an adequate labor supply, and coordinating defense purchases.

To deal with the problems arising in the civilian economy as a result of growing defense production, an *Office of Price Administration and Civilian Supply* was set up, also under OEM, on April 11. The civilian supply section was later shifted to OPM, and the name of OPACS was changed to the *Office of Price Administration* (q.v.) on August 28.

In addition to these two principal operating agencies, most of the other new offices which were created to further national defense up to December 8 and to carry on the war after that time were placed within the framework of the Office for Emergency Management. The most important of these, and the dates on which they were set up were as follows (see separate articles on each):

The *Transportation Division*, which had been established as a unit of the Advisory Commission to the Council of National Defense, was placed under OEM on Jan. 7, 1941. On December 18, the Transportation Division was superseded by the *Office of Defense Transportation*.

The *Defense Communications Board*, which had been created in September, 1940, was placed under OEM on Jan. 7, 1941.

The *Division of Defense Housing Coordination* was established Jan. 11, 1941. This agency determines the need for and location of defense housing projects, and coordinates the work of other federal housing agencies.

The *Information Division*, which had been set up under the Advisory Commission to the Council of National Defense, was formally placed within the Office for Emergency Management on Feb. 28, 1941.

The *National Defense Mediation Board* was set up March 19, 1941, to adjust labor disputes in defense industries upon certification by the Secretary of Labor.

The *Division of Defense Aid Reports* was established May 2, 1941, to supervise administration of the Lend-Lease Act. On Oct. 28, 1941, the title of this agency was changed to the *Office of Lend-Lease Administration*.

The *Office of Civilian Defense* was established May 20, 1941, to coordinate preparations for the protection of the civilian population.

The *Office of Scientific Research and Development* was set up June 28, 1941, for the purpose of assuring adequate provision for research on scientific and medical problems relating to national defense.

On July 30, 1941, the *Office of the Coordinator of Commercial and Cultural Relations between the American Republics* was placed under OEM, and

its name was changed to *Office of the Coordinator of Inter-American Affairs*.

The *Supply Priorities and Allocations Board* was created within OEM on Aug. 28, 1941, to establish general policies in regard to the supply and distribution of materials under the defense and war programs.

The *Office of the Coordinator of Health, Welfare, and Related Defense Activities* was placed under OEM Sept. 3, 1941, and its name changed to the *Office of Defense Health and Welfare Services*.

An *Office of Facts and Figures* was established on Oct. 24, 1941, to formulate programs designed to facilitate a widespread and accurate understanding of the status and progress of the national defense effort and of the defense policies and activities of the Government; and to advise with the several departments and agencies of the Government concerning the dissemination of such defense information.

Apart from OEM, several of the Government departments have been given special responsibilities and work to do in connection with defense and the conduct of the war.

Also separate from OEM and reporting directly to the President, the following new agencies have been set up to handle various phases of the war effort: *Selective Service System, Permanent Joint Board on Defense of United States and Canada* (see CANADA); *Coordinator of Information; Board of Economic Warfare*

The organization of the nation for war at the end of the year was therefore concentrated in the hands of the President through the regular Government departments and a few special agencies in the Executive Office of the President, and through the Office for Emergency Management. These were the agencies responsible for the purchase, production, and use of war materials and materials needed for war, whose authorized cost had reached more than seventy-five billion dollars by the end of the year and was already scheduled to go far beyond that figure.

See UNITED STATES under *Defense*. For a brief account of changes made early in 1942, see WAR PRODUCTION BOARD and (for the War Labor Board) LABOR CONDITIONS.

WAYNE COY.

NATIONAL DEFENSE EXPOSITION. See FAIRS, EXPOSITIONS, AND CELEBRATIONS.

NATIONAL DEFENSE MEDIATION BOARD. As America's program of rearmament began to make a real dent in the country's economy in the winter of 1940-41, the upward swing of industrial activity carried with it rises in the cost of living and in the conflicts between labor and management. As is usual in such times, the number of strikes also increased, from 147 in December, 1940, to 316 in March, 1941. Man-days lost through strikes rose rapidly from 458,314 in December, 1940, to 1,543,803 in March, 1941. (See the article on LABOR CONDITIONS under *Strikes*.)

On Mar. 19, 1941, the President created the National Defense Mediation Board by Executive Order. It was given the task of adjusting labor disputes in defense industries, and the following three steps were outlined in the Executive Order: (1) Collective bargaining between the parties before the Board; (2) Voluntary arbitration, and (3) In case both of these failed, the Board was empowered to make findings of fact and public recommendations. All disputes had to be certified to the Board by the Secretary of Labor and could only be done so after

the U.S. Conciliation Service had been unable to settle them.

Originally composed of 11 members—4 from management, 4 from labor, and 3 representing the public—the Board's membership was increased from time to time by the addition of alternates for each of the three groups until it reached a top of 41. Labor's representation was equally divided between the American Federation of Labor and the Congress of Industrial Organizations. No representatives from the railroad brotherhoods were on the Board since all railway labor disputes are handled by the National Mediation Board under the terms of the Railway Labor Act. William H. Davis, originally named as Vice Chairman, succeeded Dr. Clarence A. Dykstra as Chairman when the latter resigned July 1. The Executive Order empowered panels of the Board composed of representatives of each of the three groups to exercise all the functions given the full Board for settling disputes. This authority was exercised in all except two cases, which were referred to the full Board for final decision.

During the Board's existence, 114 cases involving a total of 1,190,789 men were certified to it. Only 22 cases involving 98,098 men were still unsettled when the Board was replaced by the National War Labor Board Jan. 12, 1942. The Board's success in averting threatened strikes or in obtaining resumption of production when strikes were certified was even greater than its ability to dispose finally of disputes. Inheriting a large number of unsettled strikes when it was first created, the Board gradually whittled these down until by November 24, 100 per cent of the men in pending cases were at work. This record of a calendar free from strikes was maintained from then until the Board was abolished. During the last few months of its existence, all the Board had to do to get a strike called off or postponed was to promise the parties a swift and fair hearing. In this way it established by voluntary methods a cooling-off period in defense industries which many persons had proposed be done through legislation.

The President of the United States was asked to intervene in four cases where the Board failed to settle controversies. In the first, involving the North American Aviation, Inc., Federal troops were used to open the plant which had been shut down by the union in violation of an agreement to maintain production during mediation before the Board. When two companies, Federal Shipbuilding and Drydock Co., and Air Associates, Inc., refused to accept Board recommendations, and strikes ensued, the government seized their plants. The fourth case, the captive mine dispute, was settled by acceptance of presidentially-offered arbitration after the union had rejected the Board's recommendation. All plants had been returned to their owners by Jan. 7, 1942.

On November 11, the C.I.O. members of the Board resigned in a body in protest over the Board's decision denying the union shop to the United Mine Workers in the captive mine case. From that time on, the Board did not hear any cases involving C.I.O. unions though it proceeded as usual with all other disputes. On December 17, the President convened a labor-management conference composed of 12 representatives from each group, and asked them to make a unanimous agreement for settling all industrial disputes peacefully for the duration of the war. On December 23, the conference announced that it had agreed on this point and asked the President to set up machinery for the peaceful settlement of disputes. On Jan. 12, 1942, pursuant to this agreement, the President established by

Executive Order the National War Labor Board to be composed of 12 representatives equally divided between those representing the public, management, and labor. The Board was empowered to take over all unsettled disputes still on the Mediation Board's calendar and the latter Board was abolished. William H. Davis was named chairman of the new Board. See *LABOR CONDITIONS under Governments and Labor Disputes* and also under *Strikes*.

NATIONAL INCOME. Income payments to individuals in the United States, according to the U.S. Department of Commerce, totaled \$80,473,000,000 for the first eleven months of 1941, as compared with \$68,172,000,000 during the corresponding period in 1940. This increase of 18 per cent, following an increase of 7.6 per cent registered during the preceding year, indicated that the national income in 1941 would reach the highest figure in history, well above the \$83,400,000,000 of the previous peak year, 1929.

The greatest increase in 1941 (22 per cent) was in the category of salaries and wages, and especially in the field of manufacturing where payrolls rose 40 per cent. During the latter part of the year, however, the increase was limited to relatively few industries with others suffering from shortages of raw materials; the shipbuilding payroll, for example, almost trebled in November, 1941, as compared with November, 1940, and in the aircraft industry it was more than two and one-half times as high. The net income of farm operators increased almost one-third in the eleven-month period, with seasonal declines smaller than usual. This is of interest when it is recalled that a decline in income from agriculture appears as the most significant change when the national income is reviewed over a period of two decades.

Final figures for 1940 showed a total national income of \$76,035,000,000. Income by industrial origin was estimated as follows (in billions of dollars): Agriculture, 6.0; manufacturing, 19.2; construction, 2.4; transportation, 5.3; trade, 10.1; finance, 6.2; government, 10.2; service, 9.3; other, 7.3; total 76.0. The most significant change within the preceding two decades was the decline in income from agriculture, which totaled over \$11,000,000,000 in 1919. See *LIVING COSTS AND STANDARDS*.

NATIONAL INVENTORS COUNCIL. Created in August, 1940, by the Secretary of Commerce, the Council is a central clearing house for inventions and suggestions deemed valuable to the war effort. Since its creation, more than 40,000 inventions have been carefully examined and evaluated, a surprisingly large number of which have proved meritorious and useful.

Dr. Charles F. Kettering, President of the General Motors Research Corporation, was chosen as Chairman and other members include eminent scientists, inventors, Government officials, and business men well versed in the industrial application of new devices, all of whom serve without compensation. The Council staff of approximately 35 employees, includes a corps of competent engineers and technical experts—each a specialist in his own

field—thus assuring competent preliminary evaluation of all inventions received.

Proposals received by the Council are first studied by these engineers, and those that obviously possess no merit receive little if any further consideration. However, those appearing useful are placed in the hands of one of the twelve appropriate Committee Chairmen charged with handling such matters. These Committees are as follows: 1. Ordnance and Firearms; 2. Land Transportation and Armored Vehicles, 3. Aeronautics; 4. Remote Control Devices; 5. Instruments; 6. Naval Warfare; 7. Signals and Communications; 8. Chemicals and Chemical Warfare; 9. Internal Combustion Engines; 10. Metals and Metallurgy; 11. Forts, Fortifications, Other Structures, and Camouflage; 12. Clothing, Sanitation, Health, and Commissariat.

If the Committee Chairman concurs with the engineer, the proposal is then brought before the Council as a whole. Affirmative action is followed by transmitting the proposal to the proper using agency, together with reasons for such disposition. Additionally, a network of liaison officers has been established between the Council and various branches of the War and Navy Departments and Office of Production Management.

The Council has made every effort to acquaint the public with its functions, and all ideas are carefully and sympathetically considered, regardless of how radical they may appear at first glance. It is felt that one really important invention may contribute largely to the winning of the war, and both Council members and staff employes are constantly on the alert for all ideas that may help in any possible manner.

CHARLES F. KETTERING.

NATIONAL LABOR RELATIONS BOARD (NLRB). Despite the overall increase in the National Labor Relation Board's current work (25 per cent over the year 1940), its staff of approximately 750 people have closed more cases than ever before and have succeeded in settling more of them informally, that is, without the necessity of going to public hearing and decision. An example of the increased ability to obtain agreement of employers and unions to settlement of cases involving the question of who is entitled to represent employees (representation cases) appears in the fact that 2,050 such agreements were reached in 1941, more than half the representation cases closed, as compared with 38 per cent during the previous year. The total of 3,698 representation cases closed in 1941 is higher than in any previous year in the Board's history.

The 9,151 charges and petitions received during the last fiscal year represent the second highest case load in the Board's history. The peak was in 1937-38 when more than 10,000 cases came to the Board following validation of the Act by the Supreme Court. The next two years saw a marked decline in incoming cases, so that 1941 represents a 50 per cent increase over 1940. The 9,151 cases filed with the Board last year involved 2,373,361 workers. The acceleration in the number of new cases coming to the Board followed closely the rising curve of defense production. The incoming cases during the last quarter of the fiscal year were nearly twice those during the first quarter.

Within this 50 per cent absolute increase in cases brought to the Board is an interesting relative shift between representation and complaint cases. For the five preceding years of Board history representation cases averaged about one-third and complaint cases two-thirds of all cases. But in 1941 the number of representation cases increased almost

100 per cent over 1940, while at the same time complaint cases were only increased by 22 per cent (4,334 compared with 2,243). Unions affiliated with the American Federation of Labor filed the largest number of charges and petitions—4,261. Unions affiliated with the Congress of Industrial Organizations filed 3,740. Other unions, either organized on a national basis or organized among the employees of a single employer filed 595; while individuals filed 476 charges.

The conduct of secret ballot elections is one of the chief functions of the Board in effectuating the purposes of the Act. Last year the Board conducted 2,566 elections or pay roll checks, compared with 1,192 for the previous year. Of this total, A.F.L. unions participated in 1,396 and won 925 or 66 per cent. C.I.O. unions participated in 1,414, winning 991 or 70 per cent. A total of 729,737 valid votes were cast in elections during the year, with A.F.L. unions polling 48.3 per cent and C.I.O. unions polling 61.7 per cent.

Board orders are not self-enforcing. The Board may seek enforcement, and any person aggrieved may seek review of the order in the Federal Circuit Court of Appeals. Ten cases involving the Board were decided by the Supreme Court during the past fiscal year. In four the Board's order was sustained in full, in one the order was sustained as modified slightly by the court below; and in four others the Board's order was modified either slightly or more substantially; in the remaining case the Supreme Court, upon procedural grounds, declined to pass upon the order.

The various Circuit Courts of Appeals rendered 124 decisions on Board orders in unfair labor practice cases, an increase of approximately 97 per cent over the 63 decisions rendered in the previous year, and an increase of about 226 per cent over the 38 decisions rendered in 1939. Of the cases decided in the present year, Board orders were enforced in full in 65 cases and were enforced as modified in 36 cases. In 23 cases Board orders were set aside, although in 3 decisions the cases were remanded to the Board for further proceedings; in one case the proceedings were remanded by the Supreme Court to the Court below for the redetermination of the case on the record as certified by the Board; in another the case settled prior to the Board's filing of a petition for certiorari; and in still another the case was reopened on motion of the Court and resulted in a modification of the Board's order.

During the year the Board created a Field Division responsible for administrative work in the field offices and for administrative case work, and to coordinate the work of the field with the Washington staff of the Board. To provide the most expeditious handling possible and to secure accuracy the Director of the Field Division, with the aid of three Assistant Directors, handles requests from the 22 Regional Offices for authorization to proceed in complaint and representation cases. The Board also appointed an Executive Secretary to act as official Secretary to the Board, to handle administrative matters not under the Field Division. See LABOR CONDITIONS under the section on *Collective Bargaining*.

NATIONAL MEDIATION BOARD. See RAILWAYS.

NATIONAL PARK SERVICE. During 1941, its silver jubilee year, the National Park Service carried on an intensive interpretive program to familiarize Americans with the background and significance of the national parks and other scenic and historic units of the Federal Park System, thereby contrib-

uting abundantly to the building and maintenance of national unity and morale.

Approximately 21,050,000 persons visited one or more of the 164 units of the Federal Park System during the 1941 travel season. Most of these travelers participated in the campfire talks, nature hikes, auto caravans, and other interpretive features conducted by trained naturalists and historians.

At the close of 1941 the 21,609,290-acre Federal Park System included 26 national parks, 82 national monuments, and 56 other nationally important scenic and historic areas. During the year three national historic sites were designated by the Secretary of the Interior under authority of the Historic Sites Act of Aug. 21, 1935. One—Fort Raleigh in North Carolina, scene of the first attempted English settlement in the United States—was included in the Federal Park System. The other two—the old Spanish Mission San Jose de Aguayo, near San Antonio, Tex., and the home in Oregon City, Oreg., of the Pacific Northwest pioneer, Dr. John McLoughlin—are still private properties, but the National Park Service is cooperating in their preservation and use, under terms of an agreement entered into with the owners.

Appropriation by the Texas legislature of \$1,500,000 for the purchase of lands within the Big Bend National Park Project was a major conservation development of the year 1941. Congress in 1935 authorized establishment of this park as a unit of the Federal Park System at such time as full title to 788,682 acres within its specified boundaries has been vested in the Federal Government. Mexican authorities are interested in reserving several hundred thousand acres of land for park purposes on their side of the border, the two sections to form a great international park.

Establishment of still another park area on the United States-Mexico border, to be known as the Coronado International Memorial, was authorized by Congress in August, 1941. The setting aside of United States lands for this memorial is dependent upon similar action being taken by the Republic of Mexico.

Included in the 1941 roster of National Park Service activities are the following: Assistance given defense agencies in the planning and development of recreational facilities for men in the armed forces, in the study of soil mechanics and foundation engineering, and in the preparation of recreational area maps for the Army's morale division; collaboration with eight Southern States and with various Federal agencies in a recreational resources survey of the Tennessee and Cumberland River watersheds; and completion or partial construction of approximately 310 miles of the 485-mile Blue Ridge Parkway connecting Shenandoah and Great Smoky Mountains National Parks.

For a list of the National Parks, see YEAR BOOK for 1940.

NATIONAL WAR LABOR BOARD. See WAR LABOR BOARD.

NATIONAL YOUTH ADMINISTRATION (NYA). To meet the increasing shortages of experienced and trained labor the National Youth Administration during the fiscal year ending June 30, 1941, trained 907,946 young men and women for jobs in the war produc-

tion industries. Under the impetus of the war program a large part of the out-of-school program of the NYA has been concentrated on training young people for employment in the vital industries—aircraft production, machine tools, and shipbuilding.

Because of the occupational requirements of the war industries, the Administration is emphasizing work experience in the metal and mechanical fields. In workshops located throughout the country NYA youth gain experience in machine operation, sheet metal work, welding, riveting, and forging. While they are acquiring the basic skills, NYA youth are also producing goods and services for public agencies, including the U.S. Army and U.S. Navy.

Almost half of the young people employed by the National Youth Administration are young women. Their activities include machine work, industrial sewing, clerical work, hospital assistance, and the preparation of foods.

During the past twelve months more than 400,000 young people who were given their practical experience and training by the NYA went into jobs in private industry, primarily industries concerned with war production and national defense.

In addition to the out-of-school program the NYA employs needy students on part-time jobs in 28,000 high schools and 1,700 colleges and graduate institutions. Between July 1, 1940 and June 30, 1941, 605,160 students who otherwise would have been unable to continue their education were employed by the NYA. Many of these students are preparing for technical and professional fields essential to the national defense.

The National Youth Administration was first set up on June 26, 1935 under Executive Order No. 7086 as a part of the Works Progress Administration. On July 1, 1939 it was transferred to the Federal Security Agency through Reorganization Plan I. It is now functioning under the provisions of the Labor Federal Security Appropriations Act of 1941.

In each State and also in the District of Columbia, Hawaii, Alaska, and Puerto Rico there is a State Administrator who has a major share in the formation of policy. A National Advisory Committee representing labor, industry, agriculture, education, and religion advises the President directly on policies and activities affecting the NYA. Local and state advisory committees help fit the program to local needs.

NAURU. See AUSTRALIA under *Area and Population and History*.

NAVAL PROGRESS. The extension of the European war into a world conflict involving all the important naval powers (see WORLD WAR) has meant a shift of interest from peacetime construction and expansion to the performance of ships and weapons in the final test of war. At the same time the extension of the conflict has given increased importance to control of the seas, as the barrier and at the same time the great avenue of communication between the continents, and to the achievement of such control, whether by weapons operating upon, above, or beneath the surface. This struggle for control of sea communications has centered in three areas; the battle of the Atlantic to maintain an uninterrupted flow of munitions, supplies, and perhaps ultimately man power to Britain; the Mediterranean conflict, where in the African campaigns both sides have been almost solely dependent on sea communications; and finally the war in the Pacific, where

again the course of the conflict has hinged vitally on sea control. The warfare in each of these areas, which will be considered separately, has tested the efficacy of all types of naval armament, and demonstrated in particular the immensely increased present importance of air power as an essential element of sea power.

Battle of the Atlantic. The critical situation in the Atlantic became evident with the heavy shipping losses during the spring months, rising to 589,273 tons in April and over 1,400,000 tons for the second quarter-year. Most of the losses—two-thirds, according to a statement of the German naval chief Admiral Raeder—were the result of submarine warfare, which, as indicated by the threats of Nazi leaders, was pushed to full intensity in these early months. Later, according to an Admiralty estimate, the losses from submarines were reduced to about 40 per cent, the rest being due to mines, aircraft, and surface raiders.

With the general marshalling of British traffic in convoys, the "wolf pack" tactics of German submarines was further developed. Aircraft—or U-boats in the outer areas—were employed to spot and trail convoys and to call in other submarines for concerted attacks. These might continue for more than one night, the U-boats attacking in succession and firing at random on the flank of the convoy, though on occasions a more daring submarine would strike directly through the convoy formation, firing its torpedoes on each side till the supply was exhausted. Aircraft attacks were also a serious menace, since, without the use of Eire bases, fighter planes of the British Coastal Command could offer little opposition to long-range Focke-Wulf bombers operating from Norway and the French coast.

In the second half of the year, though exact figures were not revealed, Admiralty statements showed that total tonnage losses were cut by nearly two-thirds. Notable among the causes for this decline was the further extension of American patrol areas from April on, along with the sending of forces to Iceland in July, and the definite orders in September that American naval vessels should engage submarines carrying on unrestricted commerce warfare. Furthermore, after July German aircraft and some submarines were diverted to the Russian campaign, and the R.A.F. struck heavily at German naval bases and construction plants.

Another effective counter-measure, aside from additional corvette and destroyer escorts, was the increase of flying patrols in British waters and the conversion of merchant vessels into catapult aircraft carriers for use with the convoys. Aircraft thus put into service proved a potent menace to both enemy bombers and U-boats. Radio and supersonic detection devices were also further developed, though little of this progress could be revealed. In England the convoy system was highly organized, with an admiral in command of the western approaches to the British Isles, 39 retired officers as commodores commanding ocean convoys, and other commanders drawn from the merchant marine and naval reserve.

A typical convoy engagement was that of December 17–21, in which according to the Admiralty account, on the first day a U-boat was brought to the surface by depth bombs and blown apart by gunfire, while two Focke-Wulf bombers were driven off by naval planes. The next day another submarine was finished off in similar fashion, and the destroyer *Stanley* (ex-U.S. *McCalla*) was sunk by torpedo. On the 19th the escort sloop *Stork* rammed a third U-boat, and the Focke-Wulfs, returning to the attack, lost two planes shot down by fighters from the converted aircraft carrier *Audacity* (ex-

German merchantship *Hanover*). After two more days of fighting, in which the *Audacity* was also sunk, the attacks were finally ended by aircraft reinforcements from the British coast.

In another extraordinary encounter in September a Hudson aircraft of the Coastal Command disabled the *U-570* so that it could not dive. The *U-boat* hoisted a white flag, and was then watched by the Hudson, and later by a Catalina flying boat, until some 13 hours later a British destroyer took it in tow.

Commerce destruction by German submarines and aircraft was supplemented by surface raiders in distant waters and by attempted forays of major naval vessels. In March the battle cruisers *Scharnhorst* and *Gneisenau* were reported in the Atlantic and joining with *U-boats* in concerted attacks on shipping, but after March 28 they were penned up in Brest, where they were subjected to repeated R.A.F. bombings. The *Scharnhorst* on July 22 was still able to move to the port of La Pallice, 240 miles to southward. On the 24th, heavy day and night air raids, with fighters and bombers, including Boeing fortresses, were directed against the ships in both ports. The *Scharnhorst* was declared to have received at least two direct hits and her sister ship seven, while 15 bombers and 7 fighters of the British and an equal number of German fighters were shot down in the mêlée. Later the *Scharnhorst* got back to Brest, and at last accounts the two ships, with the cruiser *Prince Eugen* which had joined them, remained afloat—a testimony, even though they were badly damaged, to the excellence of German ship construction and the possibilities of anti-aircraft defense.

On May 21 aircraft reported the new German battleship *Bismarck* and the 10,000-ton cruiser *Prince Eugen* about to put to sea from Bergen, Norway. Two nights later they were located and trailed by British scouts in the Denmark Strait between Greenland and Iceland, and in an engagement on the 24th with the *Prince of Wales* and *Hood*, the *Bismarck* sank the *Hood* at 23,000 yards within four minutes of opening fire. The destruction of this big 42,100 ton battle cruiser of post-Jutland design with 12-inch armor, though attributed to a "lucky hit," raised once more questions as to the efficacy of her type and of British protective measures, especially against transmission of shell explosions to the magazines.

That night, aircraft from the carrier *Victorious* succeeded in scoring a torpedo hit which slowed down the *Bismarck*, and though both German ships eluded their pursuers in the fog and darkness, and the *Prince Eugen* got away to Brest, the *Bismarck* was located 30 hours later by a Catalina scouting plane some 500 miles west of the Channel. Two torpedo hits from aircraft launched by the *Ark Royal* damaged her propellers and rudder, and after a hail of high explosive shell from the *Rodney* and *King George V*, and a half dozen or more torpedo hits from planes and destroyers, the wrecked ship was finished off on the morning of the 27th by the cruiser *Dorsetshire* with torpedos. The action demonstrated the extraordinary staying qualities of a ship with modern protection and compartmentation, and the value of aircraft scouting and preliminary torpedo damage, making possible the battleship attack. Thus within a week was ended the mission, presumably of commerce destruction, of one of the world's most powerful battleships. Six supply ships sent out for her use were later intercepted.

Mediterranean Warfare. In the Mediterranean a desperate sea and air conflict was waged to maintain British east-west communications with Egypt

and Axis communications with Libya. While throughout the year it remained beyond the ability of the British to halt the passage of well-guarded enemy convoys, yet the fact that the British line through the Mediterranean narrows was never completely blocked stands as a remarkable example of the staying qualities of the British navy and the shortcomings of Italy's vaunted strength in this area. The two British advances into Libya at the beginning and the end of the year, as well as the operations in Greece, were all based upon and made possible by sea power, and in both African campaigns the Navy rendered invaluable service in transport of water, munitions, and prisoners and bombardment of coastal strongholds, supporting the army's right flank. In fact both campaigns demonstrated the essential need of close integration of all arms—sea, land, and air—in present-day war.

A crucial test of sea control came in the second week of January when some 40 or 50 German Stuka bombers, which had come as a reinforcement to the Italians, joined the latter's torpedo craft in an all-day attack on a British convoy. In groups of three the Stukas dived almost vertically to as low as 100 feet. The cruiser *Southampton* was sunk, and the carrier *Illustrious*, with planes still aboard, was nearly wrecked by a 1,000-lb. bomb. Though she made Malta under her own power, she was later laid up till autumn in Norfolk, Va., for repairs. During this period there was a considerable diversion of Egyptian supplies to the Cape route, but the threat of the German bombers was afterward diminished by heavy losses in repeated attacks on Malta and by a British raid on their base. In these months neither Italian ships nor aircraft were a serious menace. On February 9 the Gibraltar Squadron, including the *Malaya* and *Ark Royal*, openly bombarded Genoa harbor works for twenty minutes at dawn, and on March 28 in the action of Cape Matapan the Italian fleet suffered its most serious blow in the war.

Even the briefest account of this involved battle in the Ionian Sea reveals its significance as an example of effective air reconnaissance and, in the words of the Admiralty, "the first skillful coordination of naval operations with attacks launched by aircraft, resulting in the enemy's speed being reduced and our main units being able to force action upon a reluctant enemy." On March 27 aircraft scouts radioed to Alexandria the presence of an Italian squadron of 3 battleships, 11 cruisers, and 14 destroyers off Sicily, bound southeastward and apparently bent on a thrust at British traffic with Greece. The squadron later separated, with the battleship *Vittorio Veneto*, 6 cruisers, and 7 destroyers in the more southerly division. The other had no part in the battle. The opposing force led out of Alexandria by Admiral Sir Andrew Cunningham included the battleships *Warspite* (flagship), *Valiant*, and *Barham*, the new aircraft carrier *Formidable*, 11 cruisers, and 14 destroyers, together with a number of Greek destroyers which later joined in the operation.

Following contacts on the morning of the 28th by the cruiser forces, and successive advances and withdrawals suggestive of the early moves at Jutland, a series of attacks were launched during the afternoon by torpedo planes from the *Formidable*, and others by R.A.F. bombers. At the first attack the Italians turned back, but three hits were made on the *Vittorio* which slowed her speed to 15 knots, and others were claimed on the cruisers.

At 10:10 p.m., as the British battle fleet came up with the enemy, an Italian cruiser was reported 3

miles to port of the fleet's course. Only a few minutes later a searchlight from the destroyer *Greyhound* lighted up other cruisers hardly 4,000 yards distant on the battleships' starboard bow. Within five minutes the 10,000-ton *Fiume* and next her sister ship *Zara* were wrecked by accurate salvos from the *Warspite* and her consorts at this close range. The *Pola*, the ship to port, was sunk by torpedo after the saving of part of her crew. At this point the British main force withdrew to avoid a torpedo attack, in which two Italian destroyers met their end. The British claimed also the sinking of a smaller cruiser and another destroyer. The *Vittorio*, badly damaged under water, had meantime limped away toward the Italian coast. In the early stages of the action, better provision for air scouting might have given the Italians more timely warning of the heavy opposition; and the Italian ships were evidently weak also in anti-aircraft defense. The loss of the three big 8-inch gun cruisers was a severe blow, and the fourth and last of this class, the *Gorizia*, was reported torpedoed at the close of July.

In the British withdrawal from Greece at the close of April, and more notably in the Cretan operations a month later, the conditions at Cape Matapan were reversed, and British naval forces suffered from inadequate air support and an overwhelming shore-based enemy air power. The evacuation from Greece was creditably accomplished with the loss of but two destroyers and four transports, only one of which was loaded. In the German attack on Crete—a first instance, if Norway be excepted, of an air-supported overseas invasion in the face of superior surface naval strength—the movement of troops was actually, in the first stages, accomplished by air, since the British navy effectively held up surface transport till its withdrawal from the north of the island was made necessary by the swarm of unopposed enemy planes. A novel German device during the attack was the use of gliders towed by aircraft for the transport of troops.

In these operations the British lost four cruisers and six destroyers. The cruisers were the *Fiji* (8,000 tons), the *Gloucester* (9,400 tons), the *York* (8,250 tons) under repair at Suda Bay, and the small anti-aircraft cruiser *Calcutta*, sunk during the final evacuation. Of the destroyers the *Juno*, *Kashmir*, and *Kelly* were among the best in the service. The *Greyhound*, *Hereward*, and *Imperial* were older boats of 1,300–1,400 tons. The battleship *Warspite* was so badly damaged as to be sent for repair to the American West Coast.

Subsequent British warfare on Axis supply lines to Africa, according to a statement of Admiral Cunningham in October, resulted in damage "up to 50 per cent of all convoys." Most of this injury was inflicted by submarines and by aircraft of the Fleet Air Arm and R.A.F. Out of one heavily guarded convoy which consisted of three large liners, a British submarine in September reported the sinking of two liners, one of them believed to have been the *Vulcania* of 24,469 tons, and damage to a third.

An Italian torpedo-plane attack on a British convoy in the same waters at the close of September resulted in the shooting down of 10 Italian planes, 6 by ships' guns and 4 by aircraft from the *Ark Royal*. One torpedo hit on the battleship *Nelson* reduced her speed to 15 knots, and one ship of the convoy, too badly injured to be taken in tow, was sunk by the escort. The best success registered by Axis submarines was the torpedoing of the *Ark Royal* on November 13, some 50 miles east of Gibraltar. Though taken in tow, the carrier sank next day, after the rescue of most of her crew. Often

previously reported sunk, this famous ship had taken part in the search for the *Graf Spee* in 1939, in the operations off Norway, in the bombardment of Genoa in February, 1941, in the chase of the *Bismarck*, and again in the Mediterranean as an effective weapon, with her planes, for commerce defense and destruction.

Warfare in the Pacific. In the Pacific, the air attack on Pearl Harbor on December 7, prior to a war declaration, had the effect for a period of strengthening Japanese sea control in the eastern area, and facilitated the landing operations immediately undertaken in Malaya, the Philippines, and later in Dutch, British, and American island possessions. These operations, however, were not accomplished without very serious losses of naval vessels and planes. At Wake Island alone, reports from the garrison showed the destruction, between December 8 and December 22, of one Japanese cruiser, four destroyers, a submarine, and a gunboat. One of these, in addition to numerous Japanese aircraft, was destroyed by the five planes available to the Marine Aviation unit, after the destruction of seven of its own grounded planes in the first attack. The remaining six ships were sunk by 5- and 3-inch guns of the Marine Battalion on shore. Other Japanese ship losses are noted later under the subheadings *Netherlands, Japan, and United States*.

The American losses at Pearl Harbor, as given in Secretary Knox' report of December 15, were the battleship *Arizona* of 1916 date, sunk by a bomb which went down the stack; the old target ship *Utah* (1911); the three destroyers *Cassin* (1936), *Shaw* (1936), and *Downes* (1937), efficient ships of 1,500 tons, and the old mine layer *Oglala* of 4,200 tons. The battleship *Oklahoma* was capsized but could be righted and repaired. Details of damage to other ships were not given, though it was stated that repairs on some would require from a week to several months, and that the naval dry docks were not seriously injured. Losses of personnel were: officers, 91 dead, 20 wounded; enlisted men 2,638 dead and 636 wounded.

The Japanese lost three submarines, all of the "baby" type. One of these was sunk by a patrol plane and a destroyer outside the harbor, but the news of this which reached the base watch officer at 7:12 a.m. was not taken as a warning. The other two were destroyed within the harbor, the protective net for which had been opened for mine sweepers at 5 a.m. and not closed thereafter. In the aircraft attack from 7:55 to 11:00, launched primarily against ships and airfields, the Japanese lost 41 out of an estimated total of 150 to 200 planes engaged. The fact that all the planes destroyed were of the single motor type indicated that the entire assault was made from aircraft carriers, of which three or four were probably used, together with surface escorts. The report of the special investigation commission indicated that although definite warning of the critical situation had come from Washington on November 27 and later, no information had been given by Naval Intelligence regarding movements of Japanese carriers, and officers in Hawaii had regarded an air raid as unlikely. Neither a naval distant reconnaissance nor an army inshore air patrol was operating on the date of the attack. A recently installed aircraft warning system was operated from 4 to 7 a.m., but the warning heard at 7:05 by an inexperienced operator was disregarded. These conditions were known by the Japanese, who also provided their fliers with accurate charts showing the location of ships, airfields, and other harbor installations.

Although the Japanese declarations of war on

the United States, Britain, and the Netherlands was made on December 7, the Netherlands Indies authorities, rendered suspicious by the movements of Japanese transports, had naval forces at sea as early as November 30. One Dutch submarine, later destroyed by mine with but one survivor, was credited with the sinking of four loaded troop transports off the east coast of Malaya on the night after war was declared.

The most serious loss affecting naval strength in the Far East was that of the 35,000-ton British battleship *Prince of Wales* and the 32,000-ton battle cruiser *Repulse*. Operating east of Malaya without air support, these ships were sighted by Japanese aircraft on the 9th and heavily attacked by torpedo-planes on the following day. In the first action between 11:10 and 12:10 the *Repulse* was reported to have avoided 19 torpedoes. In the second, which soon followed, she was struck twice and quickly sank. The battleship was also sunk in the second attack. Since destroyers in rescue work were not fired on, the loss of lives was limited.

This and other actions already recounted indicate the continued vulnerability to torpedo-plane attack of ships unsupported by aircraft, though, as shown in certain engagements in the Mediterranean, even such attacks may be fought off by skillful use of anti-aircraft fire. The lesson to be drawn, however, is not separation of the air and naval arms, but closer coordination of all weapons applicable to sea defense, together with an ever-increased need for speed and alertness in adapting construction and strategy to new developments in warfare.

Comparative Naval Strength. In view of incomplete reports of new construction from the belligerent nations, and the very general practice of concealing or delaying reports of losses, some of the figures in the accompanying table must be regarded as approximations only, based on all data available. In preparation of the table, reports and estimates from many sources have been given careful study. Losses, so far as known, have been deducted up to July 1, 1941, and the figures, as of that date, may be regarded as an adequate working basis for comparisons of naval strength. Further information regarding naval activities in the different countries follows.

Argentina. The destroyer *Corrientes* of the Argentine navy was lost on October 3 by collision with the cruiser *Almirante Brown* during exercises. The *Corrientes*, one of six sister ships, was completed in England in 1937. She was of 1,375 tons displacement, with a speed of 35.5 knots. The *Almirante Brown* is an Italian built cruiser of 6,800 tons.

In addition to the nine small 550-ton mine-sweepers recently completed in Argentina, the naval transport *Ushuaia*, of 1,275 tons and 12-knot speed, was launched in August from the National Shipyard at Rio Santiago. This yard, the most complete in the country in shops and trained personnel, is to be expanded to a capacity for construction of naval and merchant ships up to 10,000 tons. It is estimated that in the *Armada Nacional* and the two private yards of Argentina small ships can be built more cheaply than in the United States, but hull plates and engines for naval vessels must be imported.

Australia. Like Canada, Australia has engaged in an extensive naval shipbuilding program for her own and Empire service. Of the five *Tribal* class destroyers under construction in Australia, two, the *Arunta* and *Warramunga*, were launched in 1940, and it was expected that all five would be in service by the summer of 1942. Three other destroyers are

to be built at the Cockatoo yard in Sydney, and some 50 escort vessels, 20 of which are for the British, are under way at this and other Australian yards. The escort craft are described as stout little vessels of about 800 tons, suitable for patrol and anti-submarine duty as well as mine-sweeping if necessary and for covering great distances in all kinds of weather. Two escort sloops of 1,060 tons were delivered in 1940, and a dozen motor torpedo boats have also been built.

Being rushed to completion in 1942 is the new graving dock in Sydney, which will be 1,100 feet long and capable of handling any of the big British or American battleships now under design. Of equal importance, in view of the threat to Singapore, are the increased fortifications and fleet facilities at the naval base of Darwin in northern Australia. Distant 1,967 sea miles southeast from Singapore, Darwin will need air protection, but is strategically located also for launching long range bomber attacks in the eastern Pacific area.

The chief loss suffered by the Royal Australian Navy in the course of the year was that of the 6,850-ton cruiser *Sydney*, which mysteriously disappeared after having sunk a German surface raider. German survivors declared that when the *Sydney* left the scene she was on fire amidships, but it is difficult to believe that she could have incurred serious injury in such an engagement. The personnel of the Australian navy numbered over 15,000 in 1941 and was being steadily increased.

Brazil. A third Brazilian-built destroyer, the *Greenhalgh*, of 1,500 tons, was launched at Rio de Janeiro in July of this year. She and two sister ships, which went afloat in July and December of 1940, follow the design of the United States *Mahan* class. Six other destroyers, closely resembling the British *Hero* class, are on the stocks. In the field of aviation Brazil has stimulated progress by the establishment of a separate Air Ministry, the first in the Western Hemisphere, to coordinate all army, naval, and civil flying. There are now over 565 airports and landing fields in the country, and all airlines have been freed from Axis control. To supplement planes purchased in the United States, Brazil now has two aircraft factories in production.

Canada. The extent of naval construction in Canada for her own and Empire needs was indicated by the announcement in October that of an original program calling for 70 corvettes, between 60 and 65 had already been launched. These were under construction at numerous yards on the coast, St. Lawrence, and Great Lakes. Twelve of the mine sweepers ordered by the British Government were nearing completion in Vancouver and Toronto. They were to be 105 feet long and built of wood. The factory of the Canadian Power Boat Company in Montreal, equipped for the rapid construction of small high-speed naval craft, completed fifteen 70-foot motor torpedo boats for the Netherlands Indies, and this year was in position to turn out M.T.B.'s at the rate of at least one boat each week. These boats have a top speed of 70 knots and a range of 1,000 miles at 22 knots. They carry four 18-inch torpedoes and depth charges.

In accordance with recommendations of the Canada-United States Defense Board for the defense of Alaska and the Pacific coast, work was begun in the spring on a series of a dozen or more air bases and refueling plants extending northward toward Alaska on both sides of the Rockies. The personnel of the Canadian Navy was expected to reach at least 6,000 by the close of 1941. From a pre-war total of 13, Canada's forces afloat now number 250, and within a year will mount to 400.

COMPARATIVE DATA—THE GREAT NAVAL POWERS—AS OF JULY 1, 1941*

* Includes 2 battleships, 3 destroyers sunk at Pearl Harbor, Dec. 7, 1941. ^b Includes 6 "super-cruisers" under construction. ^c Includes 60 overage, flush-deck destroyers traded by the United States to Great Britain in exchange for Atlantic bases. ^d Includes battleship *Haruna* sunk by U.S. Army plane off Luzon. ^e Does not include 6 seaplane carriers and unknown number of converted merchant vessels used as carriers. ^f Of these 4 are supposed to be pocket battleships of about 15,000 tons. ^g Includes 1 light cruiser, 4 destroyers, and one submarine sunk by U.S. Marines off Wake Island. ^h This represents the 19,000-ton *Deutschland* which may have been completed. ⁱ This figure is an estimate only. ^j Includes battleship *Conte di Casovra* heavily damaged at Taranto bombing. ^k Represents heavy cruiser *Gorizia*, torpedoed by British in July. ^l Laid down 1909; completed 1914-15. Obsolete design though modernized in some detail *Two* in Baltic, one in Black Sea. ^m 40,000-ton battleship building at Nikolaiev destroyed by Russians before evacuating port. ⁿ Includes 35,000-ton *Richelieu*, 95 per cent complete. ^o Represents the battleship *Jean Bart* lying at Casablanca in unfinished state. ^p Because of incomplete data regarding naval losses and new construction some of the figures in this table are approximations. ^q Britain officially reported 19 destroyers and 13 submarines lost in the entire year of 1941 (not deducted in this table).

Cuba. The Cuban Government found a use for two merchant vessels taken into protective custody in the spring of 1941 by converting them into naval transports. The two vessels were the Italian *Recca* (5,441 tons), renamed *Libertad*, and the Finnish *Koura*, renamed *Caribe*.

Finland. It was reported in October that the coast defense ship *Ilmarinen*, of 3,900 tons, was sunk in action with Soviet batteries defending the naval base at Hango. The *Ilmarinen* and her sister ship *Vainamoinen* formed the backbone of the Finnish Navy. They were built in 1932 and armed with four 10-inch and eight 4.1-inch guns.

France. Of the disintegrated French Navy, the battleship strength includes the *Richelieu*, badly damaged and capable only of harbor defense, at Dakar; the *Jean Bart* at Casablanca, and the *Strasbourg*, *Dunkerque*, *Provence*, and *Bretagne* at Toulon. Of the last four only the *Strasbourg* and *Dunkerque* are reported repaired and now fit for service after the injuries inflicted by the British at Oran. The aircraft carrier *Béarn*, a cruiser, and smaller craft are at Martinique and the training ship *Jeanne d'Arc* near by at Guadeloupe. Three heavy cruisers are at Toulon and the remaining four in British hands at Alexandria. To these may be added perhaps 11 light cruisers in home and colonial ports, including those in the West Indies; probably not more than 27 destroyers out of a pre-war fleet of 59 completed; and in all likelihood fewer than the indicated total of 82 submarines. The destroyer leader *Chevalier Paul*, 2,441 tons, was sunk by the British off the Syrian coast in June, at the conclusion of that campaign three destroyers returned to Toulon, while other light craft were interned by the Turks at Alexandretta. After allowing for accessions to the Free French and losses of other kinds, it seems unlikely that of the 85,000 officers and men in the old navy any large part remain and retain the loyalty and morale needed to turn the Vichy navy into an effective fighting force.

The Free French navy, commanded by Vice Admiral Muselier and operating with the British, includes the battleships *Coubert* and *Paris* of 22,000 tons, 4 destroyers, the big submarine *Surcouf*, and 2 smaller ones (before the loss of the *Narval*), and a considerable number of light auxiliaries. These, with about 400,000 tons of merchant shipping, are manned largely by French crews.

Germany. Following the foray and destruction of the *Bismarck* and the pinning down of the *Gneisenau* and *Scharnhorst* at Brest, discussed earlier, Allied interest turned to the *Bismarck's* sister ship *Admiral von Tirpitz*, another 35,000-ton battleship of at least 30-knot speed. Rumor had it that delay in putting this new ship into service was due to engineering difficulties experienced with her 1,500-lb. high pressure boilers. In view of the pre-occupations of the Russian campaign, and the constant hammering of the R.A.F. on German ports and shipyards, it was presumed that new naval construction had been concentrated chiefly on submarines and other light units for commerce warfare, and that progress had been greatly hampered even in this limited field. New German "T" class torpedo boats were described as 267 feet in length, with 28-foot beam, and a draught of only 6 feet 3 inches, to enable them to pass through mine fields with a minimum risk of damage. With a displacement of 600 tons, they have 6 torpedo tubes, a 4-inch dual purpose gun aft, two 37-mm. anti-aircraft guns, and some machine guns—a scarcely adequate protection against air attack.

Submarine operations in the South Atlantic and

close to the American coast indicate that the Germans have built a considerable number of large submarines of over 1,000 tons, with long cruising radius and good surface speed. Another type of submarine of recent development ranges from 500 to 800 tons, with a cruising radius of 8,000 to 10,000 miles and at least 18 knots speed on the surface. For attack against well guarded convoys and armed merchant ships, this type has high maneuverability and better protection against gunfire than has ordinarily been used. For work in coastal waters the Germans are also building numerous "Minnow" type U-boats of 250 to 300 tons, with three 18-inch tubes and a surface speed of 13 knots. These may be operated with small crews, and their use may thus substantiate British Admiralty reports at the close of the year that Germany is experiencing increased difficulty in supplying her underwater craft with trained men. A clue to losses of both boats and crews is found in the statement of the Admiralty that 1,276 survivors of submarine sinkings were held prisoner. From this figure deduction must be made on the basis of a reported 700 Italian submarine captives, and allowance must also be made for the surrender of the *U-570* and at least one other German boat with their entire crews. Even so, on a liberal allowance of one-third saved from each sunk, the figures would indicate the loss of between 40 and 50 German submarines. Prime Minister Churchill spoke of 74 verified sinkings up to April, and undoubtedly the total number of boats lost up to the close of the year was much greater.

Soviet reports, to be received with considerable reserve, claimed the sinking of 9 German destroyers or large torpedo boats and 15 submarines up to the first week in August, as well as the destruction of the cruiser *Koln* and another destroyer by coastal batteries in September. One of the destroyers and three of the submarines were sunk in the Black Sea. The loss of the *Koln*, if authentic, marked the end of Germany's three 6,000-ton cruisers of this class, since the *Karlsruhe* and *Konigsberg* were destroyed by the British during the invasion of Norway.

Great Britain. During 1941 the British Navy was increased by the commissioning of the 35,000-ton battleships *Prince of Wales* and *King George V*, the 23,000-ton aircraft carriers *Formidable* and *Illustrious*, and probably one or two other carriers of this type. The extent of construction work in the lesser categories is indicated by the statement that 480 naval vessels of all sizes would be completed by the spring of the year. To relieve English shipyards, a considerable share in the building of corvettes, sloops, motorcraft, and other auxiliaries was taken over by Canada, Australia, and other overseas parts of the Empire.

Material relief was also afforded by the opening of United States Navy Yard facilities for the refitting and repair of British naval vessels. The extent of this service is indicated by the fact that during August the carriers *Illustrious* and *Formidable* were at Norfolk, the battleship *Warspite* at Bremerton, the *Delphi* and *Dido* at the Brooklyn Navy Yard, the *Orion* and *Liverpool* at Mare Island, the submarine *Pandora* at Portsmouth, two corvettes at Charleston, and a mine-sweeper at Baltimore. A useful reinforcement in the anti-submarine campaign was afforded by the transfer to the Royal Navy of 10 U.S. Coast Guard cutters, well armed, seaworthy vessels of almost 2,000 tons.

Further material aid was given by the naval forces of Britain's continental allies. The Admiralty stated in September that 187 units from these

navies were serving with the British fleet. In the larger types these included 1 Dutch cruiser; 4 Dutch, 3 Free French, 6 Norwegian, and 6 Polish destroyers; 4 Dutch, 11 Free French, and 4 Norwegian sloops and corvettes. In some instances these were British or ex-United States ships turned over, especially to the Poles and Norwegians, to replace their own craft lost during or after the German conquest of their home lands.

The general account of the war at sea has largely covered British naval operations and losses, including the battle cruiser *Hood* in the Atlantic; the new battleship *Prince of Wales* and battle cruiser *Repulse* off Malaya; the carrier *Ark Royal*, the cruisers *Southampton*, *York*, *Gloucester*, *Fiji*, *Calcutta*, and *Galatea*, in the Mediterranean. The *Galatea* was hit by three torpedoes in a dawn submarine attack on December 16 off Alexandria. Only 119 of her 580 men were saved. The list of cruiser losses just given is incomplete, and there must be added also a steady, inevitable toll of British destroyers, submarines, corvettes, and other types sacrificed in Atlantic warfare and service in many fields.

Aggressive warfare against enemy-held coasts began in March with the raid on the Lofoten Isles of Norway, in which fish oil plants were demolished, 11 enemy vessels sunk, and 215 Germans captured. In another raid on the same coast in December naval and air forces and specially trained "commandos" cooperated with even greater success.

Greece. Following the occupation of Greece in April by German and Italian forces, about 15 war vessels escaped and entered into service with the British Mediterranean fleet. These included the 9,450-ton armored cruiser *Averoff*, 7 destroyers, 4 submarines, and 2 or 3 old torpedo boats. Vessels lost included the destroyers *Leon*, *Hydra*, *Psara*, and *Condouriotis*, the submarine *Proteus*, which was sunk earlier in the war by the Italians, and numerous torpedo boats and fleet auxiliaries.

Italy. Of all the major navies in the war, that of Italy has incurred the most serious damage, having suffered a loss of perhaps half of its combatant tonnage, with a corresponding decline in fighting spirit. Of the battleships, the 23,622-ton *Conti di Cavour* was wrecked in the British air attack on Taranto of November, 1940, and the *Duilio* and *Littorio* were so damaged as to require extensive repairs. If still afloat after the Battle of Cape Matapan in March, the 35,000-ton *Vittorio Veneto* must be so injured by torpedo hits as to be unfit for service for a long time to come. This leaves only two 23,622-ton battleships, since work on the 35,000-ton *Imperio* and *Roma* is understood to have been held up for lack of materials. These ships, scheduled for completion in 1942, belong to the *Littorio* class, which Italy has regarded as unequaled in any other navy. Of her seven heavy cruisers the 8-inch gun *Zara*, *Pola*, and *Fiume* were lost at Cape Matapan, and the *Gorizia* was sunk in the following July. On September 1 it was stated that Italy had lost 30 destroyers and 4 torpedo boats since the beginning of the war, and the figures were considerably augmented before the end of the year.

To counter these losses, the sinking of the British airplane carrier *Ark Royal* on November 14 was attributed to an Italian submarine lurking east of Gibraltar, and it was definitely stated that not aircraft but Italian *Mas* (motor torpedo) boats sank the British cruisers at Crete. On the other hand, Germany claimed the credit of the *Ark Royal* sinking for one of her own U-boats, and British

sources had evidence of an infiltration of German officers in the Italian navy as a means of bolstering morale.

Japan. In the absence of full and authentic data, the figures in the table on page 400 may be taken as representing the evidence available as to Japan's naval strength up to the outbreak of war, though in the latter part of the year there was doubtless a speed-up of new construction in all categories and conversion of merchant vessels into naval auxiliaries—six at least into aircraft carriers. The two new Japanese battleships *Nissin* and *Takamatu*, of about 40,000 tons, nine 6-inch guns, and 30 knots speed, are balanced by the new United States ships *North Carolina* and *Washington*, 3 knots slower but stronger in guns and armor. Six older Japanese battleships and 4 battle cruisers date from pre-Jutland days.

The air forces of the Japanese army and navy are estimated as between 3,000 and 4,000 planes of which from 1,500 to 2,000 belonged to the navy. The large carriers *Kaga* and *Akagi* have a capacity for 60 and 50 planes respectively, while three other carriers take 30 to 40 each, and two smaller ones accommodate only about 25. From one to four aircraft are also borne by battleships and cruisers, and the five plane tenders, though they have no flight deck, take a number of seaplanes along. With adequate supply of materials, the production of the 40 or more Japanese aircraft factories is put at 1,500 to 2,000 a year. As compared with 3,000 army fliers, the number of navy fliers (in the pre-war period) was about 2,100.

A variation in cruiser design for aircraft carrying appears in the *Tikuma* and *Tone*, recent 8,500-ton ships of the *Mogami* class, which devote the entire deck space from the mainmast aft to a flight deck accommodating from 9 to 15 seaplanes. The twelve 6.1-inch guns in the main batteries of these ships are grouped together in four triple turrets. In general Japanese cruisers have been criticized as over-gunned and weak in armor protection.

Of Japan's 55 or more long-range submarines, the largest boat of recent date is the *I-16* of 2,180 tons, with 20-knot surface speed, eight tubes, and one 5.5-inch gun. At the opposite extreme are the tiny two-man subsurface craft of which several were used in the attack on Pearl Harbor. The two captured were 41 feet long, 5 feet wide, and could make 24 knots, with a cruising radius at low speed of about 200 miles. Each carried two 18-inch torpedoes and a 300-lb. demolition charge. It is known that for several years Japan has conducted special experiments with "baby" submarines of this type.

Following the surprise raid on Hawaii, Japan's well defined air superiority in eastern waters insured her the immense initial advantage of naval control in that area, and made possible the transport of troops and successful landing operations in the Philippines, the Malay Peninsula, and elsewhere, as well as the subsequent maintenance of sea communications. The Japanese naval losses, however, were severe in the first month of warfare, and not easy to replace. They included the battleship *Haruna* of 29,330 tons, 1 light cruiser, 5 destroyers, 5 submarines, a gunboat, a mine sweeper, 10 transports, and 4 supply ships, besides numerous ships damaged but not sunk.

Netherlands. Intrepid Dutch seamen operating with the remains of their navy in home waters, in the Mediterranean, and in the Netherlands Indies, rendered effective service in each area of war. Of the 24 Dutch submarines, those operating in the Mediterranean from July to October sank two 8,000-ton tankers and several transports. On a

cruise in West Indies waters and elsewhere covering 60,000 miles, the training ship *Van Kinsbergen* captured 12 Axis or Axis-controlled merchant vessels aggregating 66,000 tons. One of these was the Vichy French liner *Winnipeg*, from Marseilles, which had on board 210 Germans, 76 Austrians, and 70 passengers of undefined nationality reported to be bound for Martinique.

The Netherlands Indies naval force, besides 5 cruisers and 6 to 8 destroyers, included at least 20 submarines, a strong flotilla of mine layers, and four classes of fast motor torpedo boats. The air force, with possibly 1,000 first line craft made up in part of Curtiss pursuit planes and long range Glenn Martin bombers, operated from the naval base at Surabaya and from numerous other air fields hidden among the 2,000 or more islands of the eastern empire. In the first month of the Pacific war these forces claimed the destruction of 15 Japanese airplanes, 2 cruisers, 2 destroyers, 9 transports, and 2 merchant ships, as well as definite damage to numerous other craft of these types.

Rumania. Two submarines, the S-1 and S-2, were launched at Galatz in May, and it was assumed that they would be completed before the end of the summer and manned by Germans for use against the Soviet Black Sea fleet. There were reports also that German submarines had been shipped down the Danube in parts for assembly at the Galatz yards.

Spain. At the close of the year it was reported that the Spanish Government had completed the reconstruction of several warships remaining from the civil war and had renewed work on the building of two 1,700 ton destroyers, the *Alava* and the *Liniars*, as well as three submarines. Two mine layers, the *Eolo* and *Triton*, of 1,700 tons, should also be in readiness for service. To supply the nation's oil needs, the government had at the beginning of 1941 a fleet of 12 tankers with a capacity for 83,000 tons, and three new units under construction.

Sweden. In September the Swedish navy suffered a serious disaster from an explosion and fire in the destroyer *Goteborg* which was communicated to the sister ships *Klas Horn* and *Klas Ugglä*. All three were destroyed and also a near-by magazine. Sweden still has 7 destroyers in commission and 2 building which were to be completed in the course of the year, as well as 10 torpedo boats, and 6 small submarines. In addition to the new destroyers mentioned, an extensive naval building program provides for two 8,000-ton coast defense battleships, with four powerful 10-inch guns in twin turrets fore and aft, and belt armor 10 inches thick amidships. These ships will have a speed of 33 knots and are expected to be in commission in 1942. The program provides further for construction of several submarines and 36 mine sweepers, the larger of which may be used also as mine layers. Six motor torpedo boats were purchased abroad in 1940, and are to be increased by eight more of home construction. A unique feature of the Swedish Navy is a fleet of five ice breakers built and building. All mount anti-aircraft guns, and the largest, the *Ymer* of 4,330 tons, has facilities for aircraft operations.

Turkey. The strength of the Turkish navy is centered in the battle cruiser *Yaruz* (Goeben) taken over from Germany in 1914. In addition Turkey has 13 submarines, 4 new mine layers, and a force of older cruisers, gunboats, and auxiliary craft. Four destroyers and four submarines were completed in England and awaiting delivery.

Thailand. Early in the year, in an engagement at Kochang with the French cruiser *Lamotte-Picquet*,

a Thailand squadron suffered a defeat in which two Thai torpedo boats were sunk and the coast defense ship *Dhon-Buri* was driven ashore. Thailand has a considerable number of naval vessels of similar type which presumably fell under Japanese control in December.

Union of Soviet Socialist Republics (Russia). Although information regarding the Soviet Navy has been restricted by strict censorship, some additional data have appeared following Russia's accession to the ranks of the anti-Axis powers. The battleship strength is limited to three old vessels, reconstructed to some extent in the period from 1926 to 1931. Of two 35,000-ton battleships planned, one, the *Trettni International*, was laid down in 1939, but since most of the materials for her construction had to be imported from abroad, it seems unlikely that much progress has been made toward her completion. She was to have a speed of 30 knots and an armament of nine 16-inch guns. The *Stalin*, laid down originally as a cruiser, was long afterward converted into an aircraft carrier and completed in 1939.

Cruisers include 3 modern ships of the *Kirov* type completed between 1937 and 1940 and 4 older ones of pre-World War I design. About half of these were in the Black Sea, together with a considerable force of destroyers, against which Germany and her Rumanian ally could oppose only torpedo craft and a limited number of small U-boats. For harassing German transports in the Baltic and for defending the approaches to Leningrad, the Soviet navy could doubtless put to practical service a considerable part of its total strength of 51 destroyers, 50 motor torpedo boats, and 160 submarines. Of the latter 72 were reported in the Baltic and about 30 in the Black Sea.

In view of the large scale employment of Baltic Sea communications by the Germans in their Russian campaign, the operation of even a small part of these forces, along with mines, aircraft, and shore batteries, would add credibility to the Soviet claims of 10 or more Nazi destroyers and 15 submarines sunk during the late summer, together with a still larger toll of transports and supply ships. The Nazi advance on Leningrad and capture of islands and outer bases put a limit to these operations and made possible also the destruction of several naval vessels still on the stocks at Tallinn (Reval) and other bases. It was later reported that numerous Soviet light units and submarines had been moved through the White Sea Canal to the Arctic.

In the Far East the naval strength at Vladivostok was estimated to include between 60 and 70 submarines and 50 fast M.T.B.'s, a force which might effectively support Soviet air power in either offensive or defensive warfare against Japan. Under the second Soviet five-year plan 18 air bases were completed in the Far Eastern area, and 22 more were to be finished by 1942. Despite energetic pre-war construction, however, the Soviet navy remains in itself a limited weapon, weakened by its dispersion over four remote sea frontiers.

United States. Some idea of the numbers and combatant types to compose the immense "two-ocean navy," the legislative action for which was recorded in the 1940 YEAR BOOK, is given in the preceding table. Immediate interest centers in the ships completed or nearing completion within the year. The loss of the *Arizona* and *Oklahoma* (captured but not beyond salvage) at Pearl Harbor was more than compensated by the commissioning in the preceding spring of the new 35,000-ton battleships *North Carolina* and *Washington*, and by the

assurance that four others of the same class will be completed within the coming year. These *North Carolinas* are 750 feet in length, of 108-foot beam, and 33-foot maximum draft. They carry nine 16-inch guns in 2 triple turrets forward and 1 aft, a secondary armament of 20 five-inch dual purpose guns, and numerous 1.1-inch pompoms and .50-caliber machine guns for anti-aircraft defense. With a specified speed of 27 knots, they can do at least two knots better, and saving in machinery weights has permitted much heavier deck and side armor.

During the year the 20,000-ton *Hornet* was added to the force of aircraft carriers. A dozen destroyers, including five of an improved *Benson* (or *Bristol*) type, were commissioned in 1941, and about 60 more, of this 1,700-ton class and larger, are to be ready by the end of 1942. Seven light cruisers are due for completion in 1942. Counting the ships already noted, and 9 new submarines, the record of naval construction for the year up to Sept. 1, 1941, was 213 ships completed, 249 launched, and 436 with keels laid. The greater part of these were, of course, mine sweepers, submarine chasers, and other small patrol and district auxiliaries. An additional appropriation of \$300,000,000 in November provided for the construction or conversion of 400 light-draft vessels to be used for patrol in harbors and outlying bases. These, with 205 similar craft to be supplied for the Coast Guard, will release destroyers for other duties. By September the Navy had also converted 193 merchant ships for war use as hospital ships, tankers, and supply vessels, and had 81 more under conversion. The new naval vessels are under construction in 11 government yards and 110 private plants—44 on the Atlantic, 32 on the Pacific, 10 on the Gulf, and 24 on the Great Lakes.

Looking farther into the future, the 17 new battleships will include, in addition to the *North Carolinas*, 6 powerful 45,000-ton ships of the *Iowa* class, and 5 giant *Montanas* ranging in the neighborhood of 60,000 tons. For passage through the Panama Canal, these last ships will require the third set of locks, 140 feet wide, now under construction. Provision has also been made for six "super-cruisers," of the size and details of which little has been revealed. Adoption of a 48-hour week and 3-shift, 24-hour day in construction work has made possible an estimated 12.5 per cent gain in construction time, with a prospect that the two-ocean fleet may be ready in 1944.

For the enlarged fleet the enlisted strength of the navy had increased by the end of November to a total of 289,382, of which 229,460 were regulars, 3,325 were retired men on active duty, and 63,286 were from various classes of reserves. Commissioned officer personnel totaled 32,396, of which 9,762 were regulars, 1,410 retired, and 21,224 reserves. New legislation at the beginning of 1942 provided for an increase of the regular enlisted strength to 500,000, of which at least 300,000 would be needed within the twelve-month. To this may be added the 20,000 officers and men in the Coast Guard, which late in October was placed under naval control. To meet the increased need for officers, appointments to the Naval Academy were increased, the Academy course was telescoped to three years, universities with naval reserve officer training courses were increased to 27 with provision for 7,200 students, and the system of special training courses for selected graduates of colleges and technical schools was further expanded.

In the training of personnel for the naval air arm it was hoped to increase the number of air pilots

from 3,639 at the beginning of the year to more than 6,000 at the end. This could be in part accomplished by expansion of the training centers at Miami, Jacksonville, and Corpus Christi, Texas, to full capacity (inclusive) of 800 entrants, and by graduation of about 70 per cent in a period which might ultimately be shortened to seven months. At the end of the year the number of pilots was given as 6,900, and naval planes had increased from 2,500 to about 5,000 (3,926 on June 30)—still far from the 15,000 planes and 17,000 pilots ultimately called for.

The organization of the forces afloat was modified on February 1 by raising the Atlantic Patrol Force, established Nov. 1, 1940, to the status of a separate fleet. At first composed of about 125 units, including the three old second-line battleships *New York*, *Arkansas*, and *Texas*, this force has been further expanded to meet the exigencies of Atlantic warfare. While limited in the early months to patrol, it received orders from September 16 to protect American commerce by attacking German or Italian submarines engaged in piratical destruction of shipping. In these operations the first naval casualties were the destroyers *Greer* and *Kearny* severely damaged by submarine torpedo attack on September 4 and October 18 respectively, and the older destroyer *Reuben James*, sunk on the night of October 30-31 with a loss of 121 men. The Pacific Fleet, consisting of 12 battleships, 4 aircraft carriers, and the bulk of the heavy and light cruisers, contained the main fighting strength of the navy. The Asiatic Fleet up to the outbreak of war numbered about 35 cruisers, destroyers, and submarines, with a relatively small force of patrol planes.

The Atlantic bases at Bermuda and at Placentia Bay, Newfoundland, were formally commissioned in July, and work on these and other new bases was pushed forward. Guantánamo and San Juan, Puerto Rico, have been expanded to serve as bases for all fleet forces, and Vieques, an island east of Puerto Rico, is to have a graving dock and protected fleet anchorage. In addition to the facilities acquired at Jamaica, seaplane bases are under development in the Bahamas, Antigua, St. Lucia, Trinidad, and on the Essequibo River in British Guiana, facilitating aircraft patrol of the Caribbean.

Yugoslavia. On her entry into the war against the Axis Yugoslavia had 4 modern destroyers, 4 submarines, 10 motor torpedo boats of which eight dated from 1937, and a very considerable force of mine layers and sweepers, and other auxiliaries. Most of these were later scuttled by their crews or seized by the invaders, but a destroyer, a submarine, and two M.T.B.'s joined the British fleet in the Mediterranean.

Venezuela. Arrangements were made this year for the sending of a United States Naval Mission to Venezuela, similar to the naval and army missions which have for some time been established in Brazil, Peru, and other Latin American nations. The mission will consist of four officers and two petty officers, headed by a lieutenant commander. Contributory also to coordinated American defense preparations is the development of Venezuela's Puerto Cabello naval base by provision for increased port facilities and for a floating dry dock accommodating ships up to 6,000 tons. See AERONAUTICS, PETROLEUM; PRODUCTION MANAGEMENT, OFFICE OF; UNITED STATES under *Foreign Affairs*; WORLD WAR. For appropriations see UNITED STATES under *Legislation*. Compare MILITARY PROGRESS; SHIPBUILDING.

Wearing tin hats, the anti-aircraft gun crew is constantly on the alert against air attacks

JAPANESE MIDGET SUBMARINE

One of the two-man submarines used in the attack on Pearl Harbor, December 7. Launched from a larger vessel, it has a range of about 200 miles and a speed of 24 knots. It is 41 feet long, has five compartments (two occupied by the electric batteries which propel it) and carries two 18-inch torpedoes and a demolition charge under the stern with which it may be self-destructed.

NDMB. See NATIONAL DEFENSE MEDIATION BOARD.

NEBRASKA. A west north central State. Area: 77,237 sq. mi., including 584 sq. mi. of inland water. Population: (1940 census) 1,315,834. The urban population comprises 39.1 per cent of the total (U.S. average, 56.5 per cent); non-white population, 1.4 per cent (U.S. average, 10.2); elderly (65 years and over), 8.1 per cent. Nebraska ranks 15th among the States in area, 32d in population, and 37th in density, with an average of 17.2 persons per square mile. The capital is Lincoln with 81,984 inhabitants, largest city, Omaha, 223,844. There are 93 counties and nine cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS

Education. According to C. W. Taylor, Superintendent of Public Instruction, there were 276,188 pupils enrolled in the public schools of Nebraska during the school year 1940-41, 191,910 in elementary schools and 84,278 in secondary schools. Teachers numbered 13,760 with the men teachers in city and village schools receiving an annual average salary of \$1,123, women \$981; rural schools, men \$517 and women \$498. Total expenditures for the year were \$20,427,683.88.

Transportation. State highway mileage in 1939, including streets under State control, totaled 8,879, of which 8,513 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 417,827; 347,317 were private and commercial automobiles, 310 busses, and 64,489 trucks and tractor trucks. Gross motor-fuel consumption was 244,354,000 gallons. Net motor-fuel tax receipts were \$11,901,000, the rate being five cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$2,839,000.

Railways of all classes extended 6,092 miles (Dec. 31, 1939), 2.59 per cent of the total mileage in the United States. Class I steam railways (5,741 miles) reported 5,734,542 tons of revenue freight originating in Nebraska in 1940 and 7,911,308 tons terminating in Nebraska. There are 46 airports and landing fields in the State (13 lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 202 civil aircraft in the State and 1,111 commercial and private pilots (988 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 18,620,000, as compared with 17,313,000 acres in 1940. According to the latest census, there are 121,062 farms, valued at \$1,137,808,019, averaging 391.1 acres each. Farm population numbered 498,756 or 37.9 per cent of the total. Leading crops with production in 1941 were: Corn, \$105,817,000, 157,638,000 bu.; wheat, \$35,108,-

000, 36,194,000 bu.; barley, \$19,044,000, 48,832,000 bu.; hay, \$18,729,000, 3,785,000 tons; oats, \$17,912,000, 54,280,000 bu.; sweet sorghums, \$6,735,000, 2,245,000 tons; potatoes, \$5,291,000, 9,620,000 bu.

Manufacturing. According to the 1939 Census of Manufactures, there were 1,161 manufacturing establishments in Nebraska, employing 18,810 wage earners who received \$20,623,550 in wages for the year. The total value of products was \$273,524,581; value added by manufacture, \$69,087,373.

Mineral Production. The value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$4,390,291 or only one-tenth per cent of the total for the United States.

Trade. According to the 1940 census there were 3,391 wholesale establishments in Nebraska, employing 15,038 persons, reporting net sales for 1939 of \$566,975,000 and annual pay roll of \$20,723,000. There were 19,330 retail stores with 44,353 employees, reporting sales of \$397,196,000 and pay roll of \$36,221,000. Service establishments numbered 7,619, employing 8,511 persons for \$6,715,000 per year, and reporting a business volume amounting to \$26,372,000. The leading business center of the State is Omaha which reported wholesale sales of \$390,754,000 and retail sales of \$105,453,000. Douglas County, including Omaha City, is the leading county in the volume of receipts from its service establishments (\$10,594,000). Lincoln reported sales of \$33,314,000 wholesale and \$39,142,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Nebraska was \$30,816,000. Under the Social Security program, financed by Federal funds matching State grants, 29,024 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$17.11 (U.S. average pension, \$21.08); 13,077 dependent children in 5,852 families received average monthly payments of \$27.57 per family (U.S. average, \$32.73). In addition, in 70 counties payments amounting to \$12,759 were made from local funds without Federal participation to 746 families in behalf of 1,705 children under the State mothers'-pension law. There were 718 blind persons receiving \$20.93 per month, figures include aid administered with Federal participation (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only numbered 5,763 and received \$10.51 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses). CCC, 1,883 (\$125,000); NYA student work program, 5,369 (\$36,000); NYA out-of-school work program, 4,385 (\$90,000); WPA, 20,176 (\$1,152,000); other Federal emergency projects, 451 (\$46,000); regular Federal construction projects, 3,579 (\$395,000). The Farm Security Administration certified subsistence payments totaling \$23,000 for the month to 1,239 cases.

Legislation. Nebraska has the only unicameral legislature among the States, composed of 43 Legislators chosen by non-political election. It convenes in regular session on the first Tuesday of January in odd years.

In the 55th session of the Nebraska Unicameral Legislature 515 bills were introduced and 195 new laws were passed. Appropriations voted in regular session for the biennium 1941-43 totaled \$57,972,879 (excluding \$1,170,261 of special insane funds), as compared with \$53,111,277 for the preceding

biennium. The increase of nearly \$5,000,000 was voted by a predominantly Republican legislature which had been elected on an economy program. The following summary of bills passed that were "controversial or of more than ordinary interest" has been condensed from comment in *The Nebraska Taxpayer*, issue of May-June, 1941.

L. B. 8 abolishes the State Planning Board. In introducing this bill Senator Tom Lambert is quoted as saying, "Since 1935 the Planning Board spent \$55,000 in state money, and surveys made under its direction with WPA help have involved a total expenditure of \$455,710 . . ."

L. B. 12 proposed to abolish the State Sheriff's office. It wound up by consolidating that office and the Highway Patrol. The expense of the Sheriff's office was formerly taken from property tax and is now paid from drivers' license fees. The bill provides for use of members of the patrol for general law enforcement.

L. B. 65, corrupt practices act, puts teeth in the act relating to filing campaign expense accounts by candidates for public office.

L. B. 65 provides that receipts for the inheritance tax be turned over to the counties. They can be spent for relief, roads and bridges, or in the general fund.

L. B. 128 requires that all fees collected by county officials shall be reported monthly instead of quarterly as provided under the old law.

L. B. 180 provides for the cancelling of delinquent interest on all taxes prior to March 8, 1939. It was passed over the veto of Governor Griswold.

L. B. 148 provides a trade school at Milford. The legislature appropriated \$32,000 as an emergency appropriation for immediate use and then appropriated an additional \$50,000 for the biennium.

L. B. 153 repeals the state hail insurance law.

L. B. 156 permits the state to go back three years instead of one and collect unreported personal or intangible taxes.

L. B. 191 resubmits the home rule amendment to be voted on in the regular election in 1942. The legislature seemed to feel that the people were not given proper information on this issue in the last election. Because of a hot presidential campaign, State affairs were somewhat neglected.

L. B. 192 reduces the mileage on State autos from five cents per mile to four cents per mile.

L. B. 221 empowers the Board of Control and county boards to cooperate with the Federal government in creating a surplus commodities stamp plan in all the counties. The legislature appropriated \$400,000 out of the state general fund, (supported by general property tax) to be loaned to the counties to start the plan. The counties will issue warrants, not included in their budget, to repay the state and in turn will be reimbursed by selling the stamps. L. B. 234 provides for the distribution of surplus commodities by the stamp plan.

L. B. 250, New State Corporation Law, is explained by its proponents as a clarification of corporation laws and is copied somewhat after the laws of Delaware. Present corporations will not be affected.

L. B. 282 regulating small loans in Nebraska and placing their supervision under the Department of Banking, was a very controversial piece of legislation. Senator Peterson said "I vote for L. B. 282 not because I approve of it but solely because it improves the present law."

L. B. 429 is a compact between the states of Colorado, Kansas, and Nebraska on the water of the Republican River.

L. B. 507 redistricts the congressional districts of the state of Nebraska.

L. B. 462 provides for investigation and promotion by the University of new uses for agricultural products through chemistry.

L. B. 470 provides exemption from the tax on gasoline used for agricultural purposes. This is legislation that farmers, under the leadership of the Farm Bureau Federation, The Farmers Union, and the Grange, have been working for in several sessions of the legislature. It provides that farmers, who have secured a license as a farm operator, may receive a refund of four cents tax on gasoline used for agricultural purposes.

L. B. 399. This "must" legislation came from Washington and provides that the names of all recipients of any form of so-called assistance must be held as a state secret and likewise, of course, the amount that the individuals received. The idea was repulsive to the legislature as a whole. An amendment was finally attached to the bill which stated: "All state and county officials of this state shall have free access at all times to all records and information." However, to make this information public the official would be subject to a fine or jail sentence.

Finances. A partial report on total tax collections in Nebraska for the fiscal year ending in June, 1941, showed \$28,495,000 (complete report for 1940:

\$28,609,000). Total sales taxes amounted to \$13,733,000, including motor fuel, \$11,973,000. Taxes on specific businesses ran to \$1,799,000, general and selective property, \$5,046,000, unemployment compensation, \$2,212,000.

Cost payments for the operation of general government totaled \$22,487,000 in 1939, the latest year available. (Revenues for the general government for that year were \$34,367,000.) Cost of operation per capita was \$17.01. Total gross debt outstanding was \$998,000, as compared with \$929,000 in 1932.

Officers and Judiciary. The Governor is Dwight Palmer Griswold (Rep.), inaugurated in January, 1941, for a two-year term; Lieutenant Governor, William E. Johnson; Secretary of State, Frank Marsh; Attorney General, Walter R. Johnson; State Treasurer, L. B. Johnson, State Auditor, Ray C. Johnson. Chief Justice of the Nebraska Supreme Court is Robert G. Simmons; there are six associate members elected by popular vote for six-year terms. See CONSUMERS' COOPERATIVES; PLANNING.

NECROLOGY. The following is a list of notable persons who died during the year 1941.

Adams, Alva Blanchard. American Senator (Dem.) from Colorado, died in Washington, D.C., Dec. 1, 1941; born in Del Norte, Colo., Oct. 29, 1875. Graduated from Yale University in 1896 and from the Columbia Law School in 1899, he had been a member of the U.S. Senate since November, 1923. Senator Adams was one of the Senate's leaders in the effort to reduce government expenses.

Adams, Joseph Henry. American inventor and author; died in Brooklyn, N.Y., Feb. 10, 1941; born in Brooklyn, 1867. Inventor of the Adams cracking process in the distillation of oil, used by the leading gasoline companies. He was also the author of several books for boys: *Harper's Outdoor Book for Boys*, *Harper's Indoor Book for Boys*, *Harper's Machinery Book for Boys*, and *Harper's Electricity Book for Boys*; all written between 1900 and 1910.

Aked, Charles Frederic. American minister; died in Los Angeles, Calif., Aug. 12, 1941, born in Nottingham, Eng., Aug. 27, 1864. Ordained a Baptist minister in 1886, he held several pastorates in England (1886-90); pastor, Pembroke Chapel at Liverpool (1890-1907); Fifth Avenue Baptist Church, New York (1907-11); First Congregational Church at San Francisco (1911-15), at Kansas City, Missouri (1919-24); and pastor and founder of All Souls Church, Los Angeles, since 1925. As an author he published, among others *The Courage of the Coward* (1905), *Wells and Palm Trees* (1908), *Old Events and Modern Meanings* (1908), and *The Lord's Prayer* (1910).

Albertini, Luigi. Italian politician and fascist foe; died in Rome, Italy, Dec. 30, 1941; born in Ancona, Italy, Oct. 19, 1871. Assuming a leading role in Italian politics during the first quarter of this century, he became director of the *Corriere Della Sera* of Milan in 1900, and as such used the newspaper as an organ to voice approval of Italy's entry into World War I on the side of the Allies. In recognition of his services in that connection the King appointed him Senator of the Kingdom in 1914. When Mussolini came to power the most outspoken opposition, during 1921-25, came from Albertini. Albertini explained his hatred of fascism with the words "I cannot reconcile the subordination of the individual to an undemocratic system."

Aldrich, Richard S. American Republican Congressman from Rhode Island (1923-33); died in Providence, R.I., Dec. 25, 1941; born in Washington, D.C., Feb. 29, 1884. He was appointed to the Foreign Affairs Committee in his first term and to

the Ways and Means Committee in his second—appointments usually reserved for veteran members.

Alexander, Robert. American major general; died in New York, N.Y., Aug. 26, 1941; born in Baltimore, Md., Oct. 17, 1863. In the army since 1886, he was a veteran of Indian campaigns, the Spanish-American War, the Cuban occupation, the Philippine insurrection, and the Mexican campaign of 1916. During the World War he became commander of the 77th Division, New York, in France. General Alexander was appointed a regular brigadier general in 1921 and a major general in 1927. He retired in 1927. His only publication was *Memories of the World War* (1931).

Alfonso XIII; Spanish King; died in Rome, Italy, Feb. 28, 1941; born in Madrid, Spain, May 17, 1886. The last occupant of the Bourbon throne, he reigned nearly forty-five years, until Apr. 14, 1931, when he was forced into exile by the overwhelming vote of the anti-monarchist parties.

In 1906 the King married Princess Victoria Eugenie Ena of Battenburg, a granddaughter of Queen Victoria of England. Alfonso's reign, like his exile, was one frequently marked by tragedy. Eight separate attempts were made upon his life. He managed to keep Spain out of the World War, but the Moroccan debacle of 1921 proved to be his nemesis. In this affair twenty thousand Spanish soldiers were trapped and more than half were killed. Alfonso, through General de Rivera as dictator, immediately dissolved the Parliament and placed the country under martial order. Seven years of this was enough to bring public opinion to revolt, and the King lost his throne. In exile, he lived with the hope that he might soon return to the throne, but the outbreak of the civil war put an end to any such plans. The courage and bravery of Alfonso demands notice, for hardly a month passed in the early years of his reign in which he did not give proof of this.

Anderson, Sherwood. American author; died in Colon, Panama, Mar. 8, 1941; born in Camden, O., Sept. 13, 1876. At the conclusion of the Spanish-American War, in which he had served, he became the manager of a prosperous paint factory, but abruptly resigned at the age of forty and turned, in contentment, to creative writing. By 1925 he had been acclaimed, along with Dreiser, Lewis, O'Neill, and others, as the harbinger of a new day in American literature. Out of the money from his writings, he purchased two country newspapers in Marion, Virginia, in order "to get back to the people," as he put it, and edited these up to the time of his death. His novels, plays, and short stories fill some 15 volumes; included among his better known works are *Winesburg, Ohio* (1919), *Poor White* (1920), *The Triumph of the Egg* (1921), *Many Marriages* (1922), *A Story Teller's Story*, a philosophical autobiography (1924), *Dark Laughter* (1925), and *Kit Brandon* (1936).

Armington, Frank Milton. Canadian-American artist; died in New York, N.Y., Sept. 21, 1941; born in Fordwich, Ontario, Canada, July 28, 1876. A painter and etcher, his works hang in American, French, and British galleries.

Arsonval, (Jacques) Arsène d'. French physicist, whose researches led to his discovery of the high-frequency currents and diathermy; died in Limoges, France, Dec. 31, 1941; born at La Porcherie, Haute-Vienne, France, June 8, 1851.

Atkinson, Fred W(ashington). American educator, president of Brooklyn Polytechnic Institute, New York, from 1905 to 1925; died in Tucson, Ariz., Oct. 21, 1941; born in Reading, Mass., May 23,

1865. He was superintendent of education in the Philippine Islands from 1900 to 1903.

Austin, Frederick Britten. British author and playwright, who contributed extensively to American magazines; died in Somersetshire, England, Mar. 12, 1941; born, May 8, 1885. Living his literary life in a contemplation of war, past, present, and future, he was noted for his amazingly accurate military writings and predictions. His books included *In Action* (1913), *Battlewreck* (1917), *On the Borderland* (1922), *The War-God Walks Again* (1926), *A Saga of the Sword* (1928), *The Red Flag* (1932), *Told in the Market Place* (1935), and the play *The Thing That Matters* (1921).

Austin, 1st Baron, Longbridge, Herbert. British industrialist; died in Bromsgrove, Worcestershire, Eng., May 23, 1941; born in Little Missenden, Buckinghamshire, Eng., Nov. 8, 1866. Known as the "Henry Ford" of England, Lord Austin was principally noted for his manufacturing of the Baby Austin, the car which weighed only 1,130 pounds. One of his greatest business rivals said of him: "No man has done more for the motor industry." He was knighted in 1917, raised to the peerage in 1935; and was a Conservative Member of Parliament from 1919 to 1924.

Baca-Flor, Carlos. Peruvian painter; died near Paris, early in 1941; born at Islay, Dept. of Arequipa, Peru, 1869. Known as the "Painter of Millionaires" after he had completed a series of portraits of J. P. Morgan and other financiers, he had studied painting and sculpture at the National Institute and the Academy of Fine Arts at Santiago, Chile, and in 1889 received a fellowship to study in Europe from the government of Peru. He studied under Filippo Prosperi at the Royal Institute of Fine Arts of Rome (1891) and under Jean Paul Laurens and Benjamin Constant at the Academy of Paris (1894-95). He was named American corresponding member to the Institut de France in 1926. Other of his works are in England, France, Italy, and Spain.

Baden-Powell, Lord Robert S. British general and founder of the Boy Scouts; died at Nyeri, Kenya, Africa, Jan. 8, 1941, born in London, Eng., Feb. 22, 1857. He emerged from the Boer War as a popular hero due to his defense of Mafeking, and with the rank of major general. As Lieut. Gen. Sir Robert Baden-Powell, he retired from the army in 1910. From this time on he devoted himself to the Boy Scout movement, which he had founded two years previously. The Scout movement took hold at once; and during the more than a quarter of a century he was Chief Scout of the World it enlarged until millions of boys from all nations belonged to it; also, more than a million Girl Guides, Girl Scouts, and Campfire Girls joined together under his banner. The greatest honor conferred upon him, perhaps, was in 1930, during the World Scout Jamboree, when 50,000 high ranking Scouts from seventy-one countries gathered to pay him homage. Among his many publications were: *Aids to Scouting* (1899), *Scouting for Boys* (1908), *My Adventures as a Spy* (1915), *Pigsticking* (revised edition) (1924), *Scouting and Youth Movements* (1929), *Lessons of a Lifetime* (1933), his autobiography.

Baer, William Jacob. American painter; died in East Orange, N.J., Sept. 21, 1941; born in Cincinnati, O., Jan. 29, 1860. A founder of the American Society of Miniature Painters (1899) and an international leader in the modern school of miniature painting, his most famous works include *The Golden Hour*, *Aurora*, *Daphne*, *In Arcadia*, *Madonna With the Auburn Hair*, *Summer*, *Nymph*, and *Primavera*.

Baez, Cecilio. Paraguayan lawyer, professor, and diplomat, President of Paraguay (1908); Minister to the United States in 1917; died in Asuncion, Paraguay, June 18, 1941; born in Asuncion, in 1862.

Bailey, J(ames) R(obinson). American organic chemist and educator; died in Austin, Texas, Mar. 25, 1941; born in Houston, Tex., 1868. A graduate of the University of Texas (1891), he became notable during the World War for his reproduction of secret German formulas for novocain and synthetic adrenalin. After 1891 he was associated with the University of Texas as research chemist on petroleum bases, and as professor of organic chemistry since 1901. His published works, running into the scores, have been largely on nitrogen compounds in petroleum and cottonseed-meal, and include the discovery of over 20 drugs of varying nature.

Baizan, Celestino. Cuban politician, Governor of Havana Province (1933); one of the founders of the Nationalist party; died near Guradamenelan, Cuba, June 13, 1941; born in Spain, 1873.

Baker, Arthur Mulford. American clergyman and editor; died in Philadelphia, Penn., Sept. 22, 1941; born in Wapakoneta, O., Oct. 11, 1880. Chaplain of the 120th Infantry of the A.E.F. in the World War, he was assistant editor of the American Sunday School Union Publications (1924-30) and editor since 1930. His publications include *If I Were a Christian* (1930), *Hoofbeats in the Wilderness* (1930), and *The River of God* (1930).

Baker, Charles Whiting. American civil engineer, died in Montclair, N.J., June 5, 1941; born in Johnson, Vt., Jan. 17, 1865. He was editor of *The Engineering News* from 1895 to 1917, and author of *Monopolies and the People* (1889), and *Pathways Back to Prosperity*.

Balfour, George. British electricity magnate, died in London, Eng., Sept. 26, 1941, born in Portsmouth, Eng., 1872. An electrical and mechanical engineer and one of the founders of Britain's electrical industry (he was known as the "electricity king"), he was a Conservative Member of Parliament from Hampstead since 1918. He was founder and president of Balfour, Beatty & Co., London.

Banting, Sir Frederick Grant. Canadian scientist, co-discoverer of insulin; died in an airplane crash in Newfoundland while en route on a secret war mission to Great Britain, Feb. 21, 1941; born in Alliston, Ont., Nov. 4, 1891. In 1921 Dr. Banting began work to find something that would alleviate the ravages of diabetes. By the following year he had discovered that insulin could be extracted from the pancreas and that injections of the substance would check diabetes. The discovery brought relief to thousands throughout the world, and in 1923 he received the Nobel Prize for his work.

Barclay, Sir Thomas. British lawyer and peace advocate; died in occupied zone of France, funeral services were held on Jan. 20, 1941; born in Dunfermline, Eng., 1853. He founded the Franco-Scottish Society (1895); the International Brotherhood Alliance (1905), and thereafter advocated the preservation of relations between France and England and, until the second World War, improvement of Anglo-German relations. He was a member of Parliament (1910); president of the British Chamber of Commerce in Paris (1899-1900); and vice president of the International Law Association at his death. His publications included *Problems of International Practice and Diplomacy* (1907), *International Law and Practice* (1917), *Law and Usage of War* (1914), *New Methods for Adjustment of International Disputes* (1918), and *Collapse and Reconstruction* (1919).

Barringer, Paul Brandon. American educator, chairman of the faculty at the University of Virginia during 1895-1903 and president of Virginia Polytechnic Institute from 1907 to 1912; died in Charlottesville, Va., Jan. 9, 1941; born in Concord, N.C., Feb. 13, 1857.

Bartel, Kazimierz. Polish scientist and politician; reported shot by German Gestapo in Lwow, Poland, during the outbreak of the German-Russian war, exact date unknown, born in Poland, 1882. He served as Chief Military Administrator of Railways (1919), Minister of Railways (1919, 1920-21), member of the Diet for Radical Peasant Party and for the Government Bloc (1922-29), Prime Minister of Poland (1926, 1927-28), and Vice Prime Minister (1926-27). At his death he was reported to be a professor of mathematics at Lwow University and Technical College.

Bartet, Jeanne Julia (Regnault). French actress, starred in classic roles for forty years (1872-1919) at the Comédie Française, died in Paris, France, 1941, born in Paris, Oct. 28, 1854. Known, before Sarah Bernhardt, as "The Divine," she played the leading roles in plays by Racine, Molière, Musset, Victor Hugo, Dumas, Lavedan, Hervieu, Capus, and Brieux.

Bates, Blanche. American actress; died in San Francisco, Calif., Dec. 25, 1941, born in Portland, Ore., 1873. For thirty years (1894-1926) she was a leading star of the American stage, attaining outstanding success in the hits *Madame Butterfly*, *Under Two Flags*, *The Darling of the Gods*, and *The Girl of the Golden West*. Other productions she appeared in were *The Fighting Hope* (1908), *Nobody's Widow* (1910), *The Witness for the Defense* (1913), *Half-an-Hour* (1914), and *Mrs Partridge Presents* (1926). She was the wife of George Creel, head of the Committee on Public Information in World War I.

Beard, Daniel Carter ("Dan Beard"). American Boy Scout pioneer, died in Suffern, N.Y., June 11, 1941, born in Cincinnati, O., June 21, 1850. One of the founders of the Boy Scouts of America, he had been National Scout Commissioner since the founding in 1910. His life-long interest in outdoor activities for boys, his desire to teach the Scouts the spirit of America, his publications, all contributed to make him the hero of millions of boys. Beard established a reputation as a naturalist, author, and illustrator years before the Boy Scout movement, and had illustrated the first edition of Mark Twain's *A Connecticut Yankee at King Arthur's Court*. He founded the first class in animal drawing at the Women's School of Applied Design in New York City in 1893, and was instructor (1893-1900). He was editor of *Recreation*, an outdoor magazine, during 1905-06. In 1911 he organized the department of woodcraft at Culver Military Academy and became head of the department, remaining there until 1915. In 1925, celebrating his 75th birthday, 500,000 Scouts joined together to commemorate the event. To mark his 90th birthday, 50,000 Scouts gathered (June 22, 1940) in the Court of Peace at the New York World's Fair to sing "Happy Birthday to Uncle Dan." He kept up his contact with the Scouts through his monthly article in *Boys' Life*, the official publication of the Boy Scouts. His publications include *American Boys' Handy Book* (1882), *Outdoor Handy Book* (1900), *Jack of all Trades* (1900), *Boy Pioneers and Sons of Daniel Boone* (1909), *The Buckskin Book and Buckskin Calendar* (1911), *Shelters, Shacks and Shanties* (1914), *Signs, Signals and Symbols* (1918), *American Boys' Book of Wild Animals* (1921), *American Boys' Book of Birds and*

Brownies of the Woods (1923), *Do It Yourself* (1925), *Wisdom of the Woods* (1927), and his autobiography, *Hardly a Man Is Now Alive* (1939).

Beard, James Thom. American mining engineer; died in Danbury, Conn., Dec. 26, 1941; born in Brooklyn, N.Y., Oct. 19, 1855. He was senior associate editor of *Coal Age* since 1911, and had previously invented the Beard-Mackie sight indicator for testing gas (1903), the Beard deputy safety lamp (1906), and the Beard-Stine centrifugal mine fan (1909). Among his more important appointments were those of assistant engineer of construction of the Brooklyn Bridge (1877-79); surveyor in Iowa for the U.S. Department of Mines (1883-85); associate editor of *Mines and Minerals*; and principal of the School of Coal Mining of the International Correspondence Schools, Scranton, Pa. (1896-1911). He was the author of various technical works, including *Ventilation of Mines* (1894), *Design of Centrifugal Ventilators* (1899), *The Coal Age Pocket Book* (1916), and *Mine Examination Questions and Answers* (1921).

Béhal, Auguste. French chemist, died at Mennecy, France, Feb. 4, 1941; born in 1859. He was professor of organic chemistry, Paris University and Ecole de Pharmacie; member of the Académie de Médecine since 1907 and of the Académie des Sciences since 1921, president of the Académie de Médecine, 1924-25. His publications include *Traité de Chimie organique d'après les théories modernes*, *Travaux sur la chimie organique*, and *Dérivés azoques et leurs applications industrielles*.

Bell, Alexander (Alec). British criminologist, head of the Scotland Yard Criminal Investigation Dept. and credited with introducing the study of criminal psychology and other advanced methods of detection to Scotland Yard; died in London, Eng., July 5, 1941; born, 1887.

Bell, Hemphill. American naval officer; died in Chevy Chase, Md., Nov. 11, 1941; born in Milwaukee, Wis., Mar. 3, 1873. Serving as a sanitary officer in Panama for the Panama Canal Commission during 1910-41, he had served as fleet surgeon of the Pacific Fleet, senior medical officer of the U.S. Naval Academy, and commanding officer of the U.S. Navy Medical School, Washington. Admiral Bell was editor of the U.S. naval medical bulletin (1907-09).

Bell, Thomas M (Montgomery). American Democratic Congressman from Georgia (1905-31); died in Gainesville, Ga., Mar. 18, 1941; born in Cleveland, Ga., Mar. 17, 1861.

Benjamin, Gilbert Giddings. American educator; died in Los Angeles, Calif., May 28, 1941; born in Fond du Lac, Wis., Dec. 6, 1874. After receiving his Ph.D. from Yale (1907), he taught at several universities before coming to the University of Southern California as professor of European History in 1928. For outstanding research in English economic history he was made a fellow of the Royal Historical Society of Great Britain in 1934. Included in his works were *The Germans in Texas—a Study in Immigration* (1910), *Modern and Contemporary European Civilization* (with H. G. Plum), (1923), and articles in magazines.

Bennett, Sir John R. Newfoundland politician; died in St. John's, Newfoundland, Oct. 23, 1941; born in St. John's, Aug. 8, 1866. A member of the Newfoundland House Assembly for many years, he served as Colonial Secretary of Newfoundland and member of the Executive Council (1913-17), as a member of the Legislative Council (1913), and again Colonial Secretary during 1924-28.

Benson, Francis B., Jr. American surgeon and radiologist; died in Philadelphia, Feb. 18, 1941; born

in Philadelphia, 1872. Associated with Hahnemann College and Hospital for nearly forty years as professor of radiology, he was a pioneer in the treatment of cancer with radium, being co-deviser of the Craig-Benson cancer operation.

Berenschot, Gerardus Johannes. Dutch general; died in an airplane crash near Batavia, Netherlands Indies; born in Sumatra, 1877. He had been Commander in Chief of the Netherlands Indies Army since 1939.

Berg, Ernst Julius. American physicist and radio engineer; died in Schenectady, N.Y., Sept. 9, 1941; born in Ostersund, Sweden, Jan. 9, 1871. A co-worker for many years of the late Charles P. Steinmetz, he came to the United States in 1892 and became associated with the General Electric Co. (1892-1909). He was professor of electrical engineering at the University of Illinois (1910-13) and professor of electrical engineering at Union College since 1913, dean of engineering since 1932. He retired in 1941. Dr. Berg was a pioneer in radio development and in 1916 produced the first two-way voice program in the United States. He collaborated with Steinmetz on several technical books and also worked with British mathematicians on calculations of value in electrical engineering. In 1929 Dr. Berg won world recognition as the author of *Heaviside Operational Calculus*, which gave practical mathematical solutions to complex electrical phenomena. His other books are *Electrical Energy* (1908), *First Course in Electrical Engineering* (co-author), (1916), and *Advanced Course in Electrical Engineering* (1916).

Berg, Irving Husted. American educator, dean of the College of Arts and Pure Science at New York University since 1936 and chaplain of the university since 1919; died in New Rochelle, N.Y., Aug. 29, 1941; born in Rocky Hill, N.J., Mar. 1, 1878. Ordained in the ministry of the Reformed Church in 1904, he held various pastorates in New York and Connecticut, and was minister of the Fort Washington Collegiate Reformed Church, New York City, from 1917 to 1936.

Bergen, Hans. German educator and medical scientist; died at Bad Blankenberg, Germany, June 9, 1941; born May 21, 1873. From 1901 to 1905 he tutored at the University of Jena, assistant professor, 1905-19, and thereafter professor of insanity and nervous disorders and director of the clinic. Dr. Bergen wrote a number of books on mental disorders, but his great contribution to medical science was in the extension of the studies made by Sir Charles S. Sherrington and Dr. E. D. Adrian in the use of the vacuum tube for determining the transmission of nervous impulses. Dr. Bergen contrived a delicate recording device by which the impulses of the brain may be charted—the electroencephalograph. Through the study of such charts, or "brain waves," the exact nature of a mental disorder may be determined by a trained diagnostician.

Bergson, Henri. French philosopher; died in Paris, Jan. 4, 1941; born in Paris, Oct. 18, 1859. He was professor of philosophy at Angers, Clermont, and Lycée Henri IV (1891-97), professor of philosophy at the Collège de France (1900-21), member of the Académie des Sciences Morales et Politiques since 1901, and Académie Française since 1914. He won the Nobel Prize for literature (1927), and was chairman of the International Committee on Intellectual Cooperation of the League of Nations (1923-25). The most important French philosopher of his time, Bergson wielded an influence that surpassed that of any thinker since the days of Immanuel Kant. His theories possessed an incomensurate scope and richness, for they not only took in

psychology, morals, and metaphysics, but went beyond the limits of philosophy. His greatest work was *L'Evolution créatrice* (1907) and his *Reflexions sur le temps, Vespèce et la vie, Le matérialisme actuel, Les deux sources de la morale et de la religion* (1932) won the Nicholas Murray Butler Gold Medal in 1940. Among his other publications were *Extraits de Lucrèce* (1884), *Matière et Mémoire: essai sur les relations du corps à l'esprit* (1896), *Le Rire* (1900), and *L'intuition philosophique* (1927).

Bernard, Emile. French painter and novelist; died in Paris, Apr. 19, 1941; born in Lille, France, in 1873. Known as the founder of symbolism in modern painting, he was the author of several books, among them: *Reflections of a Witness of the Decadence of the Beautiful, The Ashes of Glory, After the Fall*, and monographs on *Tintoretto, El Greco, Magnasco, and Manet*.

Bertrand, Louis. French writer and historian, died in Cap d'Antibes, France, Dec. 6, 1941, born in Spincourt, Department of the Meuse, France, 1866. His novels, descriptive works, and books of travel, dealing chiefly with the Mediterranean countries, included *La Fin du classicisme* (1897), *Le Sang des races* (1899), *Pépète le bien-aimé* (1904), *L'Invasion* (1907), *Saint-Augustin* (1913), *Les Martyrs africains* (1930), *Histoire d'Espagne* (1932), and *Le Livre de Consolation* (1934).

Best, Sir Thomas Alexander Vans. British colonial administrator; died at Huntingdon, Eng., Nov. 24, 1941; born, Oct. 8, 1870. In an official career of thirty-seven years, Sir Thomas served as Colonial Secretary, Trinidad (1919-25), Lieutenant Governor of Malta (1925-30); and Governor and Commander-in-Chief of the Windward Islands (1930-33). He retired in 1933. Sir Thomas had also served in British Central Africa (Nyasaland), the Falkland Islands, and three West Indian colonies.

Bianchi, Emilio. Italian astronomer; died in Merate, Italy, Sept. 11, 1941; born, 1875. He was astronomer at Romano College from 1903 to 1922 and since 1922 director of the royal astronomical observatories at Milan and Merate.

Bibesco, Prince George-Valentin. Rumanian aeronautical pioneer; died in Bucharest, Rumania, July 3, 1941; born in Rumania, 1882. Possessor of the twentieth international license to be issued, he was commander-in-chief of the Rumanian Air Force during the Balkan war of 1913. He had been president of the International Aeronautical Federation since 1931. In 1934 he made a 7,000-mile tour of Bulgaria, Turkey, Syria, Egypt, and Libya in his private plane.

Birdseye, Claude Hale. American topographer and geographer; died in Washington, D.C., May 30, 1941; born in Syracuse, N.Y., Feb. 13, 1878. Graduated from Oberlin College in 1901, he became field assistant and later topographer for the U.S. Geological Survey (1901-06); surveyor for the General Land Office (1907-08); with the Geological Survey (except during the World War) from 1909 to 1929 as topographer and geographer, from 1919 to 1929 as chief topographic engineer, and chief of the division of engraving and printing of the Geological Survey since 1932. Among his better known achievements were the mapping of the Kilauea volcano region in Hawaii (1912), and the determination of the height of Mount Rainier, Seattle, Washington.

Bishop, Louis Faugères. American heart specialist; died in New York City, Oct. 6, 1941; born in New Brunswick, N.J., Mar. 14, 1864. Graduated from the Columbia College of Physicians and Surgeons, 1889, and since 1908 a specialist in diseases of the

heart and circulatory system, he was the author of numerous books on heart disease, including *Heart Troubles, Their Prevention and Relief, Heart Disease, Blood Pressure and the Nauheim Treatment; and History of Cardiology*.

Bissell, Richard Mervin. American insurance executive, associated with the Hartford Fire Insurance Co. since 1883 and president since 1913; died in Farmington, Conn., July 18, 1941; born in Chicago, June 8, 1862. He had been chairman of the board of the Hartford Accident and Indemnity Company since 1934.

Blackfan, Kenneth D. American pediatrician; died in Louisville, Ky., Nov. 29, 1941; born in Cambridge, N.Y., Sept. 9, 1883. Professor of pediatrics at the Harvard Medical School since 1923, he was a delegate to the White House Conference on Child Health and Protection in 1930 and served as chairman of the committee on growth and development; was general secretary of the Fifth International Conference of Pediatrics; delegate to the International Commission on Nutrition, sponsored by the League of Nations, in Berlin, 1932; and a member of the Commission on Graduate Medical Education.

Blackton, (James) Stuart. American motion-picture pioneer; died in Hollywood, Calif., Aug. 13, 1941, born in Sheffield, Eng., Jan. 5, 1875. Entering the motion-picture field in 1896, he was a founder of the old Vitagraph Co., the first company to produce film plays, and was the producer of the well-known early films, *The Christian* and *The Battle Cry to Peace*. In 1915 he organized and became the first president of the Motion Picture Board of Trade. In 1925 he sold the Vitagraph Co. to Warner Brothers, Inc., for a price estimated to be over \$1,000,000. Subsequently he met with misfortune and in 1931 was adjudged bankrupt, and in 1935 went on relief. At his death he was doing special technical work for Hal Roach Studios.

Blethen, (Clarance) Bretton. American editor, died in Seattle, Wash., Oct. 30, 1941, born in Portland, Me., Feb. 1, 1879. Associated with the *Seattle Times* since 1900, he had been editor of the newspaper since 1915.

Block, Paul. American newspaper publisher; died in New York, N.Y., June 22, 1941, born in Elmira, N.Y., Nov. 2, 1877. President of Paul Block and Associates, national advertising representatives, he began his newspaper publishing career in 1916 with the acquisition of the Newark *Star-Eagle*, and subsequently acquired newspapers from the Atlantic to the Pacific. Block frequently wrote editorials for his own papers, but, desiring more space, placed them as advertising matter in other papers, hence his two column, bold-face editorials were familiar to millions. During the investigation of the corruption of the Walker administration (James J. Walker, Mayor of New York City) in 1932 it was shown that Walker had received \$246,000 from Block as the result of a joint stock account to which the Mayor had made no contribution. Walker, in defending himself, termed it a "beneficence." In recent years Block's own holdings had dwindled to a few papers, and at his death he was the publisher of only three papers: The Pittsburgh *Post-Gazette*, The Toledo *Blade*, and The Toledo *Times*.

Blumenthal, George. American financier and philanthropist; died in New York, N.Y., June 26, 1941; born in Frankfort on the Main, Germany, Apr. 7, 1858. Coming to the United States as a youth, he became associated with the banking firm of Speyer & Co. from 1883 to 1893, when he was made a partner of Lazard Frères. He retired in 1925 and devoted the rest of his life to art and medicine. In 1934 he became president of the Metropolitan

Museum of Art in New York City, and continued his interest in the Mount Sinai Hospital, of which he was the head from 1911 until his retirement as president emeritus in 1938. He gave over \$1,000,000 to the Metropolitan Museum, and \$2,000,000 to the Mount Sinai Hospital, in addition to numerous other charities and organizations. Blumenthal was the founder of the American Foundation for French Art and Thought, and was made a knight of the Legion of Honor by the French government in recognition of his services. He was also internationally known as an art collector and connoisseur.

Bois, Elie Joseph. French editor of the Paris newspaper *Le Petit Parisien*; died in London, Eng., Apr. 27, 1941. He had escaped to London after the German entrance into France.

Bolles, Stephen. American Congressman; died in Washington, D.C., July 8, 1941; born in Springboro, Pa., 1866. A veteran newspaperman, he was a Republican member of the U.S. House of Representatives since 1938.

Bonine, Fred N. American eye specialist; died in Niles, Mich., Aug. 23, 1941; born in Niles, Oct. 21, 1863. A world-wide authority on the treatment of cataracts, he attracted sufferers from as far as Siam and it is estimated, in the 38 years of his practice, that he treated 1,500,000 patients. Dr. Bonine was also widely-known in that his fee was \$2 for rich and poor alike.

Borglum, Gutzon (John Gutzon de la Mothe Borglum). American sculptor and painter, died in Chicago, Mar. 6, 1941, born in Idaho, Mar. 25, 1871. In 1890 he went to Paris, studied under Rodin, and attended the Julian Academy and the Ecole des Beaux Arts. He came to New York in 1901 and began his mammoth sculpturing out of stone. In 1916 he was commissioned to sculpture the head of Gen. Robert E. Lee on the 800-foot granite face of Stone Mountain. The World War intervened, but he returned in 1924. A dispute with the Stone Mountain Association brought an abrupt end to the entire project and he destroyed his models and plans.

In 1927 he started work on the Mount Rushmore Memorial. This gigantic work—sculpturing, out of granite, the heads of Washington, Jefferson, Theodore Roosevelt, and Lincoln into the cliffs of the Black Hills, South Dakota—brought him the fame that was his at death. The heads measured, from chin to crown, 60 feet. Although he had completed the unveiling of the heads the work was not finished and the project has been turned over to his son, Lincoln, for completion.

The great head of Lincoln in the rotunda of the Capitol in Washington, along with the bronze group, *Wars of America*, and the Lincoln statue, both in Newark, N.J., have been seen by more Americans than have any of his other works. Other notable works are the *Mares of Diomedes* in the Metropolitan Museum of Art; Bryan Memorial, Washington; Princeton University Gargoyles; Thomas Paine Memorial, Paris; and sculptures on the Cathedral of St. John the Divine, New York.

Botana, Natalio. Argentine newspaper publisher; died in Jujuy, Argentine, Aug. 7, 1941; born near Saranda Del Yi, Uruguay, in 1888. He founded the paper, *Critica*, in 1914 and built it into one of the leading evening newspapers, with a circulation of from 300,000 to 400,000. The editorial policy was strongly anti-totalitarian and pro-democratic.

Bottazzi, Filippo. Italian biologist; died at Diso, Italy, Sept. 19, 1941; born in 1867. Professor of physiology at Naples University since 1905, he was rector at the university during 1924-27. He was the Italian delegate on the Inter-Allied Commission in the World War during 1915-18. His publications

include *Trattato di chimia fisiologica* (1898-99), *Das Cycloplasma und die Körpersäfte* (1911-12), and *Fisiologia dell' alimentazione* (with G. Jappelli).

Bouck, Francis Eugene. American Chief Justice of the Colorado Supreme Court for the term 1941-43; died in Denver, Colo., Nov. 24, 1941; born in New York City, Nov. 25, 1873. He had served as a justice in the Colorado Supreme Court during 1933-41.

Bowers, Robert Hood. American composer and conductor; died in New York City, Dec. 29, 1941; born in Chambersburg, Pa., May 24, 1877. Conductor for the Columbia Phonograph Co. during 1916-20 and former musical director of the Aeolian and Columbia Phonograph Companies, he had been musical director of the School of Radio Technique, New York, since 1935. Composer of 34 musical shows between 1903 and 1935, he saw several of them succeed on Broadway, the most successful being *East Is West* (1918), featuring the popular song *The Chinese Lullaby*. He conducted several of the late Victor Herbert's premières.

Bowman, George Ernest. American historian; died in Boston, Mass., Sept. 6, 1941; born in Manchester, N.H., Jan. 5, 1860. Devoting years of study to the history of the Mayflower passengers and to the compilation of the Mayflower genealogies, he was the founder in 1896 and secretary since that time of the Massachusetts Society of Mayflower Descendants. In 1899 he established and edited the society's quarterly publication, *The Mayflower Descendant*; and during 1913-17 he served as editor and publisher of the magazine *Pilgrim Notes and Queries*. He compiled, among others, *Bowman's Ancestral Charts* (1896), *Vital Records of Halifax, Mass.* (1905), *Governor William Bradford's Letter Book* (1906), and *The Mayflower Compact and Its Signers* (1920).

Braisted, William Clarence. American naval medical officer; died in West Chester, Pa., Jan. 17, 1941; born in Toledo, O., Oct. 9, 1941. In the Navy since 1890, he was fleet surgeon, Atlantic Fleet (1912-14); surgeon general of the Navy and chief of the Bureau of Medicine and Surgery (1914-21), and, since 1921, president of the College of Pharmacy and Science in Philadelphia. During 1905-06 he was attending physician at the White House.

Brandeis, Louis Dembitz. American jurist; died in Washington, D.C., Oct. 5, 1941; born in Louisville, Ky., Nov. 13, 1856. Graduated from the Harvard Law School in 1877, he was admitted to the bar in 1878. He was a partner in the law firm of Warren & Brandeis during 1879-97 and in the firm of Brandeis, Durbar & Nutter from 1897 to 1916. In the latter year he was appointed to the U.S. Supreme Court by President Woodrow Wilson, where he remained until his retirement on Feb. 13, 1939.

During his years as a practicing lawyer, he was counsel in many important cases of litigation. In 1910 he was counsel in the famous Congressional investigation of the Ballinger-Pinchot feud, over land-grab coal contracts in Alaska, in the Dept. of the Interior, and, as a result of Brandeis' cross-examination, Richard A. Ballinger, then Secretary of the Interior, retired. He arbitrated the 1910 garment strike in New York City, which affected 70,000 workers and \$180,000,000 worth of business. He succeeded in keeping Boston's transportation under the city's control; in establishing Boston's sliding-scale gas system; and in breaking the industrial life insurance monopoly (which he believed was his greatest contribution to society) by obtaining passage of a State statute allowing savings banks to write policies.

As a Supreme Court justice, Brandeis was noted

for his liberal views and was best known to the public for the dissenting opinions in which he joined with the late Justice Oliver Wendell Holmes. Of the sixteen major New Deal laws which were brought before the Supreme Court, Justice Brandeis upheld the administration in ten instances. A prominent advocate of Zionism, he was chairman of the Zionist Provisional Emergency Committee from 1914 to 1916. In his works he displayed his breadth of learning and his "down to earth" qualities which the preciseness of legality never dulled. His writings include *Other People's Money* (1914), *Business, A Profession* (1914), and *The Curse of Bigness*.

Former Chief Justice Charles Evans Hughes in tribute said that Justice Brandeis "brought his wide experience and his extraordinary acumen to the service of the public interest and in a judicial career of the highest distinction left his permanent impress upon our national jurisprudence."

Brewster, Benjamin. American Protestant Episcopal Bishop of Maine from 1916 to 1940; died in Portland, Me., Feb. 2, 1941; born in New Haven, Conn., Nov. 25, 1860.

Bridges, Robert ("Droch"). American editor; died in Shippensburg, Pa., Sept. 2, 1941; born in Shippensburg, July 13, 1858. A classmate of Woodrow Wilson at Princeton University and an intimate friend of Theodore Roosevelt, Dr. Bridges served as assistant news editor of the *New York Evening Post* (1881-87); assistant editor of *Scribner's Magazine* (1887-1914); and from 1914 to 1930 editor of *Scribner's*. From 1930 to 1939 he acted in the capacity of literary advisor to *Scribner's*, and when the magazine suspended publication in 1939 he lived to see it appear again in a merger with *The Commentator*. He was literary critic of *Life Magazine* from 1883 to 1900 and contributed to both *Life* and *Scribner's* under the pen name of "Droch." Dr. Bridges was the author of *Overheard in Arcady* (1894), *Suppressed Chapters* (1895), and *Bramble Brae* (collected poems), (1902).

Briggs, L(oyd) Vernon. American psychiatrist, author of the Briggs law requiring mental examination before trial of all persons accused of a felony in Massachusetts; died in Tucson, Ariz., Feb. 28, 1941; born in Boston, Aug. 13, 1863. Among his books were *Experience of a Medical Student in Honolulu* (1926), *California and the West* (1931), *Arizona and Mexico* (1932), and *History and Genealogy of the Briggs Family* (1937).

Brooks, Robert C(larkson). American educator; died in Chester, Pa., Feb. 2, 1941; born in Piqua, O., Feb. 7, 1874. A graduate of the University of Indiana (1896), he was professor of Social Sciences at Swarthmore College from 1912 until his death. Included among his writings were: *Corruption of American Politics and Life* (1910), *Teachers' Salaries and Cost of Living* (1913), *Political Parties and Election Problems* (1923), and in 1935 *Deliver Us From the Dictators*. In addition to his books, he wrote for the *Dictionary of American Biography*, and *Encyclopedia of Social Sciences*.

Brown, Carleton. American educator and philologist; died in Montclair, N.J., June 25, 1941; born in Oberlin, O., July 15, 1869. Ordained a Unitarian minister, he remained in the ministry until 1900, and in 1903 went to Harvard as an instructor; was professor of English philology at Bryn Mawr College (1910-17); went to University of Minnesota as professor of English (1918-21); returned to Bryn Mawr (1921-27), and accepted the post of professor of English at New York University (1927), retiring as emeritus in 1939. A scholar of medieval English, he compiled several volumes, including the following: *A Register of Middle English Religious*

and Didactic Verse (part 1, 1916,—part 2, 1920), *Religious Lyrics of the XIVth Century* (1924), *English Lyrics of the XIIIth Century* (1932), *Religious Lyrics of the XVth Century* (1939), *A Manuscript Index of Middle English Verse* (1940). He was the editor of *Venus and Adonis and other poems* (1913), *Poems by Sir John Salusbury and Robert Chester* (1914), *The Stonyhurst Pageants* (1920). As an author he published *A Study of the Miracle of Our Lady Told by Chaucer's Prioress* (1910).

Browne, Dame Sidney Jane. British nurse; died in Cheltenham, Eng., Aug. 13, 1941; born January, 1850. Known as the "modern Florence Nightingale," she had served in four campaigns, including the Egyptian War (1884), the Sudan campaign (1885), the Boer War (1899-1902), and the World War (1914-18). Dame Sidney was the first president of the College of Nursing. She was awarded the International Florence Nightingale Medal, the Royal Red Cross, and the International Red Cross Medal. Her publications include the nursing department of the *Times History of the War* and *Cassell's History of Nursing*.

Browning, William. American neurologist and writer; died in Brooklyn, N.Y., Jan. 5, 1941, born in New London Co., Conn., July 7, 1855. Lecturer on normal neurology at Long Island College of Medicine (1887-1901), professor of neuropsychiatry (1901-26) and thereafter emeritus, he was the author of several medical works, including *The Vents of the Brain and Its Envelopes* (1884), *The Epileptic Interval* (1893), *Circulation in the Central Nervous System* (1897), and *Medical Heredity* (1925). He was one of the founders of the American Medical Library Association (1898), president from 1917 to 1919.

Brush, George de Forest. American artist; died in Hanover, N.J., Apr. 24, 1941; born in Shelbyville, Tenn., Sept. 28, 1855. A conservative artist, he won a wide reputation as an academician and painter of the Italian Renaissance school. He once consummated his point of view with regard to the need of the old masters with "A student learns nothing until he comes under a master. . . . We must not run after new things; we must find out what the masters knew." His paintings hang in many of the museums in the United States. Included among his more noted works are *Mother and Child, At the Fountain* (sold for \$18,000), *In the Garden, Portrait of a Young Woman, The Young Violinist, and Family Group*.

Bryan, Enoch A(lbert). American educator, president of Washington State College, Pullman, from 1893 to 1916 and thereafter president emeritus; died in Pullman, Wash., Nov. 6, 1941; born in Bloomington, Ind., 1855. Graduated from Indiana University (1878), he served as superintendent of public schools, Grayville, Ill. (1878-82); president of Vincennes University, Indiana (1882-93); State commissioner of education for Idaho (1917-23); and research professor of economics and economic history at Washington State College (1923-39).

Byles, Axtell J(ulius). American petroleum executive, president of the Tide Water Associated Oil Co. from 1926 to 1933 and president of the American Petroleum Institute since 1933; died at Ardsley-On-Hudson, N.Y., Sept. 28, 1941; born in Titusville, Pa., Oct. 21, 1880.

Cabot, Philip. American educator, banker, and economist; lecturer of public utility management during 1924-27, professor of the same, 1927-35, and professor of business administration since 1935 at Harvard University; died in Cambridge, Mass., Dec. 25, 1941; born in Beverly Farms, Mass., Aug.

11, 1872. Dr. Cabot had been president and director of many public utility concerns in the Connecticut Valley section during 1904-18, and had been associated with investment banking in Boston during 1912-18.

Cadman, 1st Baron, of Silverdale, John. British oil industrialist; died in Bletchley, Buckinghamshire, Eng., May 31, 1941; born in Silverdale, Staffordshire, Eng., Sept. 7, 1877. He served as inspector of mines in Trinidad (1904); professor of mining at Birmingham University (1908-20), and emeritus thereafter. In 1927 he became chairman of the Anglo-Iranian Oil Co., Ltd., and the Iraq Petroleum Co., and at his death was also director of the Suez Canal Co. and the Great Western Railway. During the World War, he was director of Petroleum Supplies for the Allied forces. Lord Cadman was the author of numerous papers for scientific societies on oil, coal, and iron problems.

Cammerer, Arno (Erthold). Assistant director of the National Park Service (1919-27), associate director (1928), and director (1933-40); died in Cherrystone, Va., Apr. 30, 1941, born in Arapaho, Neb., July 31, 1883.

Campbell, Philip Pitt. American lawyer and congressman; died in Washington, D.C., May 26, 1941; born in Cape Brcton, N.S., Apr. 25, 1862. Elected Republican Representative from Kansas to the 58th Congress (1903), he was reelected to each succeeding Congress, being a member of the 67th session (1923) when he failed of renomination. He was parliamentarian for the 1924 National Republican Convention.

Campinchi, César. French barrister and politician; died in Marseilles, France, Feb. 23, 1941; born in Calcatoggia, Corsica, May 24, 1882. A Radical Socialist, he was Minister for the Merchant Marine in the Chaumetemps Cabinet (1937) and in the next Chaumetemps Cabinet was Minister of Justice. Then he became Minister of the Navy in the Blum Cabinet and continued in that post for the war-time Cabinets of Daladier and Reynaud, resigning, with the rest of the Reynaud Cabinet, June 16, 1940. Throughout his career he consistently advocated resistance to German and Italian aggression. After the Pétain government came into force, M. Campinchi was named as one of those responsible for "throwing our country into war," although he was never brought to trial.

Candler, Warren A(kin). American Methodist Episcopal Bishop; died in Atlanta, Ga., Sept. 25, 1941; born in Carroll Co., Ga., Aug. 23, 1857. Entering the North Georgia Conference of the Methodist Episcopal Church, South, in 1875, he continued in the pastorate until 1886; assistant editor of *The Christian Advocate* (organ M.E.Ch.,S.), (1886-88), president of Emory College (1888-98); Bishop of the Methodist Episcopal Church, South, since 1898; and chancellor of Emory University (formerly Emory College) from 1914 to 1921.

A distinguished, militant, and respected spokesman for the austere Southern Methodist order, he, as Bishop, was instrumental in establishing the church's mission in Cuba, supervised Methodist work in Japan, Korea, and China, presided over numerous Methodist conferences in the South, and for many years, especially in 1925, fought the union between the Northern Methodist Episcopal Church and the Methodist Episcopal Church, South. His publications include *History of Sunday Schools* (1880), *Christus Auctor* (1899), *High Living and High Lives* (1901), *Current Comments on Timely Topics* (1926), and *Young J. Allen, the Man Who Seeded China* (1931).

Cannon, Annie Jump. American astronomer; died in Cambridge, Mass., Apr. 13, 1941; born in Dover, Del., Dec. 11, 1863. Graduating from Wellesley College in 1884, she became an assistant at the Harvard College Observatory (1897-1911), curator of astronomical photographs (1911-33), and in 1933 was named William Cranch Bond astronomer, a post established in honor of the founder of the college observatory. She retired in September, 1940.

Her greatest single achievement—classifying the spectra of a quarter of a million stars to make up the famed Henry Draper catalogue for international use—won her the Henry Draper Medal of the National Academy of Sciences (1931). In 1929 she was listed among "the twelve greatest living American women" chosen by the National League of Women Voters.

Caperton, William Banks. American admiral, commanded the U.S. Pacific Fleet during 1916-19; died in Newport, RI, Dec. 21, 1941; born in Spring Hill, Tenn., June 30, 1855. Admiral Caperton won national recognition through his administration of American intervention in the troubled political affairs of West Indian Latin-American republics (1915-16). During his years in the service he was commander-in-chief, Atlantic Reserve Fleet (1914), commander of the Cruiser Squadron of the Atlantic Fleet (1916), and in charge of the first division of the Pacific Fleet that made a cruise, during World War I along the east coast of South America, helping to win the good will of South American republics. He was promoted to a rear admiral in 1913 and retired in June, 1919.

Carey, Charles Henry. American jurist; died in Portland, Ore., Aug. 26, 1941; born in Cincinnati, O., Oct. 27, 1857. Engaged in the practice of law at Portland from 1883 to 1932 (except in 1888-89), he was vice-president of the American Bar Association (1894-1914), president of the Oregon Bar Association (1912-13, 1922-23), and a founder of the Multnomah Law Library. As a member of the American Council of the Institute of Pacific Relations he attended the institute's third biennial conference at Kyoto, Japan (1929). His publications include *Index-Digest of the Oregon and Washington Reports* (1888), *History of Oregon* (1922), and *A General History of Oregon* (1935).

Carle, Richard. American actor; died in Hollywood, Calif., June 28, 1941; born in Somerville, Mass., July 7, 1871. Making his stage debut at the Bijou Theatre, New York City, in 1891, he was an accomplished comedian who, often as not, wrote his own material, besides dancing and singing—a song and dance man. After years of success on the stage, he turned to Hollywood in 1916, becoming a prominent character actor. The last film in which he appeared was *That Uncertain Feeling*.

Carney, Jim. British prizefighter, died in London, Eng., Sept. 10, 1941; born in Birmingham, Eng., 1858. Prominent in the era of boxing's bare-knuckle days, he was a former English lightweight champion. His most famous and greatest fight took place near Boston, Massachusetts in 1887, when he battled for 74 rounds with Jack McAuliffe, the Irish world champion. After five hours the bout was declared a draw.

Carr, Sir Emsley. British publisher; died in London, Eng., July 31, 1941; born in Leeds, Eng., May 1, 1867. Since 1891 he had been editor of *News of the World*, a weekly newspaper, and since 1935 chairman of the paper. He increased the circulation from 40,000 in 1891 to 4,000,000 in 1939. Sir Emsley was president of the Institute of Journalists (1932-33).

Carson, Frank. American newspaper editor; died

in Tucson, Ariz., Mar. 19, 1941; born in Chicago, in 1881. Associated with Chicago newspapers since 1906, he became city editor of the *New York Daily News* in 1928 and, with the exception of a two year period, remained at that post until 1935, when he became assistant managing editor (1935-40).

Cauldwell, Leslie Giffen. American portrait artist; died in Paris, France, Apr. 9, 1941; born in New York, N.Y., Oct. 18, 1861. Leader of the American art colony in France, he had been president of the American Artists Professional League, with headquarters in Paris. At only 24 years of age his paintings were admitted to the Paris Salon (1886), and during the next fifteen years were displayed prominently at the Society of British Artists, Royal Academy in London, and at the National Academy of Design and the Society of American Artists in New York. Appointed an official delegate to the Eighth International Art Congress held in Paris (1937), he delivered a series of lectures to the Fontainebleau School of Art. A member of the Architectural League of New York since 1894, he was made a member emeritus in 1922.

Cerda, Pedro Aguirre. Chilean politician, President of Chile since 1938; died in Santiago, Chile, Nov. 25, 1941; born in Los Andes, Chile, 1879. The Western Hemisphere's first Popular Front executive, he served as national deputy from Los Andes (1915-18), from Santiago (1918-21); as Minister of the Interior on three occasions (1920-24); Minister of Justice and Public Instruction (1918); national senator from Concepción (1921-27); and Minister of State at various times.

Affluent vineyard owner, lawyer, and politician, President Cerda ascended to his high office on a program of a "New Deal" for Chile. Declaring himself a "believer in democracy" and an admirer of President Roosevelt, Señor Aguirre balanced the acutely divided Right and Left factions in a country that possessed no middle class, only the extremes.

Chaffee, Adna R(omanzo). American major general, died in Boston, Mass., Aug. 22, 1941; born in Junction City, Kan., Sept. 23, 1884. Graduated from the U.S. Military Academy in 1906, he served, during the World War, as acting chief of staff of the 81st division in South Carolina and as commander of the 9th Infantry in Germany, seeing action at the St. Mihiel and Meuse-Argonne offensives. In 1930 General Chaffee advanced the opinion that the next war would see the extensive use of mobile, armored units with high-fire power, and subsequently, when mechanization began, he was appointed commanding officer of the 1st Cavalry (mechanized) in 1934. During 1934-38 he served as chief of the Legislative Planning Bureau, but in 1938 was returned to Fort Knox to command the First Cavalry of the Seventh Cavalry Brigade, mechanized. With the beginning of the current European War, the U.S. Army began to assemble its first armored and tank units, and General Chaffee, then a brigadier general, was appointed head of the force. On Aug. 1, 1941, due to sickness he was relieved of his duties, receiving the oak-leaf cluster citation for "outstanding foresight, judgment, and leadership" in organizing the armored force. On August 4, he was permanently appointed a major general, having held a temporary commission since October, 1940.

Chamberlain, Lady (Ivy Muriel). Widow of Sir J. Austen Chamberlain, former British Foreign Secretary and Nobel peace prize winner in 1926; died in London, Feb. 13, 1941; born, 1876. In 1925 at Locarno, Switzerland, during the international negotiations which led to the Franco-German non-

aggression pact and the return of Germany to the League of Nations, she seized the opportunity for an informal party for the negotiators and, due to her excellent maneuvers, the conference came to a successful conclusion.

Chapin, Charles Value. American health and sanitation expert; died in Providence, R.I., Jan. 31, 1941; born in Providence, Jan. 17, 1856. He served as Superintendent of Health in Providence from 1884 to 1932, when he retired as emeritus. Public health problems throughout the world were solved and improved as a result of the adoption of Dr. Chapin's theories. Included among his publications are *Municipal Sanitation* (1901), *Sources and Modes of Infection* (1910), *How to Avoid Infection* (1917), and *Changes in Type of Contagious Disease* (1926).

Chapman, Blanche (Mrs. Harry Clay Ford). American actress; died in Rutherford, N.J., June 7, 1941; born in Covington, Ky., 1851. A star in the theater during the 1860's and 70's, she played with Edwin Booth and Joseph Jefferson. Her career extended over 82 years.

Chevrolet, Louis. American automobile designer and racer, original designer and manufacturer of the car which bears his name, died in Detroit, June 6, 1941; born in La Chaux de Fonds, Switzerland, in 1879. He came to this country in 1900, and soon became one of the world's leading race drivers, he made new records on every important track, one of them being the then renowned speed of 52.8 seconds for a measured mile (1905). In 1911 he built the first Chevrolet, but having little faith in it sold his holdings in the company and severed all connections with it (1915). In the same year, he developed the Frontenac racer, the cylinder heads of which he later adapted to that of the Model T Fords and marketed, but lost out when the Model A Ford came out. Mr. Chevrolet turned to speedboat racing in 1925, and added many more medals to his collection. The winning of the Indianapolis Speedway, he often said, in 1920 and 1921 with cars he built was his greatest achievement.

Christie, Loring C. Canadian diplomat, Minister to the United States during 1939-41—on leave since February, 1941; died in New York, N.Y., Apr. 9, 1941; born in Amherst, N.S., 1885

Clarke, Charles L(orenzo). American electrical engineer, associate of the late Thomas A. Edison; died in Newton, Mass., Oct. 9, 1941; born in Portland, Me., Apr. 16, 1853. As chief engineer for Edison, he superintended the installation of the Edison electrical lighting central station system (1882) at 275 Pearl Street, New York, the world's first generating plant for current for incandescent lamps. In 1911 he was appointed consulting engineer of the General Electric Co., a position he held until his retirement in 1931.

Claussen, Julia. Swedish ex-opera singer; died in Stockholm, Sweden, May 1, 1941; born in Stockholm, in 1879. Prominent contralto and mezzo-soprano of the Metropolitan Opera Co. from 1917 to 1932, she sang roles in many operas, among them *Tannhaeuser*, *Die Walkuere*, *Lohengrin*, *The Flying Dutchman*, and *La Gioconda*.

Clay, Laura. American suffragist; died in Lexington, Ky., June 29, 1941; born in Madison Co., Ky., Feb. 9, 1849. Nationally known as a pioneer in the woman's suffrage movement, she attained the high point of her career, however, in 1920, when, at the Democratic National Convention, she became the first woman to receive a vote for the Presidential nomination. She received the honor as a tribute to the many years of service she rendered in political and suffragette movements. She was

president of the Kentucky Equal Rights Association from 1888 to 1910. In 1928, at the age of 79, she made a dozen speeches on behalf of Alfred E. Smith, candidate for the Presidency.

Clifford, Sir Hugh. British colonial administrator; died in England, Dec. 19, 1941; born in London, Eng., Mar. 5, 1866. Sir Hugh spent the first twenty years of his career in the Malay States, taking an active part in the suppression of native insurrections and leading special missions to native rulers. He was appointed colonial secretary of Trinidad and Tobago (1903-07) and of Ceylon (1907-12); Governor of the Gold Coast (1912-19), of Nigeria (1919-25), and of Ceylon (1925-27); Governor of the Straits Settlements and High Commissioner for the Malay States and British agent for Borneo (1927-29). Distinguished also as a scholar and writer, Sir Hugh's published works include *Studies in Brown Humanity* (1898), *In a Corner of Asia* (1899), *A Free-Lance of To-Day* (1903), *Heroes of Exile* (1906), *The German Colonies* (1918), and *Bush-whacking and other Asiatic Tales and Memories* (1929).

Coates, John. British tenor; died in Northwood, Eng., Aug. 16, 1941, born June 29, 1865. Making his grand opera debut in *Faust* in 1901, he was one of England's leading tenors for fifty years, and was particularly noted for his excellent diction and musicianly arrangement of his selections, especially his early English airs. He appeared in the United States in 1925, playing at Town Hall, N.Y. City, in a program of early and modern English songs.

Collison, Wilson. American author and playwright; died in Beverly Hills, Calif., May 24, 1941, born in Gloucester, O., Nov. 5, 1893. A prominent scenario writer, he was the author of the Broadway hits *Up in Mabel's Room* (1919) and co-author of *Getting Gertie's Garter* (1921), and the film stories *Blonde Baby* (1931), *Farewell to Women* (1932), *Shy Cinderella* (1932), *Desert Sands* (1924), and *Save a Lady* (1935). He wrote the currently popular *Maisie* pictures.

Cone, Hutch(inson) Ingham. American naval officer; died in Orlando, Fla., Feb. 12, 1941; born in Brooklyn, N.Y., Apr. 26, 1871. Graduating from the U.S. Naval Academy in 1894, his interest lay in engineering, and in 1909 he was appointed head of the Navy's Bureau of Steam Engineering, with the rank of rear admiral and engineer-in-chief. In 1912 he developed the system of wireless shore stations linking the United States, Panama, and American possessions in the Pacific. Retiring on July 11, 1922, he was recalled to government service by President Coolidge, who appointed him vice-president and general manager of the Emergency Fleet Corporation. He resigned a year later, but in 1928 he was made a commissioner of the Shipping Board. President Roosevelt reappointed him to the Board in 1935 and named him chairman. He resigned from the Board (1935) in protest against what he considered its "uncertain course" under Secretary of Commerce Roper. At his death he was chairman of the board of the Moore & McCormack steamship lines. Among the decorations he received were the Distinguished Service Medal, and the Distinguished Service Order (British).

Connah, Douglas John. American artist; died in New York, N.Y., Aug. 23, 1941; born in New York, Apr. 20, 1871. An intimate friend of the late John Singer Sargent, he was director of the New York School of Art (1896-1911), of the Shinnecock Summer School of Art (1897-1900), of the New School of Design (1911-24), and since 1925 co-director of the New York School of Design

(now called American School of Design). His works were exhibited in France, England, and the United States.

Connery, Lawrence J(oseph). American Democratic Congressman from Massachusetts since Sept. 28, 1937; died in Washington, D.C., Oct. 19, 1941; born in Lynn, Mass., Oct. 17, 1895.

Conrad, Frank. American engineer and inventor, credited with the founding of Station KDKA, pioneer broadcast station, and since 1921 assistant chief engineer of the Westinghouse Electric and Manufacturing Co. of Pittsburgh; died in Miami, Fla., Dec. 11, 1941; born in Pittsburgh, Pa., May 4, 1874.

Couch, Harvey Crowley. American utilities executive; died in Couchwood, Ark., July 30, 1941; born in Calhoun, Ark., Aug. 21, 1877. Organizer in 1913 and thereafter president of the Arkansas Power & Light Co., he also organized and was president of the Mississippi Power & Light Co. and the Louisiana Power & Light Co. (1925-36) He was a member of the U.S. Reconstruction Finance Corporation (1932-34).

Coyne, Joseph. American stage actor, appeared in such stage hits as *The District Attorney* (1895), *The Good Mr. Best* (1897), *Girl from Up There* (1901), *In Neuport* (1905), *Nelly Neil* (1907), *The Quaker Girl* (1910), and *No, No, Nanette* (1925); died in Virginia Water (near London), Eng., Feb. 20, 1941; born in New York, N.Y., Mar. 27, 1867.

Csaky, Stephen. Hungarian diplomat, Foreign Minister since December, 1938, died in Budapest, Hungary, Jan. 27, 1941; born, 1897. Count Csaky was a former chargé d'affaires in Rumania, Portugal, and Spain, becoming Minister to Spain in 1934. One of the first Balkan statesmen to jump on the "bandwagon" behind the might of Hitler, Count Csaky, after seeing the fate of Czechoslovakia, hurried to make additional pledges of cooperation to Hitler. On Mar. 21, 1939, he revealed that his efforts had been rewarded with assurances by Germany and Italy that his country would not be invaded "As long as Chancellor Hitler lives there is not the slightest danger that Germany will attack or seek to absorb Hungary or any part of it," he asserted. On Nov. 20, 1940, Count Csaky committed Hungary to the Axis-Tripartite Pact.

Cubberley, Ellwood Patterson. American educator; died in San Francisco, Calif., Sept. 14, 1941; born in Andrews, Ind., June 6, 1868. Graduated from the University of Indiana in 1891, (Ph.D., Columbia University, 1905), he served as professor and president of Vincennes University (1891-96); superintendent of schools, San Diego, Calif. (1896-98), and since 1898 associated with Stanford University, becoming a professor in 1906 and dean of the School of Education in 1917. He retired in 1933 as dean emeritus. In 1933 he presented to Stanford \$548,000 for the erection of a school of education; the public was amazed that a professor could amass such a sum, but Dr. Cubberley explained it by saying that he had made "investments." During his years at Stanford he had edited more than 100 volumes and had written some 18 others, including *School Funds and Their Apportionment* (1905), *School Organization and Administration* (1916), *A History of Education* (1921), *The Principal and His School* (1923), and *Readings in Public Education in the United States* (1934).

Cudahy, Edward A(loysius), Sr. American meat packer; died in Chicago, Oct. 18, 1941; born in Milwaukee, Wis., Feb. 1, 1860. Identified with the meat packing business since 1875, he was one of the founders of the Cudahy Packing Co., becoming

president of the firm in 1910 and chairman of the board since 1926.

Cunningham, Jack. American scenario writer; died in Santa Monica, Calif., Oct. 4, 1941; born in Ionia, Ia. One of Hollywood's most successful writers, he wrote or collaborated on such hits as *Don Q, The Black Pirate, The Covered Wagon, The Thundering Herd, Ruggles of Red Cap, Wagon Wheels, The Arkansas Traveler, and Professor Beware*. In 1936 he produced *Woman Trap* and *Too Many Parents*.

Curran, Pearl Gildersleeve (Mrs.). American composer; died in New Rochelle, N.Y., Apr. 16, 1941, born in Denver, Colo., 1876. A composer of some 40 songs since 1912, her best known works include *Life*, first sung by Enrico Caruso, *Rain, Dawn, Nocturne*, dedicated to and sung by John Charles Thomas, *The Best Is Yet To Be*, and *Sunny Boy*. Her religious songs include *The Lord's Prayer, The Lord Is My Shepherd, and Crucifixion and Resurrection*. She appeared on the radio with a program entitled *A Half Hour With Pearl Curran*.

Curtiss, James Arthur. American capitalist; died in New York City, June 4, 1941; born in New York City, June 1, 1867. Named as one of the 59 men who ruled America, he planned and carried out the unification of the Northern Pacific with the Western Pacific, thereby putting under his control a trunk system from Chicago to California. It is estimated that by shrewd investments he added \$50,000,000 to the large estate (\$26,000,000) which he inherited from his father. A philanthropist, he gave several millions to charitable organizations. Included among his avocations was yachting; he served as Commodore of the New York Yacht Club (1909-10) as well as Commodore of other clubs. His yacht, *Aloha*, was used by him for scientific investigation, and his interest in this respect was shown by valuable gifts to the American Museum of Natural History.

D'Abernon, 1st Viscount, Edgar Vincent. British diplomat, Ambassador to Berlin during 1920-26, died in Hove, Sussex, Eng., Nov. 1, 1941; born in Slinfold, Sussex, Eng., Aug. 19, 1857. In 1882 he was appointed British, Belgian, and Dutch representative on the council of the Ottoman Public Debt, Constantinople, and was president of the council the next year. He was financial adviser to the Egyptian Government, 1883-89, Governor of the Imperial Ottoman Bank in Constantinople, 1889-97; and a Conservative member of Parliament during 1899-1906. His tenure in Berlin was high lighted by three significant events: the signing of the Dawes agreement Aug. 30, 1924, the Anglo-German commercial treaty on Dec. 3, 1924, and the Treaty of Locarno on Dec. 1, 1924. Viscount D'Abernon was the author of several books, including *A Grammar of Modern Greek* (1881), *An Ambassador of Peace* (1929), *The Economic Crisis—Its Causes and the Cure* (1931), and *Portraits and Appreciations* (1931).

Daly, Thomas A. American Paulist priest; died in New York, N.Y., Jan. 8, 1941; born Co. Kerry, Ireland, 1864. Ordained in 1900, he spent most of his career in missionary activities, becoming First Consulor of the Paulist Fathers in the United States in 1934, which position he held at his death. In 1912 he established the Good Shepherd parish in New York City.

Damerel, Donna (Mrs. Peter Fick). American radio actress; starred in the radio drama, *Myrt and Marge*; died in Englewood, N.J., Feb. 15, 1941; born in Chicago, July 8, 1912.

Danforth, William. American stage actor; died in Skaneateles, N.Y., Apr. 16, 1941; born in Syracuse,

May 13, 1867. As a comedian and singer in comic opera, musical comedies, dramas, and motion pictures, he delighted thousands throughout the United States, and as late as 1936 was still a Broadway favorite; but it was in Gilbert and Sullivan shows that he achieved the greatest recognition. These included such hits as *The Mikado, Ruddigore, Pinafore, The Pirates of Penzance, and The Gondoliers*. Besides Gilbert and Sullivan he appeared in such stage history-making plays as *Wang, The Idol's Eye, Blue Beard, The Yankee Consul, Adele, and Florodora*.

D'Arsonval, (Jacques) Arsène. See ARSONVAL, JACQUES ARSENE D'.

Daugherty, Harry M(icaiah). American ex-attorney general of the United States; died in Columbus, O., Oct. 12, 1941; born in Washington Court House, O., Jan. 26, 1860. Largely responsible, as campaign manager, for the election of Warren G. Harding to the Presidency of the United States in 1920, he was rewarded by appointment as Attorney General of the United States, taking office in 1921 and resigning in 1924. His tenure in office was marked by continuous political squabble. His alleged involvement in fraudulent dealings with the Alien Property Custodian's office, in the Teapot Dome Scandal, and various other asserted instances impelled investigation by Senate committees. When, in the Teapot Dome Scandal investigation, the Senate committee requested records from his office and was refused, President Coolidge ordered the release of the records. Attorney General Daugherty resigned.

In spite of his troubles, he managed to accomplish several things that were for the betterment of the American people. He collected millions for the government in war frauds and prohibition cases, appointed J. Edgar Hoover to the Federal Bureau of Investigation, and established a Federal reformatory for first-time offenders, and a Federal women's prison.

In 1927 he was acquitted of Federal charges of conspiracy to defraud the U. S. Government. Fighting to clear his name of all charges hurled against him, he wrote the book *The Inside Story of the Harding Tragedy* (1932).

D'Aunoy, Rigney. American pathologist, died in New Orleans, La., Sept. 17, 1941; born in New Orleans, Aug. 8, 1890. Graduated from Tulane University in 1910 (M.D. 1914), he was instructor in pathology and bacteriology at Tulane (1919-24), and head of the department of pathology of Louisiana State University Medical School from 1931 to 1939, dean during 1937-39.

Davaz, Suad. Turkish diplomat; died in Iran, Aug. 22, 1941, born in Turkey, 1878. He served as Under-Secretary of State for Foreign Affairs (1921); Ambassador to Italy (1923-32); Ambassador to France; and, at his death, Ambassador to Iran. In June, 1939, he signed the French-Turkish treaty, which returned the Hatay Republic to Turkey and joined in a declaration of mutual assistance.

Davenport, Eugene. American educator and agriculturist, outstanding contributor to the agricultural development of Illinois and dean of the College of Agriculture, University of Illinois, during 1895-1922, thereafter emeritus; died in Woodland, Mich., Mar. 31, 1941; born in Woodland, June 20, 1856.

Davies, Sir (Henry) Walford. British musician, author of more than 100 songs and compositions of which his cantata, *Everyman*, the most important, was produced in 1904; died near Bristol, Eng., Mar. 11, 1941; born at Oswestry, Shropshire, Eng.,

Sept. 6, 1869. In 1924 he began a weekly series of radio talks on music, which brought him wide popularity. He was professor of music at the University College of Wales, Aberystwyth (1919-26); organist at St. George's, Windsor (1927-32); and Master of the King's Musick since 1934.

Davis, William Rhodes. American oil operator; died in Houston, Tex., Aug. 1, 1941; born in Montgomery, Ala., Feb. 10, 1889. Entering into international politics in 1939, he gained national notice when it was disclosed that he had gone to Germany, had interviewed high German officials, had obtained peace plans (world peace) from them and, returning to the United States, had presented the plans to the State Department. The State Department never revealed the details of the plans, and it was generally thought that Davis had tried to make peace on Adolf Hitler's terms. In the oil business since 1913, he had won and lost millions in operations throughout the world. He was the go-between in the great barter deals in Mexican expropriated oil, which enabled Germany and Italy to build up a substantial part of their oil reserves before the present war.

Debais, Eugene. Dutch anthropologist; died in February, 1941, at his home in the Netherlands; born at Eysden in the province of Lumburg, Holland, Jan. 28, 1858. Professor of anthropology at the University of Amsterdam from 1898 to 1928, he became internationally known in 1891-92 with his discovery of the first-found skull of the Java ape-man, *Pithecanthropus erectus*. One of the greatest controversies of modern science began in 1894 with the statement by Dr. Dubois that the fragments of the skeleton found by him were the remains of "the ancestor of man," who represented "a transition form between man and the anthropoids which, according to the teachings of evolution, must have existed." Believers in evolution were inclined to support him, but others who, for religious or other reasons, disbelieved the doctrine of anthropogeny rejected and laughed at the discovery.

De Cordova, Rudolph. British dramatic author, journalist and actor; died in London, Eng, Jan 11, 1941; born in Kingston, Jamaica, in 1860. Although he played leading roles in London and New York, he was mainly noted for his writings, which include *Royalities of the World*, *Paris I Have Played* and *Contract (Bridge) in a Nutshell*; as well as the plays, in collaboration with Alicia Ramsey (Mrs. De Cordova), *Monsieur de Paris*, *The Password*, *As a Man Sows*, *The Organ Grinder*, *Edmund Kean*, *The Price of a Hat*, and *The Mandarin*.

Denyn, Jef. Belgian carillonner, died in Malines, Belgium, Oct. 8, 1941; born in Belgium. He became carillonner of Malines in 1881 and held that position until age compelled his retirement in 1932. He was the most famous player of church chimes in the Low Countries.

De Obarrio, Nicanor. Panamanian revolutionary leader, helped lead Panama to its secession from Colombia (1903) and served as its first War Minister; died in Panama, Jan. 17, 1941; born in Brooklyn, N.Y., in 1874.

Darome, Tristan (Philippe Huc). French writer; died at Oloron in the Pyrenees, France, 1941; born in 1889. A poet and essayist and leader of the fantasist school, he was the author of numerous works including *La Flute fleurie* (1913), *La Verdure dorée* (1922), and *l'Enlèvement sans clair de lune* (1925).

De Ugarte, Rafael. Bolivian statesman, president of the Chamber of Deputies; died in Cochabamba,

Bolivia, Nov. 7, 1941; born, 1871. In opposition to the Liberal party's regimes for twenty years, he was a founder (1914) of the Republican party. In 1931 he was appointed Minister of the Treasury. He was elected Vice President of the republic in 1934, but did not take office due to the revolt against President Daniel Salamanca during the Chaco war. In recent years he had been a member of the Chamber as Deputy for Cochabamba and in August, 1940, he was reelected president of that body.

Devaney, John P(atrick). American jurist; died in Milwaukee, Minn., Sept. 21, 1941; born in Lake Mills, Ia., June 30, 1883. Graduated from the University of Minnesota law school (1908), he practiced altogether in Minneapolis, except for the interval from 1933 to 1937 when he was Chief Justice of the Minnesota Supreme Court. Since 1934 he had been a member of the Minnesota Crime Commission, and was a former chairman of the Industry Committee, Wages and Hours Division, of the Department of Labor. He also had been a member of several of President Roosevelt's emergency boards to settle strikes. In 1937 he helped organize the National Lawyers Guild and was its first president.

Dinsmore, Charles Allen. American theologian and literary scholar; died in New Haven, Conn., Aug. 14, 1941; born in New York, N.Y., Aug. 4, 1860. Ordained a Congregational minister in 1888, he had served as professor on the spiritual content of literature at the Yale Divinity School from 1920 until his retirement as professor emeritus in 1939. An authority on the works and life of the poet, Dante, he was the author of several books, including *The Teachings of Dante* (1901), *Aids to the Study of Dante* (1903), *Atonement in Literature and Life* (1906), *Life of Dante* (1919), and *The Great Poets and the Meaning of Life* (1937).

Dolly, Jenny (Janszioka Deutsch). American dancer, partner and sister of Rosie Dolly in the internationally famous dance team, the Dolly Sisters; died in Hollywood, Calif., June 1, 1941, by suicide; born in Hungary, Oct. 25, 1892. From 1909 to 1924 they were headliners on the vaudeville stage in the United States and Europe.

Dormoy, Marx. French politician; assassinated in Vichy, France, July 26, 1941, by means of a time bomb placed under his bed; born, 1888. A prominent Socialist and a militant foe of Fascists, Communists, and Pétain's new order, he was Minister of the Interior in Leon Blum's People's Front Cabinet from 1936 to 1937 and in Chautemps Cabinet from 1937 to 1938. His tenure of office was marked by many incidents, including the removal of Jacques Doriot from the Mayoralty of St. Denis, a working-class suburb of Paris; the kidnapping of General Miller, the White Russian leader in France; and his most notable achievement, the running down of the "Cagoulards" (The Hooded Ones), a Rightist group charged with conspiring to overthrow the Blum Government by violence.

Dos Passos, Szezefredo. Brazilian general and politician; died in Rio de Janeiro, Brazil, Oct. 18, 1941; born in 1873. In the army since 1888, he created and organized the Brazilian army air force. He was Minister of War in the regime of President Washington Luis. General Dos Passos retired from the army when the Luis administration was overthrown by the Vargas revolution in 1930.

Driesch, Hans. German philosopher; died in Leipzig, Germany, Apr. 17, 1941; born at Kreunznach, Germany, Oct. 28, 1867. He was a research worker at the Naples Zoological Station (1891-1900); Gifford lecturer at Aberdeen University (1907-

08); professor of philosophy at Leipzig University (1921-33); and a visiting professor in China (1922-23), in Buenos Aires (1928), and at the University of Wisconsin (1926-27). His published works include *Die Biologie als selbständige grundwissenschaft*, *The Science and Philosophy of the Organism*, *Die Logik als Aufgabe*, *The Crisis in Psychology*, *Der Mensch und die Welt*, and *Die Maschine und der Organismus*.

DuBose, Horace Mellard. American Methodist Church leader; died in Nashville, Tenn., Jan. 15, 1941; born in Choctaw Co., Ala., Nov. 7, 1858. Holder of numerous pastorates throughout the country, editor of several religious magazines and elected bishop in 1918, he was an advocate of unification of the different branches of Methodism and was a member of the original commission appointed (1916) to work out a plan of union.

Duncan, Walter Jack. American artist and illustrator; died in New York, N.Y., Apr. 11, 1941, born in Indianapolis, Ind., Jan. 1, 1881. Well-known for magazine and book illustration, his drawings appeared, from the time he went to England (1905) to do a series of drawings for Scribner's Magazine, frequently in Harper's, McClure's, and other periodicals. Books by Booth Tarkington, Robert Cortes Holliday, and Christopher Morley were among the novels he illustrated. During the World War he was appointed an official artist of the A.E.F., making sketches of all the major engagements in France, besides taking active part as a Captain in the Engineer Corps. In 1939 he wrote the book about art entitled *First Aid to Pictorial Composition*.

Du Puy, William Atherton. American journalist and author; died in Fort Collins, Col., Aug. 11, 1941; born in Palestine, Tex., Jan. 6, 1876. He worked on newspapers in New York, Philadelphia, St. Louis, and New Orleans; became field secretary for the U.S. Navy League (1915-16); originator (1916) and first editor of the publication *Sea Power*; a captain of the Military Intelligence Division, General Staff U.S.A. (1918); general manager of the Haskin Newspaper Service (1919), Public Ledger Syndicate (1920); editor for the International Labor Office of the League of Nations at Geneva (1923); expert with the U.S. Bureau of Efficiency, investigating the currency system (1925); executive assistant to the Secretary of the Interior (1929); and Eastern manager of the Pan-Pacific Press Bureau (1934). He was a former president of the National Press Club. Included among his publications were *Uncle Sam—Wonder Worker* (1913), *Uncle Sam—Detective* (1915), *Hawaii and Its Race Problem* (1932), *The Nation's Forests* (1938), *The Green Kingdom* (1939), and *The Baron of the Colorados* (1940).

Edelstein, M. Michael. American Democratic Congressman from New York; died as a result of a heart attack in the House chamber (Washington, D.C.) after making an ardent speech in which he excoriated those who had been criticising the Jews—"international bankers"—as responsible for inciting the United States toward war; born in Meseritz, Poland, Feb. 5, 1888. A product of New York's lower East Side, he graduated from the Brooklyn Law School (St. Lawrence University) in 1909, and was admitted to the bar in 1910. He maintained a law office for 20 years, during that time representing—in the prohibition era—prominent night clubs in their conflicts with the police, including those of Texas Guinan and Belle Livingston. A firm supporter of President Roosevelt and the Administration's national policies, he succeeded Charles A. Schneider (resigned) in 1939

and in the general elections (1940) was elected for the two year term.

Edwards, Augustin. Chilean financier, diplomat, and publisher; died in Santiago, Chile, June 18, 1941; born in Santiago, June 17, 1878. Holding many diplomatic positions throughout his career, he was a member of the Chilean Congress (1901-02); was Minister of Foreign Affairs in 1903, 1905, 1909, and 1910; was Minister to Italy, Spain and Switzerland (1905-06); was Minister to Great Britain (1910-25) and Ambassador since 1935. In 1921 he became vice-president of the League of Nations, advancing to president in 1922. He was president of the fifth Pan-American Conference (1923); in 1926 assumed presidency of Valparaíso University, and since 1931 was president and publisher of the newspaper *El Mercurio*, in addition to several other papers and periodicals. He visited the United States in 1940 to receive one of the four Maria Moore Cabot prizes awarded for journalistic contributions to Pan Americanism. He wrote several books, mainly political and historical, among them *Mi tierra* (1928), *La técnica del film aplicada a la historia* (1928), *Gentes de antaño* (1929), *El alba* (1931), *Cuatro presidentes de Chile* (1932), and *Recuerdos de mi persecución; Período de zozobras* (1935).

Eichberg, Frederick. Austrian engineer and inventor; died in Ann Arbor, Mich., July 30, 1941; born in Vienna, Germany, 1876. General manager of the Linke-Hoffman car and locomotive factory, Germany, for 11 years and director of the Allgemeine Electricitäts Gesellschaft, Germany, from 1908 to 1938, he was the inventor of the single-phase Winter-Eichberg electric motor, now used by the Pennsylvania Railroad and other railroads in the United States and England. He came to the United States to live in 1938.

Eidmann, Frank Lewis. American mechanical engineer; died in New York, N.Y., Sept. 4, 1941; born in Kingston, N.Y., Dec. 20, 1887. Associate professor of machine design and industrial practice at Princeton University (1923-30) and since 1930 professor of mechanical engineering at Columbia University, he designed parts for some of the first farm tractors made in the United States and did engineering work on the designing of the first gasoline engines for automobiles and airplanes. He was the author of *Economic Control of Engineering and Manufacturing* (1931), and editor of *Aircraft Engine Manual* (1919).

Eilshemius, Louis Michel. American artist; died in New York City, Dec. 29, 1941; born in Laurel Manor, N.J., Feb. 4, 1864. Living in a world outside the realm of normalcy, he became an old, embittered man, failing to accept recognition that came late in his life, and characterizing it as "ashes in my mouth." With the extreme egotism of the fanatic (he called himself "Mightiest Mind of Mankind," "The Supreme Spirit of the Universe," "The Mahatma," etc.), he bombarded *The Sun* (New York) with over 10,000 frenzied letters, held a one-man exhibition of his work to which no one came, attempted to issue an art magazine, printed a pamphlet containing descriptions of crazy inventions, such as a new electric belt, health hints and painting discoveries, and so on.

In 1933, years after he had stopped serious painting, his paintings became the rage of New York. His work was praised by such men as Joseph Stella, Gaston Lachaise, Charles Demuth, and Matisse. Henry McBride, noted art critic, called him "a genuine lyric painter." He is represented in the Phillips Memorial Gallery, Washington, D.C.; Metropolitan Museum of Art, Museum of Modern

Art, Whitney Museum of Art, New York City; Detroit Institute of Art; Cleveland Museum of Art; Luxembourg Museum, Paris; and the Museum of Fine Arts, Boston. He was the author of *And He Sat Among the Ashes*, a biography (1939).

Ellis, Carleton. American research chemist, inventor, and writer; died in Miami Beach, Fla., Jan. 13, 1941; born in Keene, N.H., Sept. 20, 1876. A prolific inventor, he held some 800 patents, ranging from an oil-cracking process used by Standard Oil to a soap which left no rings around the bathtub. He worked extensively in the field of edible oils, fats, waxes, synthetic resins, paints, varnishes, petroleum products, and gasoline manufacture. He was awarded a gold medal at the Jamestown (Va.) Exposition (1907) and the Edward Longstreth medal of the Franklin Institute (1916). Among his publications were: *Hydrogenation of Organic Substances* (3rd edit. 1930), *Synthetic Resins and their Plastics* (1923), (2d edit., 1935), *Chemistry of Petroleum Derivatives* (1934), (vol. 2, 1937), and *Chemistry of Printing Ink* (1939).

Eltinge, Julian (William Dalton). American actor; died in New York, N.Y., Mar. 8, 1941; born in Newtonville, Mass., May 14, 1883. As a female impersonator, he was a popular figure on the stage, in vaudeville, and in motion pictures until his retirement in 1931. Among the plays he appeared in were: *The Fascinating Widow* (1911-14); *The Crinoline Girl* (1914); *Cousin Lucy* (1915-16); and *Countess Charming* (1917-18). The motion pictures he appeared in include *The Widow's Might*, *The Countess Charming*, *The Clever Mrs. Carfax*, and *Over the Rhine*.

Emmerson, Louis L(incoln). American ex-governor; died in Mount Vernon, Ill., Feb. 4, 1941; born in Albion, Ill., Dec. 27, 1863. A leader in Illinois politics, he served as Secretary of State, 1916-28, and as Governor, 1929-33.

Emmet, William LeRoy. American electrical engineer; died in Erie, Penn., Sept. 26, 1941; born in New Rochelle, N.Y., July 10, 1859. Graduated from the U.S. Naval Academy (1881), he served only two years in the Navy before receiving his honorable discharge to enter private industry as an electrical engineer. He became associated with the General Electric Co. in 1892 and remained with that organization until his retirement several years ago.

The holder of 122 patents, his most important work was done in the field of steam turbine inventions and developments; inventing the mercury-vapor power boiler process and developing the method of turbo-electric propulsion of ships. Chairman of the committee on submarines of the Naval Consulting Board during the World War, he was the author of *Alternating Current Wiring and Distribution* (1934), and *The Autobiography of an Engineer* (1931).

Esch, John J(acob). American Republican Congressman from Wisconsin (1899-1920), and chairman of the Interstate Commerce Commission (1927); died in La Crosse, Wis., Apr. 27, 1941; born in Norwalk, Wis., Mar. 20, 1861.

Evans, Sir Arthur. British archaeologist; died at Youlbury, Boars Hill, Oxford, Eng., July 11, 1941; born in Nash Mills, Herts, Eng., July 8, 1851. Traveling in Finland and Russian Lapland and the Balkan countries during the 1870's, he engaged in excavations in Crete from 1893 onwards. His archaeological exploration in Crete resulted in the discovery of a pre-Phoenician script, and in the ruins of ancient Knossos the visual art of one of Europe's earliest civilizations. He rediscovered and restored the great palace of King Minos at Knossos

and proved that Mycenaean pre-Hellenic civilization in Greece was the product of Minoan Crete. His published works include *Cretan Pictographs and Prae-Phoenician Script* (1896), *The Mycenaean Tree and Pillar Cult* (1901), *The Earlier Religion of Greece in the Light of Cretan Discoveries* (1931), and *Jarn Mound* (1933).

Eves, Reginald Grenville. English portrait painter; died in Middleton, Teesdale County, Durham, Eng., June 14, 1941; born in London, 1876. A graduate of the University College School, he soon established a reputation by painting the portraits of many leading figures of England. Among his greatest successes were studies of Thomas Hardy, one of which hangs in the National Portrait Gallery, and the other in the Tate Gallery; Frank Benson, Shakespearean actor, bought by the Luxembourg Galleries in Paris; and a miniature of the Prince of Wales (now Duke of Windsor). In 1931 some of his works (3) exhibited by the Royal Academy were found to have been photographs painted over, and this exposé caused a sensation, but eight years later he was elected to the Royal Academy. He had been official war artist for the B.E.F. since 1940.

Feder, Gottfried. German politician and economist; died in Munich, Germany, Sept. 24, 1941; born in Würzburg, Germany, 1883. One of the oldest leaders of the Nazi (National Socialist) party, he drew up the original twenty-five point program on which the Nazi party was founded in 1922. He marched with Hitler in the Munich putsch of 1923, and was rewarded with the post of State Secretary of the Ministry of Economy (1933). He became a member of the Reichstag in 1924. Hitler, in *Mein Kampf*, said of him: "After I heard the first lecture by Feder, the thought immediately ran through my head that I now had found the way to one of the fundamental concepts for founding the new party." Included among his publications were *Das Manifest zur Brechung der Zinsknechtschaft*; *Der Staatsbankrott die Rettung* (1922), and *Brechung der Zinsknechtschaft* (1932).

Fielding, Mantle. American architect; died in Philadelphia, Pa., Mar. 27, 1941; born in New York, N.Y., Sept. 20, 1865. An outstanding authority on paintings and engravings of the early American era, he was the author of several standard works, which were: *Life and Works of David Edwin, Engraver* (3d volume in Stauffer's American Engravers), (1917), *Life and Works of Thomas Sully* (with Edward Biddle), (1922), *Gilbert Stuart and His Portraits of Washington* (1923), *Dictionary of American Painters, Sculptors and Engravers*, and *Life Portraits of George Washington and Their Replicas* (with John H. Morgan).

Fields, Lew (Lewis Maurice Fields). American comedian; died in Los Angeles, Calif., July 20, 1941; born in New York, N.Y., Jan. 1, 1867. He made his debut on the stage (1877) in partnership with Joseph Weber, his partner in more than sixty years of trouping, in juvenile Dutch sketches at small variety theaters. In 1885 the partners formed a company of their own, which lasted until 1896, when they became proprietors of the Broadway Music Hall, where they commenced a series of burlesques (combining slapstick with German dialect), opening on Oct. 8, 1896.

In 1904 Weber and Fields separated and Fields played on Broadway for some time before they rejoined again in 1912. The Music Hall was reopened in November of that year and they grossed \$300,000 for the season. During the next fifteen years Fields played Broadway nearly always alone,

for Weber had virtually retired. On Sept. 25, 1932, they were guests at a dinner at the Astor hotel, New York, celebrating their golden jubilee in the theater, with President Hoover extending his greetings. Among the plays in which Fields starred were: *About Town*, *The Great Decide*, *Old Dutch*, *The Henpecks*, *The High Cost of Loving*, *Bosom Friends*, and *A Poor Little Ritz Girl*.

Finger, Charles (Joseph). American author and editor, best known for his juvenile writings and tales of adventure in wild regions; died in Fayetteville, Ark., Jan. 7, 1941; born in Willesden, England, Dec. 25, 1869. He won the Newbury Medal (1924), for the most distinguished contribution during the year to juvenile literature, with *Tales from Silver Lands*. In 1929, for his *Courageous Companions*, he won the Longmans Green juvenile fiction prize. He was the author of numerous other books.

Fisher, Clarence Stanley. American archaeologist; died in Jerusalem, July 20, 1941; born in Philadelphia, Pa., Aug. 17, 1876. Acting director of the American School of Oriental Research, he had directed archaeological expeditions to Egypt and Palestine since 1900, having been associated with the Carswell Institute of Philadelphia, Harvard University, the Boston Museum of Fine Arts, Princeton University, Haverford College, Yale University, University of Chicago, and the University of Pennsylvania. Dr. Fisher's greatest discovery was made in 1920, when he excavated the gravestones of Seti I and Rameses II, which verified the biblical Book of Exodus.

Fisher, Frederic (John). American manufacturer; died in Detroit, Mich., July 14, 1941; born in Sandusky, O., Jan. 2, 1878. Organizer, with his brothers, of the Fisher Body Co. (1908) and the Fisher Closed Body Co. (1910), he was president and general manager of both companies until they were grouped together in 1916 as the Fisher Body Corporation. He continued as president and general manager of the Corporation until 1924, when he became vice-president and member of the executive and finance committees of the General Motors Corporation until his retirement in 1934. Well-known for his philanthropies, he established the Burtha M. Fisher Nurses Home of the House of Providence Hospital (1927) and in 1928 gave \$1,000,000 to the Little Sisters of the Poor to found the Burtha M. Fisher Home for the Aged Poor.

Fisher, Hubert Frederick. American Democratic Congressman from Tennessee (1919-31); died in New York, N.Y., June 16, 1941; born in Milton, Fla., Oct. 6, 1877.

Fitzgerald, Cissy (Mrs. C. Tucker). British musical comedy star, appearing in New York City during the Nineties in productions of Charles Frohman and George Edwards; died near Brighton, Eng., May 10, 1941; born, 1873. Thirty years after her retirement from the stage she appeared in motion pictures, one of her latest films being *The Masquerader* in which she co-starred with Ronald Colman.

Fock, Dirk. Dutch politician, Governor General of the Dutch East Indies from 1921 to 1926; died at The Hague, the Netherlands, Oct. 17, 1941; born in 1858. He was a member of the Second Chamber of the Netherlands Parliament (1901-05; 1913-21); Secretary of Colonies (1905-08); and Governor of Surinam during 1908-11. He was Minister of State in 1928.

Fogelqvist, Torsten. Swedish author, critic, and essayist; died at Darlekarlien, Sweden, Jan. 24, 1941; born, 1880. One of the 14 members of the Swedish Academy and attached to the staff of the

newspaper *Dagens Nyheter* since 1919, he was author of the following: *Bok och svard* (1917), *På resa och rot* (1926), *Typer och tänkesätt* (1927), *Till Viktor Rydbergs minne* (1928), *Vasterlandet och den judisktkristna etiken* (1930), and *Jag minns den ljuva tiden* (1935).

Ford, John. American justice; died in New York, N.Y., July 25, 1941; born in Knowlesville, N.Y., July 28, 1862. A member of the New York State Supreme Court from 1906 to 1932, he had served as referee of the Supreme Court since 1932.

Ford, Worthington Chauncey. American historian, died at sea on the way to the United States from Lisbon, Mar. 7, 1941; born in Brooklyn, N.Y., Feb. 16, 1858. He was chief of the Bureau of Statistics of the U. S. State Department (1885-89), and Treasury Department (1893-98); connected with the Boston Public Library (1897-1902); chief of the division of manuscripts, Library of Congress (1902-09); editor of Massachusetts Historical Society (1909-29); and director of the Congressional Library's European Mission (1929-35). His writings included: *American Citizen's Manual* (1883), *The Standard Silver Dollar* (1884), *George Washington* (1899), and he edited the two volume edition of *Letters of Henry Adams* (1930; 1938).

Foster, Richard Clarke. American educator; died in Tuscaloosa, Ala., Nov. 19, 1941; born in Demopolis, Ala., July 12, 1895. President of the University of Alabama since January, 1937, he was serving his second term as president of the Southeastern Conference, an athletic organization of twelve colleges, and was vice president of the Southern University Conference and a former president of the National Association of Separated Universities.

Frankfurter, Salomon. Austrian librarian, archaeologist, and educator, died in Vienna, Austria, Sept. 24, 1941; born in Pressburg, Bratislava, Nov. 9, 1856. An uncle of U.S. Supreme Court Justice Felix Frankfurter, he had been a member of the Vienna University Library since 1894, becoming director in 1919. An outstanding student in philology, archaeology, pedagogics, and Judaism, he received, under the Austro-Hungarian monarchy, the title of Imperial Court Counselor and in the Austrian Republic he served as advisor to the Ministries of Culture and Education. When the Nazis overran Austria in 1938 Professor Frankfurter was imprisoned, but at the instigation of the U.S. Government he was released in March of that year. His publications include *Die Organisation des hoheren Unterrichts in Osterreich* (1897), *50 Jahre osterreichische Mittelschule* (1900), *Das altjudische Erziehungs- und Unterrichtswesen im Lichte moderner Bestrebungen* (1910), and *50 Jahre Eranos-Vindobonensis* (1936).

Franklin, Irene. American actress; died in Englewood, N.J., June 16, 1941; born in New York, N.Y., June 12, 1876. Practically born on the stage, she appeared in vaudeville from 1895 to 1907, turning then to musical comedy, in which her best known role was in *Sweet Adeline* (1929-30). During her later years, she appeared in several motion pictures, but attracted little notice.

Fraser, Earle W. American radio actor; died in Farmington, Mich., Apr. 8, 1941; born in Kitchener, Ont., Canada, 1909. Since 1933 he had been the voice of the "Lone Ranger," a radio serial heard over a national network. The broadcasts were estimated to be heard by fifteen millions, mostly children, and depicted the "Lone Ranger" as a hard-riding crusader against all crime and injustice.

Frazer, Sir James (George). British anthropologist and folklore scholar; died in Cambridge, Eng., May 7, 1941; born in Glasgow, Scotland, Jan. 1,

1854. As one of the world's most established authorities on folklore, he published a wealth of material on taboos, magic, superstition, myths, and primitive belief and rites. His most important and best known work, *The Golden Bough*, was first published in 1890 and grew, as a result of his research, into twelve large volumes twenty-five years later. *The Golden Bough* is a vast collection of savage and civilized beliefs and customs, and is considered to be among the greatest works on anthropology. As Sir James delved further into the study of folklore, he found that one link of a chain leads to another, for book after book flowed from his hands, until in 1932 blindness forced itself upon him. He recovered his eyesight, after four operations, and continued his writing of a several volume work dealing with *Fear of the Dead in Primitive Religion*. In 1937 he wrote what he considered his finest work, *Totemica*, a record of primitive social organizations whose history is told by totem poles from Australia to Canada. He was knighted in 1914, elected a fellow of the Royal Society (1920), and received the Order of Merit (1925).

Freundlich, Herbert Max Finlay. German chemist; died in Minneapolis, Minn., Mar. 30, 1941; born in Germany, 1880. After the World War he became honorary professor at the University of Berlin and associate director of the Kaiser Wilhelm Institute in Berlin. He came to the United States in 1938, direct from five years of lecturing at University College, London, to teach at the University of Minnesota, where he was named Distinguished Service Professor of Colloid Chemistry. He was the author of a number of authoritative books on chemistry.

Frew, Walter Edwin. American banker; died in New York, N.Y., May 19, 1941; born in Brooklyn, N.Y., July 18, 1864. Beginning as a clerk in a bank, he rose to the position of president of the Corn Exchange Bank (1911-29) and in 1929 became chairman of the board when the bank changed to the Corn Exchange Bank Trust Company. As president, and as chairman, he was largely responsible for the growth and development of its network of branches (74) throughout New York City.

Fuller, Stuart J(amieson). American narcotic expert and diplomat, died in Washington, D.C., Feb. 2, 1941; born in Keokuk, Ia., May 4, 1880. A world authority on illicit narcotic suppression, and during 1932-39, U.S. representative, in an advising capacity, to the advisory committee of the League of Nations and delegate to the Conference for the Suppression of the Illicit Traffic in Narcotic Drugs (1936). He held various consulate posts throughout the world, becoming divisional assistant in the State Department, 1930-31, and thereafter assistant chief of the Far Eastern Division.

Gaubert, Philippe. French musician; died in Paris, July 9, 1941; born in Cahors, France, 1879. He was a pupil of Taffanel; was the first Rome Prize winner (1905); was professor of the Paris Conservatoire since 1919; and leader of the orchestra of Grand Opera since 1920 and of Société des Concerts. His works include *Philotts* (ballet) (1914), *Fresques* (1923), *Naila* (1926), and *Les Chants de la mer, Josiane, Les Stances* (1929).

Gehrig, Lou. American baseball player; died in New York, N.Y., June 2, 1941; born in New York, N.Y., June 19, 1903. Star first baseman of the New York Yankees, American League, he played fifteen seasons (June 1, 1925-May 1, 1939) without missing one game, setting a modern record that will stand for many years to come. Known as "Iron Horse Lou," "Columbia Lou," Gehrig was the

epitome of sportsmanship and clean living. Suffering from a form of infantile paralysis that caused the muscles to shrivel, he found that he no longer could play first base as of old, and of his own volition retired from the game (1939), an act that won the admiration of all baseball men, as well as the general public. A few of the records that he held were: Most consecutive games—2,130; Most years 150 or more runs batted in—7; Most home runs with bases filled—23; Most consecutive home runs in one game—4 (modern record); Most years, leading league, runs batted in—5 (tied with Ruth).

Geyer, Lee E(dward). American Democratic Congressman from California since 1939; died in Washington, D.C., Oct. 11, 1941; born in Wetmore, Kan., Sept. 9, 1888.

Gherardi, Bancroft. American communications engineer; died near Sudbury, Ont., Canada, Aug. 14, 1941; born in San Francisco, Calif., Apr. 6, 1873. Associated with the American Telephone and Telegraph Co. from 1907 to 1938, he had served as chief engineer and vice-president since 1920. In 1928, as president of the American Institute of Electrical Engineers, he formally opened a transoceanic radio-telephone circuit to London, establishing a new era in the history of communications. He was elected to the National Academy of Science in 1933, and was the recipient of the 1932 Edison Medal "for contributions to the art of telephone engineering and development of electrical communication." Among Gherardi's outstanding engineering feats were the construction of the Boston-Washington underground cable, the completion of three transcontinental lines, and the building of the New York-Chicago cable.

Gillespie, L(ouis) J(ohn). American chemist and educator; died in Boston, Mass., Jan. 24, 1941; born in Hillsboro Bridge, N.H., 1887. He was a fellow in bacteriology at the Rockefeller Institute for Medical Research, New York (1911-13); scientist for the Bureau of Soils of the U.S. Dept. of Agriculture (1913-15); biochemist in the Bureau of Plant Industry (1915-19), and teacher of physical chemistry at Massachusetts Institute of Technology since 1920.

Goldmark, Henry. American civil engineer; died in Nyack, N.Y., Jan. 15, 1941; born in New York, N.Y., June 15, 1857. Educated in the United States and Germany, he was one of the first to use steel in bridge construction. Among the many projects with which his name is connected are the drawings for concrete viaduct crossing Rock Creek Park, Washington, D.C. (1897); design of lock gates for the proposed ship canal from Great Lakes to Tidewater (1898-99); rebuilding Railroad and Highway Bridge across Missouri River (1899-1902), and the Panama Canal locks (1906-13).

Goldstein, Max Aaron. American otolaryngologist, died in Frankfort, Mich., July 27, 1941; born in St. Louis, Mo., Apr. 19, 1870. Founder (1914) and since director of the Central Institute for the Deaf at St. Louis, he taught otology and laryngology at St. Louis University (1900-12). He received the annual St. Louis Reward of Achievement in 1933 for his research in the problems of the deaf.

Gomes, Manuel Teixeira. Portuguese politician and writer; died in Bougie, Algeria, Oct. 18, 1941; born in Portugal, 1871. He was Ambassador to Great Britain from 1911 to 1923 and President of Portugal during 1923-25. Dr. Gomes wrote *Sambina Freire, Caritas Sem moral nerhuma, Maria Adelaide, Agosto Azul*, and other works.

Goodrich, Arthur (Frederick). American author and playwright; died in New York, N.Y., June 26, 1941; born in New Britain, Conn., Feb. 18, 1878. He be-

gan serious writing in 1900, but achieved his greatest success years later, when his play, *Caponsaccht*, won the gold medal of the Theater Club, Inc., as the best play of the 1926-27 season; it was presented by the Metropolitan Opera Association (1937). Among his plays were: *So This Is London* (1922), *The Ring of Truth* (1923), *The Joker* (1925), and *The Perfect Marriage* (1932). His novels included *Gleam o' Dawn* (1908), *The Lady Without Jewels* (1909), *The Man with an Honest Face* (1911), *You Wouldn't Believe It* (1936), and *The Sound of Wings* (1941).

Granger, Walter. American paleontologist; died in Lusk, Wyo., Sept. 7, 1941; born in Middletown, Vt., Nov. 7, 1872. Associated with the American Museum of Natural History since 1890 and curator of fossil mammals since 1927, Dr. Granger was best known for the ten eventful years he spent with the central Asiatic expeditions into China and Mongolia conducted by Dr. Roy Chapman Andrews between 1921 and 1931. As chief paleontologist of the Andrews expedition, he participated in the discovery of unhoped-for numbers of dinosaur remains, and also in the uncovering of many fossilized eggs of the giant beasts, which attracted wide interest. During his life, Dr. Granger had taken an active part in 28 expeditions, but due to the international situation had, in recent years, confined his work to the Western Bad Lands. He was the author of several books on paleontology and was well known as a college lecturer.

Grattan-Doyle, Sir Nicholas. British legislator; died in London, Eng., July 14, 1941; born Aug. 18, 1862. He was a Conservative member of Parliament from 1918 to 1940.

Graux, Lucien P. Belgian industrialist, died in Brussels, Belgium, during May of 1941; born in Belgium, 1872. He was president of the Belgian Society of Engineers and Industrialists in 1932, and was a director of the Belgian State Railways, Brussels Tramways and Cie. Belge des Chemins de fer et d'Entreprises. At his death he was president of the Central Industrial Committee, a federation of Belgian industrial organizations.

Gregory, Menas Sarkis. American psychiatrist and neurologist; died in Tuckahoe, N.Y., Nov. 2, 1941; born, 1877(?). Graduated from the Albany Medical College, New York, in 1898, Dr. Gregory was appointed to the psychiatric staff at Bellevue Hospital, New York City, in 1902 and two years later became head of the division, remaining as such until 1934. Dr. Gregory also served as consultant in psychiatry at the New York Neurological Institute, as professor of psychiatry at the New York Post Graduate Medical (1914-16), and as professor of psychiatry at the New York University College of Medicine (1922-26). In 1931 Dr. Gregory was given charge of a new psychiatric clinic, established as part of the Court of General Sessions, New York City, to study the psychiatric, clinical, and psychologic factors in the make-up of criminals. An expert witness on insanity, he was called in by either the state or the defense in scores of trials. He was well known to the public for his opinions on mental hygiene.

Gresley, Sir Herbert Nigel. British engineer; died in Hertford, Eng., Apr. 5, 1941; born June 19, 1876. He was the designer of the railroad engines Flying Scotsman, Coronation Expresses, and Silver Jubilee, of which the latter attained a speed of 112 m.p.h. (1936), breaking the British record. In 1939 the Mallard engine that Gresley designed broke the world record for steam traction, reaching a speed of 127 m.p.h. Sir Nigel was the inventor of articulated rolling stock, which reduced the weight

of trains, and the superior valve gear for three cylinder engines.

Gray, Clifford. English song writer; died in Ipswich, Eng., Sept. 26, 1941; born in Birmingham, Eng., Jan. 5, 1887. One of the better known lyric writers and author of the song *If You Were the Only Girl in the World*, he wrote the lyrics for such famous musical comedies as *The Bing Boys Are Here* (1916); *Sally* (1920); *Artists and Models*, *June Days*, and *Gay Paree* (1925); *A Night in Paris* (1926); *Hit the Deck* (1927); *The Three Musketeers* (1928); *O You Letty* (1937); and *Lambeth Walk* (1939).

Grimshaw, Robert. American engineer, inventor, and writer; died in Englewood, N.J., Apr. 9, 1941; born in Philadelphia, Pa., Jan. 25, 1850. He graduated from Andalusia College (1869), and in 1873 opened a consulting office in Philadelphia. In the last half century he numbered among his clients many large industrial firms, the U.S. War, Navy, and Treasury Departments, and the governments of New South Wales, Bavaria, and pre-war Bohemia. He held patents on lathe tools, core boxes, printing and bookbinding machinery, and projection apparatus, and made many inventions that were not patented; also he perfected technical improvements for railroads, foundries and other metal working plants, petroleum and vegetable oil refineries, newspapers, and many other industries.

Dr. Grimshaw retired in 1932, and interested himself in the aiding of the blind. As a result he founded *Blindaid*, a system by which he, and his assistants, sent out daily news flashes, books, magazine articles, letters, and short stories to blind children as well as adults.

Dr. Grimshaw was a prolific writer on engineering subjects, being the author of countless pamphlets and articles (including works written in French and German); perhaps his best known book is *The Locomotive Catechism* which has passed through 30 editions since 1888. Other books are: *Why Manufacturers Lose Money* (1922), *The Modern Foreman* (1923), and *Machine Shop Chat* (1923).

Grindell-Matthews, Harry. Welsh inventor; died near Swansea, Wales, Sept. 11, 1941; born March, 1880. Something of a man of mystery in the world of science, he received wide publicity in 1924 when he declared he had invented a "death ray," which would bring down airplanes at a distance. Although he announced that he was dickering with the military powers of France, England, and the United States, so far as the public knows, his lethal ray has not been employed during the present war. Since 1930 he had been engaged upon methods of defense from air attack and underwater craft. Among the inventions credited to him were devices for wireless control of torpedoes, airplanes, and motor boats; a device for wireless communication between motor cars; various submarine detecting devices invented during the World War, and the "luminaphone," an organ played by light.

Gruber, L. Franklin. American clergyman and educator; died in Chicago, Dec. 5, 1941; born near Reading, Pa., 1871. Graduated from Muhlenberg College, Pennsylvania, in 1898 and ordained in the Lutheran ministry in 1901, he had been president of the Chicago Lutheran Theological Seminary since 1927. Dr. Gruber was the author of numerous religious and mathematical books, including *The Version of 1611* (1913), *Documentary Sketch of the Reformation* (1917), *The Wittenberg Originals of the Luther Bible* (1918), *The Freedom of the Will* (1923), *What After Death?* (1925), and *The First New Testament and Luther* (1928).

Guertner, Franz. German cabinet minister; died in Berlin, Jan. 28, 1941; born in Germany, in 1871. He was Minister of Justice in Bavaria, 1922-32, and German Minister of Justice since 1932. Dr. Guertner obtained the latter post during the conservative regime of Franz von Papen (immediately preceding Nazism), but his strongly nationalistic creed, his ignoring of Parliamentary procedure, his hatred of Jews, his embodiment of the Nazi conception of justice and jurisprudence, and his inclination to overrule standard legal precedents made him an ideal Hitler satellite. Hitler reappointed him Reich Minister of Justice in 1933.

Guggenheim, Simon. American ex-senator, industrialist and philanthropist; president of the American Smelting and Refining Co. since 1919; died in New York City, Nov. 2, 1941; born in Philadelphia, Dec. 30, 1867. He was a Republican member of the U.S. Senate from Colorado during 1907-13. In memory of his son he established in 1925 the John Simon Guggenheim Memorial Foundation. The foundation provides fellowships to scholars, writers, scientists, musicians, biologists, physicists, poets, artists, composers, etc., to pursue their work or studies in all parts of the world, and are open to students in the United States, Canada, and Latin America, without regard to sex, race, creed or color. In addition to this foundation, he also contributed liberally to educational and charitable institutions.

Guggenheim, William. American industrialist, philanthropist, and publicist; died in New York City, June 27, 1941; born in Philadelphia, Pa., Nov. 6, 1868. Superintendent of the Philadelphia Smelting and Refining Co. in Colorado during 1889-90, he was general manager of the various mining and smelting interests of M. Guggenheim's Sons in Mexico from 1890 to 1900. His writings include *William Guggenheim*, under the pseudonym of Gatenby William (1934), and the booklets *Our Republic Triumphant*, *Peace by Victory at Last*, *but With a Warning*, *A Greater America*, *The New World*, *What Price Government*, *Industry*, *Labor and Bolshevism*, and *With a Prophecy*.

Gulland, George Lovell. British physician; died in Edinburgh, Scotland, May 4, 1941; born in Edinburgh, 1862. Professor emeritus of medicine at Edinburgh University from 1915 to 1928, he was one of the world's leading authorities on blood diseases. In 1893 and 1895 he won research prizes offered by the Royal College of Physicians.

Gunther, Franklin Mott. American diplomat, Minister to Egypt in 1928-30, and to Rumania since 1937; died in Bucharest, Rumania, Dec. 22, 1941; born in New York City, Feb. 28, 1885. In the diplomatic service since 1908, he served with numerous embassies and legations. He was counselor of the embassy at Rome (1920-24), and chief of the Division of Mexican Affairs, U.S. Department of State (1924-28). During 1930-37 he was president of the American Institute for Iranian Art and Archaeology.

Hajek, Marcus. Viennese physician and educator; died in London, Eng., Apr. 3, 1941; born in Hungary, 1860. Friend of Dr. Sigmund Freud, he was chief of the University of Vienna Rhinologyngological Clinic for about fifteen years, retiring in 1933. He was the author of the standard textbook *About Sinus Diseases*, and *On the Diseases of the Larynx*, translated into many languages.

Hall, Grover Cleveland. American associate editor of the *Montgomery Advertiser* (1910-26) and editor thereafter; died in Montgomery, Ala., Jan. 9, 1941; born in Haleburg, Ala., Jan. 11, 1888. He was awarded a Pulitzer prize of \$500 for "the best

editorial writing in 1928," for editorials in *The Advertiser* against gangism and racial and religious intolerance.

Hanus, Paul Henry. American educator; died in Cambridge, Mass., Dec. 14, 1941; born in Hermsdorf, Prussia, Mar. 14, 1855. Graduated from the University of Michigan in 1878, Dr. Hanus became assistant professor of history and art of teaching, 1891-1901, professor, 1901-21, and professor emeritus since 1921 at Harvard University. In 1906 he was appointed chairman of the Massachusetts State Commission of Industrial Education. A founder of the National Society of College Teachers of Education, he served as its president in 1910. In 1915 he became vice president of the American Association for the Advancement of Science. Dr. Hanus was the author of many books on educational matters, including *Elements of Determinants* (1886), *Geometry in the Grammar School* (1894), *Educational Aims and Educational Values* (1899), *School Efficiency* (1913), *School Administration and School Reports* (1920), and *Adventuring in Education* (1937).

Harris, James Rendel. British archeologist, theologian, and biblical scholar; died in London, Mar. 1, 1941; born in Plymouth, Eng., 1880. One of the best informed authorities on Old Testament history, he taught at two schools in the United States—Johns Hopkins University (1882-85) and Haverford College (1886-92). He spent many years of his life traveling extensively in search of manuscripts, and writing numerous books on the Bible, legends, ancient manuscripts, and other subjects—a total of more than 100 books.

Harris, Sam H. American theatrical producer; died in New York, N.Y., July 3, 1941; born in New York, Feb. 3, 1872. One of Broadway's most eminent and successful producers, he became associated with George M. Cohan under the firm title of Cohan & Harris (1904-20). The firm produced such hits as *Forty-five Minutes From Broadway*, *George Washington, Junior*, *Popularity*, *The Talk of New York*, *Get-Rich-Quick Wallingford*, and *The Red Widow*. The partnership dissolved with the actors' strike of 1919 and Harris went ahead as an independent producer. During the next years his intuitive instinct for successful plays produced such outstanding favorites as *Rain*, *The Coconuts*, *Animal Crackers*, *Cradle Snatchers*, *The Jazz Singer*, *June Moon*, *Dinner at Eight*, *I'd Rather Be Right*, and *Of Mice and Men*. During the latter career, he achieved the singular honor of producing three Pulitzer prize winners, *Icebound* (1923), *Of Thee I Sing* (1932), and *You Can't Take It With You* (1937). His latest endeavors were *George Washington Slept Here* (1940), *Lady in the Dark* (1941), and, at his death, the current *The Man Who Came to Dinner*.

Harrison, Pat (Byron Patton). American Senator (Dem.) from Mississippi; died in Washington, D.C., June 22, 1941; born in Crystal Springs, Miss., Aug. 29, 1881. Admitted to the bar (1902), he was elected to the U.S. House of Representatives in 1910, subsequently being reelected to three additional terms (1912-18). In 1918 he ran for the U.S. Senate, defeated the incumbent, James K. Vardaman, and was reelected to the Senate in 1924, 1930, and 1936.

An old-line deep South legislator, Senator Harrison was a top-ranking conservative Democrat, and had abandoned blind party loyalty, during the second Roosevelt term, by abruptly refusing to follow certain aspects of the New Deal. He became chairman of the Senate Finance Committee in 1933 and as such played a major part in helping the late Sen. Joe T. Robinson and former Vice-President

Garner prod the original NRA bill, the Social Security bill, the Beer bill, parts of the original Agricultural Adjustment Act, and other measures through the Senate. He drew his first frowns from the White House in 1937 when he proposed cutting the Administration's huge relief expenditures, and then showed his disinclination toward packing the Supreme Court. This attitude likely cost him the post of Senate majority leader (1937), for President Roosevelt overtly indorsed Sen. Alben W. Barkley, and Harrison was the loser by one vote. Still obstinate, he organized the drive which led to repeal of the undistributed corporate profits tax (1938), one of the President's favorite fiscal policies. (In spite of his differences with the President over domestic problems, he had firmly adhered to the foreign policy of the Administration and worked strenuously for the Hull reciprocal trade agreement program.) The breach was apparently cured in 1940 when President Roosevelt appointed him President pro tempore of the Senate.

It was evident, last year, that Senator Harrison's health was fading, but he refused to abandon the capital during the lease-lend debates, saying "Old Pat won't go away till this bill is acted upon. We've got to bring this thing to an end."

Hartman, Lee Foster. American editor; died in New York, N.Y., Sept. 23, 1941; born at Ft. Wayne, Ind., Oct. 2, 1879. Graduated from Wesleyan University in 1901, he was associated with Harper & Bros., publishers, from 1904 and since 1931 had been editor of *Harper's Magazine*.

Harty, Sir (Herbert) Hamilton. British conductor and composer, conductor of the Halle Orchestra in Manchester, 1920-33, and guest conductor in tours of both the United States and England; died in Brighton, Eng., Feb. 19, 1941; born in Hillsborough, Co. Down, Ireland, Dec. 4, 1880. His compositions include *Comedy Overture* (1907), *With the Wild Geese*, *The Children of Lir*, and *The Mystic Trumpeter*.

Hawley, Willis (Hatman). American Republican Congressman from Oregon (1906-32); died in Salem, Ore., July 24, 1941; born near Monroe, Ore., May 5, 1864. Regarded as an authority on tariff and taxation, he, with the late Sen. Reed Smoot, presented the Smoot-Hawley tariff act and led the 13 months' fight to its final approval by the President (1930). Hawley was an extreme advocate of protective tariff measures and contended, when the Smoot-Hawley bill was bitterly attacked, that it was intended as "an alert guard protecting our industries and labor against unfair competition, improper trade practices and exclusion from an advantageous participation in our markets, which markets our people have created and maintain." He was appointed chairman of the House Ways and Means Committee in February, 1928, and was chairman of the caucus of House Republicans from 1926 to 1932.

Hay, Eduardo. Mexican soldier and diplomat, Secretary of Foreign Affairs during 1935-40; died in Mexico City, Mexico, Dec. 27, 1941; born in Mexico, Jan. 29, 1877. Graduated from Notre Dame, South Bend, Ind., in 1901, he began his political career (1911) as chief of staff of Francisco I. Madero during the first Mexican revolution, and accompanied Madero on his triumphal entry into Mexico City. In 1912 he was elected deputy to the National Congress, and in 1913 participated in the Constitutionalist movement in Sinaloa as chief of staff of General Ramón Iturbide. General Hay was successively Minister Plenipotentiary to Italy, Japan, Chile, Peru, Guatemala, and France. He also occupied the posts of Under-Secretary of Commu-

nications and Public Works, Director of Public Welfare, and Director of Customs.

Hayes, Commodore Sir Bertram Fox. British International mercantile marine officer; died in Crosby, Liverpool, Eng., May 15, 1941; born in Birkenhead, Eng., Apr. 26, 1864. Former commodore of the White Star Line, he was a World War hero, and was knighted and won the Distinguished Service Order for his success in sinking two submarines. In 1925 he wrote his autobiography, *Hull Down, Reminiscences of Windjammers, Troops, and Travelers*.

Hazen, Charles Downer. American educator and historian; died in New York, N.Y., Sept. 18, 1941; born in Barnet, Vt., Mar. 17, 1868. Graduated from Dartmouth College (1889), he was professor of history at Smith College (1894-1914); and professor of European history at Columbia University (1916-37). He retired in 1937 as professor emeritus. Author of many well known works on European history, especially the French Revolution, he published *Contemporary American Opinion of the French Revolution* (1897), *Europe since 1815* (1910), *Modern European History* (1917), *Fifty Years of Europe* (1919), *The Kaiser vs. Bismarck* (1921).

Head, Frederick Waldegrave. Australian prelate, Anglican Archbishop of Melbourne since 1929; died in Melbourne, Dec. 18, 1941; born in London, Eng., Apr. 18, 1874. Archbishop Head had served in World War I as senior chaplain to the Guards Division of the B.E.F., 1917-18, as Vicar of Christ Church, Greenwich, 1922-26, chaplain to the King, 1922-30, and canon and subdean of the Liverpool Cathedral, 1926-29.

Heckscher, August. Capitalist; died in Lake Wales, Fla., Apr. 26, 1941, born in Hamburg, Germany, Aug. 27, 1848. He came to the United States in 1867, and engaged in the coal business until 1884; an organizer of the Lehigh Zinc & Iron Company (1881), later consolidated with others into the New Jersey Zinc Company, he was general manager of this Company until 1904. In 1912 he became interested in New York real estate and purchased property in the vicinity of Forty-Second street, where he foresaw a high appreciation in values.

Through his interest in philanthropy he conceived the Heckscher Foundation Building (1922) for children, in New York, toward which he donated \$5,000,000. He provided for the continuation of the foundation, and in 1929 added \$4,000,000 to the children's fund for the maintenance of day nurseries, dental clinics, and playgrounds in the congested areas of the city. At his death he was a director of the Empire Trust Company, chairman of the board of directors of the Union Bag and Paper Corporation, and a director of the Crucible Steel Company.

Heinz, Howard. American industrialist; died in Philadelphia, Pa., Feb. 9, 1941; born in Pittsburgh, Pa., Aug. 27, 1877. He graduated from Yale in 1900, and began working in his father's firm, the H. J. Heinz Company; on the death of his father (1919) he assumed the presidency. During the World War he served as U.S. Food Administrator in Pennsylvania—among other various positions—and after the war he was director general of the American Relief Administration for Southeastern Europe and Asia Minor. In 1927 he gave Yale University \$100,000 to endow the "Howard Heinz Students' Educational Fund." In September, 1940, he sent \$80,000 to England to enable the British to build more planes.

Henry, Jules. French diplomat, appointed Ambassador to Spain, October, 1938, to Brazil, April, 1939, and to Turkey, September, 1940; died in Ankara, Turkey, June 10, 1941; born in France, 1889.

He was generally accredited as being one of the most efficient of foreign diplomats.

Hess, Sol. American cartoonist, creator of the syndicated comic strip *The Nebbs*; died in Chicago, Dec. 31, 1941, born in Wisconsin, 1872.

Hewlett, (James) Monroe. American architect; died in Lawrence, Long Island, N.Y., Oct. 18, 1941; born in Lawrence, Aug. 1, 1868. Resident director of the American Academy in Rome from 1932 to 1935, he designed, among others, the Brooklyn Hospital, the Brooklyn Masonic Temple, St. John's Hospital in Brooklyn, and the Danbury, Conn., hospital. He was president of the Architectural League of New York from 1919 to 1921.

Higbee, Lenah Sutcliffe (Mrs.). American nurse leader, superintendent of the U.S. Navy Nursing Corps from 1908 to 1923, and during the World War directed the activity of some 500 nurses; received the Distinguished Service Medal for her work, died in Orlando, Fla., Jan. 10, 1941, born 1875.

Higgins, Frederick Robert. Irish poet; died in Dublin, Ireland, Jan. 8, 1941; born in Foxford, Co. Mayo, Ireland, Apr. 24, 1896. A frequent contributor to English, Irish, and American literary journals, he was managing director of the Abbey Theater in Dublin since 1937, and came to the United States (1937) with his Abbey company. He received the Aonach Taitteann Award for Poetry with his *Salt Air* (1924). Other poetic works include *Island Blood* (1925), *The Dark Breed* (1927), *Arable Holdings* (1933), and *The Gap of Brightness*.

Hilferding, Rudolf. German politician, Finance Minister of Germany in 1923 and 1928, reported to have committed suicide by hanging in prison in occupied France, September, 1941, born in Austria. A Socialist leader (of Jewish ancestry), he left Germany when Hitler became Chancellor (1933) and moved to Arles, France. After the fall of France, Dr Hilferding made arrangements to move to the United States and in February, 1941, obtained possession of the necessary papers for United States entry, but as he prepared to embark from Marseille the Gestapo intervened and he was handed over to German authorities.

Hill, Sir Arthur William. British botanist, assistant director of the Royal Botanical Gardens at Kew, England, from 1907 to 1922 and thereafter director; died in London, Eng., Nov. 3, 1941, born Oct. 11, 1875.

Hill, (John) B(oynton) P(hilip) Clayton. American general, lawyer, and ex-congressman; died in Washington, D.C., May 23, 1941, born in Annapolis, Md., May 2, 1879. He served as Republican Congressman from Maryland from 1921 to 1927, in 1924 attained national publicity when he was tried and acquitted on charges of illegal manufacture of wine and cider in his home. (The case established the legality of making home brew during prohibition.) He sought election to the U.S. Senate in 1926 and 1934, but was defeated both times.

Joining the National Guard (1904), he rose through the ranks, serving as lieutenant colonel during latter part of the World War and receiving the Distinguished Service Medal, the Croix de Guerre, and other honors. In 1935 he was promoted to brigadier general and named adjutant general of the State of Maryland. A contributor to many national magazines, he wrote *National Protection—Policy, Armament and Preparedness* (1916), and *The Federal Executive* (1916).

Hill, Robert Thomas. American geologist, principal geologist of the U.S. Geological Survey from 1886 to 1930; died in Dallas, Tex., July 28, 1941; born in Nashville, Tenn., Aug. 11, 1858.

Hills, Laurence. American newspaperman, chief

Paris correspondent of the New York *Herald* and New York *Sun*, 1920–24, and since 1924 editor-in-chief and general manager of the European edition of the New York *Herald Tribune*; died in Vichy, France, Mar. 28, 1941; born in New York, N.Y., July 29, 1879. The European edition of the *Tribune* went to press for the last time on June 12, 1940, two days before the German army occupied Paris.

Hiltman, John Wolfe. American publisher, vice-president and general manager of D. Appleton & Co. (1912–19), president (1919–33), and since 1933 chairman of the board; died in New York, N.Y., Apr. 15, 1941; born in Manchester, England, Feb. 27, 1862.

Hinckley, Robert. American portrait painter; died at Rehoboth Beach, Del., June 2, 1941; born in Boston, Mass., Apr. 3, 1853. A direct descendant of John Cotton and of Governors Simon Bradstreet, Thomas Dudley, and Thomas Hinckley of the Plymouth colony, he was a graduate of Ecole des Beaux Arts in Paris, and studied painting in the French capital for 17 years. He founded the Carolus Duran Studio and in it worked as a colleague of John Singer Sargent for many years. After his return to America he painted more than 350 portraits of prominent citizens and taught for several years at the Corcoran School in Washington. Among his better known works are *Alexander at Persepolis* and his painting of the first ether operation at the Medical Museum in Boston.

Hinds, Ernest. American general; died in San Antonio, Texas, June 17, 1941; born in Alabama, Apr. 18, 1864. A graduate of the U.S. Military Academy (1887), he served in the Philippines, and in the World War was made Chief of Artillery of the A.E.F., winning praise even from the Germans for his remarkable skill. In 1922 he was promoted to the rank of Major General. General Hinds held the Distinguished Service Medal, commander of the French Legion of Honor, and Belgian Order of Leopold. In civilian life, he was attorney, secretary-treasurer, and general manager of the United Services Automobile Association.

Hitchcock, Thomas. American sportsman; died near Old Westbury, L.I., Sept. 29, 1941; born on Nov. 12, 1860. A ten goal polo player in his day and a member of the first American international polo team in 1886, he was regarded as the greatest steeplechase trainer in the history of American turf. He was the father of Thomas Hitchcock, Jr., one of the country's outstanding polo players until his retirement in 1939.

Hobson, Robert Lockhart. British art expert; died at Horsham, Sussex, Eng., June 6, 1941; born July 26, 1872. Famed as an authority on Chinese pottery and porcelain, he was the author of the following standard works: *Catalogue of English Pottery* (1903), *Guide to English Pottery and Porcelain* (1904), *Catalogue of English Porcelain in the British Museum* (1905), *Worcester Porcelain* (1910), *Chinese Pottery and Porcelain* (1915), *The Wares of the Ming Dynasty* (1923), *The Later Ceramic Wares of China* (1925), and *Catalogue of the Eumorphopoulos Collection* (1925–28).

Holland, Charles Thurston. British radiologist, one of the original experimenters with X-rays, noted for his work with radiology in relation to bone fractures; died in Liverpool, Eng., Jan. 16, 1941; born in England. He was credited with perfecting the World War method of detecting bullets and shell fragments embedded in the bodies of patients.

Holland, Edward Everett. American Democratic Congressman from Virginia from 1911 to 1921; died in Suffolk, Va., Oct. 23, 1941; born in Nansemond Co., Va., Feb. 26, 1861. He had been presi-

dent of the Farmers Bank of Nansemond, Virginia, since 1892.

Holm, August. Danish industrialist; died in Copenhagen, Denmark, Oct. 14, 1941, born in 1882. He was a leading Danish business man, administration director of the Otto Monsted Margarine Works, chairman of the Federation of Industries, and president of the Danish exhibition at the New York World's Fair.

Holt, Sir Herbert S(amuel). Canadian financier; died in Montreal, Canada, Sept. 28, 1941; born in County Kildare, Ireland, Feb. 12, 1856. Canada's foremost financier, he was putatively one of the wealthiest men in the Dominion. Sir Herbert, with his associates, reputedly controlled 250 companies at different times with assets of more than \$2,000,000,000. In 1908 he became president of the Royal Bank of Canada. He was knighted by King George V in 1915 for his services in connection with railway problems during the World War.

Holt, Sir Richard Durning. British shipowner; died in Liverpool, Eng., Mar. 21, 1941; born in Liverpool, Nov. 13, 1868. Senior partner in Alfred Holt & Company, he had been chairman of the Elder Dempster Lines, Ltd., since 1932, and chairman of the Mersey Docks and Harbor Board (1927-41). He was a liberal member of Parliament from 1907 to 1918.

Hombert, Octave. French financier, died in Cannes, France, July 10, 1941; born in France. Former president of the Société Financière Française et Coloniale, director of the Banque de l'Indo-Chine, and Cie. Générale du Maroc, and president and member of several banking houses. He was a leader in the movement to stabilize the franc in the post-war period. An author of many financial and political books his works include *La France des cinq Parties du Monde* (1927), and *L'impérialisme américain* (1929).

Horgan, Stephen. American inventor of the half-tone engraving process in 1880, died in Orange, N.J., Aug. 30, 1941; born near Norfolk, Va., February, 1854.

Horn, Joseph V. American restaurant owner, co-founder of the chain of Automat restaurants; died in Philadelphia, Penn., Oct. 13, 1941; born in Philadelphia, 1861. At his death he was president of the Horn and Hardart Baking Co., of Philadelphia, and chairman of the board of the Horn and Hardart Co., New York. In his later years he had devoted his time to the Horn Foundation, which he established for philanthropic and educational purposes.

Houghton, Alanson Bigelow. American diplomat; died in South Dartmouth, Mass., Sept. 16, 1941; born in Cambridge, Mass., Oct. 10, 1863. He graduated from Harvard University in 1886; was president of the Corning Glass Works from 1910 to 1918 and since then chairman of the board; member of the U.S. House of Representatives (1919-23); resigned from the House to become Ambassador to Germany (1922-25); Ambassador to the Court of St. James's (1925-28); and was unsuccessful Republican candidate from New York for the U.S. Senate in 1928.

Known as the "businessman diplomat," he was said to be one of the most capable and most competent diplomats that the United States ever sent abroad.

Hovey, Otis Ellis. American civil engineer and bridge designer; died in New York, N.Y., Apr. 15, 1941; born in East Hardwick, Vt., Apr. 9, 1864. Graduating from Dartmouth College (1885) and from the Thayer School of Civil Engineering (1889), he became associated with George S. Morrison, consulting engineer of Chicago, as engineer of

design in the building of several bridges (1890-96). He served later as plant engineer of the Union Bridge Co. (1896-1900), and as engineer of design for the American Bridge Co. (1900-07), assistant chief engineer (1907-31). He retired in 1934. He was a director of the Engineering Foundation since 1937. The two-volume work *Movable Bridges* which he wrote in 1926-27 is a standard reference. He also published *Steel Dams* in 1935.

Howard, Cordelia (Mrs. Edmund J. MacDonald). American actress; died in Belmont, Mass., Aug. 10, 1941; born in Providence, R.I., Feb. 1, 1848. As the original Little Eva, who portrayed Harriet Beecher Stowe's character from *Uncle Tom's Cabin*, she was "the Shirley Temple of her day." On the night of Sept. 27, 1852, at Troy, New York, the first dramatization of the story was presented, and for the next eight years Cordelia Howard was the incarnation of Little Eva. The play was given before Abraham Lincoln in Washington, and in 1856 was successfully staged in London. Before she retired, at the age of 12, she had also appeared in *Dread of the Dismal Swamp*, *Fashion and Famine*, *A Page of History*, and *Oliver Twist*. The rest of her life was passed quietly.

Hoxie, Charles A. American engineer and inventor; died in Schenectady, N.Y., Oct. 13, 1941; born in Constable, N.Y., 1867. With the General Electric Co. from 1912 until his retirement in 1932, he invented the process which made possible the recording of the sound track directly on motion-picture films. This invention insured the synchronization of sound and picture, opening wide the possibilities of sound motion-pictures. In 1920 he developed a machine called the pallophotophone, which received transatlantic wireless messages (dot and dash) thirty times faster than skilful operators. He also devised the process of turning sound into light and recording it on a transparent film. This process eventually led to the Hoxie machine for recording sound on the same motion-picture film that carries the picture.

Hudspeth, C(laude) B. American Democratic Congressman from Texas (1919-31); died in San Antonio, Tex., Mar. 19, 1941; born in Medina, Bandera Co., Tex., May 12, 1877.

Huntziger, Charles Leon Clement. French army officer; died in an airplane crash at Le Vigan, France, on his return from Africa, Nov. 12, 1941; born in Lesenen, Brittany, France, June 25, 1880. Minister of War in the Pétain Cabinet since September, 1940, and Commander in Chief of the French land forces, he was the No. 3 man in the Vichy regime. General Huntziger had served with distinction in the French army since 1901. On June 22, 1940, he signed the French armistices with Germany and Italy.

Hymans, Paul. Belgian statesman; died in Nice, France, Mar. 9, 1941; born in Brussels, in 1865. A leader of Belgian liberals and an outstanding scholar, he was elected to the Chamber of Deputies (1900), and served as Ambassador to the Court of St. James's (1915-17); Minister of Economic Affairs (1917-18); Minister of Foreign Affairs, 1918-20, 1924-25, 1927-34, and November, 1934, to March, 1935; and since 1935 Minister without Portfolio. In 1920 he served as president of the League of Nations Assembly and in 1922 as president of the Council of the League. After the Belgian inquiry into war atrocities (1914) Hymans, with Emile Vandervelde, Socialist leader, came to the United States to place before President Wilson documents of their findings. He was a signer of the Treaty of Versailles. Among his books were: *Parliamentary History of Belgium*, *Modern Brussels*,

Trère Orban (2 vols. 1906–12) *Portraits, Essais et Discours* (1914), and *Pages Libérales* (1936).

Isaacs, Nathan. American educator; died in Cambridge, Mass., Dec. 18, 1941; born in Cincinnati, O., July 10, 1886. Receiving his degree from the Cincinnati Law School (1910), he taught at that institution during 1912–18. Dr. Isaacs served as a professor of law at the University of Pittsburgh (1920–23), becoming associated with Harvard University as a lecturer on business law in 1923–24, and thereafter professor of law. Dr. Isaacs had served as president of the Association for Jewish Culture and Education and the Menorah Educational Conference, and in 1936 was an American delegate at the first World Jewish Congress in Geneva. His publications include *The Law in Business Problems* (1921), *Course in Business Law* (1922), and *Study as a Mode of Worship* (1925).

Israel, Edward L. American rabbi; died in Cincinnati, O., Oct. 19, 1941; born in Cincinnati, Aug. 30, 1896. Rabbi of Har Sinai Congregation, Baltimore, from 1923 to 1941, he was a noted labor mediator and president of the Synagogue Council of America since September, 1940. In July, 1941, he was elected executive secretary of the Union of American Hebrew Congregations, and at his death was about to take over his new duties.

Jackson, Daniel Dana. American chemical engineer, head of the department of chemical engineering at Columbia University from 1918 to 1939; died in Mattituck, N.Y., Sept. 1, 1941; born in Gloucester, Mass., Aug. 1, 1870. He was an authority on water supply and sanitation problems.

Jackson, Frederick John Foakes. American clergyman and theologian; died in Englewood, N.J., Dec. 1, 1941; born in Ipswich, Eng., Aug. 10, 1855. Prepared for the Episcopal priesthood at Trinity College, Cambridge University, he was dean and assistant tutor at Jesus College, Cambridge, England, during 1895–1916, and professor of Christian institutions at the Union Theological Seminary, New York, from 1916 until his retirement in 1932. Dr. Jackson was the author of various works on theology, including *History of the Christian Church* (1891), *Biblical History of the Hebrews* (1903), *Introduction to Church History (590–1314)* (1921), *Studies in the Life of the Early Church* (1924), *The Church in England* (1931), *The Church in the Middle Ages* (1934), and *History of Church Historians* (1939).

Jameson, Andrew. British distiller and politician; died in Dublin, Feb. 15, 1941; born in Ireland, Aug. 17, 1855. Chairman of John Jameson & Son, Ltd., he served as governor of the Bank of Ireland from 1896 to 1898, and as Senator of the Irish Free State, 1922–36.

Janssen, Georges. Belgian banker, governor of the Belgian National Bank; died in Brussels, Belgium, June 17, 1941; born in 1893.

Jenson, Andrew. American Mormon historian; died in Salt Lake City, Utah, Nov. 18, 1941; born in Denmark, 1851. Assistant historian of the Latter-Day Saints Church since 1898, he compiled and edited 850 manuscript volumes of the history of the Mormon church, encompassing the period 1830 to 1900. His writings include a biography (1938), numerous books on church chronology, and several Danish and Norwegian books.

Johns, George Sibley. American newspaper editor; died in St. Louis, Mo., July 16, 1941; born in St. Charles, Mo., Dec. 27, 1857. Associated with the *St. Louis Post-Dispatch* since 1883 (except during 1898–99), he was successively dramatic critic, city editor, managing editor, editor-in-charge, and since 1899 editor of the editorial page; retired in 1929,

as editor emeritus. Among things successfully sponsored by *The Post-Dispatch* under his editorial leadership were reorganization of the local public school system, construction of a lake in Forest Park by public subscription, the raising of \$83,000,000 in bonds for public improvements and general beautification of St. Louis, and general exposure of graft and corruption.

Johnson, Amy. See MOLLISON, AMY JOHNSON.

Johnson, Howard E. American lyric song writer of *When the Moon Comes Over the Mountain, Ireland Must Be Heaven, Oh, Those Sunday Drivers, What Do You Want to Make Those Eyes at Me For?, M-o-t-h-e-r, There's a Broken Heart for Every Light on Broadway, Where Do We Go From Here*, an early World War song, and *Dew, Dew, Dewy Day*; died in New York, N.Y., May 1, 1941; born in Waterbury, Conn., 1888. A few months before his death, he wrote *If They Feel Like a War, Let Them Keep It Over There*, sung over the radio by Eddie Cantor.

Jones, Howard H(arding). American football coach; died in North Hollywood, Calif., July 27, 1941; born in Excello, O., Aug. 23, 1885. Graduating from Yale University in 1908, he became head football coach at Syracuse University (1908), Yale (1909), Ohio State University (1910–11), Yale (1913–15), University of Iowa (1916–23), Duke University (1924), and University of Southern California since 1925. At Southern California he assured himself lasting renown as the leader of the mighty Trojan teams, which won or tied for the Pacific Coast Conference crown 8 years out of 16. He took five Trojan teams into the Rose Bowl games and won them all—an achievement never before accomplished. Eleven of the 20 players that received All-American rating under his coaching were men of Troy (Trojans).

Jones, John (Jack) Joseph. British politician; died in Essex, Eng., Nov. 21, 1941; born at Nenagh, Tipperary, Eng., Dec. 8, 1873. He was a Labor Member of Parliament from 1918 to 1940.

Jones, Paul. American pacifist; Episcopalian bishop; died at Yellow Springs, O., Sept. 4, 1941; born in Wilkes-Barre, Pa., Nov. 24, 1880. Ordained a priest in the Protestant Episcopal Church in 1906 he served as Episcopal Bishop of Utah from 1914 to 1918, when he resigned because of his pacifist viewpoint. Since 1930 he had been pastor and associate professor of religion at Antioch College, and at his death was chairman of the National Episcopal Committee on European Refugees, of the Ohio Christian Committee on Conscientious Objectors, and of the Fifth Province Episcopal Pacifist Fellowship.

Joyce, James. Irish author, died in Zurich, Switzerland, Jan. 13, 1941; born in Dublin, Ireland, Feb. 2, 1882. He left Ireland when he was 20 and went to Paris to study medicine, but soon after turned to writing and teaching. In 1922 he published the book *Ulysses*, which became the center of one of the most bitter literary controversies of modern times. Its author was evaluated in many ways by many critics from Edmund Wilson's appraisal of him as a great innovator of literature whose influence upon other writers of his time is immeasurable to that of Irving Babbitt who thought that the book could have been written "only in an advanced stage of psychic disintegration." It was not until 1933 that *Ulysses* could be legally bought in the United States, for until then it had been banned as obscene. His other works were: *Dubliners* (1914), *Portrait of the Artist as a Young Man* (1916), *Finnegans Wake* (1939), and *Collected Poems*.

Just, Ernest Everett. American Negro zoologist and educator; died in Washington, D.C., Oct. 28, 1941; born in Charleston, S.C., Aug. 14, 1888. Graduated from Dartmouth College (1907), he became an instructor in zoology at Howard University, Washington, D.C., and since 1912 was professor of zoology and head of the department at the university. The recipient of international recognition through his researches in the biology of the cell, Dr. Just was a factor in improving the standard of the Negro medical schools, and, as a tribute to his work, received in 1915 the Spingarn Medal, awarded annually to "the man or woman of African descent and American citizenship who shall have made the highest achievement during the preceding year, or years, in any honorable field of human endeavor."

Kagey, Charles L. American lawyer and diplomat; died in Wichita, Kan., Oct. 13, 1941; born in New Market, Va., Dec. 22, 1876. He was United States Minister to Finland from October, 1921, to May, 1925.

Kahn, Gus. American song writer; died in Beverly Hills, Calif., Oct. 8, 1941; born in Germany, 1886. One of the better known American lyric writers, he wrote such famous songs as *My Blue Heaven*, *Carolina in the Morning*, *Mammy*, *One Night of Love*, and *Memories*. The screen musicals to which he contributed include *Whoopie*, *Kid Milhons*, *Naughty Marietta*, *Rose-Marie*, *San Francisco*, *Lillian Russell*, *Bitter Sweet*, and *The Firefly*.

Kašpar, Karel. Czechoslovak ecclesiastic, died in Prague, Czechoslovakia, Apr. 21, 1941; born in Mirosov, Bohemia, May 16, 1870. Raised to the Sacred College of Cardinals in 1935, he was Titular Bishop of Bethsaida (1920); Bishop of Králové Hrádek (1921-31); and Archbishop of Prague since 1931. He visited the United States (1926) to attend the Chicago Eucharistic Congress.

Kast, Ludwig. American medical scientist; died in New York, N.Y., Aug. 14, 1941; born in Vienna, Austria, Mar. 2, 1877. Receiving his medical education in several European universities, he came to the United States in 1906. In 1907 he joined the staff of the New York Post-Graduate Medical School and Hospital, became a full professor in 1914 and since then had continued as an active trustee of the school, specializing in teaching and research in internal medicine and education. In 1928 he organized a philanthropic institution for medical research, which became in 1930 the Josiah Macy Jr. Foundation, with an original grant of \$5,000,000. Dr. Kast, president of the institution since its founding, had seen the organization appropriate nearly \$2,000,000 for medical research. From 1909 to 1914 he was secretary of the national committee of the United States of the International Committee on Post-Graduate Medical Education.

Kawai, Misao. Japanese statesman; died in Japan, Oct. 13, 1941; born in Oita-ken, Japan, September, 1864. A graduate of the Japan Military Academy and Military Staff College, he was Supreme War Councillor in 1921. Since 1927 he had been a member of the Japanese privy council, and as such had helped negotiate Japan's entry into the Rome-Berlin-Tokio axis. He was also a member of the council's special committee which deliberated the Japanese-French Indo-China treaty, giving Japan concessions in the east Asian colony.

Kean, Hamilton Fish. American Republican Senator from New Jersey (1929-35); died in New York City, Dec. 27, 1941; born in Ursino Union Twp., Union Co., N.J., Feb. 27, 1862. Senator Kean had been a banker and politician in New Jersey for nearly half a century.

Keene, Foxhall Parker. American sportsman; died

at Ayre's Cliff, P.Q., Canada, Sept. 25, 1941; born in San Francisco, California. One of the greatest polo players in the history of the game, he rated a 10 goal handicap (highest in the game) for fourteen years between 1891 and 1920. After attending Harvard University, he became associated with his father in sporting affairs, and for over a quarter of a century, starting in the late Nineties, James R. Keene and son completely dominated horse racing in the United States and England.

Kendall, William Mitchell. American architect; died in Bar Harbor, Me., Aug. 8, 1941; born in Jamaica Plain, Mass., Feb. 13, 1856. Associated with the architectural firm of McKim, Mead & White since 1882 and member since 1906, he designed the following prominent buildings: American Academy in Rome, New York Municipal Building and General Postoffice; Columbia University Library, New York; Knickerbocker Trust Company, New York; J. P. Morgan Library, New York; Arlington Memorial Bridge, Washington, McKinley Memorial, Niles, Ohio; Butler Art Gallery, Youngstown, Ohio, and Savoy Plaza Hotel, New York.

Kerri, Hanns. German politician, Minister of Religious Affairs since 1935; died in Berlin, Germany, December, 1941; born in Fallersleben, Prussia, December, 1887. High in Nazi circles from the time of Adolf Hitler's beer-hall putsch in 1923, Dr. Kerri was appointed Minister of Justice when Hitler rose to the seat of power (1933). During 1934-35 he served as Minister without Portfolio. As Minister for Church Affairs he led the efforts of the Nazis to gain full State control of the church.

Ketcham, John C(lark). American Republican Congressman from Michigan from 1921 to 1933; died in Hastings, Mich., Dec. 4, 1941; born in Toledo, O., Jan. 1, 1873.

Kidd, Isaac Campbell. American admiral, chief of staff, and aide commander of battleships of the battle force since February, 1940; killed in action during the Japanese attack on Pearl Harbor, Hawaii, Dec. 7, 1941; born in Cleveland, O., Mar. 26, 1884. Admiral Kidd had served as captain of the Port of Cristobal in the Canal Zone, as chief of staff of the command base force, as head of the officer detail section in the Bureau of Navigation, and as commander of Destroyer Squadron One, scouting force, during 1935-36. His last assignment before joining the battle force of the Pacific Fleet was commanding officer of the *Arizona*. At the time of his death Admiral Kidd was in command of a battleship division of the Pacific Fleet.

Kienzl, Wilhelm. Austrian composer; died in Vienna, Austria, Oct. 3, 1941, born in Wazzenkirchen, Upper Austria, Jan. 17, 1857. In his youth he was a friend of Franz Liszt and Richard Wagner. He was best known in the United States for his opera *Der Kuhreigen* (presented in New York and Chicago in 1913), and for *Der Evangelimann*, a folk opera which gained wide popularity in Germany and Austria. His other operas include *Urvast*, *Heilmar*, *Don Quixote*, *Knecht Ruprecht*, *Das Testament*, and *Hassan der Schwarmer*. He was the author of *Meine Lebenswanderung*, a biography.

Kiest, Edwin J(ohn). American newspaper publisher; died in Dallas, Tex., Aug. 11, 1941; born in Cook Co., Ill., Sept. 24, 1861. A charter member of the Associated Press, he had been owner and publisher of *The Dallas Times-Herald* since 1896.

Kilmer, Aline Murray (Mrs. Joyce Kilmer). American author; died in Stillwater, N.J., Oct. 1, 1941; born in Norfolk, Va., Aug. 1, 1888. Poet, essayist, and writer of children's stories, she was the author of six volumes of poems and essays, including *Candles That Burn* (1919), *Vigils* (1921), *The Poor*

King's Daughter (1925), and *Selected Poems* (1929). Mrs. Kilmer was the widow of Sergeant Joyce Kilmer, the soldier-poet who wrote *Trees*, and was killed in action in World War I.

Kinnear, Wilson Sherman. American civil engineer; died in Grosse Pointe, Mich., Aug. 8, 1941; born in Circleville, O., May 25, 1864. While assistant general manager of the Michigan Central Railroad (1910), he became nationally known for his construction of the firm's tunnel between Detroit and Windsor, Canada. Nearly 2 miles in length, it has the largest cross-sectional area of any sub-aqueous tunnel in the world. The method employed marked an epoch in engineering history, tending to revolutionize sub-aqueous construction. The work required three years to complete.

Kittredge, George Lyman. American educator; died in Barnstable, Mass., July 23, 1941; born in Boston, Mass., Feb. 28, 1860. Graduated from Harvard University in 1882, he taught Latin the next six years at Phillips Exeter Academy. He returned to Harvard as an instructor in English (1888-90), assistant professor (1890-94), and was then appointed to his professor's chair, where he remained until his retirement in 1936.

An outstanding authority on Beowulf, Chaucer, and Shakespeare, especially the latter, his "English 2" was perhaps the most difficult elective on the curriculum. Lewis Nichols, in *The New York Times*, in 1936, said of it: "It is hard, it is a series of mathematical equations based on six plays, but if you are weak and lack character, you can escape after mid-year's. Few ever did, save by invitation of the proprietor, for the Piper plays brilliantly right to the edge of the little blue books (in which examinations are written). Then comes two score or more lines with the terse commands: 'Indicate context,' 'Summarize briefly,' or, more unreasonable still, 'Quote remainder of speech.' The books come back, bathed in red ink and trembling with neuroses." Professor Kittredge was never known to be late for a lecture, never permitted anyone to cough in his classes, and carried a cane with which, in the Widener Library, he knocked off the hat of anyone so unwise as to persist in wearing one. Possessing a tall, angular frame, topped by a bushy, white beard, with a cigar invariably moving somewhere within the foliage, he was a legend when it came to traffic, for he simply held out his hand and walked on, amid the squealing of brakes and raucous honking of horns.

He was the author or co-author of 13 books, many of them used as text-books in the leading educational institutions of the world, among them *The Language of Chaucer's Trailus* (1894), *Words and Their Ways in English Speech* (with J. B. Greenough, 1901), *Old Farmer and His Almanac* (1905), *Chaucer and His Poetry* (1915), *Shakespeare* (1916), *Sir Thomas Malory* (1925), *Dr. Robert Child, the Remonstrant* (1919), and *Witchcraft in Old and New England* (1929).

Kneeland, Elbert W. Canadian industrialist, former president of the Winnipeg Grain Exchange; member of the Montreal Stock Exchange; and president and director of the Kneeland Grain Company; died in Montreal, Can., May 20, 1941; born in Bolton, Que., in 1871.

Koch, Theodore Wesley. American librarian; died, Evanston, Ill., Mar. 23, 1941; born in Philadelphia, Aug. 4, 1871. Librarian at the University of Michigan from 1905 to 1916, and since 1919 librarian at Northwestern University, he was the author of more than twenty books on library work. He was president of the American Library Institute during 1930-32.

Koffka, Kurt. German-American psychologist and educator; died in Northampton, Mass., Nov. 22, 1941; born in Berlin, Germany, Mar. 18, 1886. One of the scientists credited with the modern development of the Gestalt theory of psychology, he was visiting professor at Cornell University, 1924-25, professor of psychology at the University of Wisconsin, 1926-27, William Allan Neilson research professor at Smith College, 1927-32, and since 1932 professor of psychology at that college. His publications include *Zur Analyse der Vorstellungen und Ihrer Gesetze* (1912), *Die Grundlagen der psychischen Entwicklung* (1921), and *Principles of Gestalt Psychology* (1935).

Korizis, Alexander. Greek politician; died in Athens, Apr. 18, 1941; born on the island of Poros, near Salonica, in 1885. Long known for his keen knowledge of the affairs of his country, he became Premier of Greece on Jan. 29, 1941, upon the death of his intimate friend, Premier Gen. John Metaxas. Although not a military man, he pledged himself to carry on the war policies of General Metaxas. During his short tenure as Premier—80 days—he was in constant consultation with British and Greek leaders, and led a strenuous existence, contributing to his physical downfall. Prior to his Premiership he had been associated with the National Bank of Greece since 1903, becoming vice-governor in 1929.

Krause, Allen Kramer. American physician; died in Providence, R.I., May 12, 1941, born in Lebanon, Pa., Feb. 13, 1881. He graduated from Brown University (1901), received his medical degree from Johns Hopkins University in 1907, and for the next two years taught there. He returned to Johns Hopkins as an associate professor of medicine (1916-29); was president of the Desert Sanatorium (Arizona), 1929-37, and, in addition, was clinical professor of medicine at Stanford University (1929-37) and of the University of Southern California (1932-37). Prominent in the study of the pathology of tuberculosis, he was appointed managing editor of *The American Review of Tuberculosis* in 1916, became editor in 1922, remaining at that post until he retired, 1939. His publications included: *Rest and Other Things* (1922), *Environment and Resistance in Tuberculosis* (1923), *The Evolution of Tubercle* (1927), and numerous articles on tuberculosis.

Krencher, Daniel. German architect and archaeologist, died in Berlin, Germany, Nov. 13, 1941; born, 1874. A member of archaeological expeditions to Baalbeck, Syria, 1900-04, Aksum, Ethiopia, 1905-06, and Boghaskoi (Asia Minor), 1907, he was director of the excavation of Roman ruins near Trier, Germany, during 1912-14 and 1919-21. He also served as director of excavations in Angora in 1926 and 1928, and in Kalât Simân during 1938. Dr. Krencher served as a professor of historical architecture in the Berlin Technical High School in 1922, Rector, 1930-31. His works include *Boghaskoi* (1912), *Deutsche Aksumexpedition* (1913), *Baalbek* (1921-26), *Palmyra* (1932), *Stelen von Aksum* (1935), and *Römische Tempel in Syrien* (1938).

Kriebel, Hermann. German officer and Hitler aide, died in Munich, Germany, Feb. 17, 1941; born in Germany in 1876. Since 1938, chief of the personnel department of the German Foreign Office, he marched at Adolf Hitler's side in the beer cellar putsch of 1923 and was sentenced, with Hitler, to a jail term. It was Kriebel who bade farewell to the Allied Armistice Commission in June, 1919, with the words, "See you again in 20 years."

Kurt (-Derf), Melanie. German ex-opera singer; she

was the leading Wagnerian soprano at the Metropolitan Opera House from 1914 to 1917; died in New York, N.Y., Mar. 11, 1941; born in Vienna, Germany, 1879.

Labriolle, Pierre de. French literary historian, professor of Roman Literature at the Sorbonne since 1926, and author of several publications, including *La Crise Montaniste* (1913), *Histoire de la littérature latine chrétienne* (1920-26), and *La Réaction Paenne* (1935); died in Nantes, France, Jan. 15, 1941; born, 1874.

Ladd, William Palmer. American Protestant Episcopal priest and educator, dean of the Berkeley Divinity School at Yale University since 1918; died in New Haven, Conn., July 1, 1941; born in Lancaster, N.H., May 13, 1870. President of the American Theological Society in 1928, his publications include *A Guide to Christian Living* (1939) and *Prayer Book Interleaves*.

Laffoon, Ruby. American ex-governor; died in Madisonville, Ky., Mar. 1, 1941; born in Madisonville, Jan. 15, 1869. Elected Democratic Governor (1931-35) by the largest majority ever accorded a Kentucky governor, he attained nation-wide publicity by creating approximately 5,000 Kentucky colonels. Upon leaving office, he resumed his law practice.

Lagergren, Carl Gustaf. Swedish-American theologian; died in St. Paul, Minn., Oct. 27, 1941; born in Ostersund, Sweden, June, 21, 1846. A prominent pastor in Sweden, he came to the United States in 1889. From 1892 to 1914 he was the dean of the Swedish Baptist Seminary at the University of Chicago and professor of systematic theology. In 1931 the seminary was moved from Chicago to St. Paul and Dr. Lagergren also removed there to continue as head of the institution. He retired as dean emeritus in 1921. An authority on Swedish Baptist history and contributor to Swedish newspapers in America, he was the author of religious works, including *Strödda Tankar* (1872), *Om Små Barns dop* (1874), *Nytt och gammalt* (1894), *Den Kristna församlingen* (1908), and *På upp eller nedgående* (1915).

Lamberton, Robert Eneas. American judge of the Court of Common Pleas of Philadelphia County (1931-39) and mayor of Philadelphia since November, 1940; died in Longport, N.J., Aug. 22, 1941; born in South Bethlehem, Pa., Sept. 14, 1886.

Lampport, Samuel C. American textile merchant; died in New Rochelle, N.Y., Sept. 13, 1941; born in Marienpol, Poland, Apr. 1, 1880. One of the most widely known cotton merchants in the United States, he was president of the Lampport Company, Inc., for forty years. He represented the United States at Geneva in 1927 at the Conference Economique International, and in the same year made a survey of the Near East as a possible market for American textiles. In 1929 he visited Russia as a representative of the American Textile Institute to promote trade agreements between Russia and the United States. He was widely known as a contributor to Jewish philanthropic and educational institutions.

Landrith, Ira. American clergyman and educator; died in Los Angeles, Calif., Oct. 11, 1941; born in Milford, Tex., Mar. 23, 1865. President of Belmont College, Nashville, Tenn., from 1904 to 1912, he had been a prominent Presbyterian minister and prohibition leader. In 1916 he was the Prohibition candidate for the Vice Presidency of the United States. In 1906, as moderator of the last general assembly of the Cumberland Presbyterian Church, he assisted in the merger of that denomination

with the Presbyterian Church in the United States.

Lane, Gertrude Battles. American editor; died in New York, N.Y., Sept. 25, 1941; born in Saco, Me. Associated with *The Woman's Home Companion* as assistant editor during 1903-12 and editor since 1912, she was considered one of the foremost, if not the most prominent, woman in the magazine publishing field. During her editorship the circulation of the magazine grew from 738,000 monthly to more than 3,500,000. A main part of the growth was credited directly to the editorial policies of Miss Lane. A vice-president and director of Crowell-Collier Publishing Company, she was an advisor to the editors of *Collier's*, *The American Magazine*, and *Country Home*. During the World War (1917-18) Miss Lane served on the Washington staff of the U.S. Food Administration. Later, during Hoover's presidency, she was a member of the White House Conference on Child Health and Protection, and a member of the planning committee of the White House Conference on Home Building and Home Ownership.

Langmuir, Arthur (Comings). American research chemist; died at Hasting-on-Hudson, N.Y., May 14, 1941; born in Evanston, Ill., 1872. World authority on shellac and glycerine, he instituted and financed the American Chemical Society's \$1,000 annual award for young research chemists working in American universities. From 1900 to 1920 he was chief chemist and superintendent of Marx & Rawolle, Brooklyn, N.Y., glycerine and shellac manufacturers. Since then he had been a research and consulting chemist. Dr. Langmuir was chairman of the American Chemical Society Commission to London in 1910.

Laning, Harris. American naval officer; died in Philadelphia, Pa., Feb. 2, 1941; born in Petersburg, Ill., Oct. 18, 1873. Graduating from the U.S. Naval Academy in 1895, he rose through the ranks until, immediately after the World War, he was appointed acting chief of the Bureau of Navigation. Admiral Laning was made a rear admiral in 1925 and received a vice admiral's rank in 1933, and as such became commander of the cruisers of the fleet. From 1935 to 1936 he was commander of the fleet force. He retired in 1937. Among his decorations was the Distinguished Service Medal. In private life, after retirement, he was governor of the United States Naval Home in Philadelphia, Pa.

Lanman, Charles Rockwell. American educator and authority on Oriental literature and culture; died in Boston, Mass., Feb. 20, 1941; born in Norwich, Conn., July 8, 1850. He graduated from Yale University (1871), and in 1876 was engaged to teach at Johns Hopkins University, which had just opened. He joined the Harvard faculty (1880) as a full professor and introduced the study of Sanskrit; went to India (1889) and continued his research into Sanskrit, returning after a year with many valuable manuscripts; became professor emeritus (1926), having taught at Harvard for 46 years. His most eminent work, as a writer, was the standard 38 volume *Harvard Oriental Series*. Other works were: *Noun-Inflection in the Veda* (1880), *Sanskrit Reader, Vocabulary, Notes*, 8 issues (1884-1927), and *Beginnings of Hindu Pantheism* (1890). Parenthetically, he was an able sculler and had rowed up and down the Charles River for a total of nearly 12,000 miles.

Lapointe, Ernest. Canadian politician; died in Montreal, Canada, Nov. 26, 1941; born in St. Eloi, Quebec, Canada, Oct. 6, 1876. He had served as a member of the House of Commons since 1904; as Minister of Marine and Fisheries (1921); Min-

ister of Justice during 1924-30 and since 1935; and Attorney General since 1935.

A close friend of Premier King and his associate in the Cabinet, he was regarded by many as being a second Prime Minister. He was one of Canada's representatives at the Imperial Conference in London, 1926, represented Canada several times at the Assembly of the League of Nations, and was a representative again at the dedication of the Vimy Ridge Memorial in France, 1936. In 1937 he was made a member of the Privy Council of the United Kingdom, as a tribute to his services for the British empire.

Lasker, Emanuel. German chess champion, holder of the world's title from 1894 to 1921; died in New York, N.Y., Jan. 11, 1941; born in Berlin, Ger., Dec. 24, 1868.

Laughlin, Clara E(lizabeth). American author of at least forty books, including novels, travel books and biographies, she was best known for the travel-book series *So You're Going To—*, and the novel *Felicity*; died in Chicago, Mar. 3, 1941; born in New York, N.Y.

Laughlin, Irwin (Boyle). American diplomat; died in Washington, D.C., Apr. 18, 1941; born in Pittsburgh, Pa., Apr. 26, 1871. Holding numerous diplomatic posts from 1905 to 1919, he became Envoy Extraordinary and Minister Plenipotentiary to Greece (1924-26) and Ambassador to Spain (1929-33). From 1923 to 1935 he was a United States representative of the International Commission for the Advancement of Peace between the United States and Denmark.

Lauri, Lozenzo Cardinal. Italian Roman Catholic prelate, died in Vatican City, Rome, Italy, Oct. 8, 1941; born in Rome, Oct. 15, 1864. Ordained in the church in 1887, he was elected to the vigilance council of the diocese of Rome in 1897, and in 1901 was appointed canon of the Basilica of San Lorenzo in Damascus. Cardinal Lauri served as a diplomatic representative of the Vatican in Peru, Spain, and Poland, where he served as Papal nuncio during 1921-27 and consummated a concordat allowing for the reorganization of the dioceses in territories acquired by Poland after the World War. He was made a cardinal in 1927, and since 1939 had been Camerlengo (Chamberlain) of the Holy Roman Church, the highest administrative office in the church under the sovereign Pontiff.

Lavery, Sir John. British artist; died in County Kilkenny, Eire, Jan. 10, 1941; born in Belfast, Northern Ireland, March, 1856. In 1896 he helped Whistler found the International Society of Sculptors, Painters and Gravers; knighted (1918); elected a Royal Academician (1921), and president of the Royal Society of Portrait Painters since 1932. He was a member of the academies of Antwerp, Milan, Brussels, and Stockholm, the Societe Nationale des Beaux-Arts of Paris, and of Berlin, Vienna, Munich, and Spanish institutions. Sir John was considered to have painted more portraits of American millionaires than any other artist. He had pictures in many public galleries in Europe and America. His autobiography *The Life of a Painter* was published last year.

Lavranga, Denys (Dionigi). Greek musician and composer; died at Cefalonia, Greece, July 30, 1941; born in Argostoli, Cefalonia, 1864. Founder and director of the Athens National Opera since 1899, he was considered the creator of modern Greek opera. His musical tragedy *Didon*, performed in Athens in 1909, was the first Greek opera of magnitude, although his later operas, *Les Deux Frères* and *La Sorcière*, and his symphonical works,

Suites Grecques and *Ouverture Grecque*, possess a more heavily designed national color.

Lawrence, William. American Protestant Episcopal Bishop of Massachusetts from 1893 to 1926; died in Boston, Mass., Nov. 6, 1941; born in Boston, May 30, 1850. Ordained a priest in 1875 and consecrated a Bishop in 1893, he attained his most notable achievement with the establishment of the Church Pension Fund, which provided old-age pensions for retired Episcopal clergymen. The fund began in 1916 and when Bishop Lawrence retired as head in 1931, the funds had increased to \$30,000,000. He served as professor of homiletics and pastoral theology at the Episcopal Theological School, Cambridge, from 1884 to 1893, becoming dean of the institution in 1888, a post he held until his elevation to the episcopacy. His publications include *The Life of Amos Lawrence* (1889), *Visions of Service* (1896), *Life of Roger Wolcott, Governor of Massachusetts* (1902), *The American Cathedral* (1921), *Fifty Years: Memories of a Happy Life* (1926), and *The Life of Phillips Brooks* (1930).

Lawton, William Cranston. American educator and author; died in Philadelphia, Pa., Apr. 18, 1941; born in New Bedford, Mass., May 22, 1853. A graduate of Harvard in 1873, he held various professorships before retiring (1918) as professor emeritus in literature at Hobart College. During the last decade, although he had lost his eyesight, he, with his wife, published three translations of German works. He was the author of many books, among which were: *Three Dramas of Euripides* (1889), *Art and Humanity in Honor* (1896), *New England Poets* (1898), *Successors of Homer* (1898), *Introduction to American Literature* (1902), *The Soul of the (Greek) Anthology* (1923). Many poems he wrote were published under the title *Folia Dispersa*.

Lazarovich-Hrebilianovich, Prince Eugene Lazar. Serbian prince, descendant of the last czar of Serbia; died in Heidelberg, Germany, July 15, 1941; born in Zagreb, Croatia, 1870. Preparing for a military career, he graduated from the Imperial War College in Vienna and was assigned to the Austrian general staff. In 1894 he resigned his commission and devoted himself to the liberation of Serbia from Austria and Turkey and thereafter was active in Serbian freedom and acquainting the rest of the world with Serbia. He collaborated in a two volume work *The Serbian People—Their Past Glory and Their Destiny* (1910), and was the author of *The Orient Question* and other books and articles. In 1912 he visited the United States and lectured at Stanford University.

Lebesgue, Henri. French mathematician; died in France, August (?), 1941; born in Beauvais, France, 1875. Professor at the University of Paris (1910-21) and at the College de France since 1921, he had been a member of the French Academy of Sciences since 1922. Among his publications are *Leçons sur l'intégration et la recherche des fonctions primitives*, *Les fonctions sommables*, and *Leçons sur les séries trigonométriques*.

Leblanc, Maurice. French author; died in Perpignan, France, Nov. 7, 1941; born in Rouen, France, 1864. Pioneer of the detective novel in France, he was the creator of the noted Arsène Lupin, gentleman crook. His publications include *Arsène Lupin, Gentleman Cambrioleur* (1907), *Arsène Lupin contre Sherlock Holmes* (1908), *Les heures de mystère*, *Le bouchon de cristal*, *Le triangle d'or*, *Les trois crimes d'Arsène Lupin*, *La demoiselle aux yeux verts*, and *Les dents du tigre*.

Lee, Auriol. American actress and producer; died

near Hutchinson, Kan., July 2, 1941; born in London, Eng., Sept. 13, 1880. One of the theater's few women directors, she made her debut, as an actress, in London in 1900 and after a long career, in which she appeared in many distinguished casts and plays, she turned to stage directing in the late 1920's. Broadway plays staged by her include the successes *The Distaff Side*, *There's Always Juliet*, and *Old Acquaintance*, which appeared in December, 1940.

Lees-Smith, Hastings Bertrand. British politician, acting chairman of the Parliamentary Labor party, and leader of the Opposition; died in London, Eng., Dec. 18, 1941; born in India, 1878. He was a Labor member of Parliament during 1910-18, 1922-31, and since 1935. In 1929-31 he was Postmaster General, and also (1931) president of the Board of Education. His published works include *Studies in Indian Economics* (1909), *Second Chambers in Theory and Practice* (1923), and *Guide to Parliamentary Papers* (1924).

Leicester, 3rd Earl, Thomas William Coke. British army officer and land owner; died in Norfolk, Eng., Nov. 19, 1941; born, July 20, 1848. Noted big game hunter and a veteran of the Egyptian campaign, the Suakim expedition, and the Boer War, he was Lord Lieutenant of Norfolk during 1906-29. Lord Leicester was the owner of approximately 40,000 acres of land.

Leonard, Eddie (Lemuel Gordon Teney). American minstrel; died in New York, N.Y., July 29, 1941; born in Richmond, Va., October, 1875. One of the last and best of minstrel men, he was a vaudeville star from 1905 until vaudeville faded out in the late 1920's. He was the composer of *Ida*, who was "sweet as apple cider," *Don't Do Nothin' for Nobody That Won't Do Nothin' for You*, *Roly-Boly Eyes*, *Big Brown Booloo Eyes*, and many others. He appeared in motion pictures and starred in the *Melody Man* and *Rainbow's End*. His last part in pictures was a specialty act in *If I Had My Way* (1940). He was the author of one book *What a Life: I'm Telling You*, an autobiography (1935).

Le Tellier, Pol. Belgian diplomat; died in Vichy, France, Aug. 3, 1941; born in Belgium. He served as counselor of the Belgian embassy in London (1920-26); director general, political department of Foreign Affairs in Brussels (1927-35); Ambassador to Russia (1935-37); and Ambassador to France (1939-40).

Levinson, Samuel Oliver. American lawyer and peace advocate; died in Chicago, Ill., Feb. 2, 1941; born in Noblesville, Ind., Dec. 29, 1865. Internationally known attorney and sponsor of the Kellogg-Briand Peace Pact (1928), he was an idealist, believing that war could be avoided by simple and honest appeals to reason. He founded the American Committee for the Outlawry of War, and in 1925 urged United States entry into the World Court. In 1927 he went to Europe to work for peace. He established the William E. Borah Outlawry of War Foundation, with a grant of \$55,000, at the University of Idaho (1927), and gave the University of Chicago 50,000 documents showing the growth of his idea outlawing war (1937); a second batch, nearly as large, was given in 1939.

Levitzi, Mischa. American pianist and composer; died at Avon-By-The-Sea, N.J., Jan. 2, 1941; born in Kremenchurg, Russia, May 25, 1898. A child prodigy in Europe, he established his reputation as an artist in the United States when he appeared in concert in New York City in 1916; all the leading symphonic orchestras bid for his services. His compositions for the piano are ranked highly. He toured the United States many times, and Aus-

tralia and New Zealand (1921; 1931), and the Orient in 1925.

Lewis, Dean (De Witt). American educator and surgeon; died in Baltimore, Md., Oct. 9, 1941; born in Kewanee, Ill., Aug. 11, 1874. Associated with Rush Medical College (1900-24), he was professor of surgery at Johns Hopkins University and surgeon in chief of Johns Hopkins Hospital from 1925 to 1939, retiring as professor emeritus of surgery. Dr. Lewis made valuable contributions to the knowledge of acromegaly and also discovered the so-called "cable transplant," a means of joining two severed ends of a nerve whose intervening section of tissue is destroyed. In 1933 and 1934 he was president of the American Medical Association.

Lewis, Mary Sybil (Mrs. Robert L. Hague). American opera singer, star for the Metropolitan Opera Co. in the 1920's; died in New York City, Dec. 31, 1941; born in Hot Springs, Ark., Jan. 7, 1900. Coming to the Metropolitan by way of the *Greenwich Village Follies* and the *Ziegfeld Follies*, she won acclaim in Europe as well as in the United States. Her repertoire included the leading feminine roles in *Faust*, *La Bohème*, *Carmen*, *Rigoletto*, *Le Coq d'Or*, *Manon*, *Thais*, and *Louise*.

Liang, M. T. Chinese statesman; died in Tientsin, China, Oct. 14, 1941, born in China, 1860. He was Foreign Minister of China in 1912. In 1921 he was high adviser to the Chinese delegation to the Washington conference on limitation of armaments. He served as chairman of the China International Famine Relief Commission from 1923 to 1931.

Lieberman, Herman. Polish politician, Minister of Justice of the Polish Government in Exile since September, 1941; died in London, Eng., Oct. 21, 1941; born in Austrian Poland, 1870. An outstanding lawyer and orator, and a leader of the Polish Socialist party, he became a member of the Polish Parliament after the World War, serving until 1932. An extreme advocate for the cause of Polish liberty, his attacks on Pilsudski's dictatorship in 1931 brought about his incarceration after the Brest-Litovsk trials.

Liverpool, 5th Earl of, Arthur William de Brito Savile Foljambe. British colonial administrator, Governor of New Zealand (1912-17) and Governor General (1917-20); died in Lincoln, Eng., May 15, 1941; born May 27, 1870.

Llewellyn, Sir William. British artist; died in London, Eng., Jan. 29, 1941; born in Gloucester, Eng., in 1864. Outstanding as a figure in English art, perhaps his best known works were studies of King George V and Queen Mary (1910), which have been copied many times for other galleries. He was elected an associate of the Royal Academy (1912); knighted (1918); Royal Academician (1920); president of the Royal Academy (1928-38); and trustee of the National Gallery (1933-40). Sir William was conservative in his painting, and his works have often been summarized as "thoroughly conservative and decorous."

Lloyd, 1st Baron, of Dolobran, George Ambrose. British diplomat; died in London Feb. 5, 1941; born in Montgomeryshire, Wales, Sept. 19, 1879. A strong supporter of Winston Churchill's policies, he served as a member of Parliament (1910-18; 1924-25); Governor of Bombay (1918-23); High Commissioner to Egypt (1925-29); Secretary of State for the Colonies since May, 1940; and government spokesman in the House of Lords since January, 1941. He was the author of *The Great Opportunity* (1919), *Egypt, since Cromer* (vol. 1, 1933, vol. 2, 1934), and *The British Case* (1940).

Lloyd George, Margaret (Mrs). Wife of Britain's

Prime Minister of the World War I period; died in Criccieth, Carnarvonshire, North Wales, Jan. 19, 1941; born in Criccieth, in 1864. In 1927 she wrote a series of articles recalling her days as First Lady of No. 10 Downing Street.

Lo, Wen-Kan. Chinese statesman, Foreign Minister of China in 1928 and again during 1932-33; died in Northern Kwangtung Province, China, Oct. 16, 1941; born in P'anyü, Kwangtung, China, 1888. Graduated from Oxford University, he served as Procurator General of Peiping in 1912-15; vice chairman of the Chinese Government's Law Codification Commission, 1916-26; Minister of Justice of China in 1921 and 1926; Chief Justice of the Chinese Supreme Court and also Chinese Minister of Finance, 1922; and Director General of the China Customs Administration, 1926-27.

Lobligeois, Felix. French physicist; died as a result of radium poisoning in Paris, France, Oct. 20, 1941. He was a pioneer in the furtherance of radium experiments. During the past few years he had been hurrying to complete additional radium experiments, for the poisoning had taken one arm in 1926 and only in August, 1941, had spread to the other arm, requiring amputation.

Lone Ranger. See FRASER, EARLE W.

Lord, Frederick Taylor. American educator and medical doctor; died in Boston, Mass., Nov. 4, 1941; born in Bangor, Me., Jan. 16, 1875. Graduated from the Harvard Medical School in 1900, he was appointed an assistant in clinical medicine at the School in 1905, becoming a professor in 1930, and retiring as professor emeritus in 1935. Dr. Lord was nationally prominent for his research into pneumonia. He was the author of *Diseases of the Bronchial Lungs and Pleura* (1915), *Pneumonia* (1922), co-author of *Lobar Pneumonia and Serum Therapy* (1936), and collaborated on *Chemotherapy and Serum Therapy of Pneumonia* (1938).

Loudon, Jonkheer Hugo. Dutch oil dealer, died in occupied Netherlands, Sept. 6, 1941; born at The Hague, 1860. Recognized for twenty years as one of "the leading generals on the British-Dutch side" in the battle for the control of the world's oil trade, he served as head administrator of the Royal Dutch Co. from 1894 to 1902, as manager, 1902-21, as a member of the board of directors during 1921-29, and since the year 1929 he was president of the board.

Lowy, Alexander. American chemist and educator, professor of organic chemistry at the University of Pittsburgh since 1918; died in Pittsburgh, Penn., Dec. 25, 1941; born in New York City, Mar. 31, 1889. Dr. Lowy was the holder of numerous patents on chemical research discoveries. He was vice-president of the American Electrochemical Society during 1930-33 and 1939-41. His published works include *Introduction to Organic Chemistry* (1922), *Study Questions in Organic Chemistry* (1932), and *Industrial Organic Chemicals and Dye Intermediates* (1935).

Luca, Henry Winters. American educator, noted leader in the establishment of higher education in China; died in Haverford, Pa., Dec. 7, 1941; born in Scranton, Pa., Sept. 24, 1868. An organizer of Shantung Christian University in Tsinan (1904), and of Yen Ching University in Peiping (1919), he was a leader in the unification movement, which led to the establishment of the associated boards for Christian colleges in China (1923).

Luca, Maximilien. French landscape painter; died in Paris, France, February, 1941; born, 1901. President of the Société des Artistes Indépendants, his paintings include *Cathédrale de Gisors*, *Char-*

leroi, *Notre-Dame, Pont de Sully*, *Paysages de Rolleboise*, and *Les Baigneurs*.

Luetjens, Guenther. German naval officer; drowned as the battleship Bismarck, under his command, went down before thundering British cannon, May 27, 1941; born in Germany, in 1889. The possessor of the Knight's Cross of the Iron Cross, German Nazi's highest military decoration, which he won for his exploits in the Norwegian campaign in 1941, Admiral Luetjens was lauded in Germany for sinking the British battle cruiser *Hood*, the airplane carrier *Glorious*, transport ship *Orama*, and the auxiliary cruiser *Jervis Bay* (1940).

McAdoo, William Gibbs. American politician; died in Washington, D.C., Feb. 1, 1941; born near Marietta, Ga., Oct. 31, 1863. He was educated at the University of Tennessee and was admitted to the bar in 1885. McAdoo practiced law in Chattanooga, Tenn., and dabbled in Democratic politics. In 1892 he came to New York, and formed a law partnership, with William McAdoo (unrelated) which lasted until 1903. Then he accepted a position as president and director of the Hudson & Manhattan Railroad Co., operating the Hudson River tunnel system, which completed, Mar. 8, 1904, the first tunnel under the Hudson River.

McAdoo, in 1912, became vice chairman of the Democratic National Committee, and in the Presidential campaign of that year was acting chairman during the greater part of the campaign. Acceding to the importunities of President Woodrow Wilson, he became Secretary of the Treasury in 1913. Then followed the chairmanship of the Federal Reserve Board; chairman ex-officio Federal Farm Loan Board; U.S. Secretary of International High Commission; Director General of U.S. Railroads, Dec. 28, 1917. He resigned as Secretary of the Treasury in 1918, and as Director General of Railways in 1919. During the war he was responsible for money-raising programs that provided the government with \$43,000,000,000. His second wife, whom he married in 1914, was a daughter of President Wilson.

In the Democratic National Convention of 1920, in spite of his wishes, he was placed as nominee for President, and lost to Frank M. Cox only on the 44th ballot. Again in 1924 he was placed as nominee for the Presidency, this time with his backing, but lost to John W. Davis after a long and bitter struggle. As chairman of the California delegation to the Presidential convention, 1932, in Chicago, he swung California's votes to Roosevelt—on the fourth ballot—and that started the stampede that won for the New York Governor. Back in California, he won his party's nominee as Senator, in a battle against old-line Democrats, and beat out the Republicans and Prohibitionists for the decision (1933-39). As Senator, McAdoo was faithful to the New Deal and its policies.

McAdoo withdrew from politics after his defeat in the primaries for reelection, and at his death was chairman of the board of the American President Steamship Line. He was the author of *The Challenge—Liquor and Lawlessness versus Constitutional Government* (1928), and *Crowded Years* (autobiography).

McCain, Henry Pinckney. American major general, Adjutant General of the U.S. Army from 1914 to 1918; died in Washington, D.C., July 24, 1941; born in Carroll Co., Miss., Jan. 23, 1861. He retired in 1921.

McCormick, Harold Fowler. American manufacturer and industrialist; died in Beverly Hills, Calif., Oct. 16, 1941; born in Chicago, May 2, 1872. Son of Cyrus Hall McCormick, inventor of the reaping

machine, he was a vice-president of the International Harvester Co., the largest manufacturer of farm machinery in the world, from 1902 to 1919, treasurer, 1906-16, president, 1918-22, chairman of the executive committee of the board of directors, 1922, and chairman of the board since 1935.

McCune, George Shannon. American educator; died in Chicago, Dec. 5, 1941; born in Pittsburgh, Pa., Dec. 15, 1873. An authority on Chinese and Japanese affairs and active for many years in educational and missionary work in Korea, Japan, he served as superintendent of schools at Pyeng Yang, Korea (1905-08), president of the Union Christian College, Pyeng Yang (1908-09; 1927-36), and general superintendent of schools of North Korea and president of Sin Sung School (1909-21). Dr. McCune was president of Huron College, South Dakota, during 1921-27, and since 1937 professor of psychology and missions at Moody Bible Institute, Chicago.

McCurdy, Charles A(lbert). British lawyer and politician; died in London, Eng., Nov. 10, 1941; born on Mar. 13, 1870. A member of Parliament during 1910-23, he served as Food Controller, 1920-21, and as Coalition Liberal chief whip, 1921-22. He had been a member of the bar since 1896.

McDonald, Angus D(anial) American railway president of the Southern Pacific Company since 1932; died in San Francisco, Calif., Nov. 15, 1941; born in Oakland, Calif., Apr. 14, 1878.

MacDowell, (William) Melbourne. American actor, matinee idol of the Nineties and a star of the early motion-picture days, died in Oakland, Calif., Feb. 19, 1941; born in South River, N.J., 1857.

MacDuffie, John. American educator; died in Springfield, Mass., Sept. 21, 1941; born in Cambridge, Mass., May 16, 1861. Graduated from Harvard in 1884, he was the founder of the MacDuffie School for Girls, Springfield, in 1890 and principal from 1890 to 1937.

McGarry, William (James). American Jesuit theologian and educator; died in New York, N.Y., Sept. 23, 1941, born in Hamilton, Mass., Mar. 14, 1894. Ordained a priest in the Roman Catholic Church in 1925, he was professor of mathematics and philosophy at Fordham University (1918-22); professor at Weston College (1930-37), president of Boston College (1937-39); and editor of *Theological Studies*, a Catholic quarterly, since 1939. Dr. McGarry was the author of several books, including *The Biblical Commission* (1931), *Anthropology and Knowledge of God* (1932), *Mystical Body* (1935), and *Paul and The Crucified* (1939).

McGrath, Matt(hew) J. American policeman and track star; died in New York, N.Y., Jan. 29, 1941; born in Nenagh, Co. Tipperary, Ire., Dec. 20, 1876. Competing in four Olympics—1908, 1912, 1920, and 1924—and still holder of the world's record for throwing the 56-pound weight, he won 21 national championships in weight throwing during 30 years of competition. Made a sergeant in the New York City police force (1917), he had advanced to an inspector at the time of his death.

McHarg, Henry K. American financier and philanthropist; died in Lake Wales, Fla., Jan. 28, 1941; born in Albany, N.Y., Feb. 6, 1851. Starting his business career in 1866 as a bank clerk, he rose to become director of several railway companies; a director of the Bank of Manhattan Co. (1882-1928), vice-president (1893-1920); owner of the Virginia and Southwestern Railway System (sold in 1906); and a member of the New York Stock Exchange (1872-1926). His philanthropies to religious, medical, and charitable organizations totaled \$2,000,000.

McKenzie, John Charles. American Republican Congressman from Illinois (1911-25); died in Elizabeth, Ill., Sept. 17, 1941; born in Woodbine Township, Jo Daviess Co., Ill., Feb. 18, 1860. Upon his retirement from Congress, he was appointed chairman of the commission in charge of the government's Muscle Shoals hydroelectric project, now known as the Tennessee Valley Authority.

McLean, Edward Beale American newspaper publisher; died in Baltimore, Md., July 27, 1941; born in Washington, D.C., 1883. He was a former publisher of the Washington Post, heir to an immense fortune, involved in the Teapot Dome and Elk Hills lease scandals of 1924-25-26; a close friend of the late President Harding; and husband of Evelyn Walsh McLean, owner of the famous Hope diamond. In October, 1933, he was legally declared to be of unsound mind and was confined to a hospital, where he died.

McNab, Alexander. American marine inventor and engineer; died aboard a train near Sanderson, Tex., Mar. 6, 1941; born in Glasgow, Scotland, 1876. Owner and founder of the Marine Iron Works, New London, Conn., he was the inventor of numerous marine devices, among them were direction indicators, dials, meters, ice detectors, and steering gear. He was the author of *McNab's Encyclopaedia of Marine Appliances*.

Magnusson, Carl Edward. American electrical engineer and educator, died in Seattle, Wash., July 11, 1941; born in Harris, Miss., Sept. 29, 1872. Graduating from the University of Minnesota in 1896, he went to the College of Engineering of the University of Washington as associate professor in 1904, became head of the department of electrical engineering in 1906, and was dean of the college from 1917 to 1929. An authority on electric power, Dr. Magnusson was on the American committee at the first world power conference in London (1924) and at the third in Washington, D.C. (1936). His publications include *Alternating Currents* (1916), *Electric Transients* (1926), *Direct Currents* (1929), and *International Boundary Waters* (1937).

Mahtab, Sir Bijay Chand. Maharajah of Burdwan; died in Burdwan, India, Aug. 29, 1941; born Oct. 19, 1881. Senior Hindu prince of Bengal, he traced his hereditary title to the Mogul Emperors and was paternal governor of more than 1,000,000 persons. His annual income was reported to be \$15,000,000. Throughout his career a staunch supporter of the British rule in India, he was active in Indian governmental affairs for 40 years. He was a member of the Imperial Legislative Council (1909-12); of the Bengal Legislative Council (1907-18); and president of the British Indian Association at Calcutta during 1911-18; 1925-28, and from 1935 to his death. Sir Bijay headed an Indian delegation to the British Imperial Conference in London in 1926, and in 1931 toured the United States and lectured at Smith College.

Mailhouse, Max. American educator and neurologist, professor of neurology at the Yale Medical School from 1907 to 1920 and thereafter professor emeritus; died in New Haven, Conn., Oct. 19, 1941; born in New Haven, Feb. 5, 1857.

Mallory, Frank B(urrr). American pathologist; died in Brookline, Mass., Sept. 27, 1941; born in Cleveland, O., Nov. 12, 1862. One of the world's foremost pathologists, he had been associated with Harvard University from 1890 and was professor emeritus of pathology since 1932. He was head of the Institute of Pathology at Boston City Hospital from 1897 until his retirement in 1933. He was noted as the discoverer of the scarlet fever bacillus

and the cause of cirrhosis of the liver. Dr. Mallory was the author of two books: *Pathological Technique* (in collaboration with Ames H. Wright), (1897), and *The Principles of Pathologic Histology* (1914).

Mann, Tom. British labor leader; died in Grassington, Yorkshire, Eng., Mar. 13, 1941; born in Foleshill, Warwickshire, Apr. 15, 1856. A leading propagandist for a social democratic federation and strong for trade unionism, he was, for more than 50 years, one of the most active of left-wing labor agitators in England and other countries. He began as a Socialist in 1885, and ended as a confirmed Communist. In 1889 he led his first strike, the London Dock strike in which he gained world-wide fame, and from then on whenever there was important labor strife he was certain to be involved; he saw the inside of prisons in England, Ireland, Australia, and New Zealand. His publications include *A Socialist's View of Religion, The Programme of the I.L.P. and the Unemployed, The Dockers and Sailors in 1897, The International Socialist Movement, Russia in 1921, Tom Mann's Memoirs, and What I saw in China* (1927).

Marchand, Jean. French artist; died in Paris, 1941; born in Paris, 1883. A painter of landscapes, figures, and portraits, he illustrated works of Paul Valéry, Paul Claudel, and Francis Jammes. His paintings include *St. Martin* (1907), *Allée d'Arbres* (1910), *Le Labcur* (1912), *Laveuses* (1913), *La Réfugiée* (1914), *Maternité* (1921), and *Les Kadenyehs* (1928). In 1933 he completed two paintings, *Travail* and *Les Jeux*, for the Ecole Municipale in Paris.

Marland, Ernest Whitworth. American ex-governor; died in Ponca City, Okla., Oct. 3, 1941; born in Pittsburgh, Pa., May 8, 1874. He was a member of the U.S. House of Representatives (1933-35), and Governor of Oklahoma during 1935-39. As Governor he achieved the launching of the \$22,000,000 Grand River hydroelectric flood-control project, an old-age pension amendment, unemployment insurance, and State wage-and-hour-control statutes. In 1936 and 1938 he attempted unsuccessfully to gain a seat in the U.S. Senate. Also an oil man, he won and lost two fortunes in the business, and at one time was reported to control holdings valued at \$85,000,000.

Marshall, John Patten. American educator and musician, professor of music at Boston University since 1903 and founder of the university's College of Music (1928); died in Boston, Mass., Jan. 17, 1941; born in Rockport, Mass., Jan. 9, 1877. His publications include *Syllabus of History of Music* (1906), *Syllabus of Music Appreciation* (1911), and *Musical Instruction for Army Bandmen*, written for the U.S. War Department.

Martin, Everett Dean. American educator and clergyman; died in Claremont, Calif., May 10, 1941; born in Jacksonville, Ill., July 5, 1880. He served numerous pastorates; was chairman of the National Board of Review of Motion Pictures (1919-22); president of the American Association for Adult Education (1939), and chairman (1939-40). He was the author of *Civilizing Ourselves, Farewell to Revolution, The Conflict of the Individual and the Mass, Some Principles of Political Association, and The Nature of the State*.

Martin, Frank Lee. American educator; died in Columbia, Mo., July 18, 1941; born in Benedict, Neb., July 7, 1881. Graduated from the University of Nebraska in 1902, he became assistant professor of the University of Missouri School of Journalism (1909-12), associate professor (1912-16), profes-

sor (1921-30), associate dean (1930-35), and dean since 1935. He was news editor of the Japan Advertiser, Tokyo, 1915-16, and exchange professor of journalism at the Yenching University, Peiping, China, 1931-32.

Martinez-Nadal, Rafael. Puerto Rican Senator; died in San Juan, Puerto Rico, July 6, 1941; born in Mayaguez, Puerto Rico, 1878. Serving in the Puerto Rican Legislature for more than 25 years, he was president of the Senate from 1932 to 1940. He founded the daily newspaper *El País*.

Marvell, George Ralph. American naval officer; died in Annapolis, Md., Nov. 12, 1941; born in Fall River, Mass., Sept. 25, 1869. Graduated from the U.S. Naval Academy in 1889, he had been Commandant of the Naval station at Manila (1927-30), and president of the Navy's general board at Washington (1932-33). During the World War he was in command of the battleship *Louisiana*, engaged in convoying troops to France. Admiral Marvell was promoted to a Captain in 1915 and was made a Rear Admiral in 1922, retiring in October, 1933.

Mascheroni, Edoardo. Italian conductor and composer; died in Milan, Italy, Mar. 4, 1941; born in Milan, Sept. 4, 1859. Director of the world première of Verdi's *Falstaff* at La Scala in 1893, he composed the operas *Lorenza* (1901) and *La Perugina* (1909).

Mason, (Joseph) W(arren) T(eets). American foreign correspondent and author; died in New York, N.Y., May 13, 1941; born in Newburgh, N.Y., Jan. 3, 1879. Author of the syndicated column "Today's War Moves" (1914-18), he had only recently returned to this country to resume his column. He served as correspondent to the London Daily Express (1908-31); as United Press writer on foreign affairs (1918-30); and writer on foreign affairs for *La Prensa*, Buenos Aires, since 1925. Also deeply interested in occidental and oriental philosophies and religions, he wrote *The Creative East* (1928), *The Meaning of Shinto* (1935), and *The Spirit of Shinto Mythology* (1939).

Mathews, Shailer. American educator, theologian and editor; died in Chicago, Oct. 23, 1941; born in Portland, Me., May 26, 1863. For more than half a century an exponent of religion as "an aspect of the social process," he was associated with the University of Chicago Divinity School from 1894, becoming dean of the School in 1908 and retiring as dean emeritus in 1933. Dr. Mathews served as president of the Federal Council of Churches of Christ in America during 1912-16; as director of the Chautauqua Institute religious work department, 1912-34; and since 1914 as a trustee of the Church Peace Union, an organization formed by Andrew Carnegie in 1913. Editor of *The World Today* during 1903-11, and of *Biblical World* from 1913 to 1920, he was the author of scores of books, principally religious, among them *The Social Teachings of Jesus* (1897), *A History of New Testament Times in Palestine* (1899), *The Church and the Changing Order* (1907), *The Faith of Modernism* (1924), *Creative Christianity* (1935), and *New Faith for Old: An Autobiography* (1936).

Mead, Kate Campbell Hurd. American physician and writer; died in Haddam, Conn., Jan. 1, 1941; born in Danville, Quebec, Can., Apr. 6, 1867. She was medical director at Bryn Mawr School in Baltimore (1890-93); practiced her profession in Middletown, Conn. (1893-1925); and from 1925 to 1929 was engaged in research on the history of women in medicine for her books, *American Medical Women Pioneers* (1933) and the first

volume of a series called *A History of Women in Medicine* (1938).

Menocal, Mario García. Cuban politician; died in Havana, Cuba, Sept. 7, 1941; born in Hanabana, Matanzas Province, Dec. 17, 1866. President of Cuba from 1913 to 1921, he was candidate for that office four times, distinguished himself as a commanding officer in the Cuban War of Independence, and built and operated for the Cuban American Sugar Company one of the largest sugar mills in the world. General Menocal's administration put in force numerous reforms in the handling of the government departments, and attempted to improve relations with the United States. With the end of the World War, Cuba began to experience severe financial difficulties, and General Menocal's enemies accused him of fraud, maladministration, and responsibility for the bankruptcy of the country, but these charges were soon dropped and Menocal continued to be a powerful force in the policies of the government. In 1931 he led an armed uprising against the administration of President Gerardo Machado, but the revolt was short-lived and General Menocal was exiled, however, in 1933 he returned to Cuba and formed the National Democratic party, running as his party's nominee for President in 1936. He was defeated in a close election. In spite of his political losses he remained high in Cuban society and continued to be a leader of the opposition.

Merejkowski, Dmitri. Russian novelist and philosopher, died in Paris, France, 1941; born in Russia, 1865. Employing history as a basis for his fictional developments, he was the author of numerous works in which his sound historical scholarship was interpolated with mystical revelations. His publications include *The Rejected*, *The Romance of Leonardo da Vinci*, *Jesus the Unknown*, *Jesus Manifest*, and books on Peter the Great, Akhnaton, the mystic King of Egypt, Michael Angel, and Napoleon.

Metaxas, John. Greek general and politician, died in Athens, Jan. 29, 1941, born on the Isle of Ithaca, Apr. 12, 1871. As an officer in the Greek army, he served in the war against Turkey (1897) and the Balkan wars of 1912 and 1913, resigning in 1920 to enter politics as head of the Free Opinion Party. His rise in power followed the restoration of the exiled monarch—King George—to the throne in 1935, after 11 years of republicanism. General Metaxas was appointed Premier in 1936, and as such abolished Parliament, denied the right to strike, and suspended liberties of the press. He spent over \$100,000,000 rebuilding the army and equipping it for modern warfare, sought friendship with his Balkan neighbors, and completed an entente cordiale with Turkey. As a result of his efforts the Greeks fielded a fine army, defeating the Italians in the early stages of the Italo-Greek conflict of 1940 and advancing far into Albania. On July 30, 1938, after the suppression of a revolt in Crete, he was proclaimed "Premier for life."

Millard, Bailey. American editor and author, editor of the magazine *Cosmopolitan*, 1905–07, managing editor of *Munsey's*, 1913–14, editor of *Orchard and Farm*, 1916–18, and since 1924 special writer for the Los Angeles Times; died in Los Angeles, Calif., Mar. 20, 1941; born in Markesan, Wis., Oct. 2, 1859. In addition to hundreds of stories and articles, he was the author of several books, among them *Fettered Commerce* (1892), *She of the West* (1900), *Songs of the Press* (1902), *The Sea Hawk* (1910), and *Sunland Song* (1933).

Mille, Pierre. French writer of many novels and historical works on the colonial empire; died in

Paris, Jan. 15, 1941; born, 1864. Former vice-president of the Société des Gens de Lettres, he was the author of, among others, *De Thessalie en Crète* (1897), *Sur la vaste terra* (1905), *Anthologie des humoristes français* (1912), *Histoires exotiques et merveilleuses* (1920), and *Le bel art d'apprendre, Chez les Hommes de l'Ombre et du Soléil* (1932).

Miller, Dayton Clarence. American physicist and educator; died in Cleveland, O., Feb. 22, 1941; born in Strongsville, O., Mar. 13, 1866. Connected with Case School of Applied Science since 1890 and professor of physics since 1895, he was widely known for his experiments in the measurement of "ether drift," which tended toward a modification of Albert Einstein's relativity theory. He is believed to have owned the world's largest collection of flutes, they were exhibited in New York City in 1927.

Mitsui, Benzo. Japanese industrialist; died in Tokio, Japan, May 22, 1941. Director of the Mitsui Bussan Kaisha and of the Mitsui Mining Corporation, he was a member of one of Japan's foremost financial and industrial families who maintain offices in the United States and other capitals throughout the world (Mitsui & Co., Ltd.).

Mollison, Amy Johnson. British aviatrix, drowned in Thames River, London, Eng., Jan. 5, 1941, in an attempt to parachute to safety from a falling plane; born in Hull, Eng., in 1908. She occupied a position in British aviation that was comparable to that held formerly by Charles A. Lindbergh in the United States. In 1930 she flew from London to Australia, the first woman to accomplish that feat. In 1931 she set new records for flights to Japan, from England, and back. In 1932 she flew solo from England to Capetown, again making new records both ways. The next year, along with her husband, Capt. James A. Mollison, she set a new trans-Atlantic record—taking off from Wales and landing in Connecticut thirty-nine hours later. She was the author of the well-known book *Sky Roads of the World* (1939).

Monnier, Henri. French theologian, died Aug. 21, 1941, born in St. Quentin, France, Apr. 24, 1871. An outstanding Protestant leader, he was professor of theology at the Free Faculty of Protestant Theology of Paris and was pastor of the Reformed Church of L'Etoile, Paris.

Montague, James J. American newspaper writer, died in Belmont, Mass., Dec. 16, 1941; born in Mason City, Ia., Apr. 16, 1873. Formerly a reporter and assistant editor of *The Portland Oregonian* and Washington correspondent for the Universal Service, Hearst news service (1912–16), he was mainly noted as the author of the syndicated column "More Truth Than Poetry," which he ran in the *New York Herald Tribune* from Dec. 12, 1921 to May 16, 1936. He was the author of *More Truth Than Poetry* (1920).

Moore, C. Ellis. American ex-congressman (Rep.); died in Cambridge, O., Apr. 2, 1941; born in Middlebourne, Guernsey Co., O., Jan. 3, 1884. A militant dry leader from Ohio, he served in the 66th to 72d Congresses (1919–33).

Moore, R(ober) Walton. American lawyer and politician, distinguished legislator and authority on international law; died in Fairfax, Va., Feb. 8, 1941; born in Fairfax, Feb. 26, 1859. A member of the U.S. House of Representatives (1919–31), he served as Counselor of the Dept. of State from May, 1937, until his death.

Moore, William Emmet. American editor, managing editor of *The Baltimore Sun* since 1929 and news editor-in-chief of *The Baltimore Sun* and *The Baltimore Evening Sun* the last two years; died in

Miami Beach, Fla., Dec. 27, 1941; born in La Grange, Mo., June 30, 1878. During 1899-1917 he served on various papers throughout the country, becoming associated with *The Baltimore Sun* in 1922. In World War I he was director of "the pictorial history of the A.E.F.," attached to General Pershing's general headquarters. He published *Democratic Campaign Text Book* (1920), and *U.S. Official Pictures of the World War* (1920).

Morehouse, Daniel W(alter). American educator and astronomer, died in Des Moines, Ia., Jan. 21, 1941; born in Mankato, Minn., Feb. 22, 1876. Immediately after receiving his degree of bachelor of science from Drake University (1900), he was made professor of physics and astronomy, and in 1923 ascended to the presidency, which post he held until his death. He established his reputation as an astronomer by the discovery of the Morehouse Comet on Sept. 1, 1908, although some time before he had discovered Comet C. He was a member of the American Astronomical Society, British Astronomical Association, and a fellow of the Royal Astronomical Society.

Morgan, Helen. American actress and songstress, died in Chicago, Oct. 8, 1941; born in Danville, Ill., Aug. 2, 1900. Since 1920 she had been a vaudeville star, a headliner in musical shows, and the "name in lights" in several New York night-clubs. She was a "hit" as Julie in Ziegfeld's *Show Boat* during 1927-28-29, in Hammerstein's *Sweet Adeline*, 1929, and in George White's *Scandals of 1936*. In the past few years she had played in several motion pictures.

Morgan, Tali Esen. American musical author and conductor; founder of the International Correspondence Schools of Music and director of the Ocean Grove Auditorium (Ocean Grove, N.J.) from 1901 to 1918, died in Asbury Park, N.J., July 1, 1941; born in Llangynwyd, Glamorgan-shire, South Wales, Oct. 28, 1858.

Morton, James F(erdinand). American curator of the Paterson Museum since 1925, died in Paterson, N.J., Oct. 7, 1941; born in Littleton, Mass., Oct. 18, 1870. An author, bibliophile, and collector of rare minerals, he was extremely active in the single-tax ideas of the late Henry George, writing two books on the subject, *Single Tax Review* and *The Philosophy of the Single Tax*. Also a champion of Negro rights, he wrote *The Curse of Race Prejudice* (1906).

Mosca, Gaetano. Italian political scientist; died in Rome, Italy, Nov. 9, 1941; born in Palermo, Sicily, 1858. He taught at the University of Turin during 1896-1922, at the University of Palermo, 1885-96, and from 1924 until he retired in 1933 he taught the history of political doctrines at the University of Rome. He served as Under-Secretary for the colonies, 1914-16, and since 1919 had been a Senator. A writer on constitutional law, political science and history of political doctrines, he was the author of numerous works, including *Sulla Teorica dei Governi e sul Governo Parlamentare* (1884), *Elementi di Scienza Politica* (1896), *Diritto costituzionale* (1908), *L'evoluzione actuelle du regime representatif* (1928), and *Cenni storici e critici sulle dottrine razziste* (1933).

Mosher, Gouverneur Frank. American Protestant Episcopal bishop and missionary; died in New York, N.Y., July 19, 1941; born in Stapleton, S.I., N.Y., Oct. 28, 1871. Ordained a deacon in 1896 and a priest in 1898, he was a missionary in China during 1896-1920. In 1920 he became second Bishop of the Philippine Island Missionary District, retiring in 1940. As an author, he published *Handbook of the China Missions* (1913).

Mott, Lewis Freeman. American educator, professor of English at the College of the City of New York from 1897 to 1934; died in New York City, Nov. 20, 1941, born in New York City, Sept. 29, 1863. Professor Mott served as president of the American Dialect Society during 1899-1900 and as president of the Modern Language Association of America in 1911. He was the author of *The System of Courtly Love* (1894), *The Provençal Lyric* (1901), *Ernest Renan* (1921), and *Sainte-Beuve* (1925).

Moure, Jean. French laryngologist; died in France, November, 1941; born in Bordeaux, France, 1855. The most prominent French laryngologist, he had served for approximately forty years as clinical professor of otorhinolaryngology of the medical faculty of Bordeaux University. In 1904 he had served as president of the International Congress of Otology at Bordeaux. Dr. Moure was credited with transferring laryngology from the medical to the surgical field, was famed for his operations, and was the originator of operations and instruments used in his specialty. Dr. Moure was the author of *Study of Larynx Cysts*, *Manual of Diseases of the Nasal Passages*, and *Elementary Treatment and Practice in Diseases of the Throat and Larynx*.

Mowat, Robert Balmain. British historian; died aboard an eastbound trans-Atlantic transport plane which crashed on the United Kingdom's West Coast, Sept. 2, 1941; born in Edinburgh, Scotland, Sept. 26, 1883. One of the most brilliant and most prominent of historians, he was a fellow and tutor of Corpus Christi College, Oxford (1907-28); a member of the Naval Intelligence Department (1916-18); engaged in the Secretariat of the War Cabinet (1918-19); a professor of history at the University of Wisconsin (1925-26), and professor of history at the University of Bristol since 1928. Dr. Mowat came to the United States in 1940, under the auspices of the Carnegie Endowment for International Peace, to lecture at the leading universities and colleges. The author of many books on European and American history, his publications include *The Later Middle Ages* (1916), *The Life of Henry V* (1920), *A History of Great Britain* (1920-21), *Contemporary Europe* (1924), *The Diplomatic Relations of Great Britain and the United States* (1925), *The States of Europe, 1815-71* (1932), *The Americans in England* (1935), and *The American Entente* (1939).

Muhlfield, John E(rhardt). American railway engineer and designer, died in New York, N.Y., June 19, 1941; born in Peru, Ind., Sept. 18, 1872. He designed the first Mallet articulated type of locomotive in operation in the United States, assisted in the development of powdered fuel burning for locomotives and stationary power plants, and in the creation of types of high-pressure freight locomotives. He served as consulting engineer to many large railroad concerns. His publications included many pamphlets and papers; he contributed to the *Encyclopedia Britannica*, and several books, of which *The Railroad Problem and the Solution* was, perhaps, best known.

Muir, Ramsay. British politician and writer; died at Pinner, Middlesex, Eng., May 4, 1941; born in 1872. He was a prominent Liberal member of Parliament from Rochdale (1923-24) and president of the National Liberal Federation (1933-36). A noted writer on historical, political, and economic subjects, his publications include *Atlas of Modern History* (1911), *Nationalism and Internationalism* (1916), *America the Golden* (1927), *British History* (1928), *A Brief History of*

Our Own Times (1934), and *Civilisation and Liberty* (1940).

Murphy, James J(oseph), Jr. American consul, chief of the Division of Commercial Affairs, State Department (1924-40), and U.S. Consul General at Hamburg, Germany, since Aug. 2, 1940; died in Berlin, Jan. 6, 1941; born in Philadelphia, Pa., in 1888.

Murphy, J. Harvey. American clergyman, president of the General Synod of the Reformed Church of America in 1938-39; died in Hudson, N.Y., Sept. 19, 1941; born in Paterson, N.J., Apr. 28, 1882. Since 1921 pastor of the First Reformed Church in Hudson, he preached at the English Church, The Hague, the Netherlands, during 1931.

Murray, Charlie. American actor; died in Hollywood, Calif., July 29, 1941; born in Laurel, Ind., June 22, 1872. A comedian for nearly half a century on the stage and screen, he was of that era of slapstick comedy when a custard pie in the face was the height of clowning. For twenty-one years he was a partner in the comedy team of Murray and Mack (Oliver Trumbull). Among the motion pictures in which he played were *Cohens and Kellys* (a series), *McFadden's Flats*, *The Gorilla*, *Irene, Do Your Duty*, *King of Jazz*, *Around the Corner*, *His Honor the Mayor*, and *Caught Cheating*.

Mussolini, Bruno. Italian aviator, son of Il Duce; killed in an airplane crash near Pisa, Italy, Aug. 7, 1941; born in Milan, Italy, Apr. 22, 1918. A captain in the Italian air fleet, he had followed his father's advice to "live dangerously" by fighting in the Ethiopian and Spanish Civil wars and in the present world conflict, and had made a trans-Atlantic flight from Rome to Rio de Janeiro (1938). Captain Mussolini and a crew of six were testing a four-motored bombing plane when it crashed to the ground.

Nagayo, Matao. Japanese educator; died in Tokyo, Japan, Aug. 16, 1941; born in Tokyo, Apr. 6, 1878. Graduating from the Tokyo Imperial University (1904), he studied pathology in Germany (1907-10); was director of the Government Institute for Infectious Disease (1919-32); dean of the medical faculty at the Tokyo Imperial University (1932-34), and was elected president of the university in 1934. At his death he was a professor emeritus of the university. A noted authority on bacteriology and cancer, he attended the Tropical Pathology Conference (1921).

Naon, Romulo S. Argentine diplomat, Minister to the United States (1910-14) and Ambassador (1914-19); died in Buenos Aires, Argentina, Dec. 30, 1941; born in Buenos Aires, Feb. 17, 1876. A member of many international commissions, Dr. Naon had served as a deputy to the National Congress (1902-08), professor of constitutional law at the University of Buenos Aires, and Minister of Justice and Education of Buenos Aires (1908-10). Dr. Naon was an ardent supporter of the Allied cause in World War I, and found it his duty to resign (1918) as Ambassador when his country would not enter the war along with the Allies.

Natalia, Queen of Serbia (1882-88); daughter of Colonel Keckho, a Russian, and Princess Pulcherie Stourdz of Rumania; died in Paris, May 8, 1941; born in Florence, Italy, May 2, 1859. In 1875 she married Prince Milan Obrenovich, who later succeeded to the Serbian throne (1882-99). She was divorced from King Milan in 1888, due to his many infidelities, and when her son, Alexander, was assassinated (1903) retired to France for the remainder of her life.

Nernst, Walter H. German physicist and inventor;

died in Muskau, Germany, Nov. 18, 1941; born in Germany, June 25, 1864. Founder of the Institute for Physical Chemistry, he was the inventor of the metallic filament lamp, which made the modern incandescent lamp possible. His "third law" of thermo-dynamics, having to do with the behavior of matter at the approach of absolute zero, brought him the Nobel Prize for Chemistry in 1920. Professor Nernst invented the micro-scale, an instrument of such sharp precision that it turned at the weight of one-millionth of a milligram. He was a leader in the group of scientists who "created physical chemistry, bridging physics and chemistry, and enabling highly exact mathematical calculations of chemical reactions." He was the author of numerous scientific standard works, including *Ziele der physikalischen Chemie* (1896), *Die Bedeutung des Stickstoffs für das Leben* (1913), *Lehrbuch der theoretischen Chemie* (1915), and *Die theoretischen und experimentellen Grundlagen des neuen Warmesatzes* (1918).

Nevinson, Henry W(oodd). British war correspondent and author, died at Chipping Campden, Gloucestershire, Eng., Nov. 9, 1941; born in Leicester, Eng., 1856. A war correspondent since 1897, he had, in spite of his stand as a pacifist, covered almost every war, small or large, that took place during his career. Among his books are *Ladysmith* (1900), *Between the Acts* (1903), *Books and Personalities* (1905), *The Dawn in Russia* (1906), *The Dardanelles Campaign* (1918), *More Changes More Chances* (1925), *England's Voice of Freedom* (1929), *Fire of Life* (1935), and *Films of Time* (1938).

Newell, Edward Theodore. American numismatist, president of the American Numismatic Society since 1916; died in New York, N.Y., Feb. 18, 1941; born in Kenosha, Wis., Jan. 15, 1886. He was one of the foremost authorities in the field of Hellenistic coinages, and had acquired a singularly thorough knowledge of Greek and Roman coins. He also spoke authoritatively on the coinage of the Sasanians and Byzantines, and on the Mahometan and Indian coinages. He was the recipient of the American Numismatic Society's Archer M Huntington Medal (1918) and the medal of the Royal Numismatic Society of England (1925). His publications include *The Dated Alexander Coinage of Sidon and Ake* (1916), *Tarsos Under Alexander* (1919), *Some Unpublished Coins of Eastern Dynasts* (1926), and *The Kuchuk Kohne Hoard* (1931).

Newlon, Jesse H(omer). American educator; died in New Hope, Pa., Sept. 1, 1941, born in Salem, Ind., July 16, 1882. Superintendent of schools in Lincoln, Nebraska (1917-20) and in Denver, Colorado (1920-27), he had been professor of education at Teachers College, Columbia University, since 1927. He also had been director of the Lincoln School at Teachers College (1927-37); chairman of the college's division of instruction (1934-38), and from 1938 until his death, director of the college's division of the foundation of education. He was president of the National Education Association, 1924-25. A leader in experimental progressive education and a champion of academic freedom, Dr. Newlon believed that American high schools were thirty years behind the times and that the schools were doing little to prepare the graduate to take his place in a democratic society. He was the author of *Educational Administration as Social Policy* (1934), and *Education for Democracy in Our Time* (1939).

Newton, Walter Hughes. American Congressman (Rep.); died in Minneapolis, Minn., Aug. 10, 1941; born in Minneapolis, Oct. 10, 1880. A member of the 66th to 71st Congresses (1919-31), he

resigned on July 1, 1929, to become secretary and administrative assistant to President Hoover during his tenure in office. He was a member of the Federal Home Loan Bank Board (1933-34).

Nice, Harry (Whinna). American ex-governor; died in Richmond, Va., Feb. 25, 1941; born in Washington, D.C., Dec. 5, 1877. Defeated in 1919 by Albert C. Ritchie, life-long political foe, for the governorship of Maryland (by 165 votes) he came back in 1934 to reverse the tables and succeed Ritchie as governor (1935-39)—one of three Republicans ever elected to that office. Governor Nice ran for reelection (1938), but was defeated, and after his failure to attain a seat in the U.S. Senate (1940) he retired.

Noel, Carlos M. Argentine public man; died in Pozo de Caldas, Brazil, Jan. 3, 1941; born in Buenos Aires, in 1886. He served as Minister to Chile (1919), advanced to Ambassador in 1923. Subsequently he served two terms as Mayor of Buenos Aires, but was exiled from the country in 1931 (for his activities in the Civic Union Radical Party), being permitted, however, to return that same year. He was president of the Chamber of Deputies for the periods 1936-37 and 1937-38.

Nollet, Edouard. French army officer; died at Royat, France, Jan. 29, 1941; born, 1865. Hero of the capture of Saint Quentin in the World War (1914-18), General Nollet was president of the Inter-Allied Control Commission (1915-24) and as such supervised the disarmament of Germany. He was the French Minister of War during 1924-25.

Norton, Thomas Herbert. American chemist and editor, died in White Plains, N.Y., Dec. 2, 1941; born in Rushford, N.Y., June 30, 1851. Graduated from Hamilton College, New York (1873) and from the University of Heidelberg, Germany (1875), he was manager of a large chemical works in Paris, France (1878-83); professor of chemistry at the University of Cincinnati (1883-1900); appointed by President McKinley to establish the U.S. consulate at Harput, Turkey (1900); sent by U.S. Government to investigate conditions in Armenia, 1904, to Persia, 1904-05; and was American consul at Smyrna, Turkey, 1905-06, and at Chemnitz, Saxony, 1906-14. He was appointed by the U.S. Department of Commerce to help develop the American dyestuff industry (1915-17). Dr. Norton was editor of *The Chemical Engineer* during 1917-18, and from 1920 to 1929 was editor of *Chemicals*. Since 1930 he had been a research chemist for the American Cyanamide Company. His publications include *Utilization of Atmospheric Nitrogen* (1912), *Dyestuffs for American Textile Industry* (1915), *The Dyestuff Census* (1916), and *Reflections at the 70th Milestone* (1921).

Noyes, William Albert. American chemist; died in Champaign, Ill., Oct. 24, 1941, born in Independence, Ia., Nov. 6, 1857. Receiving his doctor's degree in philosophy from Johns Hopkins College, Baltimore, in 1882, Dr. Noyes began his teaching career as a professor of chemistry at the University of Tennessee (1883-86), and at the Rose Polytechnic Institute, Indiana (1896-1903). He was chief chemist of the National Bureau of Standards during 1903-07. In 1907 he became professor of chemistry and director of the chemical laboratory at the University of Illinois, holding that post until 1926 when he became professor emeritus. In Dr. Noyes' last year at the university the first chemical element discovered in America, illinium, was isolated in his laboratories.

Dr. Noyes was editor of *The Journal of the American Chemical Society* (1902-17), of *Chemical Abstracts* (1907-09), of *Chemical Reviews* (1924-

26), and of *Scientific Monographs*, American Chemical Society. He was the recipient of the Nichols Medal, 1908, the Willard Gibbs Medal, 1919, and the Priestley Medal of the American Chemical Society, its highest honor, in 1925. Dr. Noyes was the author of many textbooks.

Nutting, Wallace. American photographer, antiquarian, and writer; died in Framingham, Mass., July 19, 1941; born in Marlboro, Mass., Nov. 17, 1861. After 17 years as a Congregational minister, he retired from the ministry in 1905, due to ill health, and devoted his life to photography, writing, and the collection and study of antique furniture. His "States Beautiful" series depicts architecture, interiors, and furniture (especially that of New England).

O'Brien, Edward (Joseph) (Harrington). American author and short story editor; died in Buckinghamshire, England, Feb. 25, 1941; born in Boston, Mass., Dec. 10, 1890. A graduate of Harvard (1909), he was the editor of poetry magazines, wrote plays and verse, and in 1915 began his annual volumes of *The Best Short Stories*. He was editor of many other short story books and author of several books, including *White Fountains* (1917), *The Forgotten Threshold* (1919), *The Advance of the American Short Story* (1923), *The Dance of the Machines* (1929), and *Son of the Morning*, a portrait biography of Nietzsche (1932).

Ochoa, Armando Humberto da Gama. Portuguese statesman, Minister to France since 1926; died in Vichy, France, June 9, 1941; born in 1877.

O'Connor, Andrew. American sculptor; died in Dublin, Ireland, June 9, 1941; born in Worcester, Mass., June 7, 1874. With the first prize award of the Salon des Artistes Français in Paris (1928) for his statue *Tristan and Isolde*, he won a rare distinction, for it was the first time in 141 years that the award had gone to a foreigner. Three years later he became the first American sculptor to be admitted to the Tate Gallery, London. The gallery accepted his *Mother of Sorrows*, a bronze figure of a kneeling woman. Best known in the United States for his statue of Abraham Lincoln—for which he received \$50,000—located in Springfield, Ill., he also accomplished many other notable works, principally the 11 marble statues on the Essex County Courthouse, Newark, N.J.; General Liscum monument, Arlington, Va.; General Lew Wallace statue, Washington, D.C.; Daniel O'Connell statue, Dublin, and the Roosevelt Memorial located in Glen View, Ill.

O'Connor, James, Sr. American Democratic Congressman from Louisiana during 1919-31; died in New Orleans, La., Jan. 7, 1941; born in New Orleans, Apr. 4, 1870.

Ohl, Jeremiah Franklin. American Lutheran clergyman, superintendent of the Philadelphia City Mission of the Evangelical Lutheran Church from 1903 to 1930; died in Philadelphia, Jan. 21, 1941; born in Cherryville, Northampton Co., Pa., June 26, 1850. He served as editor of *The Common Service Book of the Lutheran Church* (1917), and was the author of numerous religious works including *School and Parish Hymnal* (1892), *The Responses of Matins and Vespers Set to Music* (1909), *The Inner Mission: A Handbook for Christian Workers* (1911), and the Christmas cantata *The Christ Child* (1925).

Oman, Joseph Wallace. American rear admiral, Governor of the Virgin Islands in 1920-21; died in London, Eng., July 1, 1941; born in Columbia Co., Penn., Aug. 15, 1864. He supervised the reconditioning of the old German liner *Vaterland*, renamed *Leviathan*, during the World War and was in com-

mand on her first voyage from the United States to Liverpool as a troop transport.

Paderewski, Ignace Jan. Polish musician and statesman; died in New York, N.Y., June 29, 1941; born in Kurilovka, Province of Podolia (then Southwest Russia), Nov. 6, 1860. At an early age Paderewski's father recognized the latent talent in his son and sent him to a music teacher; at the age of 12 the young musician was giving public concerts. In 1882 he went to Berlin to study under Wurst and Urban, and by this time had acquired a partial reputation. With successful concerts in Vienna in 1887 and 1889, and in Paris in 1888, Paderewski experienced a preview of the renown he was to win later.

It wasn't until 1891 that he came to America, and set new records for the amount of money earned by pianists—he played at 117 recitals in 90 days. When he returned in 1891 he commanded a fee of \$2,500 a performance, and grossed \$180,000. During the years between 1892 and 1914 he gave performances on the continent; coming to the United States in 1902.

When war was declared (1914) Paderewski set out for the United States, and immediately began the organization of the 4,000,000 Poles in this country. In 1917, when the United States entered the war, he started the Polish Legion in America, urging all Poles to join up, and by June, 1918, 18,000 Poles had been sent overseas. At the close of the war he returned to Poland and devoted his labors towards the rehabilitation of his country. A social democrat, Paderewski accepted the posts of Premier and Minister of Foreign Affairs, proffered to him by General Pilsudski, a socialist. Later, in the Polish elections, he could have been elected President by acclamation, but he declined, and Pilsudski became President. As Premier, Paderewski attended the Versailles Peace Conference; maintained his country's rights, and proved his might as a statesman. The outcome of his efforts was the *Polish Corridor*, and, although it did not meet with popular approbation, Parliament ratified the pact in 1919. Returning from Paris, he found his political support in danger of collapse, and General Pilsudski vacillating; with the announcement, by the Allies, that Poland could have merely a 25-year mandate to administer East Galicia the Cabinet fell and Paderewski resigned, disheartened, his wealth decreased by \$2,700,000 in gifts to Poland.

He turned back to the piano (1922), which he had not touched in three years "in case the old habit comes back and demands my time," and renewed touch with United States music audiences.

Paderewski donated many of his recitals to charity and philanthropy. In 1932, in Madison Square Garden, New York, playing before an audience of 16,000, he swelled the fund of the Musicians Emergency Aid by \$33,500; and it was a concert for charity that prevailed upon him to appear in Washington (1925) for the first time since the war. In 1936 music lovers thrilled to the event of seeing him perform, on the piano, in a motion picture *Moonlight Sonata*, but in 1939 they had to say good-bye, as he presented his last American tour, the twentieth.

Returning to Poland (1939) he arrived in time to take action against Germany, and in a radio address castigated Hitler for his actions. After Poland was invaded he was mentioned as President, following the flight of President Moszicki to Rumania, but he declined and gave his support to the exiled Polish Government. On Jan. 11, 1940 he accepted a seat in the exiled Government, and on January 22 agreed to become President of the Polish Parliament in Exile.

In September, 1940, he came to the United States, and made his permanent home in California. He gave a broadcast in December, urging aid to Great Britain; in March, 1941, he enjoyed a Paderewski Week, donated by communities throughout the United States, and one of his last activities was to help in the establishment of a Paderewski Hospital in Edinburgh, Scotland, for the use of Polish soldiers and civilians, and for British civilians in time of need.

Since his first success, he had received degrees from most of the great universities of the world, and decorations from many countries; in return he had established the Paderewski Fund (1900) by a grant of \$10,000 to aid musical education in America. He was the author of *My Story* (with Mary Lawton), (1937). Many posthumous awards were made.

Papi, Gennaro. Italian-American conductor; died in New York City, Nov. 29, 1941; born in Naples, Italy, December, 1886. He was assistant conductor to Arturo Toscanini at the New York Metropolitan Opera, 1913-16, conductor of Italian repertoire at the Metropolitan Opera in 1916-25 and since 1935.

Pardee, George Cooper. American ex-governor; died in Oakland, Calif., Sept. 1, 1941; born in San Francisco, Calif., July 25, 1857. Active in public life since 1889, he was Governor of California from 1903 to 1907.

Parmoor, 1st Baron, of Frieth, Charles Alfred Cripps. British lawyer and politician, father of Sir Stafford Cripps, British Ambassador to Soviet Russia; died in Buckinghamshire, Eng., May 31, 1941; born, Oct. 3, 1852. He served as Vicar General of Canterbury (1902-24), and as a Conservative member of Parliament (1895-1914). He was knighted in 1908 and elevated to the peerage in 1914. After the World War he became a prominent member of the Labor party, and as such became Labor Lord President of the Council (1924; 1929-31). Lord Parmoor was an ardent advocate of peace, approved the principles of the League of Nations, and pursued the theory that the best way to entice the United States into the League was to make it an effective instrument for peace.

Parsons, Elsie Clews. American anthropologist and sociologist; died in New York City, Dec. 19, 1941, born, 1876. Dr. Parsons graduated from Barnard College, New York, in 1896 and taught sociology there during 1899-1905. In 1916 she became interested in anthropology, particularly ethnography, and during the next twenty-five years went on at least that many field trips and published twenty-one volumes of anthropological studies. She specialized in the American and West Indian Negroes and the Indians of the Southwest Pueblos. Dr. Parsons was a former president of the American Ethnological Society and the American Folklore Society, a former vice-president of the New York Academy of Sciences, and since December, 1940, president of the American Anthropological Association. Her most important published work is considered to be the two-volume *Pueblo Indian Religion* (1939); other works include *Religious Chastity* (1913), *The Old-Fashioned Woman, Fear and Conventionality, Social Freedom, Folk-Tales of Andros Island, Winter and Summer Dance Series in Zuni, Pueblo of Jemez, Social Organization of the Tewa of New Mexico*, and *Notes on the Caddo*.

Parsons, Floyd William. American editor and author; died in New York, N.Y., Aug. 7, 1941; born in Keyser, W. Va., Jan. 23, 1880. A graduate of the University of West Virginia (1902), he had been associated with the Robbins Publishing Co., publishers of trade and business periodicals, for 21

years. At his death he as a member of the board of directors, editorial director, and vice-president of the company, editor of *Gas Age-Record and Industrial Gas*, and contributing editor of *Advertising and Selling*. He was founder and editor of *Coal Age* from 1910 to 1918. His publications include *American Business Methods* (1921), *Everybody's Business* (1923).

Partridge, Frank. English prelate; died in England, Oct. 1, 1941; born Dec. 31, 1877. Recognized as greatly responsible for the building up of English churches and church finances after the World War, he was financial secretary to the National Assembly of the Church of England from 1921 to 1934, chaplain to the King during 1934-36, and Bishop of Portsmouth since 1936.

Pasha, Mohammed Mahmoud. Egyptian statesman; died in Cairo, Egypt, Feb. 1, 1941; born in Upper Egypt, in 1877. One of the founders of Egypt's Liberal party, and a firm believer in close Anglo-Egyptian relationship, he served as Premier during 1928-29, and held numerous Ministerial portfolios before again becoming Premier (1938-39). In June, 1940, he was called back into the Cabinet as Minister of Defense and as such advocated strengthening of national defense and assistance to England.

Patterson, Banjo (Andrew Barton). Australian song writer; died in Sydney, Australia, Feb. 5, 1941; born in Narrambia, Australia, Feb. 17, 1864. Correspondent for several Australian newspapers during the Spanish-American War, the Boer War, and the World War, he was the author of many favorite Bush ballads and verses. His works include *The Man from the Snowy Riteer and Other Verses* (1895), *Rio Grande's Last Race and Other Verses*, *Saltbush Bill and Other Verses*, *Old Bush Songs*, *An Outback Marriage* (a novel), and *Three Elephant Power* (tales and sketches).

Paxton, William McGregor. American portrait artist whose work included portraits of Presidents Grover Cleveland and Calvin Coolidge; died in Boston, Mass., May 13, 1941; born in Baltimore, Md., June 22, 1869.

Pell, Robert P(aine). American educator; died in Orlando, Fla., Feb. 8, 1941; born in Washington, D. C., June 12, 1860. A graduate of the University of North Carolina, he was president of the Presbyterian College for Women, So. Carolina, (1896-1902); and president of Converse College, So. Carolina, (1902-33), when he became emeritus.

Penner, Joe (Josef Pinter). American comedian, died in Philadelphia, Pa., Jan. 10, 1941; born near Budapest, Hungary, Nov. 11, 1904. Coming to the United States early in his youth, he did not achieve success until he appeared on the radio, as a guest of Rudy Vallee, in 1933. Soon after that he went to Hollywood, taking along his two famous gags "Wanna buy a duck?" and "You nasty man!" which became national sayings during the next few years, and appeared in *College Rhythm* (1934) and *Collegiate* (1935). More recently he appeared in *Mr. Doodle Kicks Off*, *The Day the Bookies Wept*, *Millionaire Playboy*, *Life of the Party*, and *I'm From the City*. In 1934 he was accorded the outstanding radio comedian of America; he continued on the radio until 1939. At his death he was playing the leading role in the musical comedy *Yokel Boy*, which was on tour.

Penniman, Josiah H(armar). American educator and writer; died in Philadelphia, Pa., Apr. 10, 1941; born in Concord, Mass., July 20, 1868. Receiving his education at the University of Pennsylvania (1890), he became professor of English literature there in 1896; dean of the faculty (1897-1909); vice prov-

ost (1911-20); and provost from 1923 to 1939. He served as president of the university from 1923 to 1926, when that office was abolished. Dr. Penniman was the author of *The War of the Theatres* (1897), *A Book About the English Bible* (1919), and was editor of Ben Jonson's *Poetaster* and Thomas Dekker's *Satiromastix*, of Belles Lettres Series (1905). He also wrote many articles on educational topics. In 1934 he received the cross of the French Legion of Honor in recognition of his services to French literature and Franco-American relations.

Peoples, Christian Joy. American naval officer; died in Washington, D. C., Feb. 3, 1941; born in Creston, Ia., Oct. 17, 1876. Appointed to the Supply Corps of the U.S. Navy in 1900, he rose through the grades to the rank of rear admiral in 1917. In 1933 he was made paymaster general and chief of the Bureau of Supplies and Accounts, and in that same year was ordered to further duty as Director of Procurement, Treasury Department. Relieved of his duties in Washington in 1939, Admiral Peoples served as General Director, Supply Corps, Pacific Coast, until his retirement in 1940.

Periere, Lothar von Arnauld de la. German naval officer; reported died by accident, although London believed he was killed in R.A.F. raid on Brest, Feb. 24, 1941; born in Posen, Germany, Mar. 18, 1886. Vice Admiral Periere, commander of the German naval forces in occupied France until his death, won the Medal Pour le Mérite, highest German war decoration, in World War I for being the commander of the U-35 and U-139, which were responsible for the sinking of 200 ships totaling more than 500,000 tons.

Perry, Roland Hinton. American sculptor and portrait painter; died in New York City, Oct. 27, 1941; born in New York City, Jan. 25, 1870. His best known work was the *Fountain of Neptune* in the Library of Congress, 1897; his bas-reliefs of Sybils in the same building are also well known.

Peters, Le Roy Samuel. American tuberculosis specialist, died in Albuquerque, N.M., Dec. 17, 1941; born in St. Joseph, Mich., Apr. 6, 1882. Dr. Peters was associate medical director of the Cottage Sanatorium, Silver City, N.M., in 1909-13, and in 1913-17 at the Albuquerque Sanatorium. In 1917-25 he served as medical director of the St. Joseph Sanatorium at Albuquerque. Dr. Peters was president of the American Sanatorium during 1933-34, president of the Southwestern Medical Society in 1938, and a past director of the National Tuberculosis Association. He specialized in the pneumo-thorax method of the treatment of tuberculosis.

Phelan, Michael (Francis). American Democratic Congressman from Massachusetts (1913-21); died in Lynn, Mass., Oct. 12, 1941; born in Lynn, Oct. 22, 1875. As chairman of the House Banking and Currency Committee he assisted in framing the Federal Reserve Act (1913).

Phillips, Sir Tom Spencer Vaughan. British naval officer, Lord Commissioner of the Admiralty and Vice Chief of Naval Staff since 1939, and Commander in Chief of the British naval forces in the Orient since Dec. 1, 1941; died in the wreckage of the battleship, *Prince of Wales*, as she was sunk off Malaya (Dec. 10, 1941) by Japanese torpedo and bombing planes; born, 1889. Entering the British Navy in 1903, he rose to a commander in 1921, and to a captain in 1927. Admiral Phillips served in World War I (1917) as an acting captain. He served on the Permanent Advisory Commission for Naval, Military, and Air Questions, Geneva (1920-22); was Assistant Director of Plans, Admiralty (1930-32); chief of staff and flag captain to Commander in Chief, East Indies (1932-35); Director of Plans

(1935-38); and Commodore Commanding the Home Fleet Destroyer Flotillas (1938-39).

Picard, Emile. French mathematician; died in Paris, France, Dec. 12, 1941; born in Paris, 1856. A pioneer in the study of algebraic functions of two variables, he had been a professor at the University of Paris since 1886, member of the Academy of Sciences since 1889, permanent secretary of the Academy for Mathematical Sciences since 1917, and member of the French Academy since 1924. In 1899 he was a guest lecturer at Clark University, Worcester, Mass. Professor Picard's publications include *Traité d'analyse* (1893-1923), *Théorie des fonctions algébriques* (1897-1906), *Réflexions sur la mécanique* (1902), *Pascal mathématicien* (1924), *Equations fonctionnelles* (1929), and *Notices et Discours* (1936).

Pick, Frank. British transit expert, director general of the British Ministry of Information from Aug. 7, 1940 to Dec. 13, 1940; died in London, Eng., Nov. 7, 1941; born at Spalding, Lines, Eng., Nov. 23, 1878. As vice chairman and member of the London Passenger Transport Board from 1933 to 1940, he directed the removal of refugees from London during the early months of the war.

Pilcher, Lewis Frederick. American architect; died in Philadelphia, Pa., June 15, 1941; born in Brooklyn, N.Y., in 1877. A graduate of Columbia University School of Architecture (1895), he served as State Architect and Commissioner of Sites in New York (1913-23); consulting architect to the U.S. Veterans' Bureau (1923-25); vice dean of the School of Fine Arts, University of Pennsylvania (1926-29); professor of Architecture, Pennsylvania State College (1929-37); also administrator PWA school program, Department of Public Instruction, Pennsylvania (1935).

While New York State Architect, he designed six buildings at Sing Sing Prison, for which, perhaps, he is best known. In this work he employed his ideas on modern prison construction, and provided for sanitary, humane, ventilated, and well-lighted cells in all the buildings. He was the author of *Historic Types of Architecture*; American editor in architecture for *Allgemeines Lexikon Bildenden Künster*; and editor in architecture for *The Encyclopedia Americana*.

Plaskett, John Stanley. Canadian astronomer, discoverer in 1922 of the Plaskett double star, one of the largest stars known; died in Esquimalt, British Columbia, Canada, Oct. 17, 1941. One of the world's prominent astronomers, he gave science its most accurate information on the question of rotation of the galaxy, and was notable for his advanced work in instrumental design, including the development of the stellar spectroscope. He was awarded the gold medal of the Royal Astronomical Society of Great Britain in 1930 for "valuable observations of stellar radial velocities and important conclusions derived from these observations." He also received the Royal Society of Canada Flavelle Medal for outstanding achievements in the field of astronomy in 1932, the Rumford Medal of the American Academy of Arts and Sciences for his spectra research, 1930, the Catherine Wolfe Bruce Medal of the Pacific Astronomical Society, 1932, and others. His principal papers include *Star Image in Spectroscopic Work*, *Diffuse Matter in Inter-Stellar Space*, *Rotation of the Galaxy*, and *The Dimensions and Structures of the Galaxy*.

Porter, Edwin S. American motion picture pioneer, associated with the late Thomas A. Edison in the development and early use of motion-picture projectors; died in New York, N.Y., Apr. 30, 1941; born in Pittsburgh, Pa., 1870. In 1903 he produced

The Great Train Robbery, the most popular of early pictures, others followed including *Sold*, with Pauline Frederick, *The Dictator*, with John Barrymore, and *Tess of the Storm Country*, with Mary Pickford.

Portney, Jan K. Polish Jewish leader; died in New York, N.Y., Sept. 27, 1941. Refugee president of the Jewish Socialist party (The Bund) of Poland, he was one of the prominent leaders and founders of the Jewish labor movement in Poland.

Pourtalès, Guy de. French author; died in Montana, Switzerland, June 14, 1941; born in France, 1884. The author of many books, including the biographies of the composers Liszt, Chopin, and Richard Wagner, and translator of Shakespeare, he won the grand prize of the French Academy and the Hememant Prize in England for his *Shadows Around the Lake (La pêche miraculeuse)*, published in 1937.

Power, Sir D'Arcy. British surgeon and writer; died in Middle Essex, Eng., May 18, 1941; born in London, Nov. 11, 1855. A Fellow of the Royal College of Surgeons since 1883, he was an examiner in surgery, Royal Army Medical Corps, and at the Universities of Cambridge, Oxford, Durham, Belfast, and at the National University of Ireland and the Royal College of Surgeons, England; was visiting lecturer at Johns Hopkins University (Baltimore) in 1931-32, and consulting surgeon and archivist at St. Bartholomew's Hospital, London. His publications included contributions on war surgery, syphilis, cancer, intestinal obstruction, the surgical diseases of children, and the history of medicine, in addition to *Selected Writings* (1931), and *A Mirror for Surgeons* (1940).

Prajadhipok, Somsach Chao Fa. King of Siam, 1925-35; died in Surrey, Eng., May 31, 1941; born in Siam, Nov. 8, 1893. He was the seventh monarch—one of the last three remaining absolute monarchs in the world—of the Chakkri dynasty, and ascended the throne on Nov. 26, 1925. Best known in the United States for his visit to this country (1931) for the removal of cataracts in his eyes, he was received at the White House by President Hoover.

The absence of King Prajadhipok from his country at crucial governmental crisis, necessitated by his health, gave enterprising men at home an opportunity to force through legislation with which the King differed, and rather than accept the situation, he abdicated on Mar. 2, 1935. Thereafter he lived in England.

Prévost, Marcel. French novelist, died in Vianne, France, Apr. 8, 1941; born in Paris, May 1, 1862. Member of the French Academy since 1909, and founder (1921) and director of *Revue de France*, he enjoyed an unrivaled reputation for the understanding of feminine psychology. His book *Lettres des Femmes*, published in 1892, a collection of letters in which the thoughts and desires of women were described, won wide popularity; and its successor *Les Demi-Vierges* (1894) gained immense vogue. Others of his better known works are *Le Scorpion* (1887), *Lettres à Françoise* (1902), *Les Anges gardiens* (1913), *La Retraite ardente* (1927), and *L'Homme vierge* (1930).

Purvis, Arthur Blaikie. British industrialist; died in a flying accident somewhere in the United Kingdom, announced Aug. 14, 1941; born in London, Eng., Mar. 31, 1890. President and managing director of Canadian Industries, Ltd., manufacturers of chemicals, Montreal, since 1925, he was appointed director general of the British Purchasing Commission in the United States, and chairman of the Anglo-French Purchasing Board in 1939, and as such was responsible, in his first six months in of-

rice, for the \$200,000,000 worth of Allied planes and motors bought through his office. Early in 1941 he became head of the British Supply Council in North America, an organization set up to direct the work of the purchasing commission and to "deal with all issues of policy concerning supply, including representations to be made to the United States Administration."

Guidde, Ludwig. German historian and pacifist; died in Geneva, Switzerland, Mar. 6, 1941; born in Bremen, Germany, 1858. In 1889, through his study of the history of the Reichstag, he founded the *German Historical Review*. Entering German politics (1893), he proceeded to attack Kaiser Wilhelm II bitterly in books and speeches. Due to his adherence to pacifism, he was forced into exile, removing to Switzerland, where he remained until after the war. He then returned to Germany, where in 1927 he was awarded the Nobel Peace Prize. He had been a member of the International Peace Bureau at Geneva for forty years.

Ramirez, Salvador C. Nicaraguan diplomat and educator, former Minister of Foreign Affairs and Minister to Mexico (1933); died in Salvador, Nicaragua, Dec. 26, 1941, born, 1877. Dr. Ramirez, the author of several books, was at one time presidential candidate of the Progressive Conservative Party.

Rand, Ellen Emmet (Mrs. William Blanchard Rand). American portrait artist; died in New York City, Dec. 18, 1941; born in San Francisco, Calif., Mar. 4, 1876. Her best known portraits are those of Augustus Saint-Gaudens and Benjamin Altman, both displayed in the Metropolitan Museum of Art, New York. In 1933-34 she painted the official White House portrait of President Franklin D. Roosevelt.

Ransley, Harry C. American Republican Congressman from Pennsylvania (1921-37); died in Philadelphia, Nov. 5, 1941; born in Philadelphia, Feb. 5, 1863.

Reed, James. American construction engineer, president of the Cramp Shipbuilding Co.; died in Philadelphia, Pa., July 23, 1941; born in Ashtabula, O., 1882. As general manager of the Golden Gate Bridge and Highway District in San Francisco (1933-37), he was in charge of the engineering, finance, and construction of the suspension bridge across the Golden Gate.

Reid, Helen Richmond (Young). Canadian writer and social worker; died in Montreal, Canada, June 8, 1941; born in Montreal, 1869. President and co-founder of the Montreal Charity Organization Society (1900) and director of the Patriotic Fund in Montreal during the World War, she was awarded the Jubilee Medal (1935) and the Coronation Medal (1937) for her educational and philanthropic work.

Rennell, 1st Baron, James Rennell Rodd. British diplomat; died in Surrey, Eng., July 26, 1941; born Nov. 9, 1858. The last of British ambassadors of the era before the World War, he served as minister to Sweden (1904-08); ambassador to Italy (1908-19); and Conservative member of Parliament (1928-32). He was a delegate to the League of Nations in 1921 and 1923, and in 1925 headed the Court of Conciliation between Austria and Switzerland. His writings include three series of diplomatic memoirs *Social and Diplomatic Memoirs* (1922), second series (1894-1901; 1923), third series (1926).

Richards, C(harles) R(uss). American educator; died in Minneapolis, Minn., Apr. 17, 1941; born in Clarksville, Ind., Mar. 23, 1871. Receiving his master's degree from Purdue University, he became an instructor at Colorado Agricultural College (1891); went to University of Nebraska (1892-1911); Uni-

versity of Illinois (1912-22); became president of Lehigh University in 1923, and retired as emeritus in 1935.

Richards, John G(ardiner). American ex-governor; died in Liberty Hills, S.C., Oct. 9, 1941; born in Liberty Hills, Sept. 11, 1864. He ran unsuccessfully for Governor in 1910, 1914, and 1918, he achieved his ambition in 1926, serving as Governor of South Carolina during 1927-31. His administration was marked by his efforts to enforce the State's blue laws, particularly against Sunday golf and Sunday gasoline sales. Since 1935 he had been a member of the State Tax Commission.

Rickert, Thomas A. American labor leader, president of the United Garment Workers of America since 1904; died in New York, N.Y., July 28, 1941; born in Chicago, Apr. 24, 1876. He had been second vice-president of the American Federation of Labor since 1931.

Riddle, John Wallace. American diplomat; died in Farmington, Conn., Dec. 8, 1941; born in Philadelphia, July 12, 1864. Graduating from Harvard (1887), he entered the U.S. diplomatic service in 1893, serving as secretary of the legation to Turkey (1893-1900); secretary of the American Embassy in Russia (1901-03), diplomatic agent and consul-general to Egypt (1903-05); Envoy Extraordinary and Minister Plenipotentiary to Rumania and Serbia (1905-06); Ambassador to Russia (1906-09); and Ambassador to Argentina (1921-25). He resigned from the diplomatic service in 1925.

Ridge, Lola. American poet; died in Brooklyn, N.Y., May 19, 1941; born in Dublin, Ireland, in 1883. Coming to the United States in 1907, she assisted Alfred Kreyborg in editing *Others*, a magazine for experimental poetry, and later assumed complete editorial responsibility. She became favorably known for her radical poetry published in the *New Republic*, and for her first novel, *The Ghetto and Other Poems* (1918). In 1929 she was credited with having written one of the most extraordinary poems ever composed by an American—*Firehead*, dealing with the Crucifixion. Other works are *Sun-up and Other Poems* (1920), *Red Flag* (1927), and *Dance of Fire* (1935).

Ripley, William Z(ebina). American economist and educator; died in East Edgecomb, Me., Aug. 16, 1941; born in Medford, Mass., Oct. 13, 1867. Educated at Massachusetts Institute of Technology (A.B., 1890) and at Columbia University (1892-93), he was professor of economics at M.I.T. (1895-1901); and professor of political economy at Harvard (1901-33). In 1918 he was director of Labor Standards for the War Department; from 1920 to 1922 was special examiner for the Interstate Commerce Commission in proceedings toward a merger of the nation's railroads, and was chairman of the National Adjustment Commission of the U.S. Shipping Board (1919-20). A nationally known authority on railroad transportation, he also crusaded against secrecy in the accounts of large corporations and trusts, demanding equality for non-voting shareholders. His publications include *Trusts, Pools and Corporations* (1905), *Railway Problems* (1907), *Railroads—Finance and Organization* (1914), and *Main Street and Wall Street* (1927).

Risquez, Francisco Antonio. Venezuelan physician, surgeon, and educator; died in Caracas, Venezuela, July 10, 1941, born in State of Nueva Esparta, Oct. 10, 1856. Among the many positions he held were: member of the Board of Hygiene and Public Health of the Federal District (1899); delegate to the International Congress of Medicine, Paris (1900); Venezuelan Consul in Spain and subsequently chargé d'affaires (1901-10); president of the Com-

mittee on Health of the Congress of Municipalities in Caracas (1911); president of the 1st District Council of Public Education, Caracas (1912); delegate to the Pan-American Medical Congress, Havana, Cuba (1927); and first vice-president of the organizing committee for Pan-American Medical Congress (1934). Included among his publications were *Lecciones de cirugía general* (1891), *Manual de medicina legal* (1901), *Estudios higiénicos* (1909), *Discursos y conferencias* (1926), *Higiene militar* (1926), and *Patología interna* (1938).

Roberts, Elizabeth Madox. American poet and author; died in Orlando, Fla., Mar. 13, 1941; born near Springfield, Ky., in 1886. A graduate of the University of Chicago (1921), she was the recipient of the John Reed Memorial Prize (1928), the O. Henry Memorial Prize for a short story (1930), and a prize awarded by the Poetry Society of South Carolina (1931). Among her best known works are *The Time of Man* (1926), *The Great Meadow* (1930), and *Song of the Meadow* (1940). Her more recent novels were *He Sent Forth a Raven* (1935), *Black is My Truelove's Hair* (1938), and *Not by Strange Gods* (1941).

Roberts, Frederick Owen. British Member of Parliament from 1918 to 1931 and again from 1935 to early in 1941; died in Northampton, Eng., Oct. 24, 1941; born in East Haddon, Northants, Eng., 1876. Sir Roberts was Minister of Pensions in 1924 and again during 1929-31.

Roberts, Stewart Ralph. American physician and educator; died in Atlanta, Ga., Apr. 14, 1941; born in Oxford, Ga., Oct. 2, 1878. Graduating from Emory University (1902) and receiving his medical degree from the Atlanta College of Physicians and Surgeons, he was professor of biology at Emory College (1902-06); professor of physiology, Atlanta School of Medicine (1906-09); professor of physiology (1909-10), associate professor of medicine (1910-13), professor (1913-15), and professor of clinical medicine since 1919 at the Atlanta Medical College (Emory College). Dr. Roberts was one of the ten American physicians appointed by the Secretary of Labor to study and advise on the question of governmental supervision of medical care (1934).

Roberts, William Carman. American editor; died in Waterford, Conn., Nov. 21, 1941; born in Fredericton, Canada, 1875. Associated with *The Literary Digest*, which discontinued publication in May, 1938, since 1898, he was managing editor of the magazine during 1932-34.

Robinson, Frederick Bertrand. American educator; died in New York, N.Y., Oct. 19, 1941; born in Brooklyn, N.Y., Oct. 16, 1883. He had been associated with the College of the City of New York since 1906 as tutor, instructor, assistant professor, associate professor, and professor; director of the student evening session, 1915-27, organized and directed the Division of Vocational Subjects and Civic Administration until 1927, acting president of the college, 1925-26, and president from 1927 to 1939.

Rockley, Baroness (Alicia Margaret). British horticulturist and writer; died at Lytchett Heath Poole, Eng., Sept. 13, 1941. Honorary assistant director of horticulture of the food production department of the Board of Trade during the World War, she wrote for many years on gardening and wild flowers throughout the British Empire. Her publications include *A History of Gardening in England* (1895), *Children's Gardens* (1902), *Wild Flowers of the Great Dominions of the British Empire* (1935), and *Historic Gardens of England* (1938).

Rockley, 1st Baron, Evelyn Cecil. British politician; died in Poole, Dorset, Eng., Apr. 1, 1941; born,

May 30, 1865. He was a member of Parliament from East Herts (1898-1900); from Aston Manor (1900-18); and from Birkenham (1918-29). His publications included *Primogeniture* (1895), and *On the Eve of War* (1900).

Rogers, Mark Homer. American orthopedist, assistant professor from 1915 to 1924 and thereafter professor of orthopedic surgery at Tufts Medical School, Medford, Mass.; died in Boston, Mass., Oct. 5, 1941; born in South Sudbury, Mass., May 21, 1877.

Roosevelt, Philip J(ames). American investment banker and yachtsman; died after his sailing dinghy capsized in Oyster Bay, Long Island, New York, Nov. 8, 1941; born in New York City, May 15, 1892. A cousin of the late Theodore Roosevelt, he was a partner in Roosevelt & Son, investment bankers, New York, and an executive or director of numerous corporations. As one of the nation's noted yachtsmen, he had been president for the last six years of the North American Yacht Racing Union, the ruling body of sail racing in the United States and Canada. He had taken part in races of the British-American cup team and the Scandinavian American match on Long Island Sound, New York (1930). In World War I he served as a major in the U.S. Air Service, receiving the Croix de Guerre with palm (France).

Roosevelt, Sara Delano. Mother of President Franklin D. Roosevelt; died at Hyde Park, N.Y., Sept. 7, 1941; born in Newburgh, N.Y., Sept. 21, 1854.

Rose, Mary D. Swartz (Mrs. Anton Richard Rose). American educator and nutrition expert, died in Edgewater, N.J., Feb. 1, 1941; born in Newark, O., Oct. 31, 1874. A graduate of Denison University (1902) and Yale University (1909), she became instructor (1909-11), assistant professor (1910-18), associate professor (1918-21), and since 1921 professor of nutrition, Teachers College, Columbia University. She had been a member of the Council on Foods of the American Medical Association since 1933 and since 1935 a member of the Nutrition Commission of the Health Organization of the League of Nations. Dr. Rose was president of the American Institute of Nutrition, 1937-38. Her publications included: *Laboratory Handbook for Diets* (1912), *Feeding the Family* (1916), *Everyday Foods in War Time* (1918), *Foundations of Nutrition* (1927), and *Teaching Nutrition to Boys and Girls* (1932).

Rourke, Constance Mayfield. American author and educator; died in Grand Rapids, Mich., Mar. 23, 1941; born in Cleveland, O., Nov. 14, 1885. Graduating from Vassar College in 1907, she returned there as an instructor in English (1910-15), thereafter devoting her time to writing. Her book, *American Humor—A Study of the National Character*, was adjudged one of the 15 best books of 1931 and one of the most outstanding written by a woman in the last 100 years; *Audubon* (1936) is considered one of the finest biographies of the Naturalist yet written. Among her other publications were: *Trumpets of Jubilee* (1927), *Troupers of the Gold Coast, or the Rise of Lotta Crabtree* (1928), *Davy Crockett* (1934), and *Charles Sheller: Artist in the American Tradition* (1938).

Rousseau, Paul (Maurice Lombard). French sportsman and for many years actual dictator of European boxing in his position as secretary general of the International Boxing Union; died in Vichy, France, May 5, 1941; born in Bordeaux, France, Mar. 22, 1868. At the age of 20 he won the French junior amateur cycling championship.

Rowell, Newton Wesley. Canadian diplomat and lawyer; died in Toronto, Canada, Nov. 22, 1941;

born in Middlesex Co., Ontario, Nov. 1, 1867. Chief Justice of Ontario in 1936-38, he served, during the World War I, as president of the Union Government Council and as vice chairman of the Cabinet's War Committee under Sir Robert Borden, then Prime Minister. He was Acting Secretary of State for External Affairs in 1920-21.

Rumbold, 9th Baronet of, Horace George Montagu. British diplomat, died at Tisbury, Wiltshire, Eng., May 24, 1941; born, Feb. 5, 1869. He served as British Minister to Switzerland (1916-19), Minister to Poland (1919-20), Ambassador to Turkey (1920-24), Ambassador to Spain (1924-28), and Ambassador to Berlin (1928-33). Sir Horace was one of the first British officials to warn England of Herr Hitler. In a dispatch from Germany in April, 1933, he said, "Herr Hitler has now been Chancellor for nearly five months, and the prospect is disquieting, as the only program which the government appears to possess may be described as a revival of militarism and the stamping out of pacifism." He wrote *The War Crisis in Berlin, July-August, 1914* (1940).

Russell, Charles Edward. American journalist and author, died in Washington, D.C., Apr. 23, 1941; born in Davenport, Ia., Sept. 25, 1860. After graduating from St. Johnsbury Academy, Vermont, in 1881, he was engaged by numerous newspapers before becoming city editor of the *New York World* (1894-97). From *The World* he became managing editor of the *New York American* (1897-99), publisher of the *Chicago American* 1900-02; and since 1904 contributor to magazines and lecturer on literature and sociology. He became a Socialist in 1908, and was Socialist candidate for Governor of New York in 1910 and 1912; for Mayor of New York City (1913), for U. S. Senator (1914); and was nominated (1916) by party plebiscite for president, but declined. In 1903 he joined the muck-rakers, whose general purpose was the exposure of political, economic and social corruption; Russell specialized against corporations. As an author, he wrote 34 books, and won the Pulitzer Prize (1927), for his *The American Orchestra and Theodore Thomas*, a biography.

Russell, Elizabeth Mary, Countess. British novelist; died in Charleston, S.C., Feb. 9, 1941, born in Sydney, Australia, 1867. In 1898 she wrote an autobiographical novel in diary form, *Elizabeth and her German Garden*, under the pseudonym Elizabeth, and continued to write under that name until her death. Lady Russell's first books were noted for their charm and love of nature, but showed the beginnings of the brilliant and yet merciless cynicism of her later books. Among her publications were *The Adventures of Elizabeth in Ruegen* (1904), *The Caravaners* (1909), *Priscilla Runs Away* (1910), *Vera* (1921), *The Enchanted April* (1923), *Expiation* (1929), and *Mr. Skeffington* (1940).

Sabatier, Paul. French chemist; died at Toulouse, France, Aug. 14, 1941; born at Carcassonne, France, 1854. Professor of chemistry at Toulouse University since 1882 and dean of the faculty of sciences since 1905, he was noted for his discovery of a successful method of fat-hardening, or hydrogenation, and for his experiments leading to the discovery of synthetic gasoline. In 1912 he was co-holder of the Nobel Prize in chemistry. He received the Benjamin Franklin Medal of the Franklin Institute, of Philadelphia, in 1933. Among his publications were: *Travaux de chimie, Leçons de chimie agricole*, and *Les phénomènes de catalyse et de synthèse organique par hydrogénation ou déshydrogénation*.

Sackett, Frederic Moseley, Jr. American politician

and diplomat; died in Baltimore, Md., May 18, 1941; born in Providence, R.I., Dec. 17, 1868. He was elected to the U.S. Senate (Rep.) from Kentucky in 1924, resigning in 1930 to accept President Hoover's appointment as Ambassador to Germany (1930-33).

Sáenz, Moisés. Mexican educator and diplomat; died in Lima, Peru, Oct. 24, 1941; born in Monterrey, Mexico, Feb. 16, 1888. Under-Secretary of the Department of Education of Mexico from 1925 to 1930, he helped to establish thousands of public schools throughout the country. He sought to improve relations with the United States, introducing into the Mexican schools (1929) ten lessons on international good-will. Extremely active in the interests of Mexico's Indians, he devoted many years to solving problems interfering with the integration of the Mexican people, believing that education for the Indians was of fundamental necessity to accomplish this unity. He was appointed Minister to Ecuador, 1934, to Denmark, 1935, and to Peru since 1936.

St. Just, 1st Baron, Edward Charles Grenfell. British financier; died in London, Eng., Nov. 28, 1941; born, May 29, 1870. Lord St. Just had been a partner in the banking firm of Morgan, Grenfell & Co., Ltd., of London, since 1904, and at his death was senior director of the firm. He was a Conservative Member of Parliament during 1922-35.

Sakatani, Yoshiro. Japanese statesman; died in Tokyo, Japan, Nov. 14, 1941; born in Tokyo, May 15, 1889. A member of the House of Peers, an advocate of Japanese-American friendship, and adjudged one of the foremost financiers and economists in Japan, Viscount Sakatani was Minister of Finance, 1906-08, Mayor of Tokyo, 1912-15, and fiscal advisor to China, 1917. A former president of Senshu University, he served as chairman of the Japanese delegation to the economic conference of the Allies in Paris during the World War.

Salmon, Sir Isidore. British restaurateur; died in London, Eng., Sept. 16, 1941, born, February, 1876. Chairman and managing director of J. Lyons & Co., proprietors of a large restaurant chain and three London hotels, he had been a Conservative member of Parliament since 1924. He was chairman of the London War Pensions Committee from 1918 to 1922, member of the Royal Commission on Transport during 1928-30, and, at his death, Honorable Advisor on Catering to the British Army.

Sanborn, (John) Pitts. American music critic and novelist; died in New York, N.Y., Mar. 7, 1941; born in Port Huron, Mich., 1880. Graduating from Harvard University with a masters degree in 1902, he became music editor of *The New York Globe* (1905-23), served as foreign correspondent for the paper during the summers of 1912-22 with the exception of 1913, 1917, and 1918; music editor of *The New York Evening Mail*, retaining the post when the paper was merged with *The New York Evening Telegram* (1923 to his death). He was the author of *Prima Donna* (1929), *Vie de Bordeaux* (1917), *Greek Night* (1933), and *Metropolitan Book of the Opera* (1937).

Sanders, Archie D. American Republican Congressman from New York (1917-32); died in Rochester, N.Y., July 15, 1941; born in Stafford, N.Y., June 17, 1857.

Sanders, William Stephen. British laborite, founder of the Battersea Trades Labor Council (1893), and during 1929-31, 1935-40 Labor member of Parliament from North Battersea; author of *Political Reorganization of the People*, and *Early Socialist Days*; died in Wandsworth, Eng., Feb. 4, 1941; born, January, 1871.

Saunders, Peggy (Mrs. L. R. C. Mitchell). British tennis player; died in Edgeware, Eng., June 21, 1941; born, 1905. Twice co-holder of the British women's doubles championship, she was a member of the British Wightman Cup team from 1928 to 1933.

Schaerer, Eduardo. Paraguayan statesman, President of Paraguay from 1912 to 1916; died in Buenos Aires, Argentina, Nov. 12, 1941; born in Caazapa, Paraguay, Dec. 2, 1873. He had been Minister of the Interior, 1912, and a Senator during 1918-22. In 1931 he was deported, accused of supporting a revolutionary movement.

Schertzinger, Victor. American composer and motion picture director; died in Hollywood, Calif., Oct. 26, 1941; born in Pennsylvania, 1889. One of the first to establish screen musicals as a popular form of screen entertainment, he directed such screen hits as *Love Me Tonight*, *Rhythm on the River*, *Kiss the Boys Goodbye*, *The Road to Singapore*, *The Road to Zanzibar*, and *Birth of the Blues*. His most famous composition was *Marcheta*, which sold more than 4,000,000 copies.

Schmidt-Degener, Frederick. Dutch art expert; died in Amsterdam, Holland, Nov. 21, 1941; born, 1882. Director of the Rijksmuseum in Amsterdam since 1922, he was an authority on Rembrandt's works. Under his care were collections of the original work of Frans Hals, Rembrandt, and Josef Israels.

Schoonheimer, Rudolf. American chemist; died in Yonkers, N.Y., Sept. 11, 1941; born, 1898. An outstanding research worker in the field of biochemistry, he was graduated from the University of Berlin (1922); was a former head of the department of pathological chemistry at the University of Freiburg; was a Douglas Smith Fellow in the department of experimental surgery at the University of Chicago (1930-31), and in 1933 came to Columbia University, where he was associate professor of biological chemistry at his death.

He was a forerunner in the field of "tagged atoms," in which "atoms of heavy hydrogen, heavy nitrogen, as well as heavy carbon, oxygen, and sulphur are introduced in the diet of animals to determine the uses the animal body makes of food constituents. His work at Columbia helped to discover that the human body is a chemical laboratory where diversified transformations of matter are occurring frequently.

Schulte, Karl Josef. German Catholic Cardinal; died in Cologne, Germany, Mar. 11, 1941; born in Valbert, Westphalia, Sept. 14, 1871. A militant crusader against the authority and philosophy of the Nazi regime, he was Archbishop of Cologne since 1920; editor of *Bischofliche Hirtenbriefe* since 1910; and was elevated to the College of Cardinals in 1921.

Scribner, Sam A. American theatrical producer, treasurer of the Actors Fund of America since 1916; died in the Bronx, New York, N.Y., July 8, 1941; born in Brookville, Pa., 1859.

Severance, H. Craig. American architect; died in Point Pleasant, N.J., Sept. 2, 1941; born in Chazy, N.Y., July 1, 1879. Active as an architect for 41 years, he designed, among others, the Bank of the Manhattan Company Building, the Ruppert Building, Prudence Building, Bar Building, Hotel Taft, and Nelson Towers, all in New York. In 1918 he surveyed the devastated areas in France and Belgium for the United States to inaugurate a program of rehabilitation.

Shannon, Peggy. American screen actress and former Ziegfeld Follies girl, she attained stardom in pictures during the 1930's; died in Hollywood, Calif., May 11, 1941; born in Pine Bluff, Ark., Jan. 10, 1910.

Shawkey, Morris P(urdy). American educator; died on a railroad train in Georgia, Feb. 6, 1941; born, Sigel, Pa., Feb. 17, 1868. A graduate of Ohio Wesleyan University (1909), he became State Superintendent of Schools in West Virginia (1908-20); ran for Republican Governor in 1920, but was defeated; and in 1923 became president of Marshall College. Under his leadership the College increased its registration from 1,000 to 2,000 students. In 1935, when he retired, he was designated as president emeritus. At his death, he was business manager of Morris Harvey College, an institution supported by the Methodist Church.

Shearer, Augustus H(unt). American librarian in charge of the Buffalo (N.Y.) Grosvenor Reference Library and its 350,000 volumes since 1919; died in Buffalo, N.Y., May 31, 1941; born in Philadelphia, Pa., Feb. 21, 1878. He was president of the Bibliographical Society of America in 1933. He was co-author of a *Guide to Historical Literature* (1931), and *History of New York* (1933).

Sheppard, Morris. U.S. senator (Dem.); died in Washington, D.C., Apr. 9, 1941; born in Wheatville, Morris Co., Tex., May 28, 1875. Graduated from the University of Texas (1895) and the Yale Law School (1898). Sheppard began his law practice in Pittsburg, Texas, and then, a year later, located at Texarkana, which he called home until his death.

In 1902, the young lawyer was elected to the 57th Congress to fill out the unexpired term of his father, who had died. He was reelected to five Congresses, from the 58th to the 62d, 1903 to 1913, and on Mar. 3, 1913, was elected by the Legislature as U.S. Senator for the unexpired term, ending in 1913, of Joseph W. Bailey, who had resigned. On the same day Senator Sheppard was also elected for the full term in the Senate, beginning in March, 1913, and was reelected in 1918, 1924, 1930, and 1936.

Dean of Congress in length of service and the sponsor of the national prohibition amendment to the Constitution, Senator Sheppard was a Dry politically and personally. He opposed the nomination of Franklin D. Roosevelt as late as 1931 because of Mr. Roosevelt's advocacy of repeal. He was co-author of the Sheppard-Towner act, which provided Federal aid to the states for maternity and infancy care; chairman, Senate Military Affairs Committee (at his death); was one of the pilots of the Selective Service Act, and opened debate on the bill on the Senate floor in August, 1940, appealing for its passage as essential to the protection of the nation against "dictator controlled" countries. One of his last steps, early in 1941, was to introduce in the Senate a bill to prevent the sale of liquor or beer to members of the Army and Navy, under penalties of fines from \$100 to \$1,000 and jail terms from a month to a year.

Sherley, (Joseph) Swager. American ex-congressman (Dem.); died in Louisville, Ky., Feb. 13, 1941; born in Louisville, Nov. 28, 1871. Serving in Congress as a Representative from Kentucky (1903-1919), he was a close advisor of President F. D. Roosevelt in 1933 on the President's plan for reorganization of the Federal government.

Shuman, Edwin Llewellyn. American editor and writer; died in Yonkers, N.Y., Dec. 13, 1941; born in Lancaster Co., Pa., 1864. Graduated from Northwestern University in 1887, he became a reporter for *The Chicago Journal*. In 1895 he joined the staff of *The Chicago Tribune* as literary editor and editorial writer, and in 1900 moved over to *The Chicago Record* as literary editor, a post he held until 1913. In 1915 he came to New York as

assistant general manager of Associated Sunday Magazines. In 1916 he became managing editor of *Current History Magazine*, and in 1922 was appointed associate editor of the *International Book Review*. When that magazine became defunct in 1926, he moved on to the associate editorship of *The Homiletic Review*. He was the author of *Steps into Journalism* and *How to Judge a Book*. He edited *A Decade of Oratory* and translated *Trail Blazers of Science* from the German.

Sikes, Enoch Walter. American educator; died in Charleston, S.C., Jan. 8, 1941; born in Union Co., N.C., May 19, 1868. A teacher since 1891, he held numerous positions; becoming president of Clemson College, So. Carolina, in 1916. He retired in 1925. Also he was the author of many books concerning the history of the Carolinas, including *From Colony to Commonwealth* (1897).

Simpson, Kenneth F(arrand). American Congressman; died in New York, N.Y., Jan. 25, 1941; born in New York City, May 4, 1895. He graduated from Yale University in 1917; entered politics, and subsequently became Republican County Chairman in New York City (1933-40); and Republican Representative to Congress since November, 1940. He was largely responsible for the reelection of Mayor Fiorello H. LaGuardia in New York City (1937), and for the nomination of Wendell Willkie for President at the Republican National Convention (1940). Shortly before his death he introduced in the House of Representatives a substitute bill for the administration's Lend-Lease Bill.

Sinding, Christian. Norwegian composer; died in Oslo, Norway, Dec. 3, 1941; born in Kingsberg, Norway, 1856. Credited with having introduced a new fashion for Norwegian music with his piano quintette in E minor, Sinding was the composer of, among others, *The Rustle of Spring*, *The Rustle of the Forest*, *The Holy Mountain*, an opera, and *Episodes chevaleresques*. In addition, three symphonies, three sonatas, and more than 200 songs, principally Scandinavian folk songs. In 1920-21 Sinding taught music theory and composition in the Eastman School of Music of the University of Rochester, New York.

Sisowath Monivong. King of Cambodia Province, French Indo-China; died at Pnom-Penh, Cambodia, Apr. 24, 1941. Succeeding to the throne in 1927, he reigned merely as a puppet head, as Cambodia is a protectorate within French Indo-China. Like his ancestors, the monarch lived within a walled enclosure, served by several hundred women. A sad note entered his life in 1938—he was forced to fire 100 of his 200 wives.

Skelton, Oscar Douglas. Canadian diplomat; died in Ottawa, Can., Jan. 28, 1941; born in Orangeville, Ont., July 13, 1878. Canadian Under-Secretary of State for External Affairs since 1925, he wrote *Socialism, a Critical Analysis* (1910), *Economic History of Canada, since Confederation* (1913), *The Day of Sir Wilfrid Laurier* (1916), *Life and Times of Sir A. T. Galt* (1920), *Our Northern Neighbor* (1920), and *Life and Letters of Sir Wilfrid Laurier* (1921).

Skilton, Charles Sanford. American composer and organist; died in Lawrence, Kan., Mar. 12, 1941; born in Northampton, Mass., Aug. 16, 1868. A graduate of Yale University (1889), and professor of organ, theory of music, and history of music at the University of Kansas since 1903, he was noted for his Indian melodies, which were played abroad as well as in the United States. Among his outstanding compositions are *Electra* (1889), *Sonata for Violin and Piano* (1897), *The Witch's Daughter*, *Ticonderoga*, *The Guardian Angel*, and *Ameri-*

can Indian Fantasia. He wrote the operas *Kalopln*, *The Sun Bride*, and *The Day of Gayomair*.

Slade, George (Heron). American railway official; died in St. Paul, Minn., Jan. 24, 1941; born in New York, N.Y., July 22, 1871. A graduate of Yale (1893), he served as general superintendent of the Great Northern Railway Co. (1903-07); general manager of the Northern Pacific (1907-09), made first vice-president in charge of operations from 1913 to 1918, when he resigned to become director general of transportation for the A.E.F. in France, with the rank of colonel. He became a member of President Wilson's Second Industrial Conference (1920).

Smith, Albert Edwin. American educator and clergyman, president of Ohio Northern University from 1905 to 1930; died in Findlay, O., Aug. 26, 1941; born in New Richmond, O., Dec. 16, 1860. Ordained a Methodist Episcopal minister in 1887, he was a delegate to the Ecumenical Conference in London in 1923.

Smith, Preserved. American educator and writer; died in Louisville, Ky., May 15, 1941; born in Cincinnati, O., July 22, 1880. Graduating from Amherst College (1901), and Columbia University (1902), he began teaching at Williams College (1904), Amherst (1907), and in 1922 became a professor at Harvard, a position he held until his death. Dr. Smith was a contributor to the *NEW INTERNATIONAL ENCYCLOPEDIA*, in addition to many other publications in the United States and Europe. Other among his writings were: *Life and Letters of Martin Luther* (1911), second edition in 1914, *The Age of Reformation* (1920), *Erasmus—A Study of His Life, Ideals, and Place in History* (1923), *A Key to the Colloquies of Erasmus* (1923), and *A History of Modern Culture* (vol. 1, 1930—vol. 2, 1934).

Smith, William Ruthven. American major general; died in West Point, N.Y., July 15, 1941; born in Nashville, Tenn., Apr. 2, 1868. Superintendent of the U.S. Military Academy from 1928 to 1932, he waged a long campaign, but successful, for the purchase of 15,000 additional acres, maintaining that to adequately train cadets in modern warfare it was essential to have fine artillery and rifle ranges and a landing field for planes. A considerable building program was carried out under his plans and he was able to liberalize to some extent the rules and formalities of cadet training. This post was the last assignment in a career of 44 continuous years in the Army which included the command of the 36th Division in France during the World War and the command of the Hawaiian Department of the Army (1927).

Smoot, Reed. American ex-Senator. Died in St. Petersburg, Fla., Feb. 9, 1941; born in Salt Lake City, Utah, Jan. 10, 1862. Elected to the U.S. Senate in 1903, he almost lost his seat through the Senate's opposition to the Mormon church and the idea of polygamy. The dissension lasted for one year, and due solely to Senator Smoot's intense insistence that he did not practice polygamy, that his church vows did not interfere with the oath of office, was his election confirmed. He was re-elected in 1908, 1914, 1920, and 1926.

A firm advocate of economy, of conservative Republicanism and of a high tariff, he was co-author of the Smoot-Hawley tariff bill (1930), which, with highly increased rates, extended protection into the field of agricultural production—the bill contained some 21,000 items. He was an acknowledged expert on tariff taxation and public finance, and as such was so vigilantly a foe of those who sought to raid the Treasury that the sobriquets

"watch-dog of the Treasury" and "high priest of tariff protection" were attached to him. He served as chairman of the Senate Finance Committee, member of the World War Foreign Debt Committee, and member of the Republican National Committee (1912-20).

In the Roosevelt landslide of 1932 he was defeated and retired to Utah, again to become active in the Mormon Church; he had been a president of the Utah Stake of the Church of Jesus Christ of Latter Day Saints (Mormon) since 1895 and had become an apostle in 1900.

Soler y Guardilla, Pablo. Spanish diplomat; died in Tigre, Argentina, Nov. 9, 1941; born, 1865. He was a former Ambassador to Paraguay, Cuba, and Argentina.

Sombart, Werner. German educator, economist, and author; died in Berlin, May 18, 1941, born in 1863. He taught at the University of Breslau from 1890, at the Berlin Commercial College from 1906 and in 1917 was appointed professor at the University of Berlin. Dr. Sombart opposed Karl Marx on his fundamental conclusions on the origins of capitalism, making a new analysis in which he connected the development of capitalism with new religious impulses growing out of the Reformation, particularly Calvinism. Included among his writings were: *Socialism and the Socialist Movement in the 19th Century* (1896), *Modern Capitalism* (begun in 1902 and not finished until 1926), *The Jews in Economic Life*, and *The Proletariat*.

Speyer, James. American banker and philanthropist; died in New York City, Oct. 31, 1941, born in New York City, July 22, 1861. Senior partner of the banking house of Speyer & Co., New York, from 1899 to 1939, his philanthropies were many and varied. He was the leading figure in the promotion of the Museum of the City of New York, one of the originators (1894) of the Provident Loan Society of New York, and a contributor to and an active campaigner for the Salvation Army and the United Hospitals Fund. For his generosity in founding the University Settlement Society, Speyer School of Teachers College (Columbia University), Ellin Prince Speyer Hospital for Animals, and others, he was presented the gold medal of the Hundred Year Association (1938) as the man who had contributed most to the civic welfare of New York City.

Stang, Fredrik. Norwegian educator and jurist; died in Norway, Nov. 15, 1941, born, 1867. President of the Nobel Prize Committee since 1921, he served as a member of Parliament, 1906-09, and as Minister of Justice during 1912-13. Dr. Stang became a professor of Law at Oslo University in 1897, and was president of the university from 1921 to 1927. He was the founder and head of the Institute of Comparative Research in Human Culture at Oslo.

Stewart, Robert. British checkers champion; died at Blairadam, Fifeshire, Scotland, Aug. 11, 1941; born, 1873. Holder of the world's checker championship, he had lost only two games in a total of 8,000 played. One game was lost in a world's title match (1922), when he defeated Newell W. Banks of the United States by two games to one and made 37 draws; the other game was lost to an unknown. He was a member of the victorious British checker team which visited New York in 1905.

Stiles, Charles Wardell. American zoologist, discoverer of hookworm in the United States; died in Baltimore, Md., Jan. 23, 1941; born in Spring Valley, N.Y., May 5, 1867. He studied at Wesleyan University (1885-86) and then went to Europe for

graduate work at College de France (1886-87), University of Berlin (1887-89), and University of Leipzig (1889-90). He returned to this country to become consulting zoologist of the Bureau of Animal Industry, U.S. Department of Agriculture (1902-04); professor of zoology, U.S. Public Health Service (1902-30), assistant surgeon general (1919-30) and medical director during 1930-31; professor of medical zoology, Georgetown University (1892-1906), and lecturer at various other universities. Beginning in 1891, he studied to find a cure for the malady afflicting under-privileged groups in the South, but with all the progress he made towards proving that the hookworm was responsible for the nation's greatest scourge, he could obtain little help or money from the government or private sources. Nevertheless he persisted and in 1914, after having laid the groundwork for a system of education to prevent recurrences of the disease, after proving that all his original theories had come true, and after devoting a major portion of his life to this cause, he retired—to complete obscurity. He was the author of numerous books and articles on the hookworm and intestinal parasites.

Still, Sir George Frederic. British physician extraordinary to the King since 1937; died at Harnham Croft, Salisbury, Eng., June 30, 1941; born in Holloway, London, February, 1868. He was chairman of the National Association for the Prevention of Infant Mortality, 1917-37, and was awarded the Dawson Williams Memorial Prize, for work in behalf of sick children, in 1934.

Stillwell, Lewis Buckley. American electrical engineer; died in Baltimore, Md., Jan. 19, 1941; born in Scranton, Pa., Mar. 12, 1863. A graduate of Lehigh University in 1885, he joined the Westinghouse Electric and Manufacturing Co. (1886), and from 1891 to 1897 was chief electrical engineer. With Nikola Tesla he helped develop and commercialize the alternating current system of lighting and power distribution, and had an active part in the establishment of standard frequencies of 30 and 60 cycles. He was appointed electrical director of the Niagara Falls Power Co. (1897-1900), and in 1900 he became electrical director of the Rapid Transit Subway Construction Co., builders of the Interborough subway, New York City. He held this position until 1909, and then became consulting engineer to the Interborough Rapid Transit Co. (1909-20). As consulting engineer, he also served many other prominent railway and electric companies. His work brought him the Lamme Medal (1933) "for his distinguished career in connection with the design, installation and operation of electrical machinery and equipment," and the Edison Medal (1936).

Stolz, Joseph. American rabbi; died in Chicago, Feb. 7, 1941; born in Syracuse, N.Y., Nov. 3, 1861. A well-known reform rabbi and a leader in Chicago civic and philanthropic activities, he was rabbi of the Zion Congregation (1887-95); member of the Chicago Board of Education (1898-1905); and rabbi of Isaiah Temple (1895-1927), retiring as rabbi emeritus in 1927. He was president of the Chicago Rabbinical Association from 1920 to 1925. As an author, he wrote only one book, *Funeral Agenda of Jews* (1897).

Stonehaven, 1st Viscount, John Lawrence Baird. British statesman; died in Stonehaven, Scotland, Aug. 19, 1941; born, Apr. 27, 1874. Educated at Eton and Oxford, he served in various overseas posts of the British diplomatic service (1896-1908); member of Parliament (1910-25); private secretary to the late Andrew Bonar Law (1911-16); Parlia-

mentary Member of the Air Board (1916-18); Under Secretary of State for the Home Office (1919-22); Minister of Transport and First Commissioner of Works (1922-24), and Governor General and Commander in Chief of the Commonwealth of Australia (1925-30). He was created a baron in 1925 and a viscount in 1938. On a visit to the United States in 1940 Lord Stonehaven observed to the press, "We are completely confident that we will win the war. Not one defeatist is to be found in England."

Strong, Lee A (bram). American entomologist; died in Madera Canyon, Santa Rita Mountains, Ariz., June 2, 1941; born in Russell, Ia., June 17, 1886. An enemy of plant-destroying pests for thirty years, he was chief of plant quarantine and control administration and chairman of the plant quarantine board, U.S. Department of Agriculture (1929-32); chief of the Bureau of Plant Quarantine (1932-33), chief of the Bureau of Entomology (1933-34), and since 1934, when the two above bureaus were combined, chief of the Bureau of Entomology and Plant Quarantine.

Stroock, Sol M. American corporation lawyer and Jewish leader, president of the Federation for the Support of Jewish Philanthropic Societies in New York City from 1926 to 1929, and since 1931 chairman of the board of the Jewish Theological Seminary of America, and since 1940 president of the American Jewish Committee, died in White Sulphur Springs, W.Va., Sept. 11, 1941; born in New York, N.Y., Sept. 22, 1873.

Stuart, Duane Reed American classical scholar and educator, died in Greensboro, Vt., Aug. 29, 1941, born in Oneida, Ill., Sept. 27, 1873. Graduated from the University of Michigan in 1896 (Ph.D. degree in 1901), he became a preceptor in classics at Princeton University from 1905 to 1907, and since 1907 Kennedy professor of Latin languages and literature. At his death he was chairman of the Princeton Department of Classics. During 1924-25 he was Sather professor of classical literature at the University of California. Dr. Stuart was the author of *Epochs of Greek and Roman Biography* (1928), editor of *The Agricola of Tacitus* (1908), and *The Germania of Tacitus* (1916), and joint collaborator of *Greek Inscriptions of Southern Syria* (1911-15).

Stuart, James Everett. American painter; died in San Francisco, Calif., Jan. 2, 1941, born near Dover, Me., Mar. 24, 1852. Better known for his landscape painting of the American Far West and of Alaska, he also was the inventor of a process of painting upon aluminum by which pigments could be made to attach themselves to, and virtually become a part of, the metal painted, resisting all signs of erosion. Five of his paintings, done by his aluminum process, were sold for \$15,000 each. His work is represented in the collections of museums (especially in the Southwest), art associations, educational institutions, and connoisseurs in America and Europe.

Sulzer, William. American ex-governor; died in New York City, Nov. 6, 1941; born in Elizabeth, N.J., Mar. 18, 1863. He served as a Democratic member (New York) of the U.S. House of Representatives from 1895 to 1913. Elected Governor of New York State in 1912, he was impeached and removed from office in 1913, the only Governor of New York ever turned out of office.

Sweet-Escott, Sir (Ernest) Bickham. British colonial administrator, died in Worthing, Eng., Apr. 10, 1941; born in Bath, Eng., Aug. 20, 1857. He was Governor and Commander-in-Chief of British Honduras (1904-06), Leeward Islands (1906-12),

and was Governor of Fiji and High Commissioner and Consul-General for the Western Pacific (1912-1918).

Taberski, Frank. American pocket billiard champion in 1916-18, 1925, 1927-29; died in Schenectady, N.Y., Oct. 23, 1941; born, 1888. He took part in twenty world championship challenge matches and won them all.

Tagore, Sir Rabindranath. Indian poet; died in Calcutta, India, Aug. 7, 1941; born in Calcutta, May 6, 1861. A member of one of the most influential and distinguished families of India, as a youth, he composed many patriotic songs, combining his deep love for his country—expressed in psalm-like poetry—with fervent appeals to his countrymen, earning him the title "Soul of Bengal." These songs are believed to have accomplished as much towards the edification and binding together of all India as any other single force.

In 1901 he founded the famous school, Shantiniketan, at Bolpur, Bengal, which later developed into an international university called Visva Bharati. All classes of Indian men came to the school, representing all the various religious creeds and castes that Tagore zealously attempted to eradicate. The school was sylvan in its instruction, for classes were held out-of-doors and lessons were often quoted as students strolled through the forest. (It was based on the "forest schools" of ancient India.) All of Tagore's Nobel Prize money (awarded in 1913), his royalties from his books, and revenue from his estates were given to this school.

Sir Rabindranath wrote about 50 dramas which never reached popularity outside of India, nearly 100 books of verse containing over 3,000 poems, approximately 40 works of fiction and short story, countless songs with notations, about 50 books of literary, political, and religious essays and numbers of others on travel and children's stories. His *Gitanjali* (Song Offerings) won the Nobel Prize and his two plays, *Sacrifice* and *The Post Office*, were produced in New York City in 1913. Other works, translated into English, include *The Crescent Moon*, *Chitra*, *One Hundred Poems of Kabir*, *Fruit Gathering*, *Stray Bird*, *The Lover's Gift and Crossing*, *Nationalism*, *Lectures on Personality*, *My Reminiscences*, *The Parrot's Training*, *The Home and the World*, *Sakuntala*, and *Red Oleanders*. Sir Rabindranath visited the United States several times on lecture tours.

Tague, Peter F. American Congressman (Dem.) and Boston postmaster; died in Boston, Mass., Sept. 17, 1941; born in Boston, June 4, 1871. Postmaster of Boston since October, 1935, he was a member of the U.S. House of Representatives from 1915 to 1925.

Taliaferro, Thomas Hardy. American educator, died in Washington, D.C., Sept. 26, 1941; born in Jacksonville, Fla., Mar. 22, 1871. In the educational field since 1890, he was the first president of the University of Florida (1901-04); and since 1907 had been associated with the University of Maryland as professor of civil engineering (1907-20). He was dean of the College of Engineering (1916-20), dean of the College of Arts and Sciences (1927-37), and dean of the faculty from 1937 until his retirement as dean emeritus in June, 1940.

Tassin, Algernon de Vivier. American educator and author; died in Montclair, N.J., Nov. 3, 1941; born at Fort Halleck, Nev., Dec. 11, 1869. A follower of the stage during 1894-1905, he became associated with Columbia University in 1905, becoming an associate professor in 1931, retiring in June, 1941. Originator and instructor of the course "the Analysis of the Written Word," he was the author

of *Rust* (1911), *The Magazine In America* (1916), *The Craft of the Tortoise* (1919), *The Oral Study of Literature* (1923), and co-author of *A Child's Story of American Literature* (1923).

Taylor, Charles H(enry). American journalist; died in Boston, Mass., Aug. 18, 1941; born in Charlestown, Mass., Oct. 2, 1867. He was treasurer and a director of the Globe Publishing Co., publishers of *The Boston Globe* and *The Boston Evening Globe*, from 1893 to 1937, and was president of the American Newspaper Publishers Association (1901-04).

Taylor, Edward T(homas). American Congressman (Dem.); died in Denver, Colo., Sept. 3, 1941; born in Metamora, Ill., June 19, 1858. Graduated from the University of Michigan (1884), he served as a member of the Colorado Senate (1896-1908); and in 1909 was elected to the U.S. House of Representatives, where he served fifteen consecutive terms (1909-41). Chairman of the important House Appropriations Committee since 1937, he was the author of more laws and constitutional amendments than any other member of Congress; two of the most prominent being the Taylor grazing act, which directed the use of the public domain by stock men, and the 640-acre stock-raising homestead law, through which 32,000,000 acres of practically barren land was given into private hands and advantageous use. He was chairman of the Democratic caucus in 1935-37, acting majority leader of the House during the year 1935, and in 1937, when the naval expansion program was being planned, said: "I think that it is a good investment and a wise precaution to let the world know that we are able to take care of ourselves."

Taylor, Henry O(sborn). American historian; died in New York, N.Y., Apr. 13, 1941; born in New York, Dec. 5, 1856. Graduating from Harvard College in 1878 and Columbia Law School in 1881, he immediately began to strive for the position he later attained as one of the world's foremost authorities on the history of civilization. After 10 years in the examination of ancient literatures, he brought forth *Ancient Ideals, a Study of Intellectual and Spiritual Growth From Early Times to the Establishment of Christianity* (1896). Then in 1901 he published *The Classical Heritage of the Middle Ages. The Medieval Mind* took 10 years of preparation, but by 1938 had passed into the fifth edition. He labored six years to produce *Thought and Expression in the Sixteenth Century* (1922). Other works by Dr. Taylor are *Deliverance—the Freeing of the Spirit in the Ancient World* (1915), *Greek Biology and Medicine* (1922), and *A Layman's View of History* (1935).

Teleki, Paul. Hungarian politician and geographer; died in Budapest, by suicide, Apr. 3, 1941; born in Hungary, 1879. As Premier of Hungary, since 1939 (also during 1920-21), he tread a delicate path—the great tightrope walker—apparently falling completely under Nazi control in an effort to preserve his country's independence, but personally pro-British. All Hungary believed he took his life when he could no longer continue his precarious balancing act, for death came as motorized German troops moved to Southern Hungary, amid reports that the Nazis were demanding Hungarian army help to attack Yugoslavia, a country with which Premier Teleki had just completed a friendship pact in January (1941). Only after Teleki's death was it disclosed that he was one of those behind the book *Why Germany Cannot Win the War*, which broke all sales records in Hungary. Among the books he wrote were *The Cartography of the Japanese Islands* (1908), *A földrajzi gondo-*

lat története (1917), *Magyarország néprajzi térképe* (1919), and *The Evolution of Hungary and Its Place in European History* (1923).

Tennent, D(avid) H(ili). American biologist and educator, associated with Bryn Mawr College since 1904. Professor since 1912, and research professor since 1938, he was particularly active in the fields of marine biology and dyes; died in Bryn Mawr, Pa., Jan. 14, 1941; born in Janesville, Wis., May 28, 1873.

Thompson, Charles Miner. American editor and author, associate editor of *Youth's Companion*, a magazine for boys, during 1890-1911, and editor of the publication from 1911 to 1925, died in Cambridge, Mass., Dec. 19, 1941; born in Montpelier, Vt., Mar. 24, 1864. His published works include *The Nimble Dollar*, *The Calico Cat*, and *The Army Mule*.

Thompson, James Westfall. American historian, died in Berkeley, Calif., Sept. 30, 1941; born in Pella, Ia., June 3, 1869. Graduated from Rutgers College in 1892, he became associated with the University of Chicago in 1895, being professor of medieval history from 1913 to 1932. In 1932 he was appointed Sidney Hollman Ehrman professor of European history at the University of California, becoming professor emeritus in 1939. An internationally known scholar, especially of medieval history, he was the author of numerous historical works, including *The Wars of Religion in France—the Huguenots*, *Catherine de Medici and Philip II, 1559-76* (1909), *The Last Pagan* (1916), *Feudal Germany* (1929), *Economic and Social History of the Later Middle Ages* (1931), *The Living Past* (1931), *Literacy of Laty in Middle Ages* (1939), and *History of Historical Writing*, not yet published at the time of his death.

Thompson, Reginald Campbell. British archeologist and Assyriologist; died in London, May 24, 1941; born Aug. 21, 1876. Assistant in the Egyptian and Assyrian Department of the British Museum (1899-1905), and assistant professor of Semitic languages at the University of Chicago (1907-09), he conducted numerous excavations in the Near East. He wrote prodigiously, chiefly on the arts, sciences, and culture of the ancient Near East.

Timberlake, Charles B(ateman). American Republican Congressman from Colorado (1915-33); died in Sterling, Colo., May 31, 1941; born in Wilmington, O., Sept. 25, 1854.

Titulescu, Nicholas. Rumanian diplomat and politician; died in Carnes, France, Mar. 17, 1941; born at Craiova, Rumania, in 1883. Attaining his first Cabinet post, Minister of Finance, in 1917 (held again in 1920-22), he served as a delegate to the Versailles Peace Conference and signed the Treaty of Trianon; Minister at the Court of St. James (1928-32), and Foreign Minister (1922-28, 1933-36).

He was Rumania's permanent delegate at the League of Nations, and in 1930-31 served as president of the Assembly. His renown as an orator spread wide after his speeches at the Assembly. Principal proponent of the Little Entente (which he negotiated for Rumania in 1920), and friendship with Russia and France, he was caught between the rising Nazi tide and the anti-Semitic Iron Guards, against whom he was in opposition; his positions on both issues forced him into retirement in 1936.

Treat, Charles G(ould). American army officer; died in Washington, D.C., Oct. 11, 1941; born in Dexter, Me., Dec. 30, 1859. Graduated from the U.S. Military Academy in 1882, he was a veteran of the Spanish-American and World Wars. Known

as an expert in field artillery work, he spent nearly his entire career, until he was assigned to the general staff in 1915, with artillery regiments. With the outbreak of the World War he was promoted to a brigadier general, becoming a major general in August, 1917. A recipient of the Distinguished Service Medal, he was chief of the American military mission to Italy at the close of the World War. He retired Apr. 27, 1922.

Udet, Ernst. German officer and air expert; died in Germany, Nov. 17, 1941; born in Frankfort-am-Main, Germany, June 22, 1896. Internationally famous for his achievement of shooting down sixty-two enemy craft in the World War and for his remarkable stunt flying, he was credited with the development of Germany's parachute troops and the dive-bombing tactics of the present war. Chief of the technical bureau of the German air force, and the "brams" of the Luftwaffe, General Udet was the one man responsible for keeping the Nazi air force abreast of all her enemies. At his death he was Quartermaster General of the Nazi air force.

Underhill, Evelyn (Mrs. Stuart Moore). British author and mystic; died in England, June, 1941; born in Wolverhampton, Staffordshire, England, 1875. One of the most productive of modern English writers on mysticism, she had written some thirty books, some in verse, on mysticism and the spiritual life. With the late Rabindranath Tagore, Indian author, she collaborated on *One Hundred Poems of Kabir*. Other of her published works include *Mysticism, Concerning the Inner Life, Essentials of Mysticism, The House of the Soul, Man and the Supernatural, and Theophantes*.

Udike, Daniel Berkeley. American printer, founder (1893) and senior partner of the Merrymount Press; died in Boston, Mass., Dec. 28, 1941; born in Providence, R.I., 1860. Accorded as one of the chief factors in the improvement of typography in America, his writings include the standard works *Printing Types—Their History, Forms and Use* (1922), and *In the Day's Work* (1924). He was the editor of *More's Dissertation on English Typographical Founders and Foundries* (1924), and *Notes on the Merrymount Press* (1934).

Ussishkin, Menachem Mendel. Russian Zionist leader; died in Jerusalem, Palestine, Oct. 2, 1941; born in Dubrowna, Russia, 1863. Zionist leader and world president of the Jewish National Fund, Zionist land-purchasing agency, he was a founder of the first modern Zionist society and played a prominent role in the first Zionist Congress in 1897. Ussishkin was a delegate of the Zionist movement at the Peace Conference in Paris in 1919. The next year he became chief of the Zionist Commission in Palestine and as such compelled the acquisition of the Jezreel Valley lands. In 1937, as president of the Jewish National Fund, he strongly denounced attempts of the British Government to partition Palestine, recommending retention of the Biblical borders of Palestine.

Van Devanter, Willis. American jurist; died in Washington, D.C., Feb. 8, 1941; born in Marion, Ind., Apr. 17, 1859. Graduating from the Cincinnati College Law School (1881), he went to Wyoming, and there in 1889 became Chief Justice of the State Supreme Court. He left the judiciary (1890) to serve as council to many of the powerful interests in Wyoming, thereby paving his way to becoming chairman of the Republican State Committee (1892-94); member of the Republican National Committee (1896-1900); delegate to the Republican National Convention (1896); and Assistant Attorney General for the Department of the

Interior, Washington, D.C. (1897-1903). In 1903 he was appointed U.S. Circuit Court judge and in 1910, associate justice of the Supreme Court. He retired from the Court in 1937.

Justice Van Devanter was the Supreme Court's most militant defender of property rights and its most consistently conservative member; without exception he voted against the major New Deal laws, and also its plan to enlarge the Supreme Court. In 1932, with the resignation of Justice Holmes, he became the doyen of the Court and its leading authority on rules, procedure, and tradition.

Among the important opinions written by him were: A State has no power to fix the weight of bread; the invalidation of the Federal gift tax; the Government has no power to tax the salaries of judges; the upholding of the New York "anti-Klan" law, and approbation of the Minnesota occupation tax on mining. One of the most important decisions handed down by him—in the pre-Roosevelt era (1920)—was the sweeping aside of every attack on the Eighteenth Amendment and the Volstead Act.

Varrrier-Jones, Sir Pendrill Charles. British physician, founder and director of Papworth Village Settlement, a home for tuberculars, and author of numerous books and articles on tuberculosis; died at Papworth, Cambridgeshire, Eng., Jan. 30, 1941; born, Feb. 24, 1883.

Venturi, Adolfo. Italian art historian; died in Santa Margherita Ligure, Italy, June 9, 1941; born in Modena, Italy, Sept. 4, 1856. He served as Keeper of the Estense Gallery (1878-88); Inspector General of Fine Arts attached to Ministry of Public Instruction (1888-98); Director, Rome National Gallery (1898-1901); Professor of Medieval, Renaissance, and Modern Art, Rome University (1900-31); and Senator since 1924. His publications were *La Reale Galleria Estense di Modena* (1882), *La Storia dell'arte italiana* (a 30-volume history of Italian art begun in 1901), *Botticelli* (1923), *Michelangelo* (1924), *La pittura quattrocentesca nell'Emilia* (1930), *La pittura quattrocentesca in Lombardia, Piemonte e Liguria* (1931), and *Pisanello* (1939).

Vincent, George (Eldgar). Educator; died in New York, N.Y., Feb. 1, 1941; born in Rockford, Ill., Mar. 21, 1864. Graduating from Yale (1885), he began his pedagogical career in 1894, becoming a member of the University of Chicago faculty. Here he advanced to a full professorship, and in 1911 accepted the presidency of the University of Minnesota. In 1917 he resigned to become president of the Rockefeller Foundation, retiring in 1929.

During the World War, as head of the Rockefeller Foundation, he became one of the chief war relief directors; establishing hospitals, both here and abroad, financing the teaching of new surgical methods, supplying serum for war casualties, and organizing facilities for research in war medicine. After the war, he directed the Foundation in its fight against the spread of disease, and in the improvement of sanitation in China. After his retirement from the foundation, Dr. Vincent continued his interest in humanitarian work, and was chosen honorary and acting president of the Community Chests and Councils (1938).

In the field of journalism he was extremely active, writing, among others: *Social Mind and Education* (1896), and (with Woodbury Small) *An Introduction to the Study of Society* (1895).

Von Donop, Sir Stanley (Brenton). British army officer; died in Bath, Eng., Oct. 17, 1941; born, Feb. 22, 1860. Possessing a distinguished record as a

soldier, he served as Master General of Ordnance and as a Fourth Military Member of the Army Council during 1913-16, and since 1925 had been colonel commandant of royal artillery. He was promoted to a major general in 1914.

Von Hintz, Paul. German rear admiral and diplomat; died in Berlin, Germany, Aug. 23, 1941; born at Schwedt-on-Oder, Germany, February, 1864. A one time aide-de-camp to the late Kaiser Wilhelm II, he served as Minister to Mexico, China, and Norway during 1911-18. In 1898 he played an important role in negotiations with Admiral Dewey, who threatened to search two German warships off Manila, and won the plaudits of Dewey for his statesmanship. In July, 1918, he was named Secretary for Foreign Affairs, holding that post until the fall of Germany. After 1921, when he was mentioned as a possible Ambassador to the United States, little was heard of him.

Von Schobert, Eugen Ritter. German army officer, killed in action on the Russian front, Sept. 12, 1941; born in Wuerzburg, Germany, 1883. A member of an old Bavarian family noted for its military officers, he served with distinction in the World War. After holding several prominent positions in the German War Ministry, he was appointed Inspector of Infantry in 1933 and promoted to a lieutenant general in 1937. General Von Schobert was made commander of the 7th Army Corps in 1938 and, at the same time, promoted to general of infantry. In 1940 his corps broke through north of Verdun and he was advanced to the rank of colonel general by Hitler in his Reichstag speech of July 19, 1940.

Von Siemens, Carl Friedrich. German industrialist; died in Berlin, July 10, 1941, born in Charlottenburg, Germany, Sept. 5, 1872. The outstanding electrical industrialist in Germany, he had headed the firm of Siemens & Halske since 1919. (The firm ranks among the first in the Reich's war industries.) He was a member of the Reichstag (1920-24); chairman of the board of the German State Railways (1924-34), and as chairman of the Reich Economic Council he represented Germany at the International Economic Conference at Geneva in 1927. He came to the United States in 1931 to address the Conference of Major Industries.

Wakefield, 1st Viscount, Charles Cheers. British philanthropist; died at Beaconsfield, Eng., Jan. 15, 1941; born in Liverpool, Eng., 1859. He obtained a huge fortune in the oil business, which enabled him for nearly half a century to play the role of philanthropist to hospitals, art galleries and other organizations, and to indulge in his fondness for encouraging the development of speed on land, sea, and in the air. It is estimated that he gave \$5,000,000 to hospitals and art galleries and an equal sum spent in his attempts for speed. His writings included: *America To-day and To-morrow*.

Walker, Stuart. American producer, actor, and playwright; died in Beverly Hills, Calif., Mar. 13, 1941; born in Augusta, Ky., Mar. 4, 1888. After graduating from the University of Cincinnati, he became associated with David Belasco (1909-14), staging *The Lily*, *The Concert*, and *The Governor's Lady* among others. In 1915 he organized and presented the Portmanteau Theatre, with a repertoire of 14 plays, and toured the country with it for several seasons. Since 1931 he was engaged in Hollywood and since 1936 a producer. Among the films he directed were: *Tonight Is Ours*, *The Eagle and the Hawk*, *Great Expectations*, and *Bulldog Drummond's Peril*. He was the author of many one-act plays, compiled under the headings *Port-*

manteau Plays (1917); and *More Portmanteau Plays* (1919).

Wallace, (David) Euan. British diplomat, former Minister of Transport (1939-40); member of Parliament since 1922; and Senior Regional Commissioner for Civil Defense in London since 1940; died in London, Feb. 10, 1941; born in 1892.

Walpole, Sir Hugh (Seymour). British author; died near Keswick in the Cumberland Mountains, England, June 1, 1941; born in Auckland, New Zealand, 1884. One of the most prolific writers of this or any other age, he covered a wide literary field. He went from novels to short stories, to children's tales, to fantasies, to belles-lettres, and also found time for dramatizations, adaptations, playwriting, and innumerable prefaces. Sir Hugh's first novel, *The Wooden Horse*, appeared in 1909 and then, in successive years, came *Maradick at Forty*, *Mr Perrin and Mr Trill*, *The Prelude to Adventure* and others, at a year's interval, until the outbreak of the World War. His post-war books included *Jeremy* (1919), *The Young Enchanted* (1922), *The Cathedral* (1922), *These Diversions: Reading* (1926), *Wintersmoon* (1928), *All Souls' Night* (1933), *A Prayer for My Son* (1936), *Roman Fountain* (1940), and *Semantics* (1941). His best known plays were *The Cathedral* (1932), *The Young Huntress* (1933), and *The Haxtons* (1939).

Walsh, William Henry. American physician, consulting expert on hospital planning and organization; died in Chicago, Mar. 28, 1941, born in Philadelphia, Mar. 8, 1882. Dr. Walsh specialized in studies and surveys to determine the hospital needs of communities in connection with hospital construction, and had been associated with the planning of some \$250,000,000 worth of such construction in the United States and Central and South America.

Walter, Eugene. American playwright and scenarist; died in Hollywood, Calif., Sept. 26, 1941; born in Cleveland, O., 1877. A veteran playwright and motion-picture scenarist, he was the author of such well known plays as *Paul in Full* (1907), *The Easiest Way* (1909), *Boots and Saddles* (1910), *Fine Feathers* (1912), *The Little Shepherd of Kingdom Come* (1916), and *Jealousy* (1928).

Wason, Edward H. American Republican Congressman from New Hampshire (1915-33); died in New Boston, N.H., Feb. 6, 1941; born in New Boston, Sept. 2, 1865.

Watkins, Aaron Sherman. American clergyman, educator, and prohibitionist; died in Bellefontaine, O., Feb. 10, 1941; born in Rushsylvania, O., Nov. 29, 1863. A militant champion of prohibition, he was the Prohibition Party candidate for Governor of Ohio, 1905, 1908, 1932; for Vice-President of the United States, 1908, 1912; and for President in 1920. Ordained a Methodist minister in 1895, he held various pastorates before becoming president of Asbury College (1909-10).

Watson, John Christian. Australian politician, member of the Commonwealth House of Representatives during 1901-10 and Prime Minister and Treasurer of Australia in 1904; died in Canberra, Australia, Nov. 18, 1941; born in Valparaiso, Chile, Apr. 9, 1867.

Wear, Joseph (Walker). American sportsman and banker; died in Philadelphia, Pa., June 4, 1941; born in St. Louis, Mo., Nov. 27, 1876. Co-holder of the U.S. doubles championship in tennis six times and the racquet doubles title three times, he was non-playing captain of the U.S. Davis Cup teams in 1928 and 1935 and was chairman of the Davis Cup committee of the United States Lawn Tennis Association during 1928-30. Wear was co-

donor of the Davis Cup, emblematic of the world championship in tennis. At his death he was a partner in the Philadelphia brokerage firm of Merrill Lynch, E. A. Pierce & Cassatt.

Welch (Smiling Mickey) Michael. American baseball player; with the New York Giants during 1883-92. He became one of the twelve major league pitchers to win more than 300 games—309, died in Nashua, N.H., July 30, 1941; born in Brooklyn, N.Y., July 4, 1859.

Weymouth, Frank Elwin. American civil engineer; died in Los Angeles, Calif., July 22, 1941; born in Medford, Me., June 2, 1874. With the U.S. Bureau of Reclamation from 1902 to 1924, he furnished "The Weymouth Report," (1924) credited with having provided the basis of facts and figures for the Boulder Dam project. In 1932 he was appointed chief engineer and general manager of the Metropolitan Water District of Southern California, and as such supervised the building of the canal project (1940) which brings water over 300 miles to the coastal plains.

White, Charles Lincoln. American educator and clergyman; died in Arlington, Mass., Apr. 19, 1941; born in Nashua, N.H., Jan. 22, 1863. He entered the Baptist ministry in 1890, and after serving several pastorates was appointed president of Colby College in 1901; retired in 1908. Included among his writings were: *The Churches at Work* (1915), (revised edit, 1928), *Children of the Lighthouse* (1916), and *A New Approach to Annuities* (1930).

White, Joseph Augustus. American ophthalmologist; died in Richmond, Va., Feb. 16, 1941; born in Baltimore, Md., Apr. 19, 1848. He was founder of the University College of Medicine and established the first free clinic in Richmond for eye, ear, and throat treatment; and was professor of ophthalmology at the Medical College of Virginia from 1893 to 1932.

White, Trumbull. American editor and writer; died in New York City, Dec. 13, 1941, born in Winter-set, Ia., Aug. 12, 1868. He was with the *Chicago Morning News*, *Chicago Times*, and *Chicago Record* from 1890 to 1901, during which time he covered the Cuban insurrection (1897), and the Cuban and Puerto Rican campaigns (1898). He was the editor of *The Red Book* (1903-06), *Appleton's Magazine* (1906-09), *Adventure* (1910-11), and *Everybody's* (1911-15). His publications include *Wizard of Wall Street* (1892), *Our War with Spain* (1898), *Our New Possessions* (1899), *Martique and the World's Great Disasters* (1902), co-author of *San Francisco Earthquake* (1906).

Wick, Frances Gertrude. American scientist and educator; died in Poughkeepsie, N.Y., June 15, 1941; born in Butler, Pa., Oct. 2, 1875. Graduated from Wilson College in 1897, she studied four additional years at Cornell University (1904-08); became an instructor in physics at Vassar (1910-15), assistant professor (1915-19), associate professor (1919-22), since 1922 a full professor, and since 1939 chairman of the department. She was noted especially for her researches in the field of luminescence or cold light, which takes in all forms of radiation in which there is emission of light from causes other than high temperature.

Wilberforce, Sir Herbert William Wrangham. British tennis leader; died in Kensington, Eng., Mar. 28, 1941; born, 1864. President or chairman of the All-England Tennis Club from 1922 to 1936, he was known as the "maker" of Wimbledon, beginning his activities in behalf of tennis in 1893. In 1887 he was co-holder of the British doubles title.

Wile, Frederic William. American author, newspaper columnist and editorial writer; died in Washington, D.C., Apr. 7, 1941; born in LaPorte, Ind., Nov. 30, 1873. After attending the University of Notre Dame, he worked two years on a Chicago newspaper before being sent to London to report on the Boer War—other major assignments included the death and funeral of Queen Victoria, the coronation of Edward VII, and the events that led to the separation of Norway and Sweden. In Berlin from 1902, he joined the London Daily Mail (1906) as its chief correspondent, until the start of the World War, during this same period also he wrote for *The Chicago Tribune* and *The New York Times*. During the World War he was engaged by the Intelligence Section of the A.E.F. as a specialist on German affairs. After the war Wile became head of the Washington Bureau of *The Philadelphia Public Ledger* and remained as such until 1922 when he joined the editorial staff of *The Washington Evening Star*.

In 1923 he began a weekly broadcast *The Political Situation in Washington Tonight*, over a N.B.C. network, and in March, 1929, he signed a contract with C.B.S. for a weekly summary of national political developments.

Among his publications were *Our German Cousins* (1909), *Men Around the Kaiser* (1913), *The Assault* (1916), *Explaining the Britishers* (1918), *Emile Berliner, Maker of the Microphone* (1926), and *News Is Where You Find It* (1928), an autobiography.

Wilhelm II, Friedrich Wilhelm Victor Albert Hohenzollern. Ex-Kaiser of Germany; died in exile in his estate at Doorn, the Netherlands, June 4, 1941; born in Berlin, Germany, Jan. 27, 1859. Succeeding to the throne as King of Prussia and Emperor of Germany in 1888, the Kaiser's first notable steps were the dismissal of Bismarck—"dropping of the pilot"—and in the development of plans for naval supremacy and imperialism. Yet, in spite of his opposition to England and general antagonism toward the world, the first 25 years of his reign were peaceful ones. During these years Wilhelm was constantly impressing himself on the world as a universal genius. Posing in his many medal-covered uniforms, he assumed an attitude of a fierce warlord.

On June 28, 1914, the assassination of the Archduke Franz Ferdinand struck the spark, kindling the fire that flamed throughout the world. Wilhelm led his people into the war with fierce determination, and would not let a single military operation go through without his approval. But within two years he had surrendered the leadership to his generals, and had retired far behind the front lines. The declaration of war by America (1917) did not impress him at all, and he continued to believe that nothing could stop his army. The defeat of the Germans in their last great effort at the battle of the Marne (August, 1918) was the beginning of the end; the mutiny of the Imperial Navy brought about his abdication (Nov. 10, 1918).

He spent his final years writing prolific denials that Germany was culpable for the war, chopping wood for exercise, and occasionally distributing largess to the poor of Doorn. The bitter hatred that the world held for him abated somewhat as the years passed, and he came to be regarded as a harmless old man. Among his many publications were: *Comparative Historical Tables from 1878 to the Outbreak of the War in 1914*, *Events and Figures*, *Reminiscences of Corfu*, *My Early Life*, and a history of the Hohenzollern family.

Williams, John D. American stage director and

producer, associated with Charles Frohman and A. L. Erlanger in producing many famous American plays; died in the Bronx, N.Y., Mar. 22, 1941; born in Boston, Mass. He presented the following plays in New York City: *The Copperhead* (1918); *For the Defense, Three for Diana, Toby's Bow, Up from Nowhere* (1919); *All Soul's Eve, The Letter of the Law, Beyond the Horizon* (1920); *Gold* (1921); *The Assumption of Hannele* (1924); *L'Aiglon, Savages Under the Skin* (1927). Williams also staged *Rain*, the play in which the late Jeanne Eagels achieved success, and in 1920 he presented the first Broadway play of Eugene O'Neill, *Beyond the Horizon*.

Willington, 1st Marquess of (Freeman Freeman-Thomas). British statesman; died in London, Eng., Aug. 12, 1941; born Sept. 12, 1866. One of the few commoners ever to be created a marquess, he served as a Liberal member of Parliament (1900-10); was raised to the peerage and sat in the House of Lords (1910-13); served as Governor of Bombay (1913-19) and Governor of Madras (1919-24); was present as delegate for India at the Assembly of the League of Nations (1924); Governor-General of Canada (1926-31); Viceroy and Governor-General of India (1931-36), and, since 1936, Lord Warden of Cinque Ports. In 1940 Lord Willington toured South America as the head of a British trade mission, comprising an impressive group of titled and untitled English trade experts. He was a former chairman of the English-Speaking Union.

Winslow, Edward Delbert. American Consul General at Stockholm, Sweden (1888-1900) and at Copenhagen, Denmark (1911-17); died in the Bronx, N.Y., Jan. 22, 1941, born in West Chicago, Ill., in 1859.

Woodruff, Edwin Hamlin. American educator; died in Ithaca, N.Y., July 8, 1941, born in Ithaca, Sept. 2, 1862. Professor of law at Cornell University from 1895, he was acting dean of the law school from 1914 to 1916 and dean from 1916 to 1921, retiring in 1927 as professor emeritus. He was the author of *Cases on Domestic Relations* (1897), *Introduction to the Study of Law* (1897), *Cases on Insurance* (1900), *Selected Cases on the Law of Quasi-Contracts* (1905).

Woods, Sir James. Canadian industrialist; died in Toronto, Can., Apr. 25, 1941; born in Woodstock, Ont., in 1856. He was president of Gordon MacKay & Co., Ltd., textile wholesalers, for whom he had worked since he was 19 years old. In 1915 he was knighted for his industrial work in aid of the British Empire, and became a Knight Commander of the Order of the British Empire (1917) for his labor as a member of the British War Commission in New York.

Woolf, Virginia (Mrs.). British novelist, granddaughter of Thackeray and a relative of the Darwins, Symonds, and Strachey; died near Lewes, Sussex, Mar. 28, 1941; born in London, 1883. Born with literary blood in her veins, she became one of the great of English letters. Among her works are included *The Voyage* (1915), *Night and Day* (1919), *Monday or Tuesday* (1921), *The Common Reader* (1925), *Orlando* (1929), *Flush* (1933), *The Years* (1937), *Three Guineas* (1938), and *Roger Fry, A Biography* (1940). Her husband was Leonard Woolf, novelist and essayist, founder of the Hogarth Press and former literary editor of *The Nation*.

Wren, Percival Christopher. British author; died at Amberley, Gloucestershire, Eng., Nov. 23, 1941; born in Devonshire, Eng., 1885. A major in the Indian Army Reserve of Officers, he was the

author of such extremely well known books as *Beau Geste* (1924), *Beau Sabreur* (1926), *Beau Ideal* (1928), *Good Gestes* (1929), *Mysterious Waye* (1930), *The Fort in the Jungle* (1936), *Worth While* (1937), *Cardboard Castle* (1938), *Paper Prison* (1939), *The Disappearance of General Jason* (1940), and *Two Feet from Heaven* (1940).

Wright, Huntley. British musical comedy actor; died in Bangor, North Wales, July 10, 1941; born in London, Eng., Aug. 7, 1869. On the stage for 48 years, his career spanned the years from gaslights to broadcasts for the British Broadcasting Corporation and a role in the motion picture *Look Up and Laugh*.

Yager, Arthur. American educator, and Governor of Puerto Rico (1913-21); died in Louisville, Ky., Dec. 24, 1941; born in Henry Co., Ky., Oct. 29, 1857. Dr. Yager was president of Georgetown College, Kentucky, from 1908 to 1913.

Yost, Casper S(alathiel). American editor; died in St. Louis, Mo., May 30, 1941; born in Sedalia, Mo., July 1, 1864. He became associated with *The St. Louis Globe-Democrat* in 1889, rose to assistant to managing editor, and Sunday editor (1890-1915), and editor of the editorial page since February, 1915. He was founder of the American Society of Newspaper Editors (1922), and president (1922-26). His publications included *Patience Worth* (1916), *The World War* (1919), *Principles of Journalism* (1924), *The Quest of God* (1929), and *The Carpenter of Nazareth* (1938).

Young, Rose. American author and editor; died in Mount Kisco, N.Y., July 6, 1941; born in Lafayette Co., Mo. Editor of the University Publishing Co., New York City (1903-07) and director of the Leshe Bureau of Suffrage Education from 1917 to 1922, her interest in woman suffrage prompted her to write the novels *Petticoat Push*, *From Kitchen to Night Court*, and *Her Wages and Her Morals*. Other of her books were *Sally of Missouri* (1903), *Henderson* (1904), *Murder at Manson's* (1927), *The Miss Nigger Stories*, and *The Shanklin Stories*.

Zahle, Herluf. Danish diplomat; died in Berlin, May 4, 1941; born in Copenhagen, 1873. Minister to Sweden in 1919 and to Germany since 1924, he signed a 10-year non-aggression pact with Germany on May 31, 1939. He was president of the Danish delegation to the League of Nations (1920-27) and president of the League Assembly in 1928.

Zonghi, Giovanni Maria. Italian Roman Catholic archbishop; died at Fabriano, Italy, Aug. 8, 1941; born in Italy, 1847. Dean of the Roman Catholic episcopacy and the last survivor of the court of Pope Pius IX, he was one of the private secretaries to Pius IX and served as a stenographer at the Vatican Ecumenical Council of 1870. He was named president of the Pontifical Ecclesiastical Academy by Pope Pius X and in 1914 was appointed Titular Archbishop of Colosse by Pope Benedict XV.

NEGRI SEMBILAN. See BRITISH MALAYA.

NEGROES. The approach to war by the United States during 1941 and the shock of the Japanese attack produced curiously mixed changes in the pattern of Negro life. This was inevitably seen most clearly in the national defense program. The War Department started a decidedly new practice when it began to train Negro and white Army officers in the same training schools, even in the deep South. This was done without either friction or difficulty. The doors of West Point swung open slightly wider,

with a modest increase in the number of Negro cadets. But the Navy, Marine Corps, and Coast Guard continued to exclude or limit the services of Negroes. The Marines and Coast Guard barred Negroes altogether. The Navy limited Negroes to menial service, which marked a retrogression from World War I when Negroes were permitted to rise to the rank of Chief Petty Officer.

Due to the prejudices of certain A.F.L. unions and of some employers skilled Negroes were denied employment, because of color, even by plants which were desperately in need of trained workers. When an effort to secure a Senate investigation of this discrimination was blocked by certain Southern Senators, A. Philip Randolph, President of the Brotherhood of Sleeping Car Porters, Walter White, Secretary of the National Association for the Advancement of Colored People, and others, organized a "march-on-Washington" as a means of protesting to the Government against this discrimination. The threatened demonstration caused the President to invite Messrs Randolph and White to meet with him, the Secretaries of War and the Navy, the heads of the Office of Production Management, the Office of Civilian Defense, and other Government agencies. Out of this conference came Executive Order No. 8802, June 25, barring discrimination in defense plants and by the Federal Government on account of race, creed, color, or national origin. The order provided for the establishment of a Committee on Fair Employment Practice to implement the anti-discrimination edict. Mark F. Ethridge, Editor of the Louisville (Ky.) *Courier-Journal*, was named as Chairman, and Lawrence W. Cramer, former Governor of the Virgin Islands, as Executive Secretary.

The most publicized of labor clashes during 1941 was that at the Ford plant in Detroit. Because Henry Ford employed more Negroes in semi-skilled and skilled jobs than any other employer in Detroit, Negro Ford workers and the Negro public were faced with a difficult dilemma—as to whether they should stand by Ford or join with their white fellow-workers through the U.A.W.-C.I.O. The majority of the Negro workers sided with the union. At the year's end there seemed to be no evidence that they were not benefiting on an equal basis with other Ford employees. Later in the year when white U.A.W.-C.I.O. workers in the Curtiss-Wright plant at Columbus, Ohio, dropped their tools in protest against a Negro tool and die-maker being employed, the national heads of the union ordered them to return to work and the heads of the Curtiss-Wright plant stood firm in obeying the President's Executive Order against discrimination and in refusing to yield to the prejudice of the striking workers. The issue was settled amicably, and the Negro tool and die-maker continued to work as plans were made to increase the number of Negro employees.

Established Negro artists, such as Marian Anderson, Paul Robeson, Dorothy Maynor, and Roland Hayes, continued in 1941 to add to their fame by singing before large and enthusiastic audiences in all parts of the United States. A new field of musical effort was successfully invaded for the first time by a Negro when Dean Dixon, 26-year-old orchestra conductor, was invited to conduct the famous N.B.C. Toscanini Orchestra in two coast-to-coast broadcasts. Mr. Dixon also served as guest conductor of the New York Philharmonic Orchestra at the Lewisohn Stadium, and directed the NYA New York Symphony.

W. C. Handy published in 1941 an absorbing story of his life, *Father of the Blues*. Langston

Hughes, brilliant young Negro poet, also published a charming and revealing autobiography, *The Big Sea*. Richard Wright, author of the widely discussed best-seller, *Native Son*, which was presented as a play on Broadway during 1941, added to his depiction of the handicaps of Negroes in his *12 Million Black Voices*.

Joe Louis added luster to his fame by defeating seven aspirants for the world's heavyweight title and offered to contribute his entire purse to the Navy Relief Society, despite the fact that neither Louis nor any other member of his race could serve in the Navy except as a menial. Louis's offer was accepted by the Navy for a fight in Madison Square Garden just after the close of the year, with Buddy Baer. Louis's contribution was \$47,100.94

Particularly notable during the year was the increased concern of younger white Americans with the negation of democracy through continued discrimination against the Negro and other American minorities. More sharply focused than ever as America neared participation in World War II was the contradiction of spending enormous sums to fight Hitlerism in Germany and Japanese imperialism in the Orient while lynchings, discrimination in the national defense program, disfranchisement, and discrimination in educational and economic opportunity in the United States continued to exist. Accompanying this awareness and largely the cause of it was the increasing organization of enlightened and militant opinion among Negroes themselves. Through the medium of the National Association for the Advancement of Colored People significant court decisions were won in the struggle against disfranchisement in the South through so-called white Democratic primaries, and against differentials in salaries paid to Negro teachers doing the same work as white teachers, which the U.S. Department of Education estimated to be in excess of 43 million dollars a year.

Years of educational work against lynching, particularly the campaign for Federal legislation, reduced the number of known lynchings during 1941 to five. All of them were of Negroes. The most discussed and publicized of these was the lynching of a young Negro Army volunteer, Felix Hall, on the grounds of Fort Benning, Ga. At the end of the year the War Department was still investigating the case.

The most significant and ominous development during the year was noted in Texas, where Negroes on trial in courts of law were assassinated in the courtroom by allegedly aggrieved relatives of the complainants. This was done with no apparent objection on the part of the court officials. Bob White, a Negro, whose conviction for rape had twice been reversed—once by the Texas Supreme Court and a second time by the U.S. Supreme Court—was killed in the courtroom on June 10 at Conroe, Texas. Mott Flournoy, Negro, was killed at Lufkin, Texas, in the same manner on November 23. The murderer in each instance was speedily acquitted. See ANTHROPOLOGY; PHILANTHROPY under *Rosenwald Fund*.

NEPAL. An independent kingdom between Tibet and India. It contains some of the highest mountains of the Himalaya. Area, 54,000 square miles; population, 5,800,000. Katmandu (capital), had 108,805 inhabitants; Patan, 104,929; Bhatgaon,

93,176. The principal exports are jute, rice, hides, oilseeds, ghee, cattle, and lumber; the chief imports are cotton goods, yarn, salt, sugar, spices, and metals. There are valuable forests in the southern part of the country. The revenue for 1940 was estimated at 12,500,000 rupees (1.24 Nepalese rupees equal 1 British Indian rupee). Nepal's government is a military aristocracy based on birth. All power is in the hands of the prime minister, a member of the ruling family. Ruler, King Tribhubana Bir Bikram (succeeded Dec. 11, 1911); Prime Minister, Gen. Joodha Shum Shere Jung Bahadur Ráná (installed Sept. 1, 1932).

NETHERLANDS, THE. A constitutional monarchy of northwestern Europe, invaded and occupied by German military forces beginning May 10, 1940. Capital, Amsterdam; seat of the Government, The Hague (transferred temporarily to London, England, on May 13, 1940). Sovereign, Queen Wilhelmina, who succeeded to the throne Nov. 23, 1890, and was crowned Sept. 6, 1898.

Area and Population. The area, including water belonging to municipal territories, is 13,515 square miles. The population on Feb. 28, 1940, was estimated at 8,833,000 (7,935,565 at the 1930 census). About 94 per cent of the people dwell in communities of 2,000 or more. The 1940 birth rate was 20.9 per 1,000 of population; death rate, including war losses, 9.9 per 1,000 (8.6 in 1939). Estimated populations of the chief cities on Jan. 1, 1939, were: Amsterdam, 793,222; Rotterdam, 612,375; The Hague ('s Gravenhage), 494,773; Utrecht, 163,589; Haarlem, 137,507; Groningen, 120,010; Eindhoven, 111,188; Tilburg, 95,142; Nijmegen, 94,102; Enschede, 90,291; Arnhem, 88,996; Leiden, 77,009.

Colonial Empire. The colonial possessions of the Netherlands are treated elsewhere in the YEAR BOOK under the headings of NETHERLANDS INDIES, CURAÇAO, and SURINAM. The total area is 793,354 square miles; total population was estimated at 70,760,000 in 1940.

Education and Religion. There is practically no illiteracy. The school enrollment in 1938-39 was: Infant schools, 213,338; elementary, 1,242,778; secondary, technical, and vocational, 271,298; high schools, 3,199; universities, 9,395. According to the 1930 census, there were 2,890,022 Roman Catholics, 2,732,333 members of the Dutch Reformed Church, 876,958 other Protestants, 111,917 Jews, 10,182 Jansenists, 169,575 belonging to other creeds, and 1,144,393 professing no religion.

Production. Agriculture, manufacturing, commerce, and mining are the principal industries. Yields of the chief crops in 1939 (in metric tons) were: Wheat, 416,500; barley, 146,000; rye, 603,500; oats, 449,200; potatoes, 3,000,000; beet sugar (1939-40), 217,600; linseed, 22,500; flax, 21,300. Livestock (1939): 2,817,314 cattle, 1,553,413 swine, 322,152 horses, and 689,500 sheep. The estimated 1940 mineral production was (in metric tons): Coal, 13,000,000; pig iron, 300,000; copper, 1,000; zinc (smelter) in 1939, 20,500. The 1939 output of rayon and staple fiber was about 11,000 metric tons; wood and straw pulp, 108,000; margarine, 71,000; shipping tonnage launched, 117,000. Bricks, clothing, boots and shoes, engines, boilers, machinery, cotton and linen fabrics, alcoholic beverages, tobacco products, are other leading manufactures. The German occupation led to extensive slaughtering of livestock and a marked decline in many lines of production.

Foreign Trade. Merchandise imports in 1939 were valued at 1,516,651,000 florins (1,414,768,000 in 1938); exports, 966,215,000 florins (1,039,156,000).

Textiles, iron and steel, cereals and flour, and wood were the chief 1939 imports, while textiles, coal, coke and briquets, butter, and tin were the main export items. For distribution of trade in 1939, see YEAR BOOK for 1940.

Finance. The 1940 budget estimates placed total receipts exclusive of loans at 770,005,000 florins (742,069,000 in 1939) and expenditures at 1,015,599,000 (1,008,790,000 in 1939).

The national debt on Dec. 31, 1940, was estimated at 5,410,258,000 florins, an increase of 1,192,674,000 florins since Dec. 31, 1939. Of the total debt, 3,668,335,000 florins represented the consolidated and 1,741,923,000 florins the floating debt. The floating debt (internal) reached 2,154,000,000 florins by July 31, 1941. Following the German occupation, the florin (guilder) was pegged to the reichsmark at the rate of 1 florin equals 1.33 reichsmarks, or \$0.532 at par.

Transportation. The Netherlands at the beginning of 1940 had some 2,278 miles of railway line, 16,031 miles of highways, and 4,817 miles of navigable rivers and canals. This transportation network was badly damaged during the hostilities of May, 1940, but was reported to have been repaired in considerable part by the end of that year. The Royal Dutch Air Line (K.L.M.) ended its European services—except for the new Lisbon-England route—upon the German invasion, but continued its operations in the East and West Indies, with headquarters in Batavia. K.L.M.'s former trunk line from Sydney, Australia, via Batavia to Europe was maintained only as far as Lydda, Palestine. There was an almost complete stoppage of the Netherlands overseas shipping trade in 1940; in 1939, 12,026 ships of 19,392,128 net tons entered the port of Rotterdam alone. The Dutch merchant marine under Allied control totaled 480 ships of 2,250,000 tons in July, 1941. Seventy-seven Dutch ships had been reported sunk or captured through enemy action.

Government. The Constitution of 1814, with its various amendments, vests executive power exclusively in the sovereign while legislative authority rests conjointly in the sovereign and the States-General (parliament). The States-General consisted of an upper chamber of 50 members, chosen by elected representative bodies in the several provinces for terms of six years, and of a lower chamber of 100 members elected for four years by general adult suffrage. In practice the cabinet was responsible to the States-General and the Premier was normally chosen by the sovereign from a political group commanding a parliamentary majority. The Premier proposed the members of his ministry to the sovereign. The composition of the Cabinet as reconstructed Sept. 3, 1940, was: Premier and Minister of Justice, Dr. P. S. Gerbrandy (Anti-Revolutionary party); Foreign Affairs, Dr. E. N. van Kleffens (non-party); Defense, Lt.-Col. A. O. H. Dijkhoorn; Education, Arts, and Sciences, G. Bolkenstein (Liberal); Economic Affairs, Dr. M. P. L. Steenberghe (Roman Catholic); Social Affairs, Dr. J. van dem Tempel (Social Democrat); Colonies and Finance, C. J. I. M. Welter (Roman Catholic); Waterways, J. W. Albarda (Social Democrat); Agriculture and Fisheries, Dr. A. A. van Rhijn (Christian Historical). See below for changes in 1941.

HISTORY

The Government-in-Exile. Under the vigorous leadership of Queen Wilhelmina, the refugee Netherlands Government in London pressed steadily ahead during 1941 with its efforts to mobilize Dutch and Dutch colonial men and resources for the overthrow

of Germany and restoration of the Netherlands' independence.

The Netherlands Legion organized in Great Britain and Canada in 1940 was strengthened by the calling to the colors of new classes of Netherlands citizens in British Empire countries and recruiting elsewhere. Reinforcements and new equipment were provided for the army of some 200,000 men in the Netherlands Indies. Naval forces under the Government's control in November, 1940, included 3 cruisers, several flotilla leaders, 7 modern destroyers, over 20 submarines, numerous minesweepers and mine-layers, a division of torpedo boats, and several gunboats. With additional ships obtained during 1941, the Royal Netherlands Navy aided the British fleet in Atlantic patrol work and in the defense of the Netherlands Indies. Of the Netherlands merchant fleet saved from the German invaders, it was reported in March, 1941, that about 180 deep-sea vessels and 250 coastal traders had been chartered by the British Ministry of Shipping and were operating regularly under the direction of a committee of Dutch shipowners.

On May 10, first anniversary of the German invasion of Holland, Queen Wilhelmina delivered a radio broadcast from London expressing confidence in an Allied victory and calling on her subjects everywhere for "resolute resistance." On the same day Dutch airmen attacked German bases in southern Norway in American-made planes. Seeking to prevent German exploitation of Dutch investments in the United States, the Government on January 28 asked American banks and brokerage houses not to comply with German-inspired requests for information concerning accounts held in the United States for corporations and individuals domiciled in the Netherlands. On May 22 a New York Supreme Court Justice ruled that United States courts must enforce decrees of the Netherlands Government-in-Exile affecting the large Dutch-owned assets in America. The suspension of interest and sinking-fund payments on the outstanding Netherlands debt, announced February 2, was designed to prevent such payments from falling into German hands.

Premier Gerbrandy joined with the representatives of the 13 Allied Governments in London on June 12, 1941, in signing an agreement to "continue the struggle against German or Italian aggression until victory has been won." In a radio broadcast on June 24, Queen Wilhelmina voiced her approval of the British policy of aiding Soviet Russia against Germany. The Netherlands Government never had maintained diplomatic relations with the Soviet Union. Nevertheless the Queen said that "if circumstances require, we will fight together with the people of Soviet Russia" against the "Satanic principles and the horrible acts of the Nazis." The Government-in-Exile also took a hand in diplomatic and military efforts to prevent Japanese domination of the Netherlands Indies (q.v.).

Some friction between the Government-in-Exile and the Colonial Government at Batavia was reported. Batavia authorities tended to ignore the Government in London in shaping policy with respect to Japan and the belligerent powers. Toward the end of January the Government-in-Exile sent ex-Premier D. J. de Geer on an official mission to the Netherlands Indies, apparently to iron out differences over the Batavia officials' powers and policies. De Geer proceeded as far as Lisbon, Portugal, but instead of flying on to Batavia boarded a German plane and returned to his ailing wife, whom he had left behind in the Netherlands when he fled to London in May, 1940. The Netherlands Govern-

ment then sent Foreign Minister van Kleffens to Batavia. During April and May he participated with representatives of the Batavia Government and with British, American, Philippine, Australian, and New Zealand officials in formulating joint plans to resist the Japanese and Axis threat of aggression in southeastern Asia and Malaya. See NETHERLANDS INDIES under *History*.

The Government-in-Exile was reorganized July 29. Vice Adm. J. T. Furstner became Navy Minister and H. Van Boeyen, Minister of Home and General Affairs, took over the War Ministry also. Insisting that Premier Gerbrandy consult them on all matters of general policy, the Ministers of Colonies and of Commerce and Industry resigned November 20. They were replaced by Dr. Hubertus J. van Mook and Peter M. Kerstens, respectively.

Netherlands subjects living in the South American countries were called up for military service in August. On September 14 it was announced that the Government-in-Exile had arranged to resume payment on that part of the Netherlands debt that remained "indisputably free of enemy control." By a decree of October 1, it levied an income tax on Netherlandsers the world over in place of the former "voluntary tax." Under authorization by the British Parliament, the High Court of the Netherlands Maritime Tribunal was opened in London November 3, in addition to lower courts in six British ports. They assumed jurisdiction over offenses committed by non-British nationals aboard Netherlands merchant ships.

Upon invitation of the Netherlands Government-in-Exile, United States troops were landed in Surinam (q.v.) on November 24 for the protection of that colony and its valuable bauxite mines. Following the Japanese attack on British and American possessions in the Pacific and Far East, the Government-in-Exile declared on December 8 that a state of war existed with Japan. On December 22 it declared the Kingdom of the Netherlands to be at war with Italy.

German Rule in Holland. Meanwhile the Netherlands (continued to be ruled as a conquered province by Dr. Arthur Seyss-Inquart and Maj. Gen. Friedrich Christiansen, who were appointed by Hitler as civil and military governors, respectively, on May 30, 1940. The Germans in 1941 intensified their systematic exploitation of Dutch economic and financial resources and resorted to sterner measures of repression to crush the growing hostility and resistance of the Netherlandsers (see YEAR BOOK for 1940, p. 541, for background).

To help meet the costs of the army of occupation (estimated at 250,000 men) and the German administration, a 500,000,000-florin 4-per-cent loan was issued early in the year. The prospectus of the loan asserted that if it was not subscribed a compulsory 2½ per cent annuity levy would be enforced. Successive steps were taken to bring Dutch industry and finance under German ownership. Jewish-owned businesses in the Netherlands were transferred to Germans under the sweeping Aryani-zation decree of March 13.

The last restrictions on foreign-exchange transactions and payments between the Netherlands and the Reich were abolished April 6. Following the virtual elimination of mutual tariff barriers the previous December, this speeded Holland's incorporation in the German economic system. German economic policies encouraged purchases of Netherlands securities for German account, while obstructing the withdrawal of Dutch capital from Germany. A decree of March 1 required all residents of the Netherlands to report to the Foreign Exchange In-

stitute within 14 days on all their foreign properties and holdings. In many cases the owners were then forced to seek repatriation of their foreign holdings in order to bring them under German control.

Another decree of May 26 required all Netherlanders, male and female, between 18 and 25 years of age to serve six months in the state labor service. Jews were excluded. The country was stripped of materials needed to maintain German production for war purposes and many Netherland factories were obliged to manufacture armaments and war supplies under the direction of German technicians. Livestock and food and clothing reserves were depleted to help maintain the German standard of living, while the rationing of food and clothing in the Netherlands was extended. It was estimated in May, 1941, that 22,000,000 out of 28,000,000 hens had been slaughtered along with 750,000 out of 1,550,000 pigs. Stocks of butter, eggs, cheese, cream, beans, rice, coffee, tea, tobacco, and cocoa were shipped to the Reich. Payment was made with florins obtained from Netherland banks in exchange for German Treasury bills. In June the Netherlanders were given until August 10 to turn in all articles of copper, nickel, tin, and lead. Imprisonment up to five years was threatened for those failing to comply.

Eight political parties, controlling some 90 of the 100 seats in the Lower Chamber of the States-General elected in 1937, were dissolved by Seyss-Inquart on July 7 because they adopted an attitude "directed against the interests of the occupying power." There remained only A. A. Mussert's Dutch Nazi party, a rival National Socialist group under Ridder van Rippard, the unimportant Clerical Front, and the Netherlands Union, formed after the German occupation, which offered Germany economic collaboration in return for political independence and spiritual freedom.

The Netherlands Union's uncompromising opposition to the Dutch Nazis and its refusal to endorse the German campaign against Russia brought it into disfavor with the German authorities. Its publication was banned and its other activities were restricted in July. On December 14 Seyss-Inquart announced that Mussert's Dutch Nazi party would thereafter be the only lawful political organization in the Netherlands.

In a speech at Cologne, Germany, on November 15 Dr. Seyss-Inquart outlined Hitler's political program with respect to the Netherlands. He said that no single nation in the "new European order" could expect complete independence. However he declared it was Hitler's desire to incorporate the Netherland people "in the common Germanic State as comrades, enjoying full equality with the Germans." The common State, he said, pre-supposed a common defense, unified economic system, and centralized control of foreign relations. In so far as the Netherlanders merited opportunities for spiritual and cultural development "of their own racial substance," they would receive them. He asserted the Dutch Nazis under Mussert had assumed responsibility for "educating the Netherland people for its future comradeship with the Germans."

The German decree of August 12 virtually scrapped the remaining autonomy of the Dutch provincial and municipal councils. In protest against this measure, the burgomasters of many cities and towns resigned. Their places were filled by Nazi appointees.

The Netherland press was reduced to complete servitude by progressively harsh treatment of publications hostile or passive toward the occupation. A number of prominent anti-Nazi editors were ar-

rested, including former Premier Hendrik Colijn, editor of the Calvinist daily *De Standaard*. Journalists were barred from their profession unless they joined the Nazi-created Chamber of Journalists. Fifty-three of the kingdom's 140 daily newspapers and 470 of 600 other newspapers were closed by the authorities October 1, ostensibly because of the paper shortage. Out of 650 periodicals, 520 were suppressed.

Spokesmen and anti-Nazi leaders of both the Catholic and Protestant churches were subjected to arrest, imprisonment, and persecution. The last of the Catholic trade unions were dissolved in October. Inexorable pressure to Nazify the Dutch educational system continued. When students of Leyden University staged a strike in protest at the dismissal of a Jewish professor, Dr. Seyss-Inquart in November ordered the suspension of all examinations. The school authorities then decided to close the university. In mid-September the German authorities ordered the confiscation of properties of the exiled Queen Wilhelmina and all members of her family. Persecution of Dutch Jews became more rigorous, and numerous deaths among young Jews confined in Nazi concentration camps were reported. Food became more and more scarce and rations were progressively reduced. It became virtually impossible to buy new shoes or clothing.

On July 12, Dr. Seyss-Inquart urged Netherlanders to volunteer for service with the German armies against Russia. Berlin announced August 18 that 7,000 Netherlanders were already on the Russian front and that 3,000 more were preparing to go. Most of the volunteers were members of the Dutch Nazi party.

Dutch Resistance Stiffens. Efforts to force the Netherlanders into the German political, economic, and cultural mold served to stiffen resistance to German rule. In January the German authorities threatened much more severe reprisals unless anti-German agitation and sabotage stopped. Early in February the German economic director for the Netherlands warned that he would take "measures" unless the existing boycott of German business men was ended.

The passive resistance hitherto offered to the Germans gave way to open rebellion in Amsterdam beginning February 9. The Netherland Nazis, who had aroused deep enmity by attempting to carry out the German anti-Semitic policies, were attacked while parading through the Jewish quarter of the city. Many non-Jews, especially stevedores from the dock section, joined in the anti-Nazi rioting. A number of Nazis and police were beaten, one of them fatally, and shop windows of Nazi sympathizers were broken. On February 13 the German authorities ordered all non-Jews out of the Jewish quarter around Waterloo Square, and two days later Dr. Seyss-Inquart again restricted the number of Jews in Netherland universities.

These measures and the intervention of the police on behalf of the Nazis caused a spread of the disturbances from Amsterdam to other cities and towns. In Amsterdam a wave of sympathetic strikes closed many factories and interrupted the street car, gas, and electric services. Acts of sabotage in Antwerp brought the imposition of a 10 p.m. curfew there on February 21. Five days later there was a clash between police and anti-German demonstrators in Amsterdam in which five civilians were killed, an unstated number wounded, and many others arrested.

General Christiansen immediately decreed martial law throughout the Province of North Holland. All parades, demonstrations, and street assemblies

were forbidden. Political activity of every kind was banned, and all strikers were ordered back to work by the following day. A penalty of 15 years' imprisonment was imposed for persons provoking strikes or discontinuing work. The death sentence, long banned in the Netherlands, was revived in cases of disruption of vital war industries. On May 21 penalties as severe as life imprisonment or death were decreed to enforce a complete ban on strikes and lockouts.

These measures brought the more violent outbreaks to an end. Nevertheless General Christiansen on March 1 fined the city of Amsterdam 15,000,000 florins (nearly \$8,000,000) for the disorders. The cities of Hilversum and Zaandam were likewise fined. On March 3 a Jew was executed by a firing squad, allegedly for spraying acid on Gestapo agents during the disorders, and many other demonstrators were sentenced by military courts to prison terms of 10 years or more. Reich Commissioner Seyss-Inquart on March 4 issued a compulsory labor service decree under which many citizens were drafted to guard German military signposts against defacement by Netherland youths. The same decree authorized the government to forbid workers to change their jobs. On the same day the mayors and aldermen of the cities of Amsterdam, Hilversum, and Zaandam were replaced by commissioners appointed by the occupational authorities. At the same time Dr. Seyss-Inquart appointed a commissioner to "clean up" (Nazify) about 100,000 Netherland sports, cultural and professional organizations.

A German military court sitting at Amsterdam sentenced 18 Netherlanders to death and 19 others to long prison terms on March 5. They were accused of leading a secret society, known as Les Gueux, in acts of terrorism, sabotage, and espionage against the German occupational forces. The death in the German concentration camp at Sachsenhausen of Major Gen. H. Van Tongeren, for many years Grand Master of the Netherland Grand Lodge of Free Masons, was announced in May.

The effort of the German authorities and their Netherland Nazi allies to bring the churches into line likewise met with stubborn opposition. The Catholic Episcopacy in a pastoral letter read in the churches on January 26 reiterated its decision to deny extreme unction and Catholic burial to "Liberals, Socialists, Communists, and National Socialists." Membership in the Nazi movement was forbidden to Catholics. The Germans and Dutch Nazis replied with severe retaliatory measures.

Steps were taken to force a larger measure of collaboration in other fields of activity. Dr. L. J. A. Trip, president of the Netherland Bank since 1931 and Secretary General of Finances since the German invasion, resigned both positions on March 20. The Netherland Boy Scout movement was officially abolished April 9, following dissolution of the Netherland Salvation Army.

On the eve of the first anniversary of the German invasion, Dr. Seyss-Inquart banned the wearing or public display of pictures or badges bearing the likeness of Queen Wilhelmina or other living members of the House of Orange. A similar ban was placed on the old Netherland colors of red, white and blue and also on orange, the color of the exiled ruling family. No public ceremonies, services, or demonstrations were permitted on May 10. The controlled press observed the anniversary of the German onslaught by calling upon Netherlanders and Germans to collaborate like brothers in "a great German community." "Jews and intellectuals" were blamed for the Hollanders' failure to do this.

Anti-German activities gained rapid headway following the outbreak of the Russo-German conflict in June. The occupation authorities replied by extending the scope and severity of punishment for "endangering public order and the occupation forces." Execution or long imprisonment was ordered for relatively insignificant misdemeanors. By a decree effective October 17, offenses punishable by death were extended to include "anti-German acts, preparation and distribution of anti-German publications; infringement of economic regulations and price measures; withholding, hoarding, or distribution of goods required for the common effort." A special division of the German High Court was set up in the Netherlands to deal with these "sabotage" cases. In September it was announced that the death penalty would be applied in all cases of Communist activity. A number of Netherlanders were executed for aiding and concealing British fliers who made forced landings in Holland.

NETHERLANDS GUIANA. See SURINAM.

NETHERLANDS INDIES. A group of large islands in the East Indies forming a colony of the Netherlands. Capital, Batavia, on the island of Java.

Area and Population. The area, population at the 1930 census, and population density of the various islands is shown in the accompanying table.

Group of islands	Area, sq. miles, 1930	Population, 1930	Density per sq. mile
Java and Madoera	51,032	41,718,364	817
Sumatra	164,148	7,677,826	47
Riouw-Lingga	12,235	298,225	24
Bangka	4,611	205,363	45
Billiton	1,866	73,429	39
Borneo:			
West district	56,664	802,447	14
South and east districts	151,621	1,366,214	9
Island of Celebes			
Celebes	38,786	3,093,251	80
Manado	34,200	1,138,655	33
Molucca Islands and New Guinea	191,682	893,400	5
Timor Archipelago	24,449	1,657,376	68
Bali and Lombok	3,973	1,802,683	454
Total	735,268	60,727,233	83

The estimated population in 1940 was 70,476,000, including 68,832,000 natives. Java and Madoera had 48,416,000 inhabitants; the Outer Provinces, 22,060,000. Over 92 per cent of the population is rural. The 1930 census populations of the chief cities, all of which were in Java except as noted, were: Batavia, including Meester Cornelis, 533,015 (606,800 in 1940); Socrabaja (Surabaya), 341,675 (390,700 in 1940); Semarang, 217,796; Bandoeng, 166,815; Soerakarta, 165,484; Djokjakarta (Jogjakarta), 136,649; Palembang, in Sumatra, 109,069.

Education and Religion. According to the 1930 census, there were 4,296,579 literate persons, of whom 400,877 were able to write Dutch. In 1939 there were 17,291 village schools with 1,839,386 pupils, 3,481 other primary schools (public and private) with 450,684 pupils, 35 secondary schools with 7,795 pupils, and various vocational and special schools. Higher education is given in the Technical College, Bandoeng, and in colleges of law, medicine, agriculture, science, literature, and philosophy at Batavia, combined into a university in 1941.

The natives are predominantly Moslem, but

there are several million converted Christians and Animists and about a million Buddhists.

Production. Agriculture and mining are the chief occupations, but manufacturing is expanding rapidly. The total area harvested by natives in Java and Madoera in 1939 was 22,087,950 acres; by foreign (European and Chinese) estates, 2,978,981 acres. The islands normally produce 90 per cent of the world's quinine; of pepper, 79 per cent, kapok, 70 per cent; rubber, 38 per cent; copra, 30 per cent; oil palm products, 20 per cent; tea, 17 per cent; coffee, 6 per cent; sugar, 5 per cent. Estimated production of the chief crops was (in metric tons): Cane sugar (Java only), 1,730,145 in 1941 (1,605,057 in 1940); coffee, 107,100 in 1940; rubber (exports), 544,800 in 1940 (378,000 in 1939); rice, 6,138,800 in 1939; cinchona, 12,391 in 1939, tobacco, 39,000 in 1939; tea, 83,800 in 1939; copra, 537,100 in 1939; ground nuts, 270,800 in 1940 (Java and Madoera only); palm oil, 243,683 in 1939. Cacao output was 3,419,335 lb. in 1940. Livestock (1939): 4,576,600 cattle, 703,637 horses, 3,246,918 buffaloes.

Mineral production in 1940 was (in metric tons): Petroleum, 7,944,000, coal and lignite, 1,872,000, tin, 45,600 (metal content of ore exported); manganese, 5,000 in 1939; bauxite (crude ore), 245,400 in 1938. Gold production was 2,525 kilograms in 1939. More than 6,000 factories and workshops are normally engaged in processing agricultural and mineral products for export. Expansion of manufacturing began during the world economic depression of 1929-35 and was furthered by the European War (see *History*).

Foreign Trade. Imports in 1940 totaled 444,300,000 guilders (469,340,000 in 1939), exports, 873,600,000 guilders (739,600,000 in 1939). Rubber accounted for 40 per cent of the total 1940 export trade. Value of chief 1940 exports (in millions of guilders): Rubber, 332.3; tin, 81.6; tobacco, 38.5; tea, 48.9; cinchona bark, 27.6. Trade was carried on mainly with the United States (see *TRADE, FOREIGN*), the British Empire, and Japan.

Finance. Budget estimates for 1941 anticipated receipts of 694,140,035 guilders and expenditures of 829,304,901. The large deficit was due to heavy defense expenditures (three times the pre-war level), expansion of educational facilities, etc. The public funded debt on Jan. 1, 1941, totaled 1,211,965,000 guilders. The colony became a de facto member of the sterling bloc under an Anglo-Dutch monetary accord of June, 1940. The guilder was pegged at 7.60 to the pound sterling and 1875 to the U.S. dollar (equivalent to \$0.5284). Average exchange value of guilder, \$0.5501 in 1938, \$0.5334 in 1939.

Transportation. Steam railways in 1940 extended 4,070 miles (2,701 miles state-owned), the greater part in Java; highways (1940), 42,546 miles; inter-island airways (K.N.I.L.M.), 8,065 miles of route (1939) covered by nine services (16 in 1941). On Dec. 21, 1940, the company opened the first air service into the interior of Netherlands New Guinea. During 1940 the company carried 27,033 passengers, 202,439 kilograms of freight, and 75,205 kilograms of mail on regularly scheduled flights. The K.L.M. system (Royal Aviation Co.) moved its headquarters to Batavia following German occupation of the Netherlands in May, 1940, and continued to operate the Batavia-Lyddá (Palestine) section of its Amsterdam-Batavia trunk line.

Government. The Governor General and his advisory council are appointed by the Queen of the Netherlands. The Volksraad (assembly of elected and appointed delegates) has limited legislative

powers. Governor General in 1941, Jhr. Dr. A. W. L. Tjarda van Starckenborgh Stachouwer (appointed June 8, 1936).

HISTORY

War with Japan. The long-expected Japanese effort to seize control of the Netherlands Indies and their rich natural resources began on Dec. 8, 1941 (Batavia time). See *WORLD WAR*. However the military phase of the Japanese expansionist program, which opened with a surprise attack upon Anglo-American-Dutch possessions in the Western Pacific and Malaya, was preceded by intense efforts to dominate the Netherlands Indies by political pressure and economic infiltration. The Government and peoples of the Netherlands Indies resisted both the military and non-military phases of Japanese aggression with the same tenacity and determination.

Economic Negotiations. The unsuccessful negotiations opened in Batavia by a Japanese economic mission in September, 1940 (see *YEAR BOOK* for 1940, p. 543), were renewed early in 1941 by Keikichi Yoshizawa, former Japanese Foreign Minister and newly appointed head of the special mission. He gradually expanded the Japanese demands to include "permission to explore the Outer Islands, concessions, exploitation of undeveloped areas, permits of entry for professional men and small traders, the establishment of an air line from Japan, and mining and fishing rights."

He succeeded in obtaining nothing except the renewal for one year in May of the 1940 contract under which Dutch, British, and American oil interests in the Netherlands Indies undertook to sell Japan 1,800,000 tons of oil supplies annually. The Netherlands Government-in-Exile in London on February 1 flatly refused to permit "incorporation of the Netherlands Indies in a new order under the leadership of any power whatsoever." On February 8 Batavia authorities introduced an export licensing system to prevent raw materials from reaching "enemy" nations. This curbed shipments to Japan, which was believed to be forwarding war materials via the U.S.S.R. to Germany. On March 10 the Batavia Government suspended shipments of many export products for one month to make possible emergency shipments of tin, rubber, and other war materials to the United States.

In June, 1941, the Japanese-Netherlands Indies negotiations reached an impasse when Dutch officials rejected a virtual ultimatum from Tokyo. Shortly after Yoshizawa returned to Japan, the Nipponese advance into southern Indo-China led to the imposition of an economic blockade against Japan by the United States and the British Empire. The Netherlands Indies joined in this blockade by impounding Japanese funds on July 28 and suspending operation of the oil agreement described above. The move was taken after consultation with London and Washington, with the clear understanding that it involved risk of war. The virtually complete stoppage of the islands' important trade with the Japanese Empire was offset in large part by increased trade with the United States and by British purchases of Netherlands Indies products. In December the British Food Ministry ordered 48,000,000 lb. of tea from the Netherlands Indies for delivery during 1942.

Japanese Exodus. As early as March Tokyo began the orderly withdrawal of Japanese women and children from the Netherlands Indies. In June Batavia authorities allowed 400 German nationals, imprisoned upon the German invasion of Holland in 1940, to sail on a Japanese ship for Shanghai. In

November Japanese men began to join the exodus of women and children.

Defense Preparations. These and other clear indications of Tokyo's hostile intentions were not lost upon the Batavia authorities. Precautions against a treacherous attack were taken well in advance of the surprise Japanese blow of December 8. As a result the islands' defenses survived the initial Japanese assaults virtually intact. On December 18 Dutch forces joined Australian units in occupying Portuguese Timor, over protests from Lisbon, to prevent the Japanese from seizing Timor as an advance base of aggression (see PORTUGAL under *History*).

The effectiveness of naval and air operations by the small Netherlands Indies forces during the first weeks of the war testified to the efficiency of the preparations made by the Batavia authorities. In April the Dutch, British, and American political and military heads in the Far East began the task of coordinating their defense plans and preparations (see BRITISH MALAYA under *History*). Through successive supplementary defense budgets passed by the People's Council (Volksraad) at Batavia, there was a steady expansion of local military, naval, and air units.

At the outbreak of war, the Netherlands Indies were estimated to have an army of 120,000 men (four-fifths Indonesians); a navy of 4 cruisers, 12 destroyers, 18 submarines, and over 50 torpedo boats; and an air force of more than 200 bombers and 200 fighter planes. New defenses had been established on outlying islands. Preparations were made to destroy oil wells and installations in the event of invasion. Construction of new arms and munitions factories was begun in connection with the general industrialization program. Compulsory military service, in effect for Hollanders since World War I, was extended to the native population beginning September 25.

The defense program received a setback October 13 when Licut. Gen. G. J. Berenschot, commander in chief of the Netherlands Indies Army, was killed in an air crash. The unofficial alliance between Dutch, British, American, Australian, Chinese, and New Zealand forces was placed in operation immediately after the outbreak of war. Alarmed by the Japanese advance, Batavia authorities toward the end of December joined the Australian Government in urgently asking the United States for immediate reinforcement and support of Allied forces in Malaya.

Internal Politics. The demand for greater political autonomy made by Dutch colonial officials and native leaders alike in 1940 received formal recognition from the Netherlands Government-in-Exile in 1941. On July 30 Queen Wilhelmina stated that immediately after the liberation of the Netherlands a review of the Constitution and readjustment of relations with the Dutch overseas territories would be necessary. She announced that a commission would be established, with members drawn from "all parts of the realm" to assist in the preparation of these changes. Most of the spokesmen for native political groups praised the Queen's policy, but a few called for immediate constitutional reforms to improve their political status. Soon afterward Batavia authorities announced that the special committee set up in September, 1940, to study political changes and improvements in the Netherlands Indies had completed its report, which was receiving the close consideration of the Government.

On August 26, 24 native members of the Volksraad requested a definite statement from the Netherlands Government in London on the Roosevelt-

Churchill Atlantic Declaration (see ATLANTIC DECLARATION) and its application to the Indonesian population. The Netherlands Government on November 13 replied that it had formally accepted the Atlantic Charter and was ready to apply its principles "as rules of conduct inside the State." It stated that "a post-war investigation of constitutional relations . . . will give the Government, as well as those governed, an opportunity to form a clear idea of the stage of development which has been reached, and to plan reforms."

After the Japanese attack began, all of the native political parties issued a joint declaration urging their adherents to "render all possible assistance to the Government," carry out its orders and instructions, and "defend themselves against any foreign attack."

See CHINA, JAPAN, and NETHERLANDS, under *History*; CHEMISTRY, INDUSTRIAL; WORLD WAR.

NETHERLANDS WEST INDIES. The colonial possessions of the Netherlands in the West Indies, comprising (1) CURAÇAO and (2) SURINAM, or Dutch Guiana. See separate article on each colony.

NEUTRALITY. For amendment of the Neutrality Act, see UNITED STATES under *Legislation*. For developments in other countries, see ARGENTINA, BOLIVIA, BRAZIL, BULGARIA, CHILE, COLOMBIA, COSTA RICA, CUBA, DENMARK, ECUADOR, EGYPT, EIRE, FINLAND, FRANCE, GUATEMALA, HAITI, HONDURAS, HUNGARY, IRELAND, NORTHERN; MEXICO, NICARAGUA, PANAMA, PARAGUAY, PERU, PORTUGAL, SALVADOR, EL; SOUTH AFRICA, SPAIN, SWEDEN, SWITZERLAND, TURKEY, URUGUAY, VENEZUELA, and YUGOSLAVIA, under *History*; PAN AMERICANISM. FOR NEUTRALITY PATROL, see COAST GUARD, U.S.

NEVADA. A mountain State. Area: 110,540 sq. mi., including 738 sq. mi. of inland water. Population: (1940 census) 110,247. The urban population comprises 39.3 per cent of the total (U.S. average, 56.5 per cent), non-white population, 5.7 per cent (U.S. average, 10.2); elderly (65 years and over), 6.1 per cent. Nevada ranks sixth among the States in area, 48th in population, and 48th in density, with an average of 10 persons per square mile. The capital is Carson City with 2,478 inhabitants; largest city, Reno, 21,317. There are 17 counties and one city of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Mildred Bray, Superintendent of Public Instruction, there were 24,052 pupils enrolled in the public schools of Nevada during the school year 1940-41, 17,798 in kindergartens and elementary schools and 6,254 in secondary schools. Instructional staff numbered 926 and received an annual average salary of \$1,650. Total expenditures for the year, excluding capital outlay, were \$2,457,946.37. For higher education, see Nevada under UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 5,189, of which 3,134 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 45,708; 35,264 were private and commercial automobiles, 109 busses, and 8,735 trucks and tractor trucks. Gross motor-fuel consumption was 42,788,000 gal. Net motor-fuel tax receipts were \$1,507,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$313,000.

Railways of all classes extended 1,932 miles (Dec. 31, 1939) .82 per cent of the total mileage in the United States. Class I steam railways (974 miles) reported 917,236 tons of revenue freight originating in Nevada in 1940 and 1,367,107 tons terminating in Nevada. There are 22 airports and landing fields in the State (10 lighted fields) and one seaplane anchorage. On July 1, 1941, according to the Civil Aeronautics Authority, there were 67 civil aircraft in the State and 238 commercial and private pilots (213 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 452,800, as compared with 447,300 acres in 1940. According to the latest census, there are 3,573 farms, valued at \$47,594,384, averaging 1,059.4 acres each. Farm population numbered 15,842 or 14.4 per cent of the total. The leading crop was hay, worth \$5,129,000 and producing 664,000 tons.

Manufacturing. According to the 1939 Census of Manufactures, there were 105 manufacturing establishments in Nevada, employing 1,093 wage earners who received \$1,642,397 in wages for the year. The total value of products was \$20,581,713; value added by manufacture, \$11,727,506.

Mineral Production. Leading products are: Copper, of which 157,620,000 lb. valued at \$18,441,540 were produced in 1941; gold, 372,300 fine oz., valued at \$13,030,500. Gold production declined about 3 per cent as compared with the previous year, reversing a trend that had continued since 1938. Copper output increased slightly, being greater in quantity than in any year since 1928. The total value of mineral production in 1939, according to the U. S. Bureau of Mines, was \$34,670,879 or .82 per cent of the total for the United States. See GEOLOGICAL SURVEY.

Trade. According to the 1940 census there were 176 wholesale establishments in Nevada, employing 733 persons, reporting net sales for 1939 of \$23,249,000 and annual pay roll of \$1,296,000. There were 2,045 retail stores with 5,822 employees, reporting sales of \$61,828,000 and pay roll of \$7,204,000. Service establishments numbered 596, employing 832 persons for \$970,000 per year, and reporting a business volume amounting to \$3,355,000. The leading business center of the State is Reno which reported retail sales of \$22,873,000 and \$1,846,000 receipts for its service establishments.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Nevada was \$2,393,000. Under the Social Security program, financed by Federal funds matching State grants, 2,317 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$26.61 (U. S. average pension, \$21.08); 262 dependent children in 110 families (figures estimated) received a total payment of \$2,705; and an estimated 17 blind persons received approximately \$528. General relief cases, which are supported by State and local funds only, numbered 426 and received \$17.46 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 278 (\$18,000); NYA student work program, 215 (\$1,000); NYA out-of-school work program, 380 (\$7,000); WPA, 1,231 (\$83,000); regular Federal construction projects, 2,014 (\$276,000).

Legislation. The Legislature convenes in regular session on the third Monday of January in odd years. It is composed of 17 Senators (6 Democrats,

10 Republicans, and one Independent in 1941) and 40 Representatives (26 Democrats, 13 Republicans, and one Independent). The 1941 legislature enacted 212 measures; 19 were vetoed but one of those, a horse race betting bill, was passed over the veto. Following is a list of Senate and Assembly measures of general interest, which became law (extracted from a complete list of measures signed, *Nevada State Journal*, April 1, 1941).

S. B. 13—Setting maximum payments to old-age pensioners at \$40 per month

S. B. 18—Uniform trust accounting act.

S. B. 22—Sets up a State boxing commission.

S. B. 30—Authorizing cities and counties and regional areas to enact zoning ordinances.

S. B. 31—New general insurance code

S. B. 37—Authorizing \$265,000 bond issue for constructing new prison facilities at Nevada State prison.

S. B. 59—Requiring licensing of contractors

S. B. 60—Requires temporary markers be placed on all graves.

S. B. 84—Authorizes unappropriated expenditures by the State not to exceed \$10,000 in meeting emergencies which may be brought about by the present world situation

S. B. 121—Prohibiting dissemination of horse racing news and fixing penalty

S. B. 118—Requires any person taking employment in Nevada to buy Nevada license plates.

S. B. 122—(Fish and game)—Providing for licenses for fur dealers

S. B. 124—Takes highway patrol from highway department jurisdiction and places it under public service commission

A. B. 5—New probate code

A. B. 15—Repeals act prohibiting giving away stamps, coupons, etc., with merchandise

A. B. 32—Consolidating the Nevada unemployment compensation division and employment service division into the employment security department

A. B. 46—Requiring hunters to secure written permits before they may hunt upon fenced private lands

A. B. 55—Placing personnel of old age pension system in Nevada under merit system

A. B. 61—Provides machinery for proving persons once declared insane to be sane again

A. B. 72—Gives veterans full \$1,000 exemption on community property

A. B. 88—Provides for reemployment of drafted men if they apply within 40 days of discharge

A. B. 96—Regulating use of fumigating materials

A. B. 102—Relating to the adoption of children

A. B. 117—Providing for examination of pregnant women for syphilis Effective July 1, 1941

A. B. 136—Authorizes district courts to establish dates of birth, place of birth and parentage.

A. B. 143—Raises the age of orphans eligible for county aid to 18 from 16

A. B. 158—Provides intermediate and common labor prevailing wage scales must be established for public works

A. B. 163—Amending unemployment compensation act to prevent fraudulent claims

A. B. 181—Amending act relating to death certificates

A. B. 208—Authorizes corporations to issue special stocks.

A. B. 251—Authorizes transfer of Boulder Dam State park to Federal government in return for other Federal lands

A. B. 259—Uniform auto drivers' licensing act

A. B. 282—Providing for no court fees in estates of \$400 or under

A. B. 299—Fixing State tax levy at 6.95 cents per \$100 valuation for next two years.

Finances. Total tax collections in Nevada for the fiscal year ending in June, 1941, were \$4,840,000 (1940: \$4,657,000). Total sales taxes amounted to \$1,876,000, including motor fuel, \$1,671,000. Taxes on specific businesses ran to \$465,000, general and selective property, \$1,147,000, unemployment compensation, \$987,000. Cost payments for the operation of general government totaled \$4,627,000 in 1939, the latest year available. (Revenues for the general government for that year were \$8,867,000.) Cost of operation per capita was \$42.84 Total gross debt outstanding in 1941 was \$542,000, as compared with \$1,634,000 in 1932.

Officers and Judiciary. The Governor is E. P. Carville (Dem.), inaugurated in January, 1939, for a four-year term; Lieutenant Governor, Maurice J.

Sullivan; Secretary of State, Malcolm McEachin; Attorney General, Gray Mashburn; State Treasurer, Dan W. Franks; State Auditor, D. G. LaRue; State Comptroller, Henry C. Schmidt. Chief Justice of the Nevada Supreme Court is E. A. Ducker; there are two associate members elected by popular vote for six-year terms. See **PLANNING**.

NEVIS. See **LEEWARD ISLANDS**.

NEW BRUNSWICK. A maritime province in eastern Canada. Area, 27,985 square miles. Population (1941 census), 453,377. Vital statistics (1940): 11,675 living births, 4,977 deaths, 4,829 marriages. Chief cities (1941 census): Fredericton, capital (9,905), Saint John (50,084), Moncton (22,411), Edmundston (7,028), Campbellton (6,649). Education (1939): 102,185 students in schools and colleges.

Production. The gross value of agricultural output for 1940 was \$31,090,000 (field crops \$18,446,000, dairy products \$5,457,000, farm animals \$3,656,000, poultry products \$1,640,000, fruits and vegetables \$1,242,000, fur farming \$463,000). The chief crops in 1941 were oats 6,200,000 bu. (6,507,000 in 1940), potatoes 286,800 tons (344,800), roots 146,050 tons (167,000), hay and clover 896,000 tons (944,000). Livestock (1940): 214,100 cattle (including 153,100 milk cows), 107,000 sheep, 97,100 hogs, 54,950 horses, 1,273,700 sheep. Fisheries (1940): 72,895 tons, which had a marketed value of \$4,966,000 (sardines \$1,883,000, lobsters \$856,800, herring \$750,000, smelts \$442,000). Fur production (1938-39): 94,790 pelts worth \$1,361,168. Forestry products (1939) were valued at \$12,765,000.

Mineral output for 1939 was valued at \$3,949,433 (coal \$1,566,359, natural gas \$292,403, gypsum \$134,286). Manufacturing (1939): 803 factories, 14,501 employees, \$27,041,195 net value of products.

Government. Finance (year ended Oct. 31, 1940): \$12,459,011 for revenue and \$11,921,467 for expenditure. Budget estimates (1941): \$10,139,855 for revenue and \$10,108,554 for expenditure. Net funded debt (Oct. 31, 1940), \$92,987,744. The executive authority is vested in a lieutenant governor who is advised by a ministry of the legislative assembly, the latter consisting of 48 members elected for a five-year term by the voters (29 Liberals and 19 Conservatives were elected at the provincial general election of Nov. 20, 1939). Ten senators (appointed for life) and 10 elected commoners represent New Brunswick in the Federal parliament at Ottawa. Lieutenant Governor, W. G. Clark (appointed Mar. 5, 1940); Premier, J. B. McNair (Liberal). See **CANADA**.

NEW CALEDONIA. A French island colony in the South Pacific, 850 miles east of Australia. Its dependencies consist of the following islands: Bélep, Chesterfield, Fortuna and Alofi, Huon, Isle of Pines, Loyalty, Wallis, and Walpole. Total area, 7,336 square miles; total population (Jan. 1, 1939), 55,000. Noumea (capital), 11,108 inhabitants.

Production and Trade. The main agricultural products are coffee, copra, cotton, manioc, maize, tobacco, bananas, and pineapples. Mineral production included nickel (17,500 metric tons, metal content of ore, in 1940), crude chromite (55,790 metric tons, 1940), cobalt, iron, and manganese. Trade (1938): 158,571,000 francs for imports and 146,453,000 francs for exports (franc averaged \$0.0288 for 1938; \$0.0251, 1939). The administration of New Caledonia is under the control of a

governor, assisted by a privy council and an elected general council. On Sept. 23, 1940, New Caledonia declared its allegiance to the "Free French" cause of General de Gaulle (see **YEAR BOOK** for 1940; p. 546). Governor, Henri Sautot (appointed Sept. 19, 1940).

History. It was announced on June 18, 1941, that a contingent of volunteers from New Caledonia had joined the first battalion of the French Pacific Expeditionary Force.

NEWFOUNDLAND. An island lying between the Gulf of St. Lawrence and the Atlantic Ocean. Its dependency, Labrador, lies north of the Gulf of St. Lawrence, between Quebec and the Atlantic. Newfoundland, with Labrador, forms a part of the British Empire. Capital, St. John's. Area (exclusive of Labrador), 42,734 square miles. Population, 294,800 as estimated for Jan. 1, 1939. Immigration in 1938, 9,219, emigration, 8,668. Chief towns and their populations at the census of 1935: St. John's, 54,886; Bonavista, 4,022; Harbour Grace, 2,215; Grand Falls, 4,244; Corner Brook, 6,374; Carbonear, 3,367; Twillingate, 3,203; Burin, 2,277; Grand Bank, 2,209. Area of Labrador, 118,400 square miles; population (1935), 4,716; chief settlement, Battle Harbor.

Education. Among adults, between 7 and 10 per cent are illiterate. Schools (mainly denominational, with public support) numbered 1,175 in 1939; pupils, 65,893; there were more Anglican schools, and more Roman Catholic pupils, than of any other single denomination. In 1935, 93,925 of the population were reported to be Roman Catholic; 92,709, Anglican, 76,134, of the United Church, 18,054, in the Salvation Army; 1,460, Presbyterian; and 7,306, of other denominations.

Production. Cod fishing is the chief occupation, engaging 35,018 out of some 55,000 whose occupations were reported for 1935. The fish catch in 1940 was about 900,000 quintals (of 112 lb.). The annual seal hunt in 1941 yielded about 42,000 skins (159,687 in 1940). Pulpwood and pit props cut in the 1939-40 season totaled 690,000 cords; newsprint output in 1940 was about 350,000 tons. Mineral production for 1940 was (in long tons): Iron ore, 1,500,000, zinc concentrate, 116,000; copper concentrate, 42,000, lead concentrate, 46,000; fluorspar, 14,000. The 1935 census showed only 4,226 farmers. Crops were valued at \$3,444,000 in 1937.

Foreign Trade. For the year ended June 30, 1940, imports totaled \$28,421,897 and exports of Newfoundland products were \$32,827,323. Of the exports, wood pulp, newsprint, and other manufactures accounted for \$15,453,374; fishery products, \$8,099,581; mineral products, \$7,174,659; forestry products, \$1,630,761. The United Kingdom took exports to the value of \$10,901,707; United States, \$9,676,399; Canada, \$2,627,591.

Finance. For the fiscal year ended June 30, 1940, government receipts totaled \$16,928,563; expenditures, \$17,466,914. The public debt on June 30, 1940, was £19,996,241 and \$2,129,100. Also see **History** below.

Transportation. In 1940 there were 750 miles of government and 56 miles of private railway lines. A fleet of steamers maintained communication between the towns of the coast and the Canadian mainland. Highways extended 6,159 miles (1940). Large airfields are situated near Botwood (for seaplanes) and at Hattie's Camp, 30 miles further east (for landplanes). A total of 2,324 vessels of 120,416 tons were registered in Newfoundland Jan. 1, 1939. During 1938-39, the tonnage of vessels

entering and clearing the ports was 3,835,578.

Government. Newfoundland held until the end of 1933 the status of a self-governing dominion of the British Crown. By arrangement made in 1933 with Great Britain this status and, with it, parliamentary separate government were suspended. The British government undertook to deal with Newfoundland's financial difficulties—the immediate cause of the change; it appointed a governor, responsible to the British Secretary of Dominion Affairs, and under the governor, an advisory council of six. Half of these were selected from Great Britain, half from Newfoundland; each of them had particular charge of a governmental department. Governor and Commander-in-Chief, Vice Admiral Sir Humphrey Thomas Walwyn (appointed October, 1935).

HISTORY

U.S. Defense Bases. The Anglo-American agreement of Sept. 2, 1940, for the establishment of United States naval, air and military bases in Newfoundland (see *YEAR BOOK* for 1940, p. 547) was formalized in the treaty signed in London Mar. 27, 1941 (see *GREAT BRITAIN* under *History*). In accordance with the lease annexed to the treaty, the Newfoundland Government transferred six pieces of land to the United States for 99 years, as follows: (1) 2,610 acres of land on the Argientia Peninsula, lying between Little Placentia Harbor and Placentia Bay, for development as a landplane and seaplane base and as a military training ground; (2) 160 acres (in two separate plots) on and near the shore of Quidi Vidi Lake near St. John's for the garrisoning of American troops; (3) a section 700 by 1,400 feet on the crest of White Hills, (4) a 5,000-foot frontage on St. George's Bay on the west coast for development as a servicing field for army planes en route between the United States and the Argientia Peninsula air base; and (5) a section of the north shoreline of St. John's Harbor, for development as a U.S. naval station.

The United States agreed not to permit use of the leased areas except for defense purposes and to compensate private property owners for expropriation or damage. The vanguard of the American garrison arrived at St. John's Jan. 29, 1941, receiving a warm welcome from the inhabitants. Other units followed. On May 30 the new U.S. army base at Quidi Vidi Lake was named Fort Pepperrell after the American colonial soldier, Sir William Pepperrell. In May it was reported that 4,000 Newfoundlanders were being employed on the base projects, and this number was increased to 22,000 by December. The cost of the U.S. naval installations, including the seaplane base, was estimated at \$17,050,000. The Argientia naval station was commissioned July 15, 1941. Because of the island's strategic position, the naval and air bases came into extensive use during the year in connection with the U.S. convoy system and air patrol of the North Atlantic. President Roosevelt indicated on September 11 that a U.S. outpost had also been established in Labrador.

War Contribution. Meanwhile Newfoundland made other vital contributions to the Empire's war effort. Canadian naval and air patrols made increasing use of the British-controlled bases on the island. The landplane base at Hattie's Camp, with the world's largest landing field, dispatched hundreds of American-built bombers to Britain via the transatlantic ferry service operated jointly by the British and Canadian air forces.

In June, 1941, Newfoundland's direct contribution to the war was summarized by the *London Times* as follows: 2,000 enlisted men in the Royal

Navy; a "large number" serving in the R.A.F. air and ground crews; 130 men undergoing training in Canada under the Empire Air Training scheme; two regiments of heavy artillery, with most of the personnel serving in Great Britain; a small but efficient militia force in Newfoundland for home defense; and a large force of experienced loggers engaged in cutting timber in various parts of Great Britain. At the outbreak of the war, the Newfoundland Government dispensed with its annual grant-in-aid from the British Treasury through imposing new taxation and economies. In 1940, the island accepted responsibility for servicing Newfoundland debts guaranteed by the British Government.

Economic Conditions. Despite higher taxation, reduced government expenditures on non-defense projects, and the loss of additional export markets through the spread of the war, Newfoundland experienced marked economic improvement during 1940 and 1941. Beginning in 1940 the sale of fish at good prices was possible without government assistance for the first time since 1937. In May, 1941, market prices for fish were double the prewar level. Large-scale employment on United States and Canadian base facilities and the influx of funds from Newfoundlanders serving in Britain spurred local prosperity. Agriculture was stimulated by the requirements of the new U.S. bases and garrisons. On the other hand the cost of some staple articles of consumption increased 40 to 50 per cent between May, 1939, and May, 1941. The shortage of shipping forced a curtailment in the output of mmes.

In his annual budget speech, the Finance Commissioner announced that the financial year 1940-41 closed with a small surplus, the first in many years, and that revenue was the highest in the island's history. He budgeted for a surplus of over \$2,000,000 in 1941-42 even though cutting indirect taxation to lower the cost of living, raising grants for education and social services, and devoting a substantial sum for debt redemption. Out of the surpluses for 1940-41 and 1941-42, the government voted to spend \$500,000 on a squadron of R.A.F. fighter planes to be manned by Newfoundlanders, and to lend the balance to Great Britain free of interest for the duration of the war.

See *CANADA* under *History*; *CUSTOMS, BUREAU OF*.

NEW GUINEA, Territory of. See *AUSTRALIA* under *Area and Population*.

NEW HAMPSHIRE. A New England State. Area: 9,304 sq. m., including 280 sq. m. of inland water. Population: (1940 census) 491,524. The urban population comprises 57.6 per cent of the total (U.S. average, 56.5 per cent); non-white population, 0.1 per cent (U.S. average, 10.2); elderly (65 years and over), 9.7 per cent. New Hampshire ranks 43d among the States in area, 44th in population, and 22d in density, with an average of 54.5 persons per square mile. The capital is Concord with 27,171 inhabitants; largest city, Manchester, 77,685. There are 10 counties and nine cities of more than 10,000 inhabitants (see article on *POPULATION* in 1940 *YEAR BOOK*). For statistics on births, deaths, accidents, et cetera, see *VITAL STATISTICS*.

Education. According to James N. Pringle, Commissioner of Education, there were 74,199 pupils enrolled in the public schools of New Hampshire during the school year 1940-41, 52,436 in elementary schools and 21,763 in secondary schools. Teachers numbered 2,994. Men teachers in elementary schools received an annual average salary of \$1,386, those in secondary schools \$1,905; women

teachers in elementary schools \$1,107, secondary \$1,421. Total expenditures for the year were \$7,735,293.73.

Transportation. State highway mileage in 1939, including streets under State control, totaled 3,516, of which 3,513 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motor-cycles) numbered 136,109; 105,034 were private and commercial automobiles, 288 busses, and 30,062 trucks and tractor trucks. Gross motor-fuel consumption was 95,827,000 gal. Net motor-fuel tax receipts were \$3,617,000, the rate being four cents per gal. (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$3,052,000.

Railways of all classes totaled 1,003 miles (Dec. 31, 1939) .43 per cent of the total mileage in the United States. Class I steam railways accounted for 587 miles. There are 12 airports and landing fields in the State (three lighted fields) and six seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 81 civil aircraft in the State and 344 commercial and private pilots (297 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 390,600, as compared with 388,500 acres in 1940. According to the latest census, there are 16,554 farms, valued at \$62,206,391, averaging 109.3 acres each. Farm population numbered 71,266 or 14.5 per cent of the total. The leading crop was hay, worth \$6,001,000 and producing 360,000 tons.

Manufacturing. According to the 1939 Census of Manufactures, there were 806 manufacturing establishments in New Hampshire, employing 55,781 wage earners who received \$52,735,240 in wages for the year. The total value of products was \$237,396,015, value added by manufacture, \$105,187,809.

Mineral Production. Mineral products are of little importance in New Hampshire, their total value in 1939, according to the U.S. Bureau of Mines, being only \$1,187,339, chiefly stone and clay.

Trade. According to the 1940 census there were 363 wholesale establishments in New Hampshire, employing 2,534 persons, reporting net sales for 1939 of \$64,263,000 and annual pay roll of \$3,735,000. There were 7,435 retail stores with 18,149 employees, reporting sales of \$183,100,000 and pay roll of \$17,322,000. Service establishments numbered 2,204, employing 2,974 persons for \$2,418,000 per year, and reporting a business volume amounting to \$9,429,000. The leading business center of the State is Manchester which reported wholesale sales of \$24,367,000, retail sales of \$33,734,000, and \$2,610,000 receipts for its service establishments. Nashua reported sales of \$4,711,000 wholesale and \$14,483,000 retail; Concord, \$4,638,000 and \$13,646,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in New Hampshire was \$9,546,000. Under the Social Security program, financed by Federal funds matching State grants, 6,994 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$21.67 (U.S. average pension, \$21.08); 1,407 dependent children in 578 families received average monthly payments of \$45.58 per family (U.S. average, \$32.73); and 330 blind persons received \$22.91 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered an estimated 4,600 and received a total approximate payment of \$96,000.

The number of persons employed throughout the

State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 259 (\$17,000); NYA student work program, 860 (\$7,000); NYA out-of-school work program, 832 (\$17,000); WPA, 4,820 (\$299,000); other Federal emergency projects, 13 (\$2,000); regular Federal construction projects, 7,246 (\$1,237,000). The Farm Security Administration certified subsistence payments totaling \$2,000 for the month to 63 cases.

Legislation. The legislature, or General Court, convenes in regular session on the first Wednesday of January in odd years. It is composed of 24 Senators (9 Democrats and 15 Republicans in 1941) and 423 Representatives (194 Democrats and 229 Republicans). The following is a list of the more important laws passed at the 1941 session of the New Hampshire General Court, as compiled by Margaret Owen of the New Hampshire State Library staff.

Defense and the Present Emergency Providing for a state council of defense (Ch 45) Establishing a State guard (Ch 46). To protect against sabotage (Ch 47) Relating to explosives (Ch 48). Relative to reinstatement of state officials and employees who enter into the military or naval service of the United States for national defense in the present emergency (Ch 18). Relative to registration of motor vehicles by persons entering the military service of the United States for national defense—registration suspended and proportionate part of fee returned (Ch 53). To authorize banks and other institutions to act as agents for the sale of United States defense bonds (Ch 88). Relating to poll tax of soldiers and sailors, exempting all those in military service (Ch 127) Designating for improvement a new defense highway (Ch 186) Relating to housing—special authority for housing shortage in defense areas (Ch 213).

Uniform laws, and Compacts Uniform act on intra state fresh pursuit (Ch 34). Uniform simultaneous death act (Ch 55) Uniform warehouse receipts act (Ch 97) Interstate fisheries compact (Ch 135). Adjustment of certain inheritance taxes by compromise—double domicile act (Ch 139).

Miscellaneous Unfair sales act (Ch 92) Providing for alternate jurors (Ch 104). Providing for care and custody of female convicts (Ch 123) Providing for airport zoning (Ch 145). Authorizing the public service commission to establish temporary rates (Ch 148) Abolishing causes of action for breach of contract to marry (Ch 150) Creating a commission to study the election laws (Ch 146) Establishing a commission to study the problem of a retirement plan for state employees (Ch 165) Creating a retirement system for policemen (Ch 166). To provide for research on wood waste utilization—appropriation of \$2,500, contingent on equal contribution by industry, to be used at the University of New Hampshire (Ch 177) Making appropriations for capital improvements and long-term repairs for the state of New Hampshire (Ch 181) Relating to the development of aeronautics—establishing a state aeronautics commission (Ch 199). Authorizing the creation of housing authorities in cities (Ch 222).

Finances. Total tax collections in New Hampshire for the fiscal year ending in June, 1941, were \$15,957,000 (1940: \$15,844,000). Total sales taxes amounted to \$5,549,000, including motor fuel, \$3,923,000. Taxes on specific businesses ran to \$1,841,000, general and selective property, \$1,021,000, unemployment compensation, \$2,901,000. Cost payments for the operation of general government totaled \$14,800,000 in 1939, the latest year available. (Revenues for the general government for that year were \$19,754,000.) Cost of operation per capita was \$30.33. Total gross debt outstanding in 1941 was \$15,551,000, as compared with \$7,016,000 in 1932.

Officers and Judiciary. The Governor is Robert O. Blood (Rep.), inaugurated in January, 1941, for a two-year term; Secretary of State, Enoch D. Fuller; Attorney General, Frank R. Kenison; State Treasurer, F. Gordon Kimball; State Comptroller, Stephen B. Story. Chief Justice of the New Hampshire Supreme Court is John E. Allen; there are four associate members, appointed to serve to the age of seventy.

NEW HEBRIDES. A British-French condominium in the South Pacific, 250 miles northeast of New Caledonia. The main islands of the group are Ambrym, Aneityum, Aoba, Efate, Epi, Erromanga, Espiritu Santo, Gaua, Maewo, Malekula, Pentecost, and Vanua Lava. Area, 5,700 square miles; population (1939), 43,207. Capital, Vila (1,200 inhabitants). Chief products—copra, cacao, coffee, and vanilla. Trade (1939): £118,618 for imports and £123,921 for exports (copra £79,906, cacao £22,682, coffee £16,800). Finance (1939): £25,660 for revenue and £23,367 for expenditure. The government is under the joint administration of British and French officials. On Aug. 9, 1940, the French citizens of New Hebrides declared their allegiance to General de Gaulle's "Free French" movement.

NEW JERSEY. A middle Atlantic State. Area: 7,836 sq. mi., including 314 sq. mi. of inland water, but excluding parts of Delaware Bay, 315 sq. mi.; and New York Harbor, 69 sq. mi. Population: (1940 census) 4,160,165. The urban population comprises 81.6 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 5.5 per cent (U.S. average, 10.2); elderly (65 years and over), 6.7 per cent. New Jersey ranks 45th among the States in area, ninth in population, and second in density, with an average of 553.1 persons per square mile. The capital is Trenton with 124,697 inhabitants; largest city, Newark, 429,760. There are 21 counties and 57 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to the latest Biennial Survey of Education, there were 746,383 pupils enrolled in the State School System of New Jersey during the school year 1937-38. Of this total, 544,093 were enrolled in kindergartens and elementary schools and 202,290 in secondary schools. The instructional staff comprised 28,096 persons, who received an annual average salary of \$2,006 (U.S. average: \$1,374), 4,846 or 18 1 per cent were men. Expenditures for all public schools in 1937-38 were \$96,897,241, making a total cost per capita of \$22.22 (U.S. average: \$17.15). There were 2,125 school buildings in the State, of which 176 were one-room, one-teacher schools. The value of public property used for school purposes was \$347,199,610. For higher education, see under *New Jersey* in the table of UNIVERSITIES AND COLLEGES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 1,625, of which all was surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 1,101,213, 944,630 were private and commercial automobiles, 5,210 busses, and 137,126 trucks and tractor trucks. Gross motor-fuel consumption was 898,684,000 gallons. Net motor-fuel tax receipts were \$24,337,000, the rate being three cents per gal. (Dec. 31, 1940) State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$22,562,000.

Railways of all classes extended 2,123 miles (Dec. 31, 1939) .90 per cent of the total mileage in the United States. Class I steam railways (711 miles) reported 12,351,117 tons of revenue freight originating in New Jersey in 1940 and 42,039,152 tons terminating in New Jersey. There are 30 airports and landing fields in the State (seven lighted fields) and five seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 632 civil aircraft in the State and 1,962 airline transport, commercial, and private pilots (1,590 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 728,000, as compared with 723,000 acres in 1940. According to the latest census, there are 25,835 farms, valued at \$227,804,686, averaging 72.6 acres each. Farm population numbered 146,459 or 3.5 per cent of the total. Leading crops with production in 1941 were: Commercial truck crops, \$22,637,000; potatoes, \$6,734,000, 10,360,000 bu.; corn, \$6,085,000, 7,421,000 bu.

Manufacturing. The total value of manufactured products was \$3,428,947,188 according to the 1939 Census of Manufactures (For details, see 1940 YEAR BOOK.)

Mineral Production. Leading products are: Zinc, 91,406 short tons in 1940 (88,716 short tons valued at \$11,507,318 in 1939); clay products other than pottery and refractories, \$6,726,041 in 1939. The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$30,271,293 or about seven-tenths per cent of the total for the United States.

Trade. According to the 1940 census there were 3,531 wholesale establishments in New Jersey, employing 36,609 persons, reporting net sales for 1939 of \$1,075,302,000 and annual pay roll of \$64,412,000. There were 68,851 retail stores with 153,673 employees, reporting sales of \$1,580,401,000 and pay roll of \$171,619,000. Service establishments numbered 22,864, employing 38,019 persons for \$40,081,000 per year, and reporting a business volume amounting to \$124,530,000. The leading business center of the State is Newark which reported wholesale sales of \$397,832,000, retail sales of \$249,372,000, and \$26,032,000 receipts for its service establishments. Jersey City reported sales of \$128,213,000 wholesale and \$96,257,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in New Jersey was \$85,554,000. Under the Social Security program, financed by Federal funds matching State grants, 31,174 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$21.37 (U.S. average pension, \$21.08); 23,833 dependent children in 10,486 families received average monthly payments of \$31.60 per family (U.S. average, \$32.73); and 739 blind persons received \$23.72 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 26,539 and received \$21.93 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 2,337 (\$155,000); NYA student work program, 9,834 (\$67,000); NYA out-of-school work program, 11,201 (\$248,000); WPA, 42,471 (\$2,646,000); other Federal emergency projects, 46 (\$3,000); regular Federal construction projects, 38,016 (\$5,997,000). The Farm Security Administration certified subsistence payments totaling \$3,000 for the month to 85 cases.

Legislation. The Legislature convenes in regular session on the second Tuesday of January annually. It is composed of 21 Senators (5 Democrats and 16 Republicans in 1941) and 60 Representatives (19 Democrats and 41 Republicans).

The following measures enacted by the Republican-controlled 1941 Legislature were cited by State Republican leaders as constituting its major achievements: (1) Twenty-one measures to strengthen New Jersey's military and industrial defenses and to bring about the maximum cooper-

ation between State and local officials in connection with the national defense program. (2) More than a score of measures to strengthen municipal finances, continuing a policy of reducing local taxes and setting up State supervision of municipal finance. (3) Seven laws aimed at solving the State's long-standing relief problem. (4) A measure prohibiting the practice of law in any of the courts of the State by appointed judges of the Court of Errors and Appeals and by Advisory Masters in the Court of Chancery. (5) A measure giving the Governor the right to investigate State agencies. (6) Measures to aid labor, including an anti-injunction act and a five-member Mediation Board bill. (7) Regulation of industrial home work (aimed at sweat shop abuses). (8) Eleven laws correcting weaknesses in the State election system, designed to provide uniform practices and reduce the cost of administration. (9) Permanent registration, effective July, 1943. (10) New laws dealing with the public schools, including steps to guarantee the soundness of the teachers' pension and annuity fund, expansion of vocational education, and provision for tuberculosis examinations among children. (11) Highway safety measures. (12) Public health measures, including provision for a rural mobile dental demonstration unit and measures to improve conditions in public institutions. (13) A law prohibiting discrimination under the civil rights act on the basis of sex or marital status. (14) The railroad tax compromise bills, passed in an all-night session, which constituted a victory for the Governor over Mayor Hague of Jersey City.

The Legislature adhered strictly to its policy of "no new taxes," avoiding sales, income, business, and nuisance taxes in the continued effort to attract business to the State. Other laws passed were designed to regulate the liquor industry, safeguard banks and other financial institutions, and improve farm markets. See CHILDREN'S BUREAU.

Finances. Total tax collections in New Jersey for the fiscal year ending in June, 1941, were \$163,384,000 (1940: \$153,838,000). Total sales taxes amounted to \$34,318,000, including motor fuel, \$24,702,000, alcoholic beverage, \$9,616,000. Taxes on specific businesses ran to \$23,067,000, general and selective property, \$24,761,000, unemployment compensation, \$52,554,000. Cost payments for the operation of general government totaled \$8,074,000 in 1939, the latest year available. (Revenues for the general government for that year were \$155,145,000.) Cost of operation per capita was \$21.26. Total gross debt outstanding in 1941 was \$117,071,000, as compared with \$141,230,000 in 1932.

Officers and Judiciary. The Governor is Charles Edison (Dem.), inaugurated in January, 1941, for a three-year term; Secretary of State, Thomas A. Mathis; Attorney General, David T. Wilentz; State Treasurer, William H. Albright; State Auditor, Frank Durand; State Comptroller, Frank Murray. Chief Justice of the New Jersey Supreme Court is Thomas J. Brogan; there are eight associate members appointed for seven-year terms.

NEW MEXICO. A mountain State. Area: 121,666 sq. m., including 155 sq. m. of inland water. Population: (1940 census) 531,818. The urban population comprises 33.2 per cent of the total (U.S. average, 56.5 per cent); non-white population, 7.5 per cent (U.S. average, 10.2); elderly (65 years and over), 4.3 per cent. New Mexico ranks fourth among the States in area, 41st in population, and 45th in density, with an average of 4.4 persons per square mile.

The capital is Santa Fe with 20,325 inhabitants; largest city, Albuquerque, 35,449. There are 31 countries and five cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to the latest Biennial Survey of Education conducted by the U.S. Office of Education, there were 129,877 pupils enrolled in the State School System of New Mexico during the school year 1937-38. The instructional staff comprised 4,153 persons, who received an annual average salary of \$1,090 (U.S. average: \$1,374); 786 or 21.2 per cent were men. There were 58 supervisors, 386 principals, 2,982 elementary teachers, and 727 regular and vocational high school teachers. Expenditures for all public schools in 1937-38 were \$8,774,412, making a total cost per capita of \$20.79 (U.S. average: \$17.15). For higher education, see under *New Mexico* in the table of UNIVERSITIES AND COLLEGES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 12,269, of which 5,423 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 128,159; 94,534 were private and commercial automobiles, 1,261 busses, and 29,261 trucks and tractor trucks. Gross motor-fuel consumption was 110,917,000 gal. Net motor-fuel tax receipts were \$4,699,000, the rate being five cents per gal. (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$1,994,000.

Railways of all classes extended 2,844 miles (Dec. 31, 1939), 1.21 per cent of the total mileage in the United States. Class I steam railways (1,898 miles) reported 1,768,848 tons of revenue freight originating in New Mexico in 1940 and 1,332,214 tons terminating in New Mexico. There are 39 airports and landing fields in the State (17 lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 122 civil aircraft in the State and 529 airline transport, commercial, and private pilots (479 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 1,548,300, as compared with 1,514,400 acres in 1940. According to the latest census, there are 34,105 farms, valued at \$187,525,814, averaging 1,139.4 acres each. Farm population numbered 178,692 or 33.6 per cent of the total. The leading crop was cotton lint, worth \$9,430,000 and producing 115,000 bales.

Manufacturing. According to the 1939 Census of Manufactures, there were 272 manufacturing establishments in New Mexico, employing 3,250 wage earners who received \$2,912,993 in wages for the year. The total value of products was \$25,123,641; value added by manufacture, \$8,711,764.

Mineral Production. Leading products are: Petroleum, 39,001,000 bbl. in 1940 (37,637,000 bbl. valued at \$30,850,000 in 1939); copper, 139,696,000 lb. valued at \$15,785,648 in 1940 (92,284,000 lb., \$9,597,536, in 1939); natural gas, 60,284,000 M cubic feet valued at \$8,788,000 in 1939. Preliminary figures for 1941 indicated that copper production increased by 3,428,000 lb. to a total of 143,124,000 (\$16,745,508); zinc assumed greater importance, increasing from 60,626,000 lb. (\$3,819,438) in 1940 to 75,691,000 lb. (\$5,752,516) in 1941. The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$69,921,765 or 1.65 per cent of the total for the United States. New Mexico ranks 16th among the States in value of mineral production.

Trade. According to the 1940 census there were

542 wholesale establishments in New Mexico, employing 2,463 persons, reporting net sales for 1939 of \$66,387,000 and annual pay roll of \$3,197,000. There were 6,617 retail stores with 12,846 employees, reporting sales of \$125,765,000 and pay roll of \$11,596,000. Service establishments numbered 1,612, employing 2,202 persons for \$1,714,000 per year, and reporting a business volume amounting to \$6,352,000. The leading business center of the State is Albuquerque which reported wholesale sales of \$18,992,000 and retail sales of \$23,332,000.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in New Mexico was \$12,642,000. Under the Social Security program, financed by Federal funds matching State grants, 4,750 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$17.25 (U.S. average pension, \$21.08); 5,710 dependent children in 2,011 families received average monthly payments of \$26.28 per family (U.S. average, \$32.73); and 218 blind persons received \$18.66 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 1,759 and received \$7.06 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 3,241 (\$215,000); NYA student work program, 2,022 (\$14,000); NYA out-of-school work program, 1,583 (\$32,000); WPA, 10,066 (\$619,000), other Federal emergency projects, 392 (\$47,000), regular Federal construction projects, 4,705 (\$516,000). The Farm Security Administration certified subsistence payments totaling \$10,000 for the month to 221 cases.

Legislation. The Legislature convenes in regular session on the second Tuesday of January in odd years. It is composed of 24 Senators (21 Democrats and 3 Republicans in 1941) and 49 Representatives (40 Democrats and 9 Republicans).

New Mexico's fifteenth State Legislature convened January 14, 1941, and adjourned Apr. 12, 1941, this being the first Legislature to meet under provisions of a constitutional amendment providing for division of regular sessions into two thirty-day terms with a thirty-day interim. Out of 620 measures introduced 250 were enacted into law including the following, as summarized by Arie Poldervaart, State Librarian: an act establishing a Public Service Commission to regulate public utilities, a basic sciences act regulating all healing arts practiced within the State, an act authorizing construction of a capital annex (later invalidated by the Supreme Court), an act rearranging judicial districts of the State and providing for one additional district judge, an act creating a regulatory State dry cleaning board, an act authorizing group insurance for State employees, a new teachers' retirement act, acts abolishing the State's Merit System Commission and Legislative Reference Bureau, and numerous measures aiding national defense. Several constitutional amendments were proposed for submission to the electorate at the next general election, including one to re-divide regular sessions of the Legislature into terms of 20 days and 40 days respectively, and another designed to prevent legislators from holding other public office while serving as members of the Legislature, but increasing their rate of compensation as lawmakers.

Finances. Total tax collections in New Mexico for the fiscal year ending in June, 1941, were \$18,519,000 (1940: \$17,578,000). Total sales taxes amounted to \$10,403,000, including motor fuel, \$5,435,000, general sales, \$4,265,000. Taxes on specific

businesses ran to \$718,000, general and selective property, \$2,262,000, unemployment compensation, \$1,426,000. The net income taxes were \$577,000.

Cost payments for the operation of general government totaled \$15,330,000 in 1939, the latest year available. (Revenues for the general government for that year were \$24,306,000.) Cost of operation per capita was \$29.59. Total gross debt outstanding in 1941 was \$26,747,000, as compared with \$12,232,000 in 1932.

Officers and Judiciary. The Governor is John E. Miles (Dem.), inaugurated in January, 1941, for his second two-year term; Lieutenant Governor, Ceferino Quintana; Secretary of State, Jessie M. Gonzales; Attorney General, Edward P. Chase; State Treasurer, Rex French; State Auditor, E. D. Trujillo; State Comptroller, C. R. Sebastian. Chief Justice of the New Mexico Supreme Court is Howard L. Bickley; there are four associate members elected by popular vote for eight-year terms. See FLOODS.

NEW ORLEANS. See PORTS AND HARBORS; WATER WORKS.

NEW SOUTH WALES. See AUSTRALIA under *Area and Population*.

NEWSPAPERS AND MAGAZINES. Newspapers in the United States in 1941 continued the long time trend of recent years toward a smaller number of journals as steadily rising costs were accompanied by the prospect of reduced advertising volume. The full calendar year's figures of advertising lineage indicated a small margin over the total of 1941 but the consequences of the United States entrance into the war, and the effects of this action upon advertised consumer goods were being felt more and more in the last two months. Shortages and enforced priorities in various materials—zinc, for example—were beginning to give concern. Newspapers received a rating of A-10 in supplies not actually entering into the finished product itself—that is, upon supplies except paper and ink. Although there was no increase in the price of newspaper in the year, a rise of \$3 a ton, to \$53, for the second quarter of 1942 was announced. The \$50 a ton price had been in effect for more than four years. General operating costs were estimated to be from 2 to 12 per cent higher despite economies. A moderate number of newspapers, chiefly in cities of medium to small population, advanced their weekly subscription rates in an effort to add to revenue. Circulation of newspapers rose to a new all time peak, but few compensating increases were made in advertising rates.

In the news departments the impact of the nation's going to war threw added burdens upon the staffs, and editors and reporters who heretofore had felt the restrictions only of foreign censorship now inevitably were made subject to censorship in the United States. The year also was marked by several strikes in news and editorial departments.

The year ended with newspaper publishing not yet gravely affected by the war; but the swift changes which had come over other industries in this new total war effort left few in doubt that considerable readjustments were in prospect. The supply of newsprint had not yet been diminished, but fears were expressed that mills might be required to turn over part of their pulp production to meet shortages in other paper products. Publishers were warned to make every economy. Some newspapers in the far Northwest had difficulty with deliveries of newsprint owing to the scarcity of shipping, and it was believed by many that priorities might be

established on railroad freight shipments which would be felt on such bulk commodities as newsprint.

Cranston Williams, General Manager of the American Newspaper Publishers Association, warned publishers that "frills" faced curtailment, and that while essential supplies of newsprint, type-metal, and ink, were still available, color printing and photo-engraving materials probably would fall below requirements. The smaller publisher, it was agreed, would feel the effects of priorities, shortages, high taxes, and other problems with especial severity.

The total number of daily newspapers in the English language in the United States was 21 fewer than in the previous year. The annual compilation of *Editor and Publisher* showed these comparisons over a five-year period:

Year	Total	Morning	Evening	Sunday
1941	1,857	377	1,480	510
1940	1,878	380	1,498	525
1939	1,888	383	1,505	524
1938	1,936	398	1,538	523
1937	1,993	416	1,577	539

In Canada, the number of morning newspapers remained the same, 17; evening newspapers, with 77, showed a loss of one, and Sunday newspapers, with four, a loss of one.

The combined weekday circulation of all morning and evening newspapers, according to *Editor and Publisher*, was 42,080,391, of which 16,519,010 was of morning editions, and 25,561,381 of evening. The Sunday newspapers had a combined circulation of 33,435,575. The combined weekday circulation showed a gain of 948,780 and the Sunday of 1,064,483 over the 1940 total.

The compilation of daily newspapers in the N. W. Ayer & Son's annual *Directory* listed 1,974 in 1941, or 24 fewer than in the previous year. The discrepancy between these figures and those quoted above lies in the fact that the Ayer totals include college newspapers and a number of commercial newspapers. The number of newspapers of all kinds, including weeklies, was put at 13,204, a loss of 177 in the year.

Advertising volume in newspapers increased 3.5 per cent over 1940, based upon a measurement of all daily journals in 52 cities. The increase in December, however, was only 2.2 per cent, indicating a downward trend. All major classifications of advertising registered gains except automotive, but the pattern of advertising volume was by no means the same in all markets. Some communities in which large defense expenditures were made showed exceptional increases in retail and classified.

A year end survey by *Editor and Publisher* of a representative cross section of daily newspapers (103 morning, 146 evening, 142 Sunday) showed record breaking high circulations, gaining 2 per cent over 1940. The Sunday newspapers reported an increase of 4.29 per cent, morning 2.79 per cent and evening 1.26 per cent.

A survey of trends in newspaper publishing was issued by the Newsprint Association of Canada; some 70 per cent of the dominion's output is sold to the United States. Publishing costs, it was found, had steadily been rising "in the predominant item of personnel" and there had been a tendency toward rigidity of costs which aggravated the problem of diminishing revenues. The survey found a continuation of unfavorable trends noted in a previous survey in 1938, chiefly due to a decline in advertising revenues. The main causes attributed were a long time downward movement of total expenditures for advertising in the United States, and

an increasing diversion to other media, principally radio. The survey looked to a contraction of the activities of the press.

The newspaper press naturally was preoccupied with the task of covering the war and the enormous efforts of the United States to build its fighting force. The War Department issued a list of 115 accredited correspondents, as the newspapers laid plans to report the news of a conflict likely to be fought overseas in distant lands and presenting great difficulties in transmission of stories.

Problems of covering news in Europe and elsewhere abroad were increased greatly. Arrests and expulsions of correspondents were frequent. Italy compelled John T. Whitaker of the *Chicago Daily News* to leave that country, because the general tone of his dispatches was displeasing. The same newspaper recalled its Berlin correspondent because of the impossibility of sending "independent, analytical dispatches." Jay Allen, of the North American Newspaper Alliance was imprisoned by the Nazis in occupied France; Richard Hottelet of the United Press also was seized. Both Mr. Allen and Mr. Hottelet were later exchanged for three Germans under arrest in the United States for failing to register as alien propagandists. The outbreak of war between the United States and the Axis nations naturally compelled a complete revision of personnel in enemy or enemy controlled countries. Switzerland became an increasingly important central news post from which to cover European news. Stockholm also was important, but German pressure continually was applied to newspapers and correspondents in that country.

In a war of such swift movement, and in which the bombings from the air were so widespread, many correspondents were often in great personal danger. In Libya two correspondents, Harold Denny of *The New York Times* and Godfrey Anderson of the Associated Press, accredited to the British Army, were captured by the German and Italian forces. In Russia, after the Germans had begun their retreat, correspondents were permitted to go close to the combat lines to observe the results of the fighting. Probably the most spectacular personal exploits were those of correspondents on naval ships in action. Larry Allen, of the Associated Press, was on the British cruiser, *Galatea*, sunk in the Mediterranean, and was rescued from the water after nearly one hour. Other correspondents on ships went through lively bombing attacks; Mr. Denny flew in a British bomber over Tripoli and described the sharp anti-aircraft fire of the defenders.

Censorship and various controls of news in the United States were more strongly felt as the war developed. Under the operation of the lend-lease act the newspapers were asked by the government not to print news of the arrival or departure of any British warship entering port for supplies or repairs. This request generally was observed, but led to some confusion; news of the arrival of one British battleship in New York, for repairs, observed by thousands of persons, was printed by two of the local newspapers and omitted by others.

When the United States entered the war, censorship naturally was promptly established. Shipping and mails reports, and all weather forecasts except local, were eliminated. President Roosevelt appointed Byron Price, executive editor of the Associated Press as director of the Office of Censorship (q.v.), responsible directly to the President. The administration announced that the plan differed from the Committee of Public Information in the first World War; at that time all governmental in-

formation was handled by the Committee, except Army and Navy communiques. Mr. Price was instructed to approve releases arising from the usual sources, instead of preparing and issuing them. In general the effort was to decentralize censorship and afforded news reporters a greater measure of freedom. The control was to be partly mandatory, partly voluntary. President Roosevelt had asked the newspapers soon after the war not to endeavor to compile long casualty lists, which might give information to the enemy, but to confine publication to stories of local persons killed or wounded.

An interesting incident of the outbreak of hostilities was the arrangement for the exchange of American newspapermen in Axis countries for correspondents of those nations in the United States. Because it had been apparent for some time that war was likely, the matter had been the subject of discussion with the State Department beginning in February, 1941. The actual exchange had not been completed by the year end, but it was confidently expected that the 30 United States newspapermen in Axis nations would be allowed to leave with the diplomatic staffs.

There was a noticeable diminution in criticism of newspapers as compared with 1940 when President Roosevelt's victory in spite of the opposition of a large majority of the daily press had been the occasion for outspoken attacks. Newspapers, it had been said, represented the point of view of vested interests rather than of the people. The President's domestic policies continued to be criticized by most newspapers. Although the press had been divided upon the question of the administration's foreign policies, the Japanese attack upon Pearl Harbor ended all argument on the question of war.

A general tendency to charge the government with antagonism toward newspapers and with efforts to seize control of advertising was noted. The American Newspaper Publishers Association in a special bulletin listed a number of attacks by government bureaus upon the accuracy, truthfulness, and the economic value of advertising.

The Federal Communications Commission conducted an inquiry into radio stations wholly or partly owned by newspapers. The Commission listed 249 stations (somewhat less than one third of the total) as "newspaper owned or controlled." No definite findings had been issued as the year ended, but the annual report of the Commission said that the facts developed at the hearings might lead to a "general determination of . . . policy or of new legislation."

In their efforts to meet the problem of increasing costs, partly imposed by the Wage-hour Law, a number of newspapers, chiefly in medium-sized cities, eliminated generally unprofitable Saturday or Monday editions, and substituted Sunday editions. More than 300 of the 1,850 daily newspapers in the United States have no Saturday or Monday editions. As against this trend, such newspapers as the Charlotte, N.C. *News* and New Orleans *Item* dropped their Sunday editions. In several cities newspapers adopted joint publishing operations; in all instances mechanical operations were combined, but varying patterns were arranged with respect to business, advertising, and circulation departments. Some cities thus affected were Topeka, Kansas (the *Capital and State Journal*), Tulsa, Oklahoma (the *World and Tribune*); Sioux City, Iowa, (the *Journal and Tribune*); in this instance an evening paper was discontinued). In other cities mergers were consummated; in Minneapolis the two Sunday newspapers were combined, while the three dailies were continued, with joint plant operation of two;

in Lowell, Massachusetts, four newspapers became two, with the publishers of the *Sun* in control of both morning and evening journals; and in Sandusky, Ohio, two newspapers came under a single ownership as one paper was suspended. The most notable death in the ranks of daily newspapers was that of the *Boston Transcript*, after 111 years of publication. The Bridgeport, Conn., *Times Star* suspended after a career of 151 years. The Kansas City *Journal* was sold by the Doherty estate to Washington and Kansas City interests headed by Harry Newman; and the New Orleans *Item* was sold by James M. Thompson to Ralph Nicholson.

The most important addition to the ranks of daily journalism in the year was the Chicago *Sun*. Marshall Field, who was financing the evening tabloid, *P.M.*, in New York, entered the Chicago newspaper lists on December 4 with this rival to the powerful *Tribune*, sole survivor of a long list of morning newspapers in that city. Mr. Field's associate, as publisher, was Silliman Evans, publisher of the Nashville, Tenn., *Tennessean*. Incidentally, *P.M.* (a newspaper selling at 5 cents a copy and accepting no advertising) was declared by its publisher, Ralph Ingersoll, to be losing approximately \$22,000 a week, on a circulation of some 100,000; he said that the newspaper could break even on a circulation of 200,000. The eventual success or failure of this experiment in journalism was still in doubt as the year ended.

The trend toward dropping rotogravure picture sections was hastened when newspapers such as the *Washington Post*, *Dallas News* and *Omaha World Herald* announced that they would take this step. In December *The New York Times*, the first newspaper in the United States to issue a rotogravure picture section (in 1914), announced that it would discontinue this feature, consolidating it with the tabloid-size Magazine Section. For years advertising in newspaper rotogravure sections had been declining. Improvement in quality of printing of pictures in weekday editions, on ordinary newsprint, and the increase in use of such pictures, had left rotogravure reproduction relatively less to offer the reader. A new syndicated supplement in rotogravure, however, was launched in the year by the publishers of *P.M.*, in New York, and had been added as a Sunday section by several newspapers.

Important changes were made in a number of well known news agencies. Reuter's, foremost news distributing agency of the British Empire, came under the joint ownership of the Press Association, a company financed and controlled by the provincial newspapers of Great Britain, and the Newspaper Proprietors Association, representing the larger London journals. A proposal to nationalize the agency had wisely been rejected by the government, on the ground that such a step would destroy the news value of its reports. Havas, the French agency, was taken over by the Vichy Government in January, and became the "French Office of Information." Allegations were made that in South America this Vichy agency was not unfriendly to Axis interests.

The Associated Press in the United States branched out even more widely than before in the direction of supplying special news and features. In August it purchased the photographic service, "Wide World," from *The New York Times*, and in December the special news service was transferred to "Wide World" so that a greater amount of illustrated features could be supplied to members.

The Associated Press reported that it was now serving, directly or through its subsidiaries, 2,012 newspapers throughout the world, of which 1,264

were in the continental United States. The Associated Press spent \$11,179,535 on its news and supplemental services in 1940, of which \$2,453,155 was for domestic newsgathering and \$1,047,383 for foreign news, \$4,718,679 for distribution and communications, and \$4,200,455 for supplemental services. Robert McLean was reelected president of the Associated Press. Walter Dear, General Manager of the Jersey City *Journal*, was chosen president of the American Newspaper Publishers Association.

Three court decisions were rendered involving the issue of the freedom of the press. The Supreme Court in the case of the Los Angeles *Times* established the right of a newspaper to comment upon a case pending in the courts; in setting aside convictions in the lower courts, Justice Black said that they "produced restrictive results" and a censorship at the time when public interest in the matter discussed would be at its height. A minority, however, in a dissenting opinion read by Justice Frankfurter (joined by Chief Justice Stone, Justices Roberts and Byrnes) found it dangerous to permit a powerful metropolitan newspaper "to attempt to overawe a judge in a matter immediately pending before him" The St. Louis *Post Dispatch* was upheld by the Missouri Supreme Court in the right to criticize court decisions. The Mississippi Supreme Court also reversed an editor's conviction for contempt arising out of criticism of the courts. A case involving the right of the Wage and Hour division of the government to inspect the books of Easton, Pa., newspapers was won by the newspapers on a technicality, but the judge dismissed the freedom of the press argument raised by the defendants.

The Newspaper Guild reported at the end of the year that it now had contracts with approximately 160 newspapers. The most significant change in the Guild itself was the decision at the annual meeting in Detroit to elect the national officers by a nationwide referendum instead of by a vote at convention. In the subsequent referendum the ticket which had been put in the field by a group opposing the national officers was elected by large majorities. Milton Murray of Detroit was chosen president, and Sam Eubanks, of Oakland, California, vice president. Among the elections in newspaper offices won by the Guild in 1941 was that in *The New York Times*. Several strikes were called during the year; in one of them the newspaper, the Birmingham, Ala., *Post*, suspended publication for more than three months.

Foreign Papers. In the foreign field newspapers fell increasingly under government controls. The British press, operating under a war time censorship with respect to military news, continued to have the utmost freedom in criticizing the government and its policies. Facing a shortage of news print, the newspapers at the request of the government made a substantial reduction in size, and limited the number of copies printed. Newsprint had been pooled voluntarily by the newspapers and distributed so that all journals would have a supply in proportion to their shares of the total before the war. The London *Times* raised its single copy price from twopence to threepence; the management said that the cost of the paper was three times the price received from distributing agents. Advertising in most British newspapers was reduced to approximately one-half that of 1940, but this space was readily sold; many journals announced in the autumn that they were completely booked up for the first quarter of 1942.

The dictator-controlled countries continued to

hold the press in subjugation in their own and in occupied nations. In the Netherlands only 130 of a former total of 650 news periodicals were in existence. The strictest rules concerning what could and could not be printed were issued to the Dutch newspapers by the German authorities. The newspapers in occupied France were almost entirely servile. In unoccupied France the newspapers occasionally showed some measure of independence, and official censorship was lifted slightly in March. By government order, however, the price was increased to one franc a copy and this reduced circulation.

The wartime Prices and Trade Board in Canada "froze" the subscription prices of newspapers in the Dominion. New Zealand newspapers, only 50 per cent of the size of pre-war issues, were further curtailed. Brazil forbade publication of newspapers or magazines in any language except Portuguese; 17 German, 14 Italian, and 9 Japanese newspapers, as well as a large number in the English language were forced to suspend. Ecuador granted full censorship of the press to the president, and a pro-Nazi newspaper was first to be forbidden.

Japan ordered a drastic reorganization of the nation's newspapers in September as "public utilities charged with a national mission." Publication was to be only by license, and special qualifications were to be required in the selection of executives.

A notable change in the journalistic world was the retirement of Geoffrey Dawson from the editorship of the London *Times* after twenty-five years of service. He was succeeded by R. M. Barrington-Ward.

Magazines. Magazines reached higher circulations in 1941—twenty-one national magazines showed an average gain of 5.5 per cent over 1940—and it seemed likely that the increases in subscription prices initiated by some as the year ended in an effort to meet rising costs of production would be extended. The *Ladies Home Journal* established a single copy price of 15 cents, instead of 10, and an annual subscription rate of \$1.50, instead of \$1. The *Saturday Evening Post* also raised its prices to readers, and both increased advertising rates. Several publishers announced that advertising contract rates would be guaranteed only for three months, in place of the customary annual contracts.

Readers Digest, with a circulation of 5,000,000 copies (in addition to 200,000 of its English edition, and 380,000 for its Spanish language edition) again reached a new all-time high for any publication. *Colliers*, at 2,909,794, and the *Ladies Home Journal* at 4,100,000 for the second six months of the year, reported new peaks.

The N. W. Ayer & Son's compilation of magazine publishing statistics showed a total of 6,709 periodicals in 1941, a gain of 241 over the previous year, chiefly in the weekly field. Advertising in the group classed as "general" showed a slight loss, and in the women's group a gain of 4.1 per cent.

Advertising in magazines showed only a 1 per cent gain over 1940, the natural consequence of the dislocation of consumer goods production, and the hesitation of advertisers to promote merchandise which might not be available to purchasers. Difficulties in obtaining certain colors in inks were feared by printing experts, and the shortage of chlorine was expected to change the paper color from white to darker shades.

A number of new magazines devoted to international affairs commenced publication. A monthly, *The Free World*, inaugurated to promote discussion of "World affairs and democracy" enlisted the

aid of a distinguished group of intellectual leaders of many countries. Belgian patriots in exile in the United States undertook the publication of a periodical, *Belgium, The Cultural Review*, and *The Bridge*, edited for child refugees in the United States; *Christianity and Crisis*, *The Far Eastern Quarterly*, *Salute*, published by the British War Relief Society, also were new. The Parents Magazine Press added *Calling All Girls* to its list. *Punch*, the British weekly, celebrated its 100th anniversary. See CENSORSHIP, OFFICE OF; COORDINATOR OF INTER-AMERICAN AFFAIRS; FACTS AND FIGURES, OFFICE OF; FRENCH LITERATURE; GERMAN LITERATURE; ITALIAN LITERATURE; PULITZER PRIZES. CHARLES MCD. PUCKETTE.

NEW YORK. A middle Atlantic State. Area: 49,576 sq. mi., including 1,647 sq. mi. of inland water, but excluding parts of Lake Erie, 594 sq. mi.; Lake Ontario, 3,033 sq. mi.; Long Island Sound, 726 sq. mi.; and New York Harbor, 23 sq. mi. Population: (1940 census) 13,479,142. The urban population comprises 82.8 per cent of the total (U.S. average, 56.5 per cent); non-white population, 4.5 per cent (U.S. average, 10.2); elderly (65 years and over), 6.8 per cent. New York ranks 29th among the States in area, first in population, and fifth in density, with an average of 281.2 persons per square mile. The capital is Albany with 130,577 inhabitants; largest city, New York, 7,454,995. There are 62 counties and 70 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Ernest E. Cole, Commissioner of Education, there were 2,255,508 pupils enrolled in the public schools of New York during the school year 1939-40, 1,469,913 in elementary schools and 705,042 in secondary schools. Teachers numbered 80,553 and received (exclusive of New York City) an annual average salary of \$1,850. Total expenditures for the year were \$357,637,229.

Transportation. State highway mileage in 1939, including streets under State control, totaled 14,011, of which 12,719 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 2,778,312; 2,399,496 were private and commercial automobiles, 7,757 busses, and 335,761 trucks and tractor trucks. Gross motor-fuel consumption was 1,970,555,000 gallons. Net motor-fuel tax receipts were \$73,116,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$55,944,000.

Railways of all classes extended 7,786 miles (Dec. 31, 1939), 3.31 per cent of the total mileage in the United States. Class I steam railways (4,422 miles) reported 29,669,232 tons of revenue freight originating in New York in 1940 and 67,865,727 tons terminating in New York. There are 94 airports and landing fields in the State (23 lighted fields) and 51 seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 1,624 civil aircraft in the State and 5,765 airline transport, commercial, and private pilots (4,400 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 6,527,200, as compared with 6,491,200 acres in 1940. According to the latest census, there are 153,238 farms, valued at \$947,073,893, averaging 112.1 acres each. Farm population numbered 703,606 or 5.2 per cent of the total. Leading crops with production in 1941 were: Hay, \$59,475,000, 4,230,000 tons; commercial truck

crops, \$28,481,000; corn \$24,066,000, 27,040,000 bu.; potatoes, \$22,971,000, 27,676,000 bu.; apples, \$14,508,000, 16,120,000 bu.; oats, \$13,082,000, 25,650,000 bu.; dry beans, \$8,004,000, 1,453,000 bags, wheat, \$6,106,000, 6,642,000 bu.

Manufacturing. The total value of manufactured products, according to the latest census (for the year 1939) was \$7,134,400,147. For details, see 1940 YEAR BOOK.

Mineral Production. Leading products are: Pig iron, 3,206,162 net tons valued at \$54,150,107 in 1940 (2,475,450 net tons, \$45,275,716 in 1939); coke, 5,080,403 net tons in 1940 (4,468,437 net tons valued at \$25,526,646 in 1939); ferro-alloys, 163,308 long tons valued at \$18,388,766 in 1939; natural gas, 29,222,000 M cubic feet valued at \$15,201,000 in 1939, petroleum, 4,999,000 bbl. in 1940 (5,098,000 bbl. valued at \$10,650,000 in 1939); stone, 9,782,120 short tons valued at \$10,398,401 (10,703,690 short tons, \$10,111,032); cement, 8,251,038 bbl., \$11,687,089 (6,853,796 bbl., \$9,866,102); sand and gravel, 13,225,133 short tons, \$7,639,668 (12,608,128 short tons, \$7,050,104); salt, 2,117,671 short tons, \$6,523,775 (2,041,492 short tons, \$5,855,422). Clay products (other than pottery and refractories) were valued at \$6,883,109 in 1939. The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was \$78,383,851. (Duplications are eliminated in State totals, e.g. coke, ferro-alloys, and pig iron are omitted whereas iron ore is included.) New York ranks 14th among mineral producing States with 1.85 per cent of the Nation's total value of production.

Trade. According to the 1940 census there were 30,389 wholesale establishments in New York, employing 292,807 persons, reporting net sales for 1939 of \$14,508,479,000 and annual pay roll of \$632,525,000. There were 209,425 retail stores with 567,150 employees, reporting sales of \$5,578,159,000 and pay roll of \$660,093,000. Service establishments numbered 92,900, employing 177,285 persons for \$225,816,000 per year, and reporting a business volume amounting to \$665,540,000. The leading business center of the State is New York which reported wholesale sales of \$12,954,252,000, retail sales of \$3,192,594,000, and \$518,130,000 receipts for its service establishments. Buffalo reported sales of \$450,270,000 wholesale and \$250,311,000 retail; Rochester, \$78,227,000 and \$169,967,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in New York was \$319,172,000. Under the Social Security program, financed by Federal funds matching State grants, 121,496 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$24.72 (U.S. average pension, \$21.08); 65,242 dependent children in 33,203 families received average monthly payments of \$46.04 per family (U.S. average, \$32.73); and 2,845 blind persons received \$25.72 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 199,949 and received \$36.21 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 7,965 (\$528,000); NYA student work program, 42,701 (\$306,000); NYA out-of-school work program, 30,754 (\$780,000); WPA, 101,919 (\$7,144,000); other Federal emergency projects, 882 (\$153,000); regular Federal construction projects, 30,901 (\$4,598,-

000). The Farm Security Administration certified subsistence payments totaling \$7,000 for the month to 218 cases.

Legislation. The Legislature convenes in regular session on Wednesday after the first Monday of January annually. It is composed of 51 Senators (21 Democrats and 30 Republicans in 1941) and 150 Representatives (62 Democrats, 87 Republicans, and one American Laborite).

The 1941 session of the Legislature adjourned April 4 after passing 1,333 bills, 955 of which were signed and became law. The following summary of "Highlights of the Session" appeared in the *New York Times* of April 4, 1941, and is reprinted with special permission.

General Adoption for the second time, for submission to the people in the Fall, of the Stephens constitutional amendment transferring \$60,000,000 of grade-crossing elimination bonds to highway and parkway purposes, coupled with the Stephens bill allocating \$30,000,000 of this money for parkways, mostly in the metropolitan area.

Enactment of the Williamson bills permitting Westchester to set up a parkway authority, continuing tolls on the Fleetwood Viaduct for twelve years instead of five, and letting the county keep toll moneys on other parkways which were left in its hands after the tolls were ruled illegal.

Creation of a Bureau of Commerce to promote business in the State.

Enactment of the Ives bill for creation of boards of inquiry in labor disputes.

Passage of the Wicks bill to limit the effect of a strike by the Transport Workers Union in New York City, if not actually to bar such a strike.

Continuation of the mortgage Moratorium for another year, with a mild tapering off starting in October of 1942.

Passage of two bills reducing the interest rate on small loans, letting Governor Lehman decide which one to sign.

Adoption of the Morgan bill barring unemployment-insurance benefits to those who voluntarily quit the labor market.

Adoption of the Hastings bill permitting old-age assistance to non-citizens, thus removing 15,000 persons from home relief rolls.

Enactment of the Armstrong bill permitting persons on relief to accept part-time employment, with appropriate deductions for the amount so earned.

Killing of various bills designed to bar Communists and other subversive elements from the ballot.

Creation of a legislative commission to prepare a re-appointment plan for adoption next year.

Continuation of the Rapp-Coudert School Investigating Committee.

Enactment of the Mitchell Urban Redevelopment bill, designed to foster limited-dividend housing projects in the medium-rental scale, giving private groups a right of condemnation in certain circumstances.

Adoption of the Andrews bill stating in the statute law the constitutional provisions against racial discrimination.

Adoption of a constitutional amendment, to be submitted to the people for ratification this Fall, fixing the term of State Senators at four years, instead of two.

Defeat of Governor Lehman's proposal for a \$50,000,000 bond issue for State institutions, particularly for Manhattan State Hospital.

Defense Enactment of measures designed to protect trainees and National Guardsmen inducted into Federal service, as to civil liabilities, insurance, pensions, etc.

Creation of the State Defense Council as a statutory body and authorization for local defense councils.

Enactment of an explosives-control law.

Appropriation of \$600,000 for a vocational educational program.

Enactment of a defense housing law putting State credit behind city-sponsored projects for defense workers.

Prohibition against discrimination in defense industries.

Enactment of a police mobilization bill.

Financial Adoption of a budget totaling, with the supplemental budget, about \$383,500,000, with about \$2,500,000 more to be spent outside the budget, making appropriations in effect total \$386,000,000, as compared with \$394,000,000 last year.

Dropping of the 1 per cent emergency income tax so that it will not be collected next year on this year's incomes.

Ending of double taxation of odd-lot transactions on the Stock Exchange (see below).

Provision for collection of the regular income tax in four quarterly installments, starting in 1944.

Adoption, with a second enactment necessary in 1943, of the Moffat proposal for a tax reserve system to tide the State through lean fiscal periods.

Seizure by the State of \$7,300,000 in unclaimed con-

demnation awards, with half left to New York City for reduction of the burden on real estate, and the other half going for capital improvements for the State itself.

Enactment of a measure permitting cities to make their first installment payment on serial bonds eighteen months after issue, instead of a year.

New York City Adoption of a financial plan for the city dividing up a \$25,000,000 relief surplus with benefit to real estate, general business, and Mayor La Guardia's budget problem, coupled with reenactment of the business turnover tax at half its present rate.

Adoption of the Moffat bill giving the city a higher debt limit of \$40,000,000 for the purchase of subway equipment.

Adoption of the Steingut bill validating the leasing of 250 buses in Brooklyn.

Defeat of Coudert bills reducing the mandatory retirement age of teachers from 70 to 65.

Enactment of three Coudert bills giving the city the right to appoint receivers of taxes for delinquent property, instead of forcing the sale of such properties.

Adoption of a codification of the rapid-transit law, prepared by Reuben A. Lazarus, the city's legislative representative.

When the session ended, 1,106 bills were left in the hands of Governor Lehman for signature. Claiming that the Legislature's total enactments would unbalance the budget by some \$25,000,000, he vetoed a number of measures affecting State finances, including the Coudert bill to eliminate double taxation of odd-lot transactions on the Stock Exchange, a bill dealing with the use of stock transfer stamps, and four bills transferring to localities fees estimated at \$720,000. A record total of 378 bills was vetoed for the entire legislative session.

Four measures were submitted to a vote of the people in 1941. Only one was defeated—a proposal to increase the term of State senators from two to four years. A measure was adopted permitting the transfer of funds (limited to \$60,000,000) from bond issues authorized for grade-crossing elimination, to be used for State highways and parkways. An unusual amendment permitted construction of twenty miles of ski trails on White Face Mountain, Essex County.

Finances. Total tax collections in New York for the fiscal year ending in June, 1941, were \$614,837,000 (1940. \$587,735,000). Total sales taxes amounted to \$137,736,000, including motor fuel, \$75,381,000, alcoholic beverage, \$38,269,000, tobacco products, \$23,846,000. Taxes on specific businesses ran to \$73,750,000, general and selective property (1940), \$2,977,000, betting, \$6,565,000, inheritance, estate, and gift, \$27,668,000, unemployment compensation, \$130,463,000. The net income taxes were \$174,382,000.

Cost payments for the operation of general government totaled \$465,187,000 in 1939, the latest year available. (Revenues for the general government for that year were \$585,916,000.) Cost of operation per capita was \$34.83. Total gross debt outstanding in 1941 was \$751,757,000, as compared with \$579,864,000 in 1932.

Officers and Judiciary. The Governor is Herbert H. Lehman (Dem.), inaugurated in January, 1939, for his fourth 4-year term; Lieutenant Governor, Charles Poletti, Secretary of State, Michael F. Walsh; Attorney General, John J. Bennett, Jr.; Division of Treasury, Frank S. Harris. Chief Justice of the New York Court of Appeals is Irving Lehman; there are six associate members elected by popular vote for 14-year terms. See FLOOD CONTROL; INSURANCE.

NEW YORK CITY. See ART; COMMUNISM; DAMS; FASHION EVENTS; MUSIC; PORTS AND HARBORS; RAPID TRANSIT; SEWERAGE AND SEWAGE DISPOSAL; SOCIALISM; TUNNELS; UNITED STATES under *Civil Liberties*. For aquarium, see ZOOLOGY.

NEW ZEALAND. A British Dominion in the South Pacific Ocean; principally two islands about 1,200 miles east of the southeastern coast of Australia. The Dominion has jurisdiction over Western Samoa (see SAMOA), the Union Islands (including Tokelau), and some other islands of Oceania; also over the Ross Dependency, a part of the Antarctic Zone. Capital, Wellington.

Area and Population. New Zealand proper has an area of 103,722 square miles; of this, North Island has 44,281 and South Island 58,092. Union Islands: area, 4 square miles; population, 1,176. The Ross Dependency has no reported definite area or resident population. New Zealand, by estimate for 1939, had 1,626,486 inhabitants, including 88,997 Maoris (aborigines of Polynesian race). By census of 1936 the population numbered 1,573,810: on the North Island, 1,018,036; South Island, 554,455. Totals of 1936 included 1,484,528 of European origin, 82,326 Maoris and half-castes, and 2,899 Chinese. Estimated populations of the chief cities on Apr. 1, 1940, were: Auckland, 222,900; Wellington, 162,800; Christchurch, 135,500; Dunedin, 82,700; Invercargill, 26,400; Wanganui, 26,100; Palmerston North, 25,500. The birth rate rose steadily from 17.4 per 1,000 in 1935 to 22.6 in 1940; the death rate was 8.7 in 1935 and 9.7 per 1,000 in 1940. Immigration in year ended Mar. 31, 1940, 31,432; emigration, 25,404.

Education and Religion. Primary education is free and compulsory. As of Jan. 1, 1940, there were 2,230 public primary schools, with 205,066 pupils; 304 private primary schools, with 28,280 pupils; 145 native village schools, with 10,193 pupils, 169 public and 60 private secondary schools, with a total of 37,437 students; the University of New Zealand (with units in Dunedin, Christchurch, Auckland, and Wellington), with 5,979 students; and various special and vocational schools. According to the 1936 census, 40.28 per cent of the population belonged to the Church of England, 24.66 per cent were Presbyterians, 13.09 per cent Roman Catholics, and 8.11 per cent Methodists.

Production. The economic system rests upon the production of agricultural and animal products for export, but manufacturing is rapidly expanding. Cattle in 1941 numbered 4,540,000 (1,855,000 dairy cows). Other livestock in 1940: 31,050,850 sheep, 27,581 horses, 714,000 swine. Meat production during 1940 totaled 502,500 tons (beef, 177,000; mutton and lamb, 288,000, pork, 37,500). Of this total, 334,500 tons were exported and 168,000 tons consumed in New Zealand. Wool exports in 1940 amounted to 890,738 bales (822,508 in 1939); butter and cheese, 2,637,683 cwt. (of 112 lb.). Crop yields for the year ended June 30, 1941, were: Wheat, 10,000,000 bu.; oats, 2,700,000 bu.; barley, 1,100,000 bu. War conditions produced a marked expansion of cereal and flax production. The coal output in 1940 was 2,516,099 long tons; gold, about 6,100 kilograms. During the year ended Mar. 31, 1940, there were 6,342 manufacturing establishments in operation; they employed 108,722 persons and the value of their production was £NZ44,120,000, an increase of 12.8 per cent over 1938-39. In the five years ending in August, 1941, a total of 1,072 new factories, valued at \$35,000,000, were established.

Foreign Trade. For the calendar year 1940, imports into New Zealand were valued (in New Zealand currency) at £48,998,000; exports, £73,741,000. The United Kingdom sent £23,108,000 of the imports and took £64,146,000 of the exports; Australia sent £8,227,000 and took £2,166,000; the United States sent £5,885,000 and took £2,826,-

000. The year's exports of wool were valued at £16,875,000; meat, £20,114,000; butter and cheese, £18,228,000.

Finance. Actual ordinary budget returns (excluding war, social security, and public works accounts) for the fiscal year ended Mar. 31, 1941, showed revenues of £NZ40,438,000 and expenditures of £NZ38,712,000. War expenditures during 1940-41 totaled about £NZ37,500,000; social security (excluding administration expenses), £NZ12,193,949. The public debt on Mar. 31, 1940, was £NZ322,908,000. The average exchange value of the New Zealand pound was \$3.5482 in 1939, \$3.0638 in 1940.

Transportation. On Mar. 31, 1940, there were 3,390 miles of state railways and 198 miles of private lines. Gross earnings of the state lines in 1940-41 were about £NZ11,000,000; net earnings, £NZ1,189,031. In 1939-40 passengers on state lines numbered 24,454,014; freight, 7,673,950 tons. Highways extended 87,760 miles (see ROADS AND STREETS). Internal air lines covered 1,887 miles of routes (1939) and in 1940 air connections were established with the United States via Hawaii. There is also a line to Australia. In 1939, 644 vessels of 2,974,833 tons entered New Zealand ports in the overseas trade.

Government. Executive power is exercised by a Governor General, appointed by the Crown for five years on recommendation of the Dominion Government. Legislative power rests with the Governor General and a Parliament of two chambers—the Legislative Council of 36 members appointed by the Governor General for seven years, and the House of Representatives of 80 members, elected by general male and female suffrage for three years. Sir Cyril L. N. Newall, former Chief of Staff of the Royal Air Force, was appointed Governor General Oct. 4, 1940, and was sworn in Feb. 22, 1941.

HISTORY

War with Japan. The entrance of Japan into the World War on December 8 (Auckland time) confronted New Zealand with imminent danger of invasion. The crisis, long anticipated, was met calmly and resolutely by a forewarned and fully prepared nation. The New Zealand Cabinet declared that a state of war existed with Japan as of 11 a.m. December 8. Fully matured plans were placed in effect for full mobilization of defense forces and for placing the country on a complete war footing. There was a further drastic cut in the gasoline ration. Privately owned cars and trucks were commandeered to permit complete motorization of home defense forces. Completion of mobilization by all expeditionary and home defense units was ordered by Jan. 10, 1942. Trained civil defense services were placed on an emergency basis.

War Preparations. In anticipation of the crisis, the Government pressed vigorously forward throughout 1941 with an ambitious program for strengthening the armed forces. At the end of October, it was announced that one-fifth of the entire population was enrolled in defense services of one kind or another. There were 80,000 men in the active armed forces, 138,000 in home military defense units, and 95,000 in civil defense organizations. The navy personnel totaled 4,000, the air force abroad 4,300, and the total aviation personnel at home and abroad 13,500. The home army had 35,500 first-line troops.

The drafting of men for military service abroad and for home defense training under the 1940 conscription law was speeded up early in 1941. Prime Minister Fraser announced March 6 that the air

training program was operating at the planned maximum capacity. A series of national preparedness parades in the principal cities spurred war training. Extensive war games were held in May to test plans for repelling invasion. The enrollment of all married men in the 18-45 age group for military service was ordered June 17 after the setback in Greece; those in the 21-40 age group were liable to foreign service. On August 1 the Government announced that the Home Guard would be placed under army control. An Air Training Corps to give boys preliminary air training was established. On September 21 the Government ordered mobilization of one-sixth of the home defense force for the duration of the war. The last of the men available for training in the home army were called up early in October.

Establishment of an army staff college was announced October 10. On October 27 a motor transport reserve was created. A new regional home defense system was placed in effect November 15. Coincidentally the Home Defense Minister announced the conversion of mounted infantry and motor regiments of the Home Army into regiments equipped with armored vehicles.

War industries were rapidly expanded and coordinated with the Empire armament production program. A new munitions factory completed in March made New Zealand self-sufficient in small arms and ammunition. The Government recruited women for service in defense factories. Products of these plants included Bren gun carriers, trench mortars, explosive and smoke bombs, steel helmets, and tanks. A Controller of Munitions was appointed May 4 to speed up arms production. Early in November the Government announced acceptance of a "huge" British contract for shell fuses. Shipbuilding facilities were enlarged for the construction of numerous mine sweepers.

Meanwhile the Government sought to coordinate its defense preparations with those of Australia, the British Far Eastern command at Singapore, the Netherlands East Indies, and the United States (see AUSTRALIA under *History*). In line with this policy, an exchange of Ministers with Washington was agreed upon in February and carried into effect in December. Walter Nash, Deputy Prime Minister and Minister of Finance, was named New Zealand's first Minister to the United States. In May Minister of Lands F. Langstone was sent to America to initiate trade negotiations. In particular the Dominion sought an outlet in the United States for its surplus butter, cheese, and meat and authority to purchase American arms.

Ratifications of a treaty for the peaceful settlement of United States-New Zealand disputes were exchanged August 13. Arriving in Washington August 25 on his way home from a lengthy visit to Britain, Prime Minister Peter Fraser spent two weeks in Washington seeking aid for New Zealand under the lend-lease program and closer cooperation in the political and economic fields. From June 20 to mid-August, the Prime Minister was in London, where he went on invitation of Prime Minister Churchill to confer on war plans.

Economic Measures. Far reaching measures were required to adjust the Dominion's export economy to war conditions, particularly the growing shortage of shipping facilities. On February 9 the Government undertook to guarantee payment for all meat produced for export, regardless of the amount actually taken by the British Government. Expanded storage facilities enabled the Government to hold in reserve export stocks of food for which shipping was not available.

The sinking of some 25 per cent of the refrigerator ships normally engaged in carrying New Zealand meat and dairy products to Great Britain caused serious difficulties during the second quarter of the year. But this crisis was relieved by the large-scale development of meat canning, an extensive switch in production to cheese instead of meat, the use of ordinary freighters instead of refrigerator ships for exporting meat and dairy products, and increased British purchases of cheese, bacon, etc. Strict Government control was established over all shipping space and in all departments of foreign trade.

Other economic measures taken during the year included the abandonment of the 40-hour week in favor of longer hours in war industries, restrictions on price rises, the conservation of electric power for war purposes at the expense of peace-time services, and expansion of flax production at the request of the British Government. The carrying out of these and other related measures was facilitated by the fact that extensive government control over the economic system had been established prior to the outbreak of war. The financing of the war through March, 1942, was assured through the subscription of a £10,000,000 war loan in September.

Political Developments. Two contradictory political trends made themselves evident during the year. There was a growing public demand for an end to partisan politics as an aid to national unity and to successful prosecution of the war. On the other hand elements opposed to the Labor Government's socialistic program were alarmed by the rapid extension of Government control over the Dominion's economy under the stimulus of war. This led in February to the absorption of several small Opposition groups by the Nationalist party, which held about one-third of the seats in the House of Representatives. The Opposition attacked the Government because of its refusal to form an all-party coalition Cabinet for the duration of the war; its resistance to the demand of industrialists, farmers, and others for abandonment of the 40-hour week in industry; and its insistence upon maintaining and extending social services during the crisis. The Opposition leader, Sidney Holland, demanded a greater war effort, the restoration of personal liberty, and an end to further socialistic encroachments.

In April the Government agreed to drop the 40-hour week in war industries, and the annual policy conference of the Labor party recorded its determination to throw every effort into the winning of the war. Prime Minister Fraser on April 16 told the conference that Labor would forfeit the confidence of the people if it did not place war needs ahead of social advancement. However, the radical minority wing of the Labor movement rejected this policy in favor of immediate nationalization of the banks and other socialistic measures. The sweeping defeat administered Labor candidates in the local elections in May—the worst setback in 20 years—was believed to indicate public dissatisfaction with radical influences within the party.

Following the British defeat in Crete the Government acquiesced in further extensions of the working week. Results of a hard-fought by-election in the Waitemata district on July 21 were disputed, with both sides claiming victory. After consulting Opposition leaders, Prime Minister Fraser on October 15 announced that the general election due to be held that month had been postponed for one year because of the increasingly grave international situation.

The Government on July 15 announced its cor-

dial approval of the Anglo-Russian mutual assistance pact. However it did not welcome the resurgence of the New Zealand Communist party, which although not illegal had worked under cover previous to Russia's entry into the war. In September the Communists announced that they would contest three seats in Wellington in the next general election.

Medical Insurance. The Government also ran into difficulties in its efforts to inaugurate national free medical care. It put into effect on March 1 a scheme under which any New Zealander was made eligible for free medical treatment by obtaining a registration card. A patient could take the card to any doctor of his choice, and the doctor was to receive the equivalent of \$3.50 for each patient treated during a year upon presenting the card to local health officials. Doctors were required to provide suitable accommodations for surgery and to visit patients unable to go to their offices.

The doctors were virtually unanimous in refusing to cooperate with the Government on this basis. The Government then made repeated efforts to put the scheme into operation in revised form. Most of the registered druggists agreed to accept payment from the State for all doctors' prescriptions made up by them. Some of the fraternal and other free societies were induced to accept the Government's offer of free medical services for their members. Again the doctors refused to cooperate. The House of Representatives on October 4 then passed a new measure under which doctors could collect their fees direct from patients instead of from the State. The patient was then to collect the equivalent of his doctor's fee from the State Security Fund. However the legal right of doctors to collect unpaid fees through the courts was withdrawn. This latter feature of the plan aroused further protest from the medical profession. Nevertheless the new program went into effect November 1 with most of the physicians cooperating.

See **ARCHAEOLOGY, BIRTH CONTROL; CHEMISTRY, INDUSTRIAL, JAPAN under History; LEND-LEASE ADMINISTRATION; LIVESTOCK, NEWSPAPERS AND MAGAZINES; SOCIALISM.**

NICARAGUA. The largest in area of the Central American republics. Capital, Managua.

Area and Population. Area, 49,500 square miles; estimated population in 1940, 1,133,572. Chief cities (1938 estimates): Managua, 70,000, León, 32,669; Granada, 21,172, Masaya, 15,000; Matagalpa, 5,200. The people are mainly of Spanish, Indian, or mixed blood, but there is a considerable infusion of West Indian Negroes on the east coast.

Defense. The National Guard had an active personnel of 3,474 as of Nov. 1, 1940. The navy comprises a small number of coastal patrol boats. A new military academy was established in 1940 with a United States army officer as director.

Education and Religion. About 60 per cent of all adults are illiterate. In 1938 there were 630 State primary schools, 2 normal, 13 private secondary, 5 professional, and various other schools, with an enrollment of about 49,000, besides three universities. Primary school teachers in 1941 numbered 1,294. There was a 30 per cent increase in the education budget in 1940-41 over the preceding year. Roman Catholicism is the prevailing religion but other faiths have religious freedom.

Production. Agriculture, cattle raising, gold mining, lumbering, and manufacturing for local consumption are the chief occupations. The value of gold exports increased from \$849,000 in 1937 to \$5,758,000 in 1940, accounting for 60.6 per cent of all

1940 exports. Coffee was the leading export product prior to 1939, shipments in 1940 totaled 33,650,000 lb., valued at \$2,094,000 (22.1 per cent of all exports). Banana exports amounted to 1,156,000 stems worth \$446,000 in 1940. Beans, rice, corn, and sugar are the leading food crops; plantains, rice, yucca, tobacco, and cacao also are grown. Sugar refining is the chief manufacturing industry. There are numerous coffee-cleaning mills.

Foreign Trade. Imports in 1940 totaled \$7,052,486 and exports \$9,494,142, resulting in the largest export balance since 1926. The 1939 figures were: Imports, \$6,364,891, exports, \$8,300,972. Gold, coffee, bananas, and lumber, in the order named, were the principal 1940 exports (see *Production*). The United States supplied 84 per cent of the 1940 imports (68.4 per cent in 1939) and took 94.2 per cent of the exports (77.5 in 1939).

Finance. Budget estimates increased from 6,340,000 cordobas in 1937-38 to 20,281,429 in 1939-40 and 25,530,219 in 1940-41. The President in his message to Congress of Apr. 20, 1941, stated that the Treasury closed every fiscal year of this period with a surplus. The public debt rose from 18,529,633 cordobas on Jan. 31, 1940, to 22,011,770 cordobas on Jan. 31, 1941. The latter figure represented bonds in pounds sterling, dollars, and cordobas as follows: £434,547, \$2,018,645, and 3,140,700 cordobas. The dollar debt included \$1,140,000 of used credits out of \$4,500,000 of loans made available by the Export-Import Bank of Washington, D.C. Official exchange rate of the cordoba, \$0.20 in 1939 and 1940, average curb rate, \$0.1869 in 1939 and \$0.1572 in 1940.

Transportation. Nicaragua in 1940 had 227 miles of nationalized railways in operation and a few miles of privately owned track, a steamboat service on Lake Nicaragua, 1,882 miles of highways (595 miles surfaced), and Pan American Airways and five local air services. Freight carried by air in 1940 was 15,322,342 lb. The chief ports are Cornito and San Juan del Sur on the Pacific and Bluefields, Cabo Gracias, Puerto Cabezas, and San Juan del Norte on the Caribbean.

Government. The Constitution of Mar. 22, 1939, vested executive powers in a President elected for eight years and legislative powers in a parliament of two chambers—a Senate of 15 elected members with all ex-Presidents serving *ex officio*, and a Chamber of Deputies of 42 elected members. The terms of Senators and Deputies is six years. President in 1941, Gen. Anastasio Somoza. He assumed office Jan. 1, 1937, for a four-year term, was re-elected by a Constituent Assembly Mar. 23, 1939, and inaugurated for an eight-year term Mar. 30, 1939.

History. President Somoza gave the Nicaraguan Government's full and prompt support to the United States at the outset of the latter's conflict with Japan, Germany, and Italy. He followed a consistently partial line of conduct to the United States in 1941, throughout the developments prior to American belligerency. On December 11 Nicaragua itself declared war on Japan, Germany, and Italy; on December 20, likewise on Rumania, Hungary, and Bulgaria.

As early as February 1 Somoza, speaking for publication, invited the United States to establish naval and air bases on the Nicaraguan coasts and offered full support to United States policies. Foreigners living in Nicaragua were ordered, January 26, to register within 30 days. In addressing the convening Congress, April 11, Somoza declared that cooperation with the United States would continue. On May 6 a reputed leader of a Nazi move-

ment in Managua, having made threats of what the country might expect for antagonizing German power, was seized and held for deportation. A Presidential decree of May 9 required special permission for exportation of war materials, thus tending to exclude other buyers in the United States' favor. The journal *Estrella de Managua*, said to be blacklisted by the United States, was suspended, August 16; resuming later, it gave up publication in December. Ex-President Arias of Panama, who had been ousted from that country after causing trouble to the U.S. Government, was refused permission October 22, to leave Managua, to which he had withdrawn. On November 13 Somoza expressed his readiness to help the United States, at 24 hours' notice, with 10,000 Nicaraguan troops and all military facilities.

Nicaragua at the same time gained many advantages from its close cooperation with the United States. The loss of other commercial contact, stopped by war, reduced external trade, but trade with the United States largely offset the reduction and came to constitute 96 per cent of Nicaraguan exports and 92 of imports for the first quarter of 1941. An additional loan of \$2,000,000 made by the U.S. Export-Import Bank in March assured the continuation of work on Nicaragua's intended hard-surfaced highway between Managua and the Atlantic coast.

Political conditions in the country held stable throughout the year, despite the incentive for antagonistic powers' agents to disturb them. Somoza continued as economic dictator, his sway over the country's economy being prolonged by the Congress in September for a third year. The budget for 1941-42 provided for a rise of 10 per cent in the pay of the Government's servants. A military school of aviation and a Central University were opened at Managua, September 15, as part of Somoza's plans for improving education. The country was studied during the year, for interests in the United States, as to its fitness for the cultivation of rubber trees and of abaca.

See FINLAND under *History*, GEOLOGICAL SURVEY; MOTOR VEHICLES, PAN AMERICANISM, PAN AMERICAN UNION.

NICKEL. The United States gets its nickel entirely from foreign imports, consumed two-thirds of the world's supply in 1941 and could have used more. Of the available supply 90 per cent plus went into high priority war orders. It was put under mandatory priority control in May, 1941. The war program took 63 per cent of the available supply as an alloy for toughening steel and this one use is expected to devour more and more with the planned expansion of electric furnace capacity.

The 1940 consumption was 170,000 tons. The 1941 imports totaled about 93,000 tons, of which 3,000 tons were taken from secondary sources. Of this total 90 per cent came from Canada, 5 per cent from New Caledonia. Domestic production includes only very small quantities of secondary metals taken from scrap-nickel anodes, nickel-silver, and copper-nickel alloys and insignificant amounts of primary metal recovered in copper refining.

The gravity of the nickel shortage became definitely apparent with the supply coming in at the rate of about 7,500 tons a month and the United States consuming about 10,000 tons a month. The available supply for 1942 was estimated at 110,000 tons. This figure does not include nickel to be recovered from scrap. In January, 1942, the Federal government passed a bill changing the content of U.S. 5¢ pieces from $\frac{1}{4}$ nickel, $\frac{3}{4}$ copper to $\frac{1}{2}$ silver,

$\frac{1}{2}$ copper in order to release 434 tons per year of nickel to war uses.

Steel mills, including manufacturers of alloy steels, used 70 per cent of the imported refined nickel in 1941. Foundries used 7.3 per cent; brass mills, 6.5 per cent, heat resisting and electrical resistance alloy manufacturers, 4.6 per cent; electroplaters, 2.5 per cent. Rolled nickel and high nickel alloys consumed the rest. The price of nickel in the United States and Canada remained the same, 1926-41, at 35¢ a lb. f.o.b. refinery or mill.

NIGER. See FRENCH WEST AFRICA.

NIGERIA. A British West African colony (1,381 sq. mi.) and protectorate (includes British Cameroons). Total area, 372,599 square miles; total population (1939), 20,641,814, of whom 335,544 were in the colony. Chief towns (1939 populations): Lagos (capital), 167,000, Ibadan, 318,320 (including farming suburbs); Kano, 80,634; Abokuta, 69,500; Ogbomosho, 64,680, Oyo, 63,170. Education (1939). 40,763 schools of all kinds and 543,618 students.

Production and Trade. The main agricultural products are palm oil, cacao, groundnuts (225,000 tons in 1940-41), bananas, rubber, tobacco, maize, cotton (70,000 bales in 1940-41), ginger, sesamum, and rice. Chief minerals (with 1940 production figures)—tin (12,012 long tons), gold (25,617 fine oz.), coal (300,091 long tons for 1939-40), and silver. There are deposits of manganese, galena, lignite, columbite, wolfram, and monazite. Other products—gum arabic, mahogany, ghee, hides and skins. Livestock (1938): 2,936,000 cattle, 2,188,000 sheep, 5,630,000 goats, 476,000 asses, 173,000 horses, 168,000 swine, 2,000 camels. Trade (1940), including bullion: £7,476,000 for imports and £11,388,000 for exports. Shipping (1939). 3,588,557 aggregate tons entered and cleared.

Communications. Railways (1939-40): 2,341 route miles; 4,828,703 passengers and 712,087 tons of freight were carried. Roads (1940): 21,277 miles. Lagos is an important base for seaplanes and landplanes in the air communications of the British Empire, and a link in Pan American Airways' ferry and transport services from the United States to the Middle East and the Belgian Congo, by way of the Caribbean islands and Brazil.

Government. Finance (1940-41)—Deficit estimated at £30,000 (1941-42)—Deficit estimated at £97,960. The public debt on Mar. 31, 1940, amounted to £24,936,599. Nigeria, including the British Cameroons attached to the protectorate for administrative purposes, is under the control of a governor assisted by an executive council. There is a legislative council for the colony and the southern provinces of the protectorate. The governor enacts the laws affecting the northern provinces. Governor and Commander-in-Chief, Sir Bernard Bourdillon (appointed Oct. 16, 1935; term extended to December, 1943).

History. The Police Commissioner of Nigeria, Col. A. S. Mavrogordato, on his arrival in New York, Feb. 26, 1941, revealed that Nigeria had sent 10,000 troops to the East African front. It was announced in April that an Arbitration Tribunal and a Board of Inquiry were to be established during 1941 to settle labor disputes and to inquire and report on economic and industrial conditions. As a result of the dislocation of some of the markets for foodstuffs and the high prices caused by the requirements of British armed forces in Africa, the government decided to control prices of market foodstuffs throughout Nigeria.

It was announced in June that a West African Governors' Conference Secretariat had been established with the Governor of Nigeria at its head, the expenses being shared by the governments of the Gambia, Gold Coast, Nigeria, and Sierra Leone.

NIGHTINGALE ISLAND. See BRITISH EMPIRE under *St. Helena*.

NLRB. See NATIONAL LABOR RELATIONS BOARD.

NOBEL PRIZES. The awarding of the Nobel prizes has been suspended for the duration of the war. On Dec 10, 1941, the 40th anniversary of the establishment of the awards, a dinner was held in New York City in honor of Alfred Nobel; nine previous winners were present.

NON-AGGRESSION PACTS. See GERMANY, JAPAN, TURKEY, and UNION OF SOVIET SOCIALIST REPUBLICS, under *History*.

NON-FEDERATED MALAY STATES. Same as *Unfederated Malay States*. See under BRITISH MALAYA.

NORFOLK ISLAND. See AUSTRALIA.

NORTH AMERICA. Excluding Mexico and Central America, but including Greenland, Newfoundland, and smaller adjacent islands, the continent has an area of about 7,589,532 square miles and a population estimated at 141,940,000 on Dec. 31, 1938. The combined area of Mexico, Central America, and the West Indian islands was about 1,073,080 square miles and the population about 40,870,000. See separate article on the constituent countries and territories. Also ARCHAEOLOGY, EXPLORATION, etc.

NORTH AMERICAN AVIATION STRIKE. See LABOR CONDITIONS under *Strikes*.

NORTH CAROLINA. A south Atlantic State. Area: 52,712 sq. mi., including 3,570 sq. mi. of inland water. Population: (1940 census) 3,571,623. The urban population comprises 27.3 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 28.2 per cent (U.S. average, 10.2); elderly (65 years and over), 4.4 per cent. North Carolina ranks 27th among the States in area, 11th in population, and 14th in density, with an average of 72.7 persons per square mile. The capital is Raleigh with 46,897 inhabitants; largest city, Charlotte, 100,899. There are 100 counties and 26 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Clyde A. Erwin, Superintendent of Public Instruction, there were 908,810 pupils enrolled in the public schools of North Carolina during the school year 1939-40, 703,597 in elementary schools and 205,213 in secondary schools. Teaches numbered 25,438 and received an annual average salary of \$890. Total current expenditures for the year 1938-39 were \$30,811,279.

Transportation. State highway mileage in 1939, including streets under State control, totaled 58,495, of which 31,783 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 610,121; 503,494 were private and commercial automobiles, 995 busses, and 87,457 trucks and tractor trucks. Gross motor-fuel consumption was 463,498,000 gallons. Net motor-fuel tax receipts were \$27,372,000, the rate being six cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$8,174,000.

Railways of all classes extended 4,728 miles (Dec. 31, 1939) 2.01 per cent of the total mileage in the United States. Class I steam railways (3,004 miles) reported 6,101,952 tons of revenue freight originating in North Carolina in 1940 and 11,251,072 tons terminating in North Carolina. There are 34 airports and landing fields in the State (11 lighted fields) and eight seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 445 civil aircraft in the State and 1,207 commercial and private pilots (1,041 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 6,399,400, as compared with 6,403,000 acres in 1940. According to the latest census, there are 278,276 farms, valued at \$736,308,125, averaging 67.7 acres each. Farm population numbered 1,654,123 or 46.3 per cent of the total. Leading crops with production in 1941 were: Tobacco, \$134,798,000, 465,235,000 lb.; cotton lint, \$48,094,000, 556,000 bales; corn, \$40,114,000, 52,096,000 bu.; hay, \$17,162,000, 1,091,000 tons; peanuts, \$14,504,000, 284,400,000 lb.; cottonseed, \$12,078,000, 247,000 tons; wheat, \$8,105,000, 7,110,000 bu., sweet potatoes, \$6,192,000, 6,880,000 bu.; potatoes, \$5,110,000, 6,636,000 bu.

Manufacturing. The total value of manufactured products, according to the latest census (for the year 1939) was \$1,421,329,578. For details, see 1940 YEAR BOOK.

Mineral Production. The total value of mineral production in 1939, according to the U. S. Bureau of Mines, was \$18,533,720. The leading item was stone, 6,037,000 short tons valued at \$6,979,426 (3,031,300 short tons, \$4,850,277, in 1939).

Trade. According to the 1940 census there were 2,859 wholesale establishments in North Carolina, employing 30,347 persons, reporting net sales for 1939 of \$831,251,000 and annual pay roll of \$33,838,000. There were 33,826,000 retail stores with 79,404 employees, reporting sales of \$633,240,000 and pay roll of \$60,052,000. Service establishments numbered 10,502, employing 21,791,000 persons for \$13,770,000 per year, and reporting a business volume amounting to \$42,121,000. The leading business center of the State is Charlotte which reported wholesale sales of \$207,901,000, retail sales of \$47,552,000, and \$4,283,000 receipts for its service establishments.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in North Carolina was \$38,177,000. Under the Social Security program, financed by Federal funds matching State grants, 37,549 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$10.18 (U.S. average pension, \$21.08); 23,585 dependent children in 9,858 families received average monthly payments of \$16.89 per family (U.S. average, \$32.73); and 1,911 blind persons received \$14.97 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 4,435 and received \$6.45 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 6,261 (\$415,000); NYA student work program, 5,596 (\$43,000); NYA out-of-school work program, 10,709 (\$207,000); WPA, 30,302 (\$1,446,000); other Federal emergency projects, 56 (\$3,000); regular Federal construction projects, 11,308 (\$1,423,000). The Farm Security Administration certified subsistence payments totaling \$23,000 for the month to 455 cases.

Legislation. The General Assembly convenes in regular session on Wednesday after the first Monday of January in odd years. It is composed of 50 Senators (48 Democrats and 2 Republicans in 1941) and 120 Representatives (114 Democrats and 6 Republicans).

The 1941 General Assembly was in session for 58 legislative days, and expeditiously considered some 1,300 bills. Gov. Broughton's legislative program, emphasizing reorganization of the State government and including important educational, agricultural, and retirement measures, was enacted with only two exceptions: The Assembly refused to strengthen the labor laws or to increase the compulsory school age from 14 to 16 years. The following discussion of important measures comprises excerpts from the *Raleigh News and Observer* of Mar. 23, 1941.

Reorganization. Acting unanimously, or virtually so, in every instance, the Assembly passed a series of reorganization bills which gave to Governor Broughton the greatest power of appointment ever possessed by any North Carolina Governor. Unless existing laws are materially changed in the meantime, the next Governor will inherit that vast power upon taking office in 1945, without the necessity of asking the General Assembly for it.

Four methods were used to enlarge the Governor's appointive power. One elective office, that of Utilities Commissioner, was changed to three appointive ones. Two new departments, both carved out of the Department of Revenue, were created (a Motor Vehicle Department and a Tax Research Bureau). In three instances, six year terms, most of which have not expired, were abrogated and succeeded by four-year terms. Finally, resignations were obtained, some of them after polite intimation that legislation to accomplish the same result would be sought if the resignations were not forthcoming.

Three reapportionment bills were passed, the net effect of each of which was to give greater representation to the Western portion of the State. The West gained one senator and three members of the House and the new 12th Congressional District (required as a result of the 1940 census) was carved from the two districts lying farthest West.

Two constitutional amendments were submitted by the General Assembly to create a new State Board of Education, and to permit the separation of judicial and senatorial districts and the creation of a larger number of superior court judges than solicitors.

Appropriations. Appropriated for the two years beginning July 1, 1941, was approximately \$166,500,000, approximately \$12,200,000 more than the record-breaking spending for this biennium. In voting this record high budget for 1941-43, the legislature did what normally would have been an impossible trick—it increased appropriations while reducing taxes. The answer to that is found in the fact that defense accelerated business will pay more under present tax levies. (The newer estimates upped the expected income tax yield to \$15,096,969 for each of the two coming years, compared with original estimates of \$12,860,000 and \$13,000,000.) A contingent transfer of approximately \$1,150,000 from the highway fund to the general fund also was provided.

Major change in the tax structure was elimination of the sales tax from foods sold for home consumption. That change, a campaign pledge made by Governor Broughton, becomes effective July 1. Next biggest change was that giving local units 75 per cent of collections from intangibles, with the State retaining 25 per cent. The trend has been for a larger share to the localities. As usual, the biggest share of the general fund budget goes to schools.

Agriculture. The largest single group of laws passed by the General Assembly at the request of the Governor was for the benefit of agriculture. The most important of these 13 measures was an act setting up a State Marketing Authority. There were also passed a pure seed law, a trade mark law, an act to regulate bulk milk sales, a livestock act, an act authorizing other products to be stored in bonded cotton warehouses, and an act to extend the federal housing act to rural areas. Other important agricultural legislation consisted of increased appropriations.

Education. The recent Legislature, called by some the kindest friend public education ever had, granted every wish the schools and schoolmen voiced with three principal exceptions. It did not add a month to the basic eight-month State-supported school term, raise the compulsory school attendance age from 14 to 16, or grant teachers sick leave with pay.

On the other hand, the 1941 General Assembly did: Lay foundations for a 12th grade (for units requesting it). Provide for teacher retirement. Grant a ninth pay

increment to teachers (raising to \$183.33 the maximum monthly pay for eight months a year) and a fifth increment to principals. Double the appropriation for vocational education. Provide partial protection against overloading of school busses. Appropriate to reduce the pay differential between Negro and white teachers. Enable State College to build a self-liquidating building which will ultimately be another agriculture school addition. Set in motion a Constitutional amendment to consolidate State school administrative authority. Appropriate to each institution of higher learning more than the Budget Commission recommended, notably \$1,552,675 and \$1,582,519 to the Greater University when recommendations for the next two years were \$1,352,212 and \$1,377,356.

From a strictly teacher standpoint the major gain was the State Employees' Retirement Plan, which the General Assembly set up at \$1,509,076 annually—\$1,200,000 of this for teachers alone. Teachers and other State employees must contribute if they wish to join the system. A disappointment to teachers was the teacher tenure law as eventually passed. Originally, it would have provided that teachers, giving two years of satisfactory service should get two-year contracts. In place of this protection against petty or political firing, the teachers obtained only a provision that teacher contracts shall continue from year to year unless notice is given 30 days before end of school.

Labor. The so-called uniform sabotage bill, backed by the Council of State Governments and other national organizations, was introduced. The bill was attacked by all national labor organizations as an anti-union bill. At the suggestion of Governor Broughton, the bill was changed in this State to a short measure defining sabotage as destruction of property and its passage in that form was not opposed by labor. Two changes were made in the unemployment compensation laws, one benefiting employees and the other employers. The maximum benefit remains at \$15, but the minimum figure was changed to \$3 a week and corresponding increases were made in all other brackets except the top one. On the other hand, penalties were made more severe. A conciliation service in the Department of Labor was provided, but no appropriation was made for it.

Local. From a local standpoint, the most important measure passed was the bill providing for an election on the extension of Raleigh's city limits—a hot subject for the last two decades. Hundreds of local bills were introduced. However, local ax-grinders got little, and the most objectionable of local fence-building legislation was quietly sidetracked.

An even dozen commissions to be appointed by the Governor were authorized. The most important miscellaneous acts were a ban upon fortified wine in dry counties and creation of a State Home Guard. Absentee voting also was provided for soldiers, sailors, and marines during the period of the present national emergency. Salary increases were the vogue from the very first day of the session.

Finances. Total tax collections in North Carolina for the fiscal year ending in June, 1941, were \$99,532,000 (1940: \$86,240,000). Total sales taxes amounted to \$46,823,000, including motor fuel, \$30,066,000, general sales, \$14,247,000. Taxes on specific businesses ran to \$10,733,000, general and selective property, \$2,739,000, unemployment compensation, \$12,644,000. The net income taxes were \$14,401,000.

Cost payments for the operation of general government totaled \$63,436,000 in 1939, the latest year available. (Revenues for the general government for that year were \$101,619,000.) Cost of operation per capita was \$18.03. Total gross debt outstanding in 1941 was \$150,613,000, as compared with \$188,616,000 in 1932.

Officers and Judiciary. The Governor is J. Melville Broughton (Dem.), inaugurated in 1941 for a four-year term; Lieutenant Governor, R. L. Harris; Secretary of State, Thad Eure; Attorney General, Harry McMullan; State Treasurer, Charles M. Johnson; State Auditor, George Ross Pou. Chief Justice of the North Carolina Supreme Court is W. P. Stacy; there are six associate members elected by popular vote for eight-year terms.

NORTH DAKOTA. A west north Central State, nicknamed "The Sioux State." Area: 70,665 sq. mi., including 611 sq. mi. of inland water. Population: (1940 census) 641,935. The urban population comprises 20.6 per cent of the total (U. S. average, 56.5 per cent); non-white population, 1.5 per cent (U. S.

average, 10.2); elderly (65 years and over), 6.0 per cent. North Dakota ranks 16th among the States in area, 38th in population, and 40th in density, with an average of 9.2 persons per square mile. The capital is Bismarck with 15,496 inhabitants; largest city, Fargo, 32,580. There are 53 counties and four cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Arthur E. Thompson, Superintendent of Public Instruction, there were 139,629 pupils enrolled in the public schools of North Dakota during the school year 1940-41, 105,734 in elementary schools and 33,895 in secondary schools. Teachers numbered 7,361 and received a monthly average of \$85. Total expenditures for the year were \$9,979,781.47.

Transportation. State highway mileage in 1939, including streets under State control, totaled 7,387, of which 6,358 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 184,016; 145,746 were private and commercial automobiles, 157 busses, and 36,384 trucks and tractor trucks. Gross motor-fuel consumption was 147,246,000 gallons. Net motor-fuel tax receipts were \$3,452,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$1,661,000.

Railways of all classes extended 5,267 miles (Dec. 31, 1939) 2.24 per cent of the total mileage in the United States. Class I steam railways (5,133 miles) reported 4,985,837 tons of revenue freight originating in North Dakota in 1940 and 3,001,401 tons terminating in North Dakota. There are 30 airports and landing fields in the State (10 lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 134 civil aircraft in the State and 591 commercial and private pilots (535 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 17,482,000, as compared with 16,964,200 acres in 1940. According to the latest census, there are 73,962 farms, valued at \$490,197,358, averaging 512.9 acres each. Farm population numbered 327,871 or 51.1 per cent of the total. Leading crops with production in 1941 were: Wheat, \$137,426,000, 146,198,000 bu.; oats, \$18,158,000, 58,575,000 bu.; barley, \$17,470,000, 43,675,000 bu.; corn, \$12,833,000, 24,679,000 bu.; hay, \$10,838,000, 3,198,000 tons, flaxseed, \$7,550,000, 4,576,000 bu.; potatoes, \$6,936,000, 14,155,000 bu.; rye, \$5,947,000, 13,516,000 bu.

Manufacturing. The total value of manufactured products, according to the latest census (for the year 1939) was \$43,767,082; 350 establishments employed 2,637 wage earners, who received \$2,771,468 for the year.

Mineral Production. Minerals produced in 1939 were valued at \$2,689,627, or only .06 per cent of the United States total, according to the U.S. Bureau of Mines. Coal accounted for most of the total.

Trade. According to the 1940 census there were 2,682 wholesale establishments in North Dakota, employing 5,901 persons, reporting net sales for 1939 of \$170,252,000 and annual pay roll of \$7,195,000. There were 8,549 retail stores with 15,227 employees, reporting sales of \$156,137,000 and pay roll of \$12,960,000. Service establishments numbered 2,500, employing 1,760 persons for \$1,407,000 per year, and reporting a business volume amounting to \$6,643,000. Fargo is the leading business center of the State and reported wholesale

sales of \$43,976,000 and retail sales of \$20,350,000. Cass County, including the city of Fargo, is the leading county in the State in the volume of receipts from its service establishments (\$1,518,000).

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in North Dakota was \$14,096,000. Under the Social Security program, financed by Federal funds matching State grants, 9,234 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$17.41 (U.S. average pension, \$21.08); 6,946 dependent children in 2,502 families received average monthly payments of \$31.24 per family (U.S. average, \$32.73); and 219 blind persons received \$19.37 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 2,556 and received \$12.74 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 2,307 (\$153,000), NYA student work program, 4,334 (\$25,000), NYA out-of-school work program, 2,501 (\$43,000), WPA, 9,918 (\$526,000), regular Federal construction projects, 1,202 (\$104,000). The Farm Security Administration certified subsistence payments totaling \$9,000 for the month to 368 cases.

Legislation. The Legislative Assembly convenes in regular sessions on Tuesday after the first Monday of January in odd years. It is composed of 49 Senators (5 Democrats and 44 Republicans in 1941) and 113 Representatives (10 Democrats and 103 Republicans). The following summary of legislative action in 1941 has been condensed from the *Fargo Forum*, Mar. 9, 1941.

In decided contrast to recent sessions, tax matters played but a minor part in 1941.

A big spark of the session was struck when the house, spurred by the county commissioners, passed a bill transferring 100 per cent of the cost of patients at the Jamestown asylum, Grafton training school and San Haven tuberculosis sanatorium from the counties to the state, a step that would have thrown the state budget out of balance by \$1,700,000. The problem was compromised with a program that will give 60 to 70 per cent relief to the counties. The legislature provided two forms of county manager plans which any county may adopt upon a 55 per cent favorable vote, as an economy measure against maintaining the present commission form. A new law was passed providing for the disorganization of counties.

A high point of the session was the practical absence of any dissent over how much money should be appropriated for the different public welfare programs and how the relief program should be handled. An item of apprehension, especially to Governor Moses, is that the general relief fund was cut to \$1,157,000, about \$850,000 under the expenditures of the present biennium. However, old age assistance was increased by \$700,000. The legislation authorized the establishment of merit systems in the welfare programs, but refused to repeal the \$40 a month minimum provision contained in the Langer-initiated measure. Federal authorities had warned that this statute put federal matching funds for North Dakota in danger because the state laws do not conform with federal law. But the legislature passed a resolution directing the board to make old age grants on the basis of need. Grants are expected to average \$20 a month per recipient, in comparison to the present average of \$16.90.

Headlining highway legislation was reenactment of the additional one-cent gasoline tax to provide an estimated \$1,700,000 for the biennium for matching federal funds on a 50-50 basis to construct new roads, assuring \$3,400,000 in construction from that source alone.

Liquor legislation ran the gamut. The initiated measure of 1936 legalizing hard liquor in North Dakota was amended by a two-thirds vote, thereby subjecting it to amendment or repeal by a simple legislative majority. The box score was 20 liquor bills; 16 defeated, 4 passed, including 2 routine bills.

Institutions of higher learning generally received slight increases in appropriations. A completely revised program for aid to common schools was put through without any of the opposition generated against the program two years ago. Grants on the basis of need will continue to be made to only those schools which can show they have made

"their greatest financial effort," including increasing by election their top tax limit

Girls who quit work to get married can no longer get unemployment compensation, nor can persons who quit to become students. However, employers with good employment experience will get reductions in the unemployment tax to as low as 1 per cent of the payroll in 1942, when experience ratings go into effect. The present rate is 2.7 per cent.

The legislature set up a state guard under federal and state administration, the guard units to be located only in those places where a national guard company had been previously organized. Other bills affected protection of men mobilized into the service as regards their unemployment compensation benefits accrued in anticipation of defense industries in North Dakota a bill was enacted setting up authority to cooperate with federal agencies in providing housing facilities

Legislative observers are wondering what the future will do for the Farmers Union, the organization which put such a big exclamation point on its drive to stop repeal of the anti-corporation farm ownership law by bringing 5,000 members into Bismarck for a one-day demonstration. The amendment was killed, and another Farmers Union victory was evident in the \$100,000 appropriation for high school correspondence work, the argument over which started the deadlock that blocked punctual adjournment of the assembly. Farmers Union strength also accounted for absence of any attempt to repeal the anti-deficiency judgment law and the hail tax prior lien law. Some say the group overplayed its hand at this session; others contend it is a power to be reckoned with

Attempted changes in the state's election laws failed. The state was not divided into two congressional districts, nor was the legislative lineup revamped on the basis of the state's 1940 census. Proposals to put the state officials and legislature on a no-party basis and to make county and state office terms four years instead of two got nowhere.

Finances. Total tax collections in North Dakota for the fiscal year ending in June, 1941, were \$16,094,000 (1940: \$14,062,000). Total sales taxes amounted to \$8,580,000, including general sales, \$3,364,000, motor fuel, \$3,419,000. Taxes on specific businesses ran to \$353,000, general and selective property, \$3,633,000, unemployment compensation, \$736,000. The net income taxes were \$700,000.

Cost payments for the operation of general government totaled \$14,837,000 in 1939, the latest year available. (Revenues for the general government for that year were \$20,326,000.) Cost of operation per capita was \$22.97. Total gross debt outstanding in 1941 was \$23,069,000, as compared with \$45,449,000 in 1932.

Officers and Judiciary. The Governor is John Moses (Dem.), inaugurated in January, 1941, for his second two-year term, Lieutenant Governor, Oscar W. Hagen, Secretary of State, Herman Thorson; Attorney General, Alvin C. Strutz; State Treasurer, Carl Anderson; State Auditor, Berta Baker. Chief Justice of the North Dakota Supreme Court is A. G. Burr; there are four associate members elected by popular vote for 10-year terms. See CONSUMERS' COOPERATIVES.

NORTH EAST NEW GUINEA. See AUSTRALIA under *Overseas Territories*.

NORTHERN RHODESIA. See RHODESIA, *NORTHERN*.

NORTHERN TERRITORY. See AUSTRALIA under *Area and Population*.

NORTHWEST TERRITORIES. The northern areas of Canada, extending north from the provinces and the Yukon to the North Pole. It is divided, for administrative purposes, into the districts of Franklin (554,032 sq. mi.), Keewatin (228,160 sq. mi.), and Mackenzie (527,490 sq. mi.). Area, 1,309,682 square miles. Population (1941 census), 10,661. Mining and fur trapping are the chief occupations of the inhabitants. In 1941 there were over 8,000 reindeer in the territories. Mineral production (1939) was valued at \$3,248,777 (radium and uranium products \$1,121,553, gold \$1,876,224, sil-

ver \$195,911). Gold production from the Yellowknife district during 1940 amounted to 54,869 oz. worth \$2,112,456. The Yellowknife district, 1,300 inhabitants, had its first year of municipal government in 1940, under an administrative board of 5 members. Fur output (1938-39): 514,894 pelts valued at \$1,274,817. A territorial council consisting of a commissioner, a deputy commissioner, and 5 councilors governs the territories. Commissioner, Charles Camsell; Deputy Commissioner, Roy A. Gibson.

NORWAY. A European kingdom occupying the western and northern part of the Scandinavian peninsula; occupied by Germany in 1940. The kingdom's sovereignty included Svalbard (Spitsbergen and adjacent islands) in the Arctic Sea, 240 miles distant from the Norwegian coast (see SVALBARD); also Norway asserted sovereignty over Jan Mayen Island in the Arctic Sea, unhabited, and certain uninhabited areas in the Antarctic region. Capital, Oslo.

Area and Population. Covering an area of 124,587 square miles (land area, 119,148 square miles), Norway proper had 2,937,000 inhabitants in December, 1939, by official estimate, by latest census, 2,814,194 in 1930. Only 28 per cent of the population of 1930 were classed as urban, and females exceeded males by about 71,000. The birth rate, per 1,000, was 16.3 for 1940 (15.9 for 1939); death rate, 10.7 (10.2). Populations (1930) of chief cities: Oslo, 253,124; Bergen, 98,303; Trondheim (Nidaros), 54,458; Stavanger, 46,780.

Education and Religion. School is compulsory for the young and literacy is virtually universal. In the academic year 1936-37, public elementary schools numbered 5,751; their pupils, 357,793; support for these schools amounted to 64,331,000 kroner, of which the state paid 27,572,000 and local sources the remainder. Secondary schools numbered 149 (including 42 private schools); their pupils, 25,357. The University of Oslo provided higher education; it had 4,229 students in 1939.

The Evangelical Lutheran Church, under the monarchy, was politically established. All religions were tolerated (but not the Jesuit order). Apart from Evangelical Lutherans, persons reporting religious affiliation in 1930 numbered 91,459: among them, 12,207 Methodists, 7,788 Baptists, 3,325 Adventists, and 2,827 Roman Catholics.

Production. In normal times 29 per cent of the workers followed agriculture or forestry, 27 industry, 10 commerce, 9 transportation, 7 fishing and whaling, 5 professions and public administration. Production of the chief crops in 1940, with 1939 figures in parentheses, was (in metric tons): Wheat, 70,700 (77,800); barley, 91,400 (103,500), rye, 5,700 (6,200); oats, 161,200 (200,800); potatoes, 38,144,000 in 1939. The fish catch for 1940 was reported at 1,070,000 metric tons (1,030,000 in 1939). The value of ore production in 1939 was 56,500,000 kroner, with pyrites and iron ore accounting for 81 per cent of the total. Estimated mineral and metallurgical production in 1940 was (in metric tons): Iron ore, 1,500,000; pig iron, 175,000; tungsten, 20; nickel, 1,250; copper, 20,000; zinc, 5,000; lead, 320; aluminum, 15,000; molybdenum, 600. Shipping revenues normally provide an important part of the kingdom's revenues. The merchant fleet's earnings in 1939 were estimated at about 800,000,000 kroner. As of Mar. 1, 1941, there were about 900 ships of 3,600,000 gross tons under the Norwegian flag.

Foreign Trade. Merchandise imports in 1940 were valued at 944,400,000 kroner (1,366,800,000 in 1939), while merchandise exports totaled 612,000,000 kroner (807,600,000 in 1939). After the Ger-

man invasion, trade was entirely with Germany and German-occupied countries except for a small trade with Sweden and Finland.

Finance. For the fiscal year ended June 30, 1941, proposed budget revenues and expenditures balanced at 790,256,000 kroner as against 624,631,000 kroner (voted budget) for 1939-40. Public debt on June 30, 1939, 1,528,400,000 kroner (foreign, 596,400,000). At the official exchange rate fixed Aug. 29, 1939, the krone was equivalent to \$0.2286.

Transportation. Prior to the German occupation, Norway had about 2,500 miles of railway lines in operation, practically all of which were state-owned. Another line, Grong to Mosjoen (122 miles), was opened after the occupation. Paved highways, totaling 25,699 miles in 1939, were extended by the Germans. An all-weather express highway from Oslo to Bergen was completed early in 1941, and other important roads including one from Trondheim northward to Narvik, were under construction. The Norwegian civil airways were linked with the German European network following the military occupation. The merchant marine, fourth largest in the world, was for the most part operated by Norwegian seamen under British charter or supervision during 1941 (see *Production* above).

Government. Under the Constitution of 1814, as subsequently amended, executive power is vested in the King, acting through a Cabinet responsible to the Storting (parliament). The Storting consisted of 150 members elected for four years by universal suffrage. It divided itself into two sections of 88 and 114 members, called the Lagting and Odelsting, respectively. The composition of the Storting elected in October, 1936, was: Labor, 70; Conservatives, 36; Liberals, 23; Agrarians, 18, others, 3. The elections scheduled for 1940 were not held because of the German invasion of Norway on Apr. 9, 1940. King in 1941, Haakon VII, who was born in 1872 and was elected to the throne by the Storting Nov. 18, 1905.

Upon the German invasion, the King, Government, and Storting withdrew from Oslo to the town of Hamar where the Storting and King unanimously rejected the proffered resignation of the Labor Government headed by Premier Johan Nygaardsvold (appointed Mar. 20, 1935) and voted it full powers to negotiate with the Germans. Later that day (Apr. 9, 1940) the Storting disbanded. Rejecting the German peace terms, the King and the Nygaardsvold Government were driven out of Norway and on June 10, 1940, established themselves in London. At the same time the Government was reorganized to include representatives of all the established political parties except Maj. Vidkun Quisling's National Union (Nazi) party, which had cooperated with the German invaders. Members of the reorganized Government-in-Exile were: Premier, Johan Nygaardsvold; Foreign Affairs, Trygve Lie; Finance, Oscar Torp; Social Welfare, Sverre Støstad; Justice, Terje Wold; Ecclesiastical Affairs and Education, Nils Hjeltnet; Commerce, Anders Frihagen; Public Works, O. Hindahl; Defense, Birger Ljungberg; Ministers without Portfolio, A. Sundt, Sven Nielsen, Anders Fjelstad, J. L. Mowinkel.

On Apr. 9, 1940, Major Quisling proclaimed himself head of a pro-German regime in Oslo. On April 15 the German military commander replaced the "Quisling Government" with an administrative council headed by Ingolf Elser Christensen, governor of Oslo Province. The Christensen Council was abolished, April 24, and Josef Terboven, a German Nazi, was appointed Reich Commissioner for Norway by Reichsfuehrer Hitler with full governing

powers. On Sept. 25, 1940, Herr Terboven appointed a State Council (Statsraad) of 13 Norwegian Nazis or sympathizers, and a legislature (Riksting) to take over the functions of the Storting. On the same day Terboven decreed the abolition of the monarchy and Storting, the dismissal of the Nygaardsvold Government, and the dissolution of all political parties except Quisling's National Union (Nasjonal Samling), which in the 1936 elections had failed to win any seats in the Storting. Quisling was subsequently appointed chairman of the State Council. With the aid of Quisling's supporters, Commissioner Terboven undertook to Nazify all aspects of Norwegian life. His decrees for the reorganization of the judicial system led all members of the Supreme Court to resign in a body on Dec. 23, 1940. For developments in 1941, see below under *History*.

HISTORY

The Government-in-Exile. Norway's stubborn fight against German domination and German-inspired Nazification continued with growing effectiveness at home and abroad during 1941. In London, King Haakon and the Nygaardsvold Government made marked progress in organizing and training Norwegian military and air forces, both in Great Britain and Canada. The Norwegian merchant fleet of some 900 vessels, manned by 30,000 sailors, rendered invaluable aid to the Allied cause in helping to keep Britain supplied. Airmen trained in Canada reached Britain in considerable numbers during 1941 and under the command of Capt. Hjalmar Riiser-Larsen joined in the Allied air operations (see *WORLD WAR*). Norwegian marines participated in repeated raids on isolated German garrisons and supply points along the Norwegian coast. In the British-Norwegian raid of March 4 on the Lofoten Islands off Narvik 215 Germans and 10 Quisling supporters were captured, 10 German ships were sunk, six cod-liver oil and fish factories were destroyed, and more than 300 young Norwegian patriots were recruited in a few hours time for service with the Norwegian forces in Britain.

The Norwegian and British Foreign Ministers on May 28, 1941, signed an agreement covering the organization and employment of Norwegian armed forces in the United Kingdom. The two governments affirmed their determination to prosecute the war to a successful conclusion. Both agreed to reestablish the freedom and independence of the Kingdom of Norway through its complete liberation from German domination. Britain thus undertook to help in ousting not only German forces of occupation in Norway but also every form of German rule by puppet governments. This accord was reinforced on June 12 when Premier Nygaardsvold joined with representatives of 13 other Allied Governments in London in signing an agreement to continue the war "against German or Italian aggression until victory has been won." The Norwegian Government likewise joined the other Allies on September 24 in approving the Atlantic Declaration (q.v.) and a postwar rehabilitation program (see *GREAT BRITAIN* under *History*). With the approval of the British Government, Norwegian maritime courts were established in British ports in November to assume jurisdiction over offenses committed on Norwegian ships.

Following the outbreak of the Russo-German war, King Haakon in a radio broadcast to Norway on July 10 urged his countrymen not to let their close relations with Finland soften their resistance to German rule. He declared that Norwegians assisting Germany and Finland to fight Russia were helping to fasten the German yoke upon Norway.

Only a few hundred Norwegian Nazis were reported to have responded to the German appeal for volunteers to serve on the Russian front. Normal diplomatic relations between the Norwegian Government-in-Exile and Russia were resumed August 5. A German prize court, in approving confiscation of seven Norwegian whaling vessels, held in October that "a state of war still exists between Germany and Norway."

Temporary reshuffling of the Cabinet was announced December 2 to permit Col. Birger Ljungberg, Minister of Defense, to assume "special duties." On December 5 the Government-in-Exile called to the colors Norwegian subjects in all parts of the world who were fit for military service.

Resistance in Norway. The great mass of the Norwegian people joined in this struggle for national liberation with mounting fervor as the significance of German domination and the meaning of the Nazi revolution was brought home to them by increasingly violent methods of repression. There was an extension of espionage on behalf of Britain (see *YEAR BOOK* for 1940, p. 567). Passive resistance to the Germans and sabotage of their military and political measures became more widespread and effective. But the fullest measure of hatred and violent opposition was reserved for Maj. Vidkun Quisling and his pro-Nazi Norwegian supporters, who in the fall of 1940 had undertaken to Nazify Norway through the methods of force and terrorism employed by Hitler's National Socialist party in Germany.

By the beginning of 1941 opposition to Quisling and his administration had become so violent, particularly in Western Norway, that Reich Commissioner Terboven on January 11 ordered the German police to protect the Quislingists and help them in crushing all opposition. In return for this favor, Quisling on January 13 undertook to recruit a regiment of Norwegians to aid Germany in "the German-Norwegian fight against Britain." Enlistments were slow, except among Quisling's Storm Troopers (*hirdmannen*) who were harassed and ostracized by their anti-Nazi countrymen. At the same time anti-German sabotage became more troublesome. German military authorities levied heavy fines on Trondheim and other towns in January for the repeated cutting of cables and telephone lines used by the occupationary forces.

To cope with this situation, a new state police was established late in January under Col. Konrad Sundlo, who as commander of the Narvik garrison betrayed that port to the Germans on Apr. 9, 1940. Immediately afterward Heinrich Himmler, chief of the German secret police (Gestapo), made a tour of inspection in Norway and reportedly advised Quisling as to the best methods for breaking the opposition.

Lutheran Bishops Protest. Further brutal attacks by Quisling's Storm Troopers on school children and other anti-Nazi groups brought a firm protest on February 1 from all seven of Norway's Lutheran bishops. In a letter to Prof. Ragnor Shanke, Quisling's Councilor for Education and Religion, the bishops asked how Commissioner Terboven's promises to respect the independence of the courts and the church could be reconciled with the "systematic violence" of Quisling's Storm Troopers, the resignation of the members of the Supreme Court, and "interference with preachers' sworn secrecy."

The bishops' demand for "clarification" of the regime's intentions was answered indirectly on February 11. Quisling's new appointees to the Supreme Court unanimously reversed the stand taken by their predecessors and ruled that no Norwegian court was competent to pass upon the decrees of the Ger-

man Commissioner. They also held that the Supreme Court could not legally review decrees issued by the Quisling administration with Commissioner Terboven's approval.

Meanwhile the bishops' circular letter was read to many congregations by their pastors in defiance of Professor Shanke's formal prohibition. On February 15 the authorities ordered policemen, supported by Norwegian Nazis, to attend all church services and report violations of the order banning prayers for the royal family, the Government-in-Exile, or the Storting. Some pastors openly defied the order and at most churches the bishops' letter was distributed in leaflet form. A number of prominent pastors joined the growing list of patriots confined in three large concentration camps.

Growth of Violence. Despite the protection afforded the Quisling Storm Troops by the German and Norwegian police and by some thousands of German Gestapo agents, the opposition became steadily more violent. Raids on opposition meetings and arrests of hundreds of anti-Nazis failed to end the frequent street battles between Quislingists and patriots. On February 9 the Swedish press reported the lynching of a prominent young Norwegian Nazi by angry patriots. The Storm Troopers ventured upon the streets of some cities and towns only in groups. After Quisling adherents were jeered and beaten in classrooms, the administration stationed Storm Troopers and police in the schools to enforce acceptance of the "new order."

A German military court at Bergen sentenced three Norwegians to death for pro-British espionage on February 1 and 10 more were condemned to death on February 24. (The executions were postponed by order of Chancellor Hitler on July 6.) Many long prison sentences were imposed, including terms of from one to two years for listening to London and United States radio broadcasts. Yet sabotage and espionage continued. In mid-February a German military train was wrecked and other extensive damage done to the Bergen-Oslo railway. Severe reprisals, including one execution, were taken against the people of the Lofoten Islands for welcoming the British-Norwegian raiding party in March and for sending most of their young men to join the Norwegian forces in Britain. Nevertheless the Lofoten raid was reported to have heartened the Norwegian patriots and spurred their anti-German and anti-Nazi activities.

In view of Norway's refusal to accept collaboration with the Reich, the German military authorities informed Major Quisling in February, according to the Swedish press, that the German promise of independence for Norway following a German victory over Britain could no longer be kept. To avoid clashes with Norwegian patriots, special restaurants for Germans were opened in Oslo and other centers in March. The dismissal and arrest of the head of the Farmers' Association for refusal to cooperate with the Nazis was reported March 15. On March 16 Norwegian ports were closed to visitors without special permits from German authorities. Thousands of patriots remained indoors on April 9, anniversary of the German invasion, in honor of those who fell in the fight against the invaders.

When heavy fines on offending communities and the posting of guards failed to end sabotage of telephone wires and cables, the Germans early in May seized five leading citizens of Stavanger and Hauge-sund as hostages. But sabotage continued, particularly in industrial plants working on German military orders. One of Norway's largest sulphur factories was destroyed by an explosion and fire immediately afterward.

The Physicians' Strike. Meanwhile a new wave of protest was provoked by the kidnapping by Quisling's Storm Troops on April 25 of Dr. Roly Gjissing, chief sick warden of Oslo's lunatic asylum, who defied an order dismissing him to make way for a Quislingite. Some 2,000 Oslo physicians and other medical personnel threatened to stop work unless Dr. Gjissing was released. They demanded that medical appointments should continue to be made on the basis of professional, rather than political, qualifications. This incident was followed by a formal protest by 43 organizations, representing all classes and professions, to the German Commissioner. They censured the German and Quisling authorities for the violence and brutality of Storm Troopers, for hundreds of arrests and imprisonments, and for the destruction of law and order.

Germans Curb Quisling. The authorities forbade all indoor and outdoor celebrations and manifestations on May 17, the 127th anniversary of the Norwegian Constitution. About the same time German and Norwegian Nazi sources estimated the membership of Quisling's National Union movement at from 30,000 to 40,000, or less than 1 per cent of the Norwegian population. Quisling's failure to win over any appreciable part of the people led Commissioner Terboven on May 21 to issue decrees broadening the powers of the German occupational authorities at the expense of the Quisling administration. The German Gestapo chief, Himmler, made a second visit to Oslo and with him arrived many additional German police agents and civil servants. On May 22 the German authorities requested Quisling to return 500,000 kroner of Norwegian state funds that had been appropriated for the use of his party organization and its leaders. Hurrying to Berlin, the Nazi leader succeeded in regaining some of his lost authority.

German Military Activities. Immediately before and after the German attack upon the Soviet Union, greatly increased military activity was reported from Norway. It was announced June 7 that the Germans had removed part of the population of Trondheim to permit construction of a large naval and submarine base. A week later dispatches from Norway reported the mining of the entire Norwegian coast, the prohibition of all sailings to and from Stavanger, the confiscation of 300 farms west of Kristiansand for a great new air base, and the confiscation of numerous Norwegian ships. Heavy German reinforcements were sent to the west-coast garrisons and on June 27 it was announced that Bergen and adjacent territories were closed areas.

German difficulties in Russia were soon brought home to the Norwegian people through an influx of thousands of wounded German soldiers and the replacement of first-line German troops in Norway by second- and third-line troops. Moreover Commissioner Terboven in September ordered all Norwegians to turn over their woolen blankets to the German authorities for use of the German armies in Russia. On October 19 he directed Norwegians, except those in the Narvik district, to turn over all tents, skiing apparel and winter clothing to the German army, on penalty of three years' imprisonment for disobedience.

Marital Law Declared. The Russo-German conflict spurred Norway's resistance to German rule, particularly among Norwegian trade unionists. In June a number of leaders of the National Federation of Labor and various professional groups were arrested for anti-Nazi activity. In mid-July, all but three of the 18 Provincial Governors reportedly resigned in protest against Quisling's control of the civil service. Individual acts of resistance continued to in-

crease. The Germans, fearing a British invasion of Norway and a simultaneous rising of the population, rushed to completion a line of fortifications along the western coast from Kristiansand to Agdenes. All church bells were ordered confiscated in August. Early in July the labor unions served a virtual ultimatum on Commissioner Terboven demanding release of imprisoned labor leaders, the removal of Nazi commissars named to supervise the unions, and free negotiations on working conditions. When these demands were rejected, the workers retaliated with more active sabotage and strikes. Strikes in Oslo's iron and shipbuilding industries were ended only when Nazi authorities declared a state of "civilian emergency" in the capital and surrounding districts on September 10.

During the next few days Commissioner Terboven averted a general strike by rounding up several thousand labor leaders and prominent anti-Nazis of all classes. Death sentences were imposed upon Ludvig Byland, president of the Federation of Labor, and four others. More than a thousand labor leaders, university professors, and other anti-Nazis were sentenced to concentration camps. All trade union officials were replaced by Quisling adherents. Funds of the unions were confiscated and the death penalty was ordered for strikers, saboteurs, and those guilty of "slow-downs" in industry. The Germans demanded the surrender of all firearms. Powers of the Elite Guards and Gestapo were extended throughout Norway, and a modified form of martial law was applied to the entire country.

These measures broke the Oslo strikes and curbed street demonstrations, but the underground warfare against the Germans grew more bitter. The Germans and Norwegian Nazis responded with increasingly harsh measures of repression. Thousands of workers were drafted for new jobs in other parts of the country. German exports to Norway were reduced to the barest essentials. On October 4 Terboven announced in an Oslo speech that further German shipments of foodstuffs to Norway would depend entirely upon the attitude of the Norwegian people. He said that they must either accept the "new order" under Major Quisling and consider Germany's enemies their own or face starvation and incorporation into the Reich.

These threats failed to dampen Norwegian resistance. Guerrillas were reported active in the mountains near Trondheim. The Oslo schools were closed in mid-October following anti-Nazi demonstrations by the students. Extensive sabotage was reported in the new German fortifications. Norwegian fishing boats were forbidden to go outside the five-mile limit. There was systematic expulsion of anti-Nazi students and teachers from the schools.

Three Norwegians were executed by a German firing squad in Bergen August 11 for sending military and other information to England. The execution of six more for "assisting enemies" was reported November 3 and the 70,000 vessels of the Norwegian fishing fleet were placed under State control, presumably to check escapes to Britain. Concentration camps multiplied due to constant new arrests, and the prisoners were reportedly subjected to brutal physical assaults. The city of Stavanger was fined 2,000,000 kroner for sabotage of telephone cables and hostility to German troops on December 23. Toward the end of December, 11 Stavanger residents were shot after summary trial, bringing the total of publicly announced executions to 35. The actual number killed for anti-Nazi activities was estimated at 125.

The Economic Situation. With all trade cut off except that with Sweden and Axis-controlled Europe

and with a German army of some 250,000 men to support, the Norwegian people began to feel the pinch of hunger and poverty during the winter of 1940-41. In mid-January 17 prominent Norwegians cabled an appeal to the United States for food or for funds with which to buy emergency supplies from the Soviet Union. The Swedish press reported a month later that 300,000 people in northern Norway were facing famine in some districts, and that in other sections of the country high prices, low wages, and growing unemployment made it difficult to obtain even those products and foodstuffs that were not rationed. Seagulls and crows were widely used for food, and there was a growing shortage of coal, rubber, and many other industrial supplies. Illegal patriot newspapers and leaflets blamed this situation upon the German occupation and the wholesale shipment of Norwegian food stores and other products to the Reich. The Germans ordered delivery of at least 150,000 tons of fresh fish to the Reich during 1941.

With the coming of spring, the food situation apparently improved. More land was placed under food crops. The production of fisheries was expanded. Offshore whaling, previously forbidden, was resumed. Sea weed was harvested in large quantities for use as cattle, pig, and chicken feed. New cellulose-feed factories were opened in which cordwood was processed into a feed pulp for livestock. German sources asserted that systematic utilization of Norway's fish, wood, and water power had made the country very nearly self-sufficient. On April 9 a trade and clearing agreement with Sweden was concluded under which Norway received 10,000 metric tons of grain, large quantities of canned pork, sugar, sirup, peas, and beans, and iron, steel, and machinery from Sweden in return for fish, nitrate fertilizers, and ores. A somewhat similar trade pact with Finland was announced April 10. Various unemployment relief projects were undertaken with the approval of the German Commissioner.

See GREAT BRITAIN and SWEDEN, under *History*; BIRTH CONTROL; LABOR CONDITIONS, LEND-LEASE ADMINISTRATION; NAVAL PROGRESS, SOCIALISM.

NORWEGIAN LITERATURE. The year 1941 was not conducive to Norwegian literary production, it may prove to be the most meager year since Norway won her independence in 1814. Few literatures have been freer or more individualistic in their expression than the Norwegian, and this tradition is not easily abandoned. At a time when one subject—the war and its consequences for Norway—overshadowed all else in the minds of her people, this was the one subject on which no writer could unburden his heart without dire personal consequences.

Two of Norway's best known younger writers, Ronald Fangen and Arnulf Øverland, were imprisoned by the German authorities. Three others were in voluntary exile, Helge Krog in Sweden, Nordahl Grieg in England, and Sigrid Undset in the United States. Only Knut Hamsun was known to have publicly welcomed the "New Order"; this action was not surprising in view of his pronounced anti-democratic views over a lifetime. Norway's leading historian of literature, Prof. Francis Bull, was in a concentration camp, while his collaborator on the monumental five-volume history of Norwegian literature, Fredrik Paasche, had fled to Sweden. Bull's two collaborators on the Centennial Edition of Ibsen's Works were Didrik Arup Seip, Rector of the University of Oslo, who also was in custody, and Halvdan Koht, recently resigned Foreign Minister in the Norwegian govern-

ment in London, who was living in retirement in Washington, D.C.

Those leaders who were not thus apprehended or driven out struggled on in spite of censorship and terrorism to maintain some semblance of intellectual life. One of the last rallying points of the intelligentsia seems to have been such periodicals as *Samtiden* (edited by Prof. A. H. Winsnes after the departure of Professor Worm-Mueller for England), *Kirke og Kultur*, and *Syn og Segn*. Although no openly subversive material could appear, a number of the articles and poems in these magazines were subtly contemporary in spirit. An article quoting Fichte's *Reden an die deutsche Nation* in *Kirke og Kultur* brought Ronald Fangen the honor of Nazi detention. None of the issues after August had reached this country by the end of 1941. It is not known whether this was due to postal conditions or to actual suspension of publication. Thanks to these magazines it is possible to give the following scanty account of what literature had appeared by that time, which is before the opening of the usual book publishing season.

Characteristic of both the periodicals and the books is an intense preoccupation with the Norwegian national tradition, a search into the treasures of the national past for values that may hold in the present. To this end Rolv Thesen published an anthology of national poetry under a title chosen from the national anthem, *Ja vi elsker* (*Yes, we love*) Gyldendal Publishing House issued *Norges Nasjonal-Litteratur*, a twelve-volume reprint of Norwegian classics from the Poetic Edda to Ibsen and Bjørnson. The travel accounts of the great explorer and statesman, Fridtjof Nansen, appeared in five volumes, as did the collected works of the late Oskar Braaten in six. *Norrøn Livskunst* (*The Norse Art of Life*) by Torsten Høverstad, essays on life and education; *Indtil 1910* (*Until 1910*) by Benjamin Vogt, memoirs from his work as ambassador to England; *Fangstfolk* (*Fishing Folk*) by Gutorm Gjessing, essays on Norwegian prehistory—all of these could be called national without being offensively contemporary.

Original literary works were few. Arthur Omre brought out a new novel, *Harmoni* (*Harmony*), in praise of the simple, natural laboring life. A collection of poems by the youthful Einar Skjæraasen entitled *Den underlige våren* (*That strange spring*) reflected some of the emotions of 1940 and was declared by the eminent critic Einar Skavlan to hold great promise. A contest for good amateur plays produced *Viking Fredlaus* (*Viking Outlaw*) by Birger Jåstad, a period piece, and two others, *Stadion* (*Stadium*) by Leif Halse, and *Nybrot* (*Pioneering*) by Karl Øvretvert. A versified retelling of Aesop's fables by Herman Wildenvey displeased the Nazis by some pointed allusions, but it did not suffer the fate of several other books, which were either suppressed or not permitted to be advertised and reviewed.

The real feelings of the Norwegian people found a better expression in two volumes published in the still free Sweden. *Nordens Stamma* (*The Voice of the North*) was an anthology of Scandinavian writing which expressed the best in the traditions of each nation and their hope of some day again blending their voices in a common chorus; *Norsk Krigslyrikk* (*Norwegian War Lyrics*) contained poems written in 1940 and 1941 by Nordahl Grieg and other Norwegian poets whose personal safety still requires them to remain anonymous. The poems range from passionate invective to a quiet assurance that right will prevail and the beloved land return to its rightful heirs. Some of them

strike a deep note and will undoubtedly join the classics of the nation in days to come.

EINAR HAUGEN.

NOTABLE PERSONS. See CHRONOLOGY; NECROLOGY.

NOVA SCOTIA. A maritime province of eastern Canada. Area, 21,068 square miles. Population (1941 census), 573,190. Vital statistics (1940): 12,755 living births, 6,166 deaths, 6,391 marriages. Chief cities (1941 census figures): Halifax, capital (69,326), Sydney (28,081), Glace Bay (25,050), Dartmouth (10,919), Truro (10,410), New Waterford (9,237), New Glasgow (9,118), Sydney Mines (8,157), Amherst (8,481), Yarmouth (7,699), Springhill (7,123). Education (1938-39): 151,466 students enrolled in schools and colleges.

Production. The gross value of agricultural production for 1940 was \$29,810,000 (field crops \$13,347,000, dairy products \$7,588,000, fruits and vegetables \$3,506,000, farm animals \$3,265,000, poultry products \$1,606,000). Oats 3,094,000 bu. (3,265,000 in 1940), potatoes 104,550 tons (115,650), roots 165,000 tons (175,550), hay and clover 667,000 (649,000) were the chief field crops in 1941. Apple crop (1940): 1,151,000 bbl. worth \$2,106,300. Livestock (1940): 229,200 cattle, 143,500 sheep, 52,800 hogs, 43,900 horses, 1,335,800 poultry. Fur output (1938-39): 150,865 pelts worth \$601,752. Value of products of the forests (1939): \$8,020,000. Fisheries catch (1940): 141,450 tons valued at \$9,843,000 (cod \$3,694,000, lobsters \$1,785,000, haddock \$1,399,600, mackerel \$493,200).

Mineral production (1939) was valued at \$30,746,200 (see YEAR BOOK for 1940, p. 568). Manufacturing (1939): 1,083 factories, 17,627 employees, \$35,885,563 net value of products.

Government. Finance (year ended Nov. 30, 1940): \$16,443,946 for revenue; \$15,497,608 for expenditure; net funded debt, \$96,467,281. The executive authority is vested in a lieutenant governor who is advised by a ministry of the house of assembly, the latter comprising 30 members elected for a five-year term by popular vote (23 Liberals, 4 Conservatives, and 3 Cooperative Commonwealth Federationists were elected at the provincial general election of Oct. 23, 1941). Ten senators and 12 elected commoners represent Nova Scotia in the Federal parliament at Ottawa. Lieutenant Governor, F. F. Mathers (appointed May 31, 1940); Premier, A. S. MacMillan (Liberal; appointed July 10, 1940). See CANADA.

NYA. See NATIONAL YOUTH ADMINISTRATION.

NYASALAND. A British East African protectorate. Land area, 37,374 square miles; population (1939), 1,679,977, including 1,676,382 natives, 1,847 Europeans, and 1,748 Asiatics. Chief towns: Zomba (capital), Blantyre, Limbe, Cholo, and Lilongwe. Education (1939): 4 elementary schools for European children; 4,327 native schools and 208,451 students.

Production and Trade. Chief products (figures are

for 1940 exports)—tobacco (13,394,011 lb.), tea (12,794,314 lb.), cotton (2,653,254 lb.), maize, coffee, rubber, rice, sisal, and tung oil. Livestock (1939): 238,818 goats, 216,137 cattle, 61,169 swine, and 45,685 sheep. Trade (1940): £837,561 for imports and £1,026,326 for exports (tobacco £482,166, tea £481,688, cotton £38,693). Roads (1940): 3,427 miles.

Government. Finance (1939): £505,802 for revenue and £735,889 for expenditure. Public debt (Dec. 31, 1939), £5,464,959. The government is administered by a governor, assisted by an executive and a legislative council. Governor and Commander-in-Chief, Sir Donald Mackenzie-Kennedy (appointed Feb. 24, 1939).

History. It was announced in the British Parliament on July 30, 1941, that arrangements were being made to establish a secretariat of the existing East African Governors' Conference for the purpose of securing the more effective cooperation of Northern Rhodesia and Nyasaland with Southern Rhodesia in the war effort. At the end of the war these arrangements were to be reviewed. See RHODESIA, SOUTHERN under *History*.

OATS. The oats crop of 1941 in the United States was estimated by the U. S. Department of Agriculture at 1,176,107,000 bu., about 6 per cent less than the 1940 crop of 1,246,050,000 bu. but 17 per cent larger than the 1930-39 average of 1,007,141,000 bu. The decline in production from 1940 was due to sharply lower yields per acre in the Corn Belt States; the harvested acreage was larger than in 1940 in most of the important producing States. The acreage not harvested for grain, 35 per cent of the acreage planted, compared with 43 per cent in 1940. The harvested acreage of 37,972,000 was about 7 per cent larger than that of 1940 and considerably larger than the 1930-39 average of 36,487,000 acres. Acre yields averaged 31 bu. in 1941 and 35.2 bu. in 1940. Leading oats-producing States were Iowa with 177,280,000 bu., Illinois 154,112,000, Minnesota 116,019,000, Wisconsin 75,669,000, North Dakota 58,575,000, South Dakota 54,912,000, Nebraska 54,280,000, and Indiana 54,120,000 bu. The seasonal average price per bushel (preliminary) received by farmers was 38.7¢ and the estimated value of production was \$455,610,000 in 1941 compared to 30.3¢ and \$377,171,000 in 1940. See crop production tables (pp. 12-13) under AGRICULTURE.

OHIO. An east north central State. Area: 41,222 sq. mi., including 100 sq. mi. of inland water, but excluding part of Lake Erie, 3,457 sq. mi. Population: (1940 census) 6,907,612. The urban popula-

tion comprises 66.8 per cent of the total (U.S. average, 56.5 per cent); non-white population, 4.9 per cent (U.S. average, 10.2); elderly (65 years and over), 7.7 per cent. Ohio ranks 35th among the States in area, fourth in population, and eighth in density, with an average of 168.0 persons per square mile. The capital is Columbus with 306,087 inhabitants; largest city, Cleveland, 878,336. There are 88 counties and 59 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Kenneth C. Ray, Director of the Department of Education, there were 1,200,769 pupils enrolled in the public schools of Ohio during the school year 1940-41, 698,453 in elementary schools and 480,838 in secondary schools. Teachers numbered 40,700 and received an annual average salary of approximately \$1,600. Total current expenditures for the 1940 school year were \$107,325,076, exclusive of \$19,597,664 for Capital Outlay, \$8,446,023.47 for Interest, and \$23,857,821 for Debt Retirement in 1939-40.

Transportation. State highway mileage in 1939, including streets under State control, totaled 18,603, of which 18,453 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 1,942,639; 1,728,275 were private and commercial automobiles, and 190,654 trucks and tractor trucks. Gross motor-fuel consumption was 1,473,856,000 gallons. Net motor-fuel tax receipts were \$50,789,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$30,376,000.

Railways of all classes extended 8,508 miles (Dec. 31, 1939) 3.62 per cent of the total mileage in the United States. Class I steam railways (3,569 miles) reported 55,900,751 tons of revenue freight originating in Ohio in 1940 and 131,157,206 tons terminating in Ohio. There are 109 airports and landing fields in the State (28 lighted fields) and 10 seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 1,196 civil aircraft in the State and 3,577 airline transport, commercial, and private pilots (3,014 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 9,893,900, as compared with 9,790,700 acres in 1940. According to the latest census, there are 233,783 farms, valued at \$1,443,917,176, averaging 93.7 acres each. Farm population was 1,083,619 or 15.7 per cent of the total. Leading crops with production in 1941 were: Corn, \$114,292,000, 160,974,000 bu.; wheat, \$51,427,000, 48,978,000 bu.; hay, \$30,610,000, 3,329,000 tons; oats, \$22,091,000, 51,374,000 bu.; soybeans, \$19,057,000, 13,143,000 bu.; potatoes, \$8,810,000, 10,614,000 bu.; commercial truck crops, \$7,049,000; apples, \$5,651,000, 7,064,000 bu.

Manufacturing. The total value of manufactured products, according to the latest census (for the year 1939) was \$4,584,665,659. For details, see 1940 YEAR BOOK.

Mineral Production. Leading products in 1939 in order of value were (with 1940 production in parentheses): Pig iron, 8,119,073 net tons valued at \$147,154,864 (10,275,696 net tons, \$193,283,920); coal, 19,632,000 short tons, \$32,196,000 (22,092,000 net tons); coke, 6,135,949 short tons, \$28,502,924 (7,897,929 net tons); clay products other than pottery and refractories, \$26,539,916; natural gas, 36,469,000 M cubic feet, \$18,818,000; stone, 11,133,560 short tons, \$10,140,272 (11,915,520 short tons, \$10,234,221); lime, 1,106,250 short tons,

\$8,907,195 (1,284,877 short tons, \$10,180,785); cement, 6,140,125 barrels, \$8,233,817 (6,841,129 barrels, \$9,202,414); sand and gravel, 8,660,485 short tons, \$6,595,483 (9,558,904 short tons, \$7,182,453); ferro-alloys, 143,682 long tons, \$6,084,252. The total value of mineral production in 1939, according to the U.S. Bureau of Mines, was 119,750,853. (Pig iron and coke are eliminated in State totals to avoid duplication.) Ohio ranks ninth among the States in mineral production with 2.83 per cent of the total value for the United States.

Trade. According to the 1940 census there were 9,588 wholesale establishments in Ohio, employing 75,975 persons, reporting net sales for 1939 of \$2,630,784,000 and annual pay roll of \$132,425,000. There were 93,041 retail stores with 270,425 employees, reporting sales of \$2,441,293,000 and pay roll of \$271,073,000. Service establishments numbered 34,174, employing 50,574 persons for \$52,174,000 per year, and reporting a business volume amounting to \$175,094,000. The leading business center of the State is Cleveland which reported wholesale sales of \$946,653,000, retail sales of \$420,426,000, and \$43,469,000 receipts for its service establishments. Cincinnati reported sales of \$647,187,000 wholesale and \$230,446,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Ohio was \$160,875,000. Under the Social Security program, financed by Federal funds matching State grants, 137,871 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$23.34 (U.S. average pension, \$21.08); 31,730 dependent children in 11,820 families received average monthly payments of \$39.36 per family (U.S. average, \$32.73); and 3,998 blind persons received \$20.11 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 47,980 and received \$16.30 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 5,987 (\$397,000); NYA student work program, 19,399 (\$140,000); NYA out-of-school work program, 23,440 (\$492,000); WPA, 80,670 (\$4,548,000); other Federal emergency projects, 583 (\$91,000); regular Federal construction projects, 25,816 (\$3,835,000). The Farm Security Administration certified subsistence payments totaling \$14,000 for the month to 482 cases.

Legislation. The General Assembly convenes in regular session on the first Monday of January in odd years. It is composed of 36 Senators (19 Republicans and 17 Democrats in 1941) and 138 Representatives (78 Republicans and 60 Democrats).

The 94th General Assembly, in session January 6 to May 27, 1941, enacted into law 232 measures out of 1,046 bills introduced in both Senate and House, and adopted 13 out of 77 joint resolutions offered; six other laws were vetoed. The legislative program advocated by Gov. John W. Bricker, which called for a balanced budget, a welfare and university building program, and a number of important code revisions, was enacted in the main, despite the exceedingly slim majority held by the Republican party and some division within its ranks over controversial measures. Appropriations totaled \$352,924,819. The main features of the program enacted were summarized as follows by John P. Biehn in the Columbus *Dispatch*, May 18, 1941:

Extension of the liquid fuel tax for two years.
Extension of the cigaret tax for two years.

Appropriation of \$12,000,000 a year for local governments to be paid from sales tax revenues

Creation of the Ohio state guard to serve during the absence in federal service of the Ohio national guard.

Increase of the uniformed division of the state highway patrol from 200 to 800 men and increase of the powers of the patrolmen.

Removal of the requirement for federal recognition in the appointment of an adjutant general

Creation of state and local defense councils appointed by the governor to cooperate in national defense

Liberalization of benefits and reduction of payroll taxes under the unemployment compensation act

Recodification and extension of the mine safety laws of the state.

Increased benefits under the workmen's compensation act to provide maximum death awards of \$7,000 instead of \$6,500 and weekly compensation at a maximum of \$21 instead of \$18.75

Financing of an increase in old age pension to a maximum of \$40 a month

Appropriation of \$6,500,000 of current revenue for a state welfare and state-supported university building programs.

Payment of \$6,000,000 during the 1941-42 biennium on the remaining \$12,000,000 state school deficit.

Finances. Total tax collections in Ohio for the fiscal year ending in December, 1940, were \$265,327,000. Total sales taxes amounted to \$138,869,000, including motor-fuel, \$51,428,000, general sales, \$50,985,000. Taxes on specific businesses ran to \$27,335,000, general and selective property, \$6,775,000, unemployment compensation, \$58,574,000.

Cost payments for the operation of general government totaled \$207,621,000 in 1939, the latest year available. (Revenues for the general government for that year were \$279,231,000.) Cost of operation per capita was \$30.16. Total gross debt outstanding in 1941 was \$10,664,000, as compared with \$9,534,000 in 1932.

Officers and Judiciary. The Governor is John W. Bricker (Rep.), inaugurated in January, 1941, for his second two-year term; Lieutenant Governor, Paul M. Herbert; Secretary of State, John E. Sweeney; Attorney General, Thomas J. Herbert; State Treasurer, Don Ebright; State Auditor, Joseph T. Ferguson. Chief Justice of the Ohio Supreme Court is Carl V. Weygant; there are six associate members elected by popular vote for six-year terms. See CONSUMERS' COOPERATIVES; FIRE PROTECTION; LABOR LEGISLATION; topics listed under CINCINNATI.

OIL. See PETROLEUM. For cottonseed oil, see COTTON.

OKLAHOMA. A west south central State. Area: 69,919 sq. mi., including 636 sq. mi. of inland water. Population: (1940 census) 2,336,434. The urban population comprises 37.6 per cent of the total (U.S. average, 56.5 per cent); non-white population, 9.9 per cent (U.S. average, 10.2); elderly (65 years and over), 6.2 per cent. Oklahoma is 17th among the States in area, 22d in population, and 32d in density, with an average of 33.7 persons per square mile. The largest city and capital is Oklahoma City with 204,424 inhabitants. There are 77 counties and 21 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to A. L. Crable, Superintendent of Public Instruction, there were 611,818 pupils enrolled in the public schools of Oklahoma during the school year 1939-40, 472,227 in elementary schools and 139,591 in secondary schools. Teachers, principals, and superintendents numbered 20,980 and received an annual average salary of \$1,054. Total current expenditures for the year were \$30,523,851.78.

Transportation. State highway mileage in 1939, including streets under State control, totaled 8,607, of which 7,713 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 585,052; 467,099 were private and commercial automobiles, 2,792 busses, and 104,828 trucks and tractor trucks. Gross motor-fuel consumption was 441,161,000 gallons. Net motor-fuel tax receipts were \$15,067,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$6,435,000.

Railways of all classes extended 6,313 miles (Dec. 31, 1939) 2.69 per cent of the total mileage in the United States. Class I steam railways (5,676 miles) reported 10,517,856 tons of revenue freight originating in Oklahoma in 1940 and 6,755,803 tons terminating in Oklahoma. There are 51 airports and landing fields in the State (18 lighted fields) and two seaplane anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 449 civil aircraft in the State and 2,095 commercial and private pilots (1,739 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 13,419,700, as compared with 13,441,000 acres in 1940. According to the latest census, there are 179,687 farms, valued at \$831,140,748, averaging 193.7 acres each. Farm population numbered 935,241 or 40.0 per cent of the total. Leading crops with production in 1941 were: Cotton lint, \$54,000,000, 750,000 bales; wheat, \$44,235,000, 48,610,000 bu.; corn, \$23,089,000, 31,202,000 bu.; cottonseed, \$14,395,000, 334,000 tons; hay, \$11,122,000, 1,716,000 tons, oats, \$9,583,000, 25,900,000 bu.; grain sorghums, \$7,823,000, 13,260,000 bu.; sweet sorghums, \$7,018,000, 1,210,000 tons.

Manufacturing. The total value of manufactured products, according to the latest census (for the year 1939) was \$312,168,499, 1,606 establishments employed 28,113 wage earners who received \$30,465,185 for the year.

Mineral Production. Leading mineral products in 1939 in order of value were: Petroleum, 174,994,000 bbl. valued at \$209,500,000 (155,952,000 bbl in 1940, unrevised figure); natural gas, 250,875,000 M cu. ft., valued at \$28,103,000; natural gasoline, 436,123,000 gal., \$15,502,000, zinc, 140,379 short tons, \$14,599,416 (162,935 short tons in 1940). The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$236,176,614 or 5.58 per cent of the total for the United States. Oklahoma ranks fifth among the States in the value of mineral production.

Trade. According to the 1940 census there were 3,998 wholesale establishments in Oklahoma, employing 15,559 persons, reporting net sales for 1939 of \$461,519,000 and annual pay roll of \$21,561,000. There were 23,722 retail stores with 59,988 employees, reporting sales of \$513,091,000 and pay roll of \$48,953,000. Service establishments numbered 10,726, employing 13,321 persons for \$9,742,000 per year, and reporting a business volume amounting to \$35,963,000. The leading business center of the State is Oklahoma City which reported wholesale sales of \$193,322,000, retail sales of \$91,844,000, and \$8,850,000 receipts for its service establishments. Tulsa reported sales of \$75,410,000 wholesale and \$67,806,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Oklahoma was \$54,519,000. Under the Social Security program, financed by Federal funds matching State grants, 76,469 elderly persons were receiving (as of June, 1941) an average monthly old-

age pension of \$18.01 (U.S. average pension, \$21.08); 44,879 dependent children in 19,562 families received average monthly payments of \$15.26 per family (U.S. average, \$32.73); and 2,153 blind persons received \$16.41 per month (U.S. average, \$25.58). General relief cases include 4,803 cases aided under program administered by State board of public welfare, and 6,711 cases aided by county commissioners (amount of duplication believed to be large); total payment received was \$50,012.

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 9,016 (\$597,000); NYA student work program, 8,018 (\$60,000); NYA out-of-school work program, 7,831 (\$164,000); WPA, 32,109 (\$1,433,000); other Federal emergency projects, 33 (\$3,000); regular Federal construction projects, 4,277 (\$414,000). The Farm Security Administration certified subsistence payments totaling \$43,000 for the month to 1,594 cases.

Legislation. The Legislature convenes in regular session on Tuesday after the first Monday of January in odd years. It is composed of 44 Senators (42 Democrats and 2 Republicans in 1941) and 120 Representatives (113 Democrats and 7 Republicans). The following summary of 1941 enactments was prepared for the YEAR BOOK by the Oklahoma State Librarian, Ralph Hudson.

The Eighteenth Oklahoma Legislature convened in regular session Jan 7, 1941, and, like the preceding legislature, worked closely with the Governor. Three resolutions submitting constitutional amendments were passed by the Legislature shortly after convening and the amendments were adopted on Mar 11, 1941, at a special election. The first provided that the State Board of Equalization should estimate the revenue of the State and submit this estimate to the Legislature, and it nullified all appropriations in excess of the revenues actually received. In case of a failure of revenue, all appropriations are reduced on a proportionate basis. This amendment stopped the series of deficits that have been incurred by the State in recent years. The second amendment created the Oklahoma State System of Higher Education which is a governing board of all State supported institutions of higher learning. This board prescribes standards, determines functions, grants degrees, and allocates funds to each institution as all appropriations for higher education are made in a lump sum to this board. The third amendment removed the limitation of the amount of financial assistance granted to old age pensioners if sufficient taxes were enacted to pay for any increase.

The right of eminent domain to establish airports was granted to cities and towns and to the United States of America. A system for organizing credit unions was established. A ten year apportionment of members of the House of Representatives was made. A small loan act was passed limiting the interest rate and setting certain fees. Unfair sales or sales below cost were prohibited. The judicial districts of the state were revised. Sabotage and criminal syndicalism were made felonies. The Communist Party was denied recognition and no person can be eligible as a candidate for public office who is a Communist, nor is any person affiliated with the Communist Party eligible for appointment or election to any state office and any such now in office shall be removed.

The Oklahoma Unemployment Security Commission was created to govern employment security service and the State employment service. The establishment of a State guard was authorized. The motor vehicle license and registration act was amended, and a vehicle excise tax was reenacted. All State owned passenger automobiles except those owned by the Department of Public Safety and a limited number that might be retained by the Highway Department were ordered sold and further purchase of similar vehicles was forbidden. Itinerant merchants were placed under a regulatory act. The interstate oil compact was renewed. The State prison farm was ordered sold as well as property of the subprison. A state Dry Cleaners' Board was established with authority to set minimum prices and to supervise this industry in the state.

The Oklahoma Funding Bond Commission was created to fund the last of the State's debts. Property assessment was revised as well as the law pertaining to delinquent taxes. The cigarette tax was reenacted and a tax placed on other forms of tobacco. The gasoline tax was increased one-half cent and an additional one and one-half cents per gallon tax was placed on other special fuels. A gift

tax was levied. The petroleum excise tax and the sales and use taxes were reenacted.

The State Board of Education was reorganized and the last list of text book adoptions was extended. A new compilation of the Oklahoma statutes was authorized and ordered, and a large number of obsolete acts was repealed.

Elections. By a three-to-one vote Oklahoma in March eliminated from her constitution a restriction freezing at \$30 per month the maximum amount of State aid to needy aged persons, and the legislature, or the people by initiative petition, were authorized to fix the maximum amount of aid permissible. Subsequently the State Welfare Commission authorized, if funds are available, monthly payments of \$40 per month. When this policy is implemented, Oklahoma will receive from the Federal Government \$20 monthly for each person aided instead of only \$15.

Finances. Total tax collections in Oklahoma for the fiscal year ending in June, 1941, were \$62,858,000 (1940: \$61,879,000). Total sales taxes amounted to \$32,555,000, including motor fuel, \$15,950,000, general taxes, \$11,788,000. Taxes on specific businesses ran to \$2,278,000, general and selective property, \$42,000, unemployment compensation, \$6,170,000. The net income taxes were \$6,261,000.

Cost payments for the operation of general government totaled \$70,229,000 in 1939, the latest year available. (Revenues for the general government for that year were \$80,532,000.) Cost of operation per capita was \$34.39. Total gross debt outstanding in 1941 was \$43,223,000, as compared with \$11,532,000 in 1932.

Officers and Judiciary. The Governor is Leon C. Phillips (Dem.), inaugurated in January, 1939, for a four-year term; Lieutenant Governor, James E. Berry; Secretary of State, C. C. Childers; State Treasurer, Carl B. Sebring; State Auditor, Frank C. Carter. Chief Justice of the Oklahoma Supreme Court is Earl Welch; there are eight associate members elected by popular vote for six-year terms. See COMMUNISM; DAMS; FLOODS; LABOR LEGISLATION; PLANNING.

OLD-AGE ASSISTANCE, INSURANCE, AND PENSIONS. See LABOR LEGISLATION, RAILWAYS; RELIEF; SOCIAL SECURITY BOARD; articles on States under Social Security and Legislation.

OLYMPICS. With Olympic games obviously out of the question, there was a lot of chatter early in the year about possible Pan-American games to be held in Argentina late in 1942. The fate of these games after the United States entered the War was not known.

OMAN. See ARABIA under *Muscat and Oman*.

ONTARIO. A Canadian province between Quebec and Manitoba. Area, 412,582 square miles, including 49,300 square miles of fresh water. Population (1941 census), 3,756,632. Vital statistics (1940): 68,393 living births, 38,383 deaths, 41,235 marriages. Chief cities (1941 census figures): Toronto, capital (656,930), Hamilton (163,768), Ottawa, capital of Canada (149,881), Windsor (103,961), London (77,043), Kitchener (35,366). Education (1938-39): 787,272 students enrolled in schools and colleges.

Production. The gross value of agricultural production in 1940 was \$363,584,000 (field crops \$140,680,000, dairy products \$98,993,000, farm animals \$63,681,000, poultry products \$24,438,000, fruits and vegetables \$22,195,000, tobacco \$8,598,000, fur farming \$1,114,000). Wheat 17,716,000 bu. (23,400,000 in 1940), oats 76,032,000 bu. (86,554,000), barley 13,202,000 bu. (15,519,000).

mixed grains 32,537,000 bu. (34,770,000), corn for husking 9,471,000 bu. (6,956,000), potatoes 434,700 tons (337,650), roots 906,200 tons (1,076,400), hay 5,337,000 tons (6,916,000), fodder corn 3,540,000 tons (3,112,000), sugar beets 322,200 tons (401,000) were the main field crops in 1941. Apple crop (1940): 783,200 bbl. worth \$1,440,500. Tobacco (1940): 23,365 tons valued at \$8,598,300. Livestock (1940): 2,518,300 cattle (including 1,195,100 milk cows), 1,997,900 hogs, 819,500 sheep, 559,900 horses, 22,901,200 poultry. Fur output (1938-39): 1,038,446 pelts valued at \$2,538,658. Forest production (1939) was worth \$36,100,000. Fisheries catch (1940): 13,981 tons worth (marketed) \$3,035,100.

Mineral production (1939) was valued at \$232,519,948, including gold (3,086,076 fine oz.) \$111,533,873, nickel (226,105,865 lb.) \$50,920,305, copper (328,429,665 lb.) \$32,637,305, platinum (148,877 fine oz.) \$5,221,712, palladium, rhodium, iridium (135,402 fine oz.) \$4,199,622, silver (4,689,422 fine oz.) \$1,898,653, cobalt (732,561 lb.) \$1,213,454, natural gas (11,966,581 M cu. ft.) \$7,261,928, salt (370,843 tons) \$2,220,189. Gold output (1940): 3,261,688 fine oz. Manufacturing (1939): 9,824 factories, 318,871 employees, \$791,428,569 net value of products.

Government. Finance (year ended Mar. 31, 1940): \$98,925,000 for revenue and \$102,159,000 for expenditure. Budget estimates (1941-42): \$115,180,000 for revenue and \$105,437,000 for expenditure. Revised budget estimates (1940-41): \$114,056,000 for revenue and \$101,456,000 for expenditure. Net funded debt (Mar. 31, 1940): \$682,744,454. The executive authority is vested in a lieutenant governor who is advised by a ministry of the legislature. In the legislative assembly there are 90 members elected for a five-year term by popular vote. Twenty-four senators (appointed for life) and 82 elected commoners represent Ontario in the Federal parliament at Ottawa. Lieutenant Governor, Albert Matthews (appointed Nov. 30, 1937); Premier, Mitchell F. Hepburn (Liberal; appointed July 10, 1934). See CANADA.

OPA, OPACS. See PRICE ADMINISTRATION, OFFICE OF. **OPERA.** See MUSIC.

OPINION RESEARCH CENTER, National. An institution established in 1941 by the Marshall Field Foundation, Inc., of New York City, in association with the University of Denver. Its purposes are: (1) To establish the first non-profit, non-commercial organization to measure public opinion in the United States. (Through a national staff of trained investigators, representative cross-sections or samples of the entire population will be personally interviewed on questions of current importance.) (2) To make available to legislators, government departments, academicians, and non-profit organizations a staff of experts in the science of public opinion measurement, and a highly trained nationwide corps of interviewers. (3) To analyze and review the results of surveys made by other polling organizations. (4) To create at the University of Denver a research Center to discover, test and perfect new methods, techniques and devices for ascertaining the status of public opinion. (5) To provide at the University of Denver a graduate department devoted to the study of the new science of public opinion measurement.

The new science of opinion measurement has as its field the accurate measurement of the opinions of the entire population through the use of the sampling technique. By giving the electorate an op-

portunity to express itself in the intervals between elections, opinion polls provide a new means of making voters articulate. The various population groups to be interviewed by the Center parallel the population groups of the nation. All sections of the country, from farm to large city, are represented in their true proportion. The same is true of age groups, sex, economic groups, minority groups, etc. Thus it is seen that selecting a proper cross-section requires statistical skill and a broad sociological knowledge. The Center has selected and trained a corps of interviewers in every section of the country. Questions for national surveys deal with subjects or issues close to the common experience of the masses of the people, or are based on subjects of wide public interest.

Much effort is being devoted to testing and developing new techniques and methods in order to make practical contributions to the science of opinion research. For example, as yet no really successful method of measuring "how strongly" people feel about social and political issues has been discovered. At present the public opinion polls go little farther than the popular referendum in getting at more than the simple acceptance or rejection of a proposal.

The Center intends to be active in the movement for an Audit Bureau of Polls and to analyze the results of published surveys. During the presidential election of 1940 six polls (Crossley, Dunn, Gallup, Hurja, Roper, Wall) were being widely publicized in the press. Some of these were based on the sampling technique, others on less reliable methods. If an advisory council, composed of experts in the field, were to have examined the methods used by these various organizations and to have made public its report, much confusion might have been avoided.

The Director is Harry H. Field; Associate Director, F. Douglas Williams; Statistician, William Salstrom. Directors are Caleb F. Gates, Jr.; Gordon W. Allport; Hadley Cantril; Douglas P. Falconer; J. Quigg Newton, Jr.; Samuel A. Stouffer, and Louis S. Weiss.

OREGON. A Pacific State. Area: 96,981 sq. mi., including 631 sq. mi. of inland water, but excluding Pacific coastal waters, 48 sq. mi. Population: (1940 census) 1,089,684. The urban population comprises 48.8 per cent of the total (U.S. average, 56.5 per cent); non-white population, 1.3 per cent (U.S. average, 10.2); elderly (65 years and over), 8.5 per cent. Oregon ranks ninth among the States in area, 34th in population, and 38th in density, with an average of 11.3 persons per square mile. The capital is Salem with 30,908 inhabitants; largest city, Portland, 305,394. There are 36 counties and seven cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Rex Putnam, Superintendent of Public Instruction, there were 206,715 pupils enrolled in the public schools of Oregon during the school year 1940-41, 144,792 in elementary schools and 61,923 in secondary schools. Teachers numbered 8,000 and received an annual average

salary of \$1,377.06. Total expenditures for the year were \$21,522,614.58.

Transportation. State highway mileage in 1939, including streets under State control, totaled 7,048, of which 6,687 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 401,328; 325,130 were private and commercial automobiles, 692 busses, and 67,756 trucks and tractor trucks. Gross motor-fuel consumption was 264,672,000 gallons. Net motor-fuel tax receipts were \$11,359,000, the rate being five cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$3,346,000.

Railways of all classes extended 3,406 miles (Dec. 31, 1939) 1.45 per cent of the total mileage in the United States. Class I steam railways (2,759 miles) reported 9,921,763 tons of revenue freight originating in Oregon in 1940 and 8,256,702 tons terminating in Oregon. There are 30 airports and landing fields in the State (14 lighted fields) and three seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 289 civil aircraft in the State and 1,293 airline transport, commercial, and private pilots (1,127 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 2,551,600, as compared with 2,645,700 acres in 1940. According to the latest census, there are 61,829 farms, valued at \$476,817,354, averaging 290.9 acres each. Farm population numbered 259,638 or 23.8 per cent of the total. Leading crops with production in 1941 were: Wheat, \$21,801,000, 23,442,000 bu.; hay, \$15,461,000, 1,917,000 tons, commercial truck crops, \$6,088,000; pears, \$5,401,000, 4,259,000 bu.; potatoes, \$5,381,000, 7,175,000 bu.; hops, \$5,040,000, 16,800,000 lb.

Manufacturing. The total value of manufactured products, according to the latest census (for the year 1939) was \$365,374,436; 2,248 establishments employed 63,622 wage earners who received \$77,585,546 for the year.

Mineral Production. The value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$8,636,440, only one-fifth per cent of the total value for the United States. Chief product is gold, 93,372 troy ounces in 1939 (113,402 troy ounces valued at \$3,969,070 in 1940).

Trade. According to the 1940 census there were 1,934 wholesale establishments in Oregon, employing 15,443 persons, reporting net sales for 1939 of \$441,310,000 and annual pay roll of \$24,630,000. There were 16,458 retail stores with 41,720 employees, reporting sales of \$442,160,000 and pay roll of \$44,154,000. Service establishments numbered 6,256, employing 11,376 persons for \$10,910,000 per year, and reporting a business volume amounting to \$34,203,000. The leading business center of the State is Portland which reported wholesale sales of \$317,326,000, retail sales of \$183,551,000, and \$20,270,000 receipts for its service establishments.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Oregon was \$20,883,000. Under the Social Security program, financed by Federal funds matching State grants, 21,059 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$21.42 (U.S. average pension, \$21.08); 4,887 dependent children in 2,067 families received average monthly payments of \$40.87 per family (U.S. average, \$32.73); and 465 blind persons received \$24.94 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 6,581 and received \$16.45

per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 958 (\$63,000); NYA student work program, 2,984 (\$23,000); NYA out-of-school work program, 3,143 (\$62,000); WPA, 9,096 (\$640,000); other Federal emergency projects, 53 (\$4,000); regular Federal construction projects, 7,859 (\$1,100,000). The Farm Security Administration certified subsistence payments totaling \$9,000 for the month to 564 cases.

Legislation. The Legislative Assembly convenes in regular session on the second Monday of January in odd years. It is composed of 30 Senators (5 Democrats and 25 Republicans in 1941) and 60 Representatives (22 Democrats and 38 Republicans). Most of the enactments of the 1941 Legislature were of relatively minor importance. The following is a brief summary of the more important acts, compiled by Miss Mirpah G. Blair, Acting Librarian of the Oregon State Library.

Provision was made for congressional reapportionment into four districts, when a fourth congressman is allotted to Oregon. Changes in automobile speeds allowed were made, the limit being 55 miles on open highways. Burden of proof is shifted from the arresting officer to person arrested. The fee for automobile driver's license was increased from \$1.00 to \$1.50, with 50¢ of each fee going into a hospital fund to reimburse hospitals for care of indigent persons injured in automobile accidents.

Free textbook privileges were extended to parochial schools.

The Oregon Food Act regulating foods intended for human consumption is the most important of the several acts relating to the Department of Agriculture. Numerous changes were made in the tax laws, the most important being in the change in the date of assessment of property to January 1, the change in the date when taxes are payable to November, and the change in the end of the fiscal year of counties and municipalities from December 31 to June 30. Unemployment compensation law changes were made (see LABOR LEGISLATION) and changes also were made in the law providing for the gathering and registration of vital statistics. A referendum petition filed on the act taxing cigarettes postpones the operation of this act until after the next general election.

Finances. Total tax collections in Oregon for the fiscal year ending in June, 1941, were \$35,964,000 (1940: \$31,825,000). Total sales taxes amounted to \$12,768,000, equaling \$12,133,000 in motor fuel, and \$635,000 in alcoholic beverage. Taxes on specific businesses ran to \$3,310,000, unemployment compensation, \$7,138,000. The net income taxes were \$7,285,000. Cost payments for the operation of general government totaled \$30,549,000 in 1939, the latest year available. (Revenues for the general government for that year were \$43,555,000.) Cost of operation per capita was \$28.50. Total gross debt outstanding in 1941 was \$34,986,000, as compared with \$60,999,000 for 1932.

Officers and Judiciary. The Governor is Charles A. Sprague (Rep.), inaugurated in January, 1939, for a four-year term; Secretary of State, Earl Snell; Attorney General, I. H. Van Winkle; State Treasurer, Leslie M. Scott; State Auditor, Earl Snell. Chief Justice of the Oregon Supreme Court is Percy R. Kelly; there are six associate members elected by popular vote for six-year terms. See FLOOD CONTROL; FLOODS; GEOLOGICAL SURVEY.

ORGANIZATIONS. See SOCIETIES AND ASSOCIATIONS.

OSTLAND. See GERMANY under *History*.

OSTMARK. See AUSTRIA.

OUTER MONGOLIA. See CHINA; MONGOLIA.

OVERTIME PAY. See LABOR CONDITIONS.

PACIFIC DEVELOPMENT COMPANY. See ECUADOR under *History*.

PAHANG. See BRITISH MALAYA.

PAINTS, PIGMENTS. See CHEMISTRY, INDUSTRIAL under *Paints for Blackouts*. For sales, see BUSINESS REVIEW.

PALAU. See JAPANESE PACIFIC ISLANDS.

PALESTINE. A territory on the east coast of the Mediterranean, administered by Great Britain under the mandate of the League of Nations since Sept. 29, 1923. Capital, Jerusalem.

Area and Population. Area, 10,429 square miles; population (June 30, 1940), 1,517,112 permanent residents, of whom 941,362 were Moslems, 456,743 Jews, and 119,007 Christians. The net increase by births and immigration during 1931-39 was 468,384, divided as follows: Jews, 270,851 or 155.1 per cent; Moslems, 167,433 or 24.2 per cent; Christians, 28,051 or 31.6 per cent. United States citizens in Palestine on Jan. 1, 1941, numbered 8,500. From Apr. 1, 1939, to Sept. 30, 1940, there were 12,270 legal and 16,100 illegal immigrants into Palestine, virtually all of them Jews. The immigration quota for that period was 19,601. Estimated populations of the chief cities in 1939 were: Tel-Aviv, 130,300 (all Jews); Jerusalem, 129,800; Haifa, 104,800; Jaffa, 77,400; Nablus, 19,900; Gaza, 19,900; Hebron, 19,000.

Education. In July, 1939, there were an estimated 347,500 children between the ages of 5 and 15, including 251,000 Moslems, 71,000 Jews, and 25,500 Christians. The number of children of all ages attending school in 1938-39 was 166,646 (63,190 Moslems, 79,217 Jews, 23,523 Christians, and 716 of other faiths). The Hebrew University at Mount Scopus, Jerusalem, had 1,106 students in 1939-40, Hebrew Technical Institute at Haifa, 499 students.

Production. Agriculture is the main occupation, although the value of manufactures exceeded that of agricultural products for the first time in 1940. The chief crop is citrus fruit. Exports in 1938-39 were 15,310,436 cases valued at £P4,370,078, but due to the war exports declined to less than 7,000,000 cases in 1939-40 and to an insignificant quantity in 1940-41. The 1940 grain harvest was a record one, totaling 334,000 tons (chiefly wheat, 170,000 tons, barley, 90,000; millet, 65,000; corn, 9,000). The 1940 sesame crop was double the 3,800 tons of 1939. The yield of potatoes in 1939 was 104,000 metric tons; olive oil, 3,000. Production of potash in 1939 was 63,527 tons; salt, 9,000 (1938), refined bromine, 589 tons (1939); cement, 112,350 tons (1939).

There were 5,606 Jewish industrial enterprises in 1939 with an annual output valued at just over £9,000,000 (sterling). At the beginning of 1941 the total capital invested in Jewish industries was £12,000,000. Chief manufactures: Clothing, textiles, leather, timber products, metals and machinery, printing and paper, food, chemicals, cement. Olive oil, soap, and wine are other products. A large oil refinery at Haifa began production early in 1940.

Foreign Trade. Excluding imports of military stores and fuel, imports during 1940 were valued at £P10,848,000 (£P14,632,822 in 1939). Excluding crude petroleum and Dead Sea potash, exports for 1940 declined to £P2,112,000 from £P5,117,769 in 1939. Suspension of citrus fruit shipments was the chief reason for the export decline. Imports from the United States in 1940 were \$4,176,899 (\$7,645,696 in 1939).

Finance. For the fiscal year ended Mar. 31, 1941, Government revenue from local sources was £P5,184,000; expenditure, £P7,552,000; British grant-in-aid, £P3,290,000. Expenditures budgeted for 1941-42 amounted to a record total of £P10,500,000, including the Palestine Railways and nearly

£P2,000,000 allocated for public works. The external debt on Mar. 31, 1940, totaled £4,475,000. The Palestine pound (£P) is equivalent to one pound sterling.

Transportation. Palestine in 1941 had about 328 miles of railway line; over 2,200 miles of highways, including the Palestine section of the new Haifa-Baghdad road, and British, Dutch, and Egyptian air lines connecting Lydda and other cities with Egypt, South and West Africa, Iraq, India, Netherlands Indies, and Australia. During 1940, the railways carried 973,508 metric tons of freight and 1,362,039 passengers. A total of 1,857 steamers of 4,370,085 tons entered Palestine ports in the foreign trade during 1939.

Government. The territory is administered by a High Commissioner (Sir Harold Alfred MacMichael assumed the office Mar. 1, 1938), who is appointed by the British Crown and assisted by executive and advisory councils. The Jewish, Moslem, and Christian communities have autonomous control of their religious, cultural, and communal affairs. Official languages, English, Arabic, Hebrew.

History. With the German drive into the Balkans in the spring of 1941, Palestine was drawn more actively into the European War. Occupation of Crete and of air bases in the Italian Aegean Islands (q.v.) enabled the German air force to join the Italians in sporadic air raids upon Palestinian cities. As in 1940, Haifa was again the main objective of these attacks. Air raid shelters were constructed there and in Tel-Aviv, Jerusalem, Jaffa, and other towns, and blackouts and other precautions were enforced.

The British used Palestine as an important base in ousting the pro-Axis Iraqi regime of Premier Rashid Ali Al-Gailani in May and in ending the Vichy Government's control over Syria and Lebanon in June-July. This relieved apprehension that the Germans would utilize Iraq and Syria as bases for the conquest of Palestine and the cutting of the Suez Canal.

In connection with preparations to meet the German threat in this region, the British established a War Supply Board (February 26) to enlist Palestine's factories and other facilities in producing military supplies for their armies in the Middle East. They also speeded up the recruiting of Palestine Arabs and Jews for service in various units of the Imperial defense forces. By June, 1941, some 10,000 Jews were reported to have enlisted, as well as a considerable number of Arabs. Zionist leaders in Britain and the United States seized the opportunity presented by the German menace to Palestine to demand the arming of the Jewish population and the creation of a separate Jewish army to fight on the British side. The proposal was rejected by the British Government because of expected adverse repercussions on Arab-British relations throughout the Middle East. To calm Arab protests at the large number of Jews entering Palestine illegally, the British granted no immigration quota for the first three quarters of 1941. Nevertheless 2,565 immigrants entered during the first four months of the year.

From Syria and Axis news centers came reports of anti-Jewish outbreaks among the Palestinian Arabs during the British war with Rashid Ali Al-Gailani's Government in Iraq. Axis agents were said to have smuggled arms to Arab tribesmen in Palestine. However reports from British and Jewish sources indicated that the rapprochement between Arabs and Jews that followed the outbreak of the European War was not vitally disturbed. Ten Arab students registered in the Hebrew University of Jerusalem. There was fraternization between the faculty of that

institution and visiting Arab scholars. Arab and Jewish citrus growers established a permanent agency to direct activities of mutual economic benefit.

The drastic reduction of citrus exports and of other foreign trade produced a serious economic depression, and forced the government and the religious communities to undertake extensive relief measures. A levy was imposed on all fruit sold for internal consumption and the proceeds used to assist citrus growers. The Government on March 27 also imposed an income tax for the first time since the biblical tithe, levying 10 per cent on all companies' earnings in 1940. It also undertook to reimburse banks for loans made to citrus growers in 1940 under a limited state guarantee. The banks then agreed to finance the growers for 1941-42 on substantially the same terms as before.

Continuance of the struggle between pro-British and anti-British Arab factions in Palestine was indicated by the assassination of the Anglophile Arab leader, Fakhri Bey Nashashibi, in Baghdad in November. Apparently he was the victim of adherents of the violently anti-British Grand Mufti of Jerusalem, Haj Amin el Husseini, who was driven from his refuge in Baghdad to Iran by the British occupation of Iraq in May. From Tehran the Grand Mufti escaped to Turkey at the time of the Anglo-Russian invasion of Iran. He then went to Rome and later Berlin, where he delivered anti-British propaganda broadcasts to the Arab peoples of the Middle East. The pro-British sympathies of Arabs opposing the Mufti's policy were strengthened by pledges to assist the independence and federation of the Arabs, issued by Foreign Minister Anthony Eden in June, by Prime Minister Winston Churchill, and by the British Minister of State, Oliver Lyttelton, in Amman, Trans-Jordan, in September.

See CHEMISTRY, INDUSTRIAL, IRAQ and SYRIA AND LEBANON, under *History*.

PALMYRA ISLAND. A coral atoll in the Central Pacific (6° N. and 162° 30' W.) belonging to the United States. It is under the jurisdiction of the Navy Department. Land area, 1½ square miles. As Palmyra lies almost halfway between Hawaii and American Samoa, the U.S. Navy Department in 1939 decided to convert it into an intermediate station for seaplane patrols operating from those bases. Congress voted \$13,000,000 for the establishment of an auxiliary naval air base at Palmyra and in March, 1941, an additional \$6,935,500—almost evenly divided between Palmyra and Johnston islands—was appropriated for the installation of carrier landplane runways and other aviation facilities.

Although title to the island remained in litigation (see YEAR BOOK for 1940, p. 574), the work of cutting a channel through the reefs and removing coral heads within the lagoon was pushed forward in 1941 and the lagoon was placed in service as an emergency seaplane landing field and fueling base. Effective May 15, 1941, the island was declared a "naval defensive sea area." Unauthorized vessels and aircraft were barred from a three-mile zone around it.

P-AMINO BENZOIC ACID. See BIOLOGICAL CHEMISTRY under *Vitamins*.

PANAMA. A republic of Central America, bisected by the Panama Canal Zone (q.v.). Capital, Panamá.

Area and Population. Area, 34,169 square miles; population (estimated, September, 1940), 650,000 excluding the Canal Zone. Racial division of population (1930 census): 78,813 whites, 69,583 Ne-

groes, 42,897 Indians, 4,138 Orientals, 249,583 mestizos. Census populations of the chief cities were Panamá, with suburbs, 123,270 (1940); Colón, 46,000; David, 20,088. United States citizens residing in the republic on Jan. 1, 1941, numbered 7,222. Non-transient passengers arriving at Canal Zone ports in 1940 numbered 46,237; departures, 32,081.

Education and Religion. About half the adult population is illiterate. There were 61,706 pupils in 629 public elementary schools (1938-39), 3,830 in secondary schools (1937), 1,012 students in the Instituto Nacional or college for higher instruction, and about 500 students in the University of Panamá, besides various special, normal, and vocational schools. The Constitution of Jan. 2, 1941, recognizes the Roman Catholic Church as that of the majority of the people, but guarantees freedom of religion.

Production. The chief occupations are agriculture, cattle raising, lumbering, pearl fishing, commerce, and the tourist business. Bananas are the chief domestic export; shipments were about 5,413,000 stems valued at \$2,430,000 in 1939. Coconuts, sugar, cacao, coffee, rice, tobacco are other crops. The forests yield hardwoods, copaiba, sarsaparilla, balata, etc. About 40,000 cattle are slaughtered annually. Transient passengers through the Panama Canal in the year ended June 30, 1941, numbered 79,954 (114,053 in 1939).

Foreign Trade. Panama's yearly exports totaled \$4,054,866 for 1940 (\$3,487,187 for 1939); imports, \$23,936,657 for 1940 (\$20,463,765 for 1939). The United States took \$3,788,022 (93.42 per cent) of the 1940 exports and sent \$16,645,743 (69.54 per cent) of the imports. See TRADE, FOREIGN.

Finance. The biennial budget covering the years 1941 and 1942 provided for expenditures of \$30,127,977, the highest in Panamá's history. For 1939 and 1940 the budget estimates balanced at \$22,795,000. During 1940 the external debt was reduced to \$15,313,500 and the internal debt to \$2,304,367. As of Mar 31, 1941, Export-Import Bank loan commitments to Panamá totaled \$3,300,000 exclusive of \$1,625,000 outstanding. Issuance of a new \$4,000,000 loan was authorized in August (see *History*). The balboa, unit of currency, is equivalent to the U.S. dollar.

Transportation. Including the Canal Zone, Panamá has 230 miles of railways and 870 miles of roads. The Panamá-Cristóbal air service connects at Panamá with Pan American Airways' international network. Under construction in 1941 were the transisthmian highway and the 55-mile concrete highway between La Chorrera and the new United States auxiliary air base at Río Hato (see YEAR BOOK for 1940, p. 576). Practically all overseas trade passes through the Canal Zone ports of Cristóbal (serving Colón) and Balboa (serving Panamá). For shipping traffic, see PANAMA CANAL.

Government. The Constitution effective Jan. 2, 1941 (see YEAR BOOK for 1940, p. 575), extended the terms of office of the President and members of the National Assembly from four to six years and increased the powers of the President. The President and the 32 members of the National Assembly are elected by direct popular vote.

HISTORY

President Arnulfo Arias, after putting into motion early in 1941 an ambitious Panamanian new deal and himself wielding great powers, was ousted from office during absence from the country in October and replaced, without recourse to a popular election, by his own Minister of Government, Ricardo Adolfo de la Guardia. Panamá declared war on Japan, Germany, and Italy in December, ranging

herself with the United States. A law adopted and put into effect under Arias virtually drove Asiatics and to some extent other foreigners in the country out of business.

The Overthrow of Arias. On October 8 President Arias and his Cabinet, according to account in the press, decided to prevent the use of Panamanian registry by armed merchantmen by canceling such registration in the case of any merchant ship that was armed. The Government of Panama so informed the U.S. Government. On the next day (7th) Arias left Panama, taking an airplane for Cuba under an assumed name. Officials of the Government of Panama called on U.S. Ambassador Wilson, October 9, and asked him how the United States would regard their taking over the executive power, their government being without a head. He indicated that the United States followed the policy of not interfering in other countries' internal affairs.

The group ousting Arias took the position that his departure from the country with neither the Assembly's permission nor the Supreme Court's severed him from his functions, according to the constitution of 1940, which had taken effect Jan. 2, 1941. On this ground the ousting group held that the presidential office devolved on Ernesto Jaén Guardia, the second of three designates who had been named some time before in order to settle the succession in case of a vacancy. Jaén Guardia, sworn in October 9, appointed a Cabinet and then immediately gave his resignation. The new cabinet then elected as President one of its own members, Ricardo Adolfo de la Guardia, former Minister of Government under Arias. The ousting group's arrest of Isaza (Arias' private secretary), Rodriguez (official secretary), Barletta (mayor of Panama city), Pezet (first designate), Ayao (chief of the national police), and many others assured that the coup should be bloodless. The Supreme Court voted, October 13, that Arias' absence without leave had forfeited him the office. President Arias returned to Panama by the Honduran steamship *Cefalu*, October 14. He attempted to come ashore in Cristóbal harbor but was not allowed to do so in the Canal Zone, policed by U.S. authority, and eventually consented to go into Panamanian territory and surrender himself. The new regime in Panama voted permission, October 18, to merchantmen registered under that country's flag to carry arms for their own defense. Arias, released, left Panama October 21.

Question was raised in Washington, just after the coup, whether the United States had helped those who performed it. Secretary of State Hull issued to the press, October 16, a denial of any part in the proceedings, on the part of the U.S. Government. This statement carried a purported summary of official telegraphic reports from the embassy at Panama. As to the reason for Arias' sudden departure from Panama just before the coup and immediately after the issuance of the anti-arming decree, he himself said that he had gone to Havana simply for medical attention to his eyes. He had previously left the country for a week in July to visit the President of Costa Rica; but on this occasion Pezet, the first designate, had temporarily taken his place.

At the time of the coup there passed many assertions of Arias' having displayed partiality toward the Nazis' concerns and toward the German cause. Such statements appeared chiefly, but not solely, after the decree against arming ships. Since the merchant vessels put under the flag of Panama belonged chiefly to owners in the United States, and since the latter sought that flag mainly to escape the restraint that the Neutrality Act had laid on American vessels, a tendency in Panama to copy such an Ameri-

can restriction as that on arming vessels had the effect, whatever its intention, of an unneighborly act. The Arias Government could give little real comfort to the United States by pointing out that it sought to keep in step by doing as the United States had done.

Defensive Partnership with U.S. With the notable exception of the refusal, so soon overcome, to let armed merchantmen fly Panama's flag, the Government of Panama made in 1941 a good record of helpfulness to the United States' efforts for defensively strengthening the Panama Canal. Arias, January 7, sent President Roosevelt a pledge that Panama would cooperate to assure the "territorial and political integrity of our continent," to which Mr. Roosevelt made an appreciative reply. In March Arias announced that his Government would permit the United States to build defenses outside the Canal Zone, in accordance with the agreement of 1938, but would retain sovereign rights over the territory thus employed and would keep jurisdiction over civilians on such ground. The land sought was in great part for listening posts and anti-aircraft works—distant features of the Canal's defenses, not required at the time when the original defenses were laid out. In August Arias reported to the Assembly that Panama had conceded to the United States the use of sites for such purposes on condition that they be returned to her after the conclusion of the World War and that proper compensation be paid.

De la Guardia's regime lost no time at its outset in permitting armed ships under Panama's registry. Later, Panama declared war, December 8, on Japan and, December 12, on Germany and Italy. An executive proclamation of December 7 announced internment for Japanese and ended their right to export gold and funds.

Arming the Merchant Ships. The merchant fleet of Panama numbered 270 vessels. In 1941 these aggregated 1,175,000 tons. Only five nations' flags were said to float over more tonnage. The number of vessels that had left U.S. registry to take that of Panama was put at 82; their tonnage, at 420,000, thirteen-fourteenths of it in oil-bearing tankers. These particular vessels were presumably by no means the only ones controlled by the shipping trade of the United States. The torpedoing of two ships under Panama's flag, the *Sessa* and the *Montana*, caused Panama to send (September 16) to Germany, the Government deemed responsible, a protest and claim for indemnity. It was the sinking of these vessels that occasioned the demand for permission to arm craft under Panama's flag and ostensibly also Arias' decision to deny this demand and so shun a way likely to lead to worse relations with Germany. The United States did not formally meddle in the matter by any such step as asking Arias to allow ships to arm. The prompt repeal, by de la Guardia, of the prohibition set up by his predecessor implied that he must have thought the removal of the ban more acceptable to the affected interests than its presence.

Nationalization of Commerce. The Arias administration was nationalistic, in the sense that it sought to cultivate the interests of the nation as a whole to the possible detriment of some individuals, particularly aliens, and some other nations. To this end it adopted a policy of restricting retail trade, with few exceptions, to natives of the country. The Assembly enacted in February a measure requiring all retail merchants to apply for licenses allowing them to continue their business. These licenses were to be issued mainly to natives, some to foreigners of preferred nationalities, and a small remainder to na-

tionals of the restricted-immigration group, chiefly Asiatics. Licensing went on from July into October. It was to become effective late in October as closing unlicensed business. Under Arias the principal Asiatic firms received licenses.

Citizens of the United States fared relatively well, belonging to a preferred nation. After the ousting of Arias, the administration of de la Guardia revised the issue of licenses to some extent and thus took away, in particular, all that had been granted to Japanese. The Government of Japan protested on its nationals' behalf and, as it declared, on that of Asiatics in general who suffered under the law. Its first protest, November 7, and a second, two weeks later, had no effect. The number of Japanese in Panama was reckoned at 258 in August. The operation of the new law under de la Guardia was so conducted as virtually to eliminate the small Japanese colony, which was regarded as dangerous in view of its proximity to the canal and of the increasing possibility of war between the United States and Japan.

Control of Foods. Under the Constitution of 1940 the government had power to create monopolies as means to meet public needs. It used this power in the spring in an effort to check a growing scarcity and cost in foodstuffs. In May it took control of the sale of rice, with a view to stabilization at 6 cents a pound retail, and similar action was taken or planned in other cases. The trouble arose largely from difficulty in securing the normal imports of food and from a lower harvest, particularly of rice, in the previous season.

Financial Steps. In March the Government, taking advantage of opportunity to get a lower rate of interest, marketed in the United States an issue of \$4,000,000 of 3½-per cent 26-year bonds, of the proceeds, about \$3,500,000 represented 5½-per cent bonds to be received in exchange and retired. The new bonds were secured by a lien on part of the United States' payments to Panama of annuity as rental of the Canal Zone.

Other Acts of Arias Administration. An act of 1941 gave to women of 21 years, qualified by education, the right to vote for and to serve as members of provincial councils. This law was applied first in an election held on October 5. A homestead act, designed to secure the country population's tenure of land, gave special immunities to homesteads not exceeding 1,000 balboas in value or 25 acres in extent; they could not be sold, mortgaged, or taxed. A social-security act, providing for employees' retirement, taxed employers at the rate of 2½ per cent of payroll and employees at the same percentage of pay; it superseded a law of 1931 allowing an employee 10 months' pay on retirement after 10 years of service.

Relations with Other Nations. Apart from the United States and Japan, already mentioned, several countries' relations with Panama had significance. With regard to the belligerents in general, President Arias expressed the country's approval of the Roosevelt-Churchill Atlantic Declaration (q.v.) of August. A considerable number of the German colony left—23 of them on a Japanese vessel in mid-April, in apparent conformity with a supposed order from German authorities. The number of Germans in Panama at the time was said to approximate 900. Concern about the propaganda activities of the German Legation was reported in August. The Spanish Minister, the Count of Baylen, was declared *persona non grata*, November 10, apparently on account of a slur on the independence of Panama, which he was reported to have uttered. For the settlement of the boundary dispute with Costa Rica, see COSTA

RICA under *History*. Also see LEND-LEASE ADMINISTRATION; ROADS AND STREETS.

PANAMA CANAL. The Panama Canal crosses the Isthmus of Panama between Limon Bay on the Caribbean coast and Panama Bay on the Pacific Coast. Its length from shoreline to shoreline is 40.27 miles. The U.S. Government owns and operates the canal. A strip of territory bordering either side, held and governed by the United States, constitutes the PANAMA CANAL ZONE (q.v.).

Yearly Traffic. In the fiscal year ended with June 30, 1941, the net tonnage borne across the Canal fell to 20,642,936 net tons, which was below the total for any other fiscal year after 1933, when 21,094,000 net tons crossed. Toll paid by ocean-going vessels for crossing amounted to \$18,157,740 for fiscal year 1941, the lowest yearly collection after 1923. Less than two years of the obstacles to navigation occasioned by war, such as destruction of vessels and blockade of ports, had reduced passages through the Canal to an average of 9.67 a day for June, 1941, from 15.97 a day for June, 1939, or to three-fifths of the earlier rate.

Detailed data on traffic covered the fiscal year 1941, which ended with June 30. The following figures deal with fiscal years. Crossings made by commercial vessels of at least 300 net tons (Panama Canal measurement) numbered 4,727 for 1941 (5,370 for 1940).

Tons of cargo crossing in the commercial ships of 300 or more tons totaled 24,950,791 for the fiscal year 1941 (27,299,016 for 1940); but in net tonnage, as measured under the rules of the Canal, the totals were much lower, being only 20,642,736 for 1941 (as against 24,144,366 for 1940). The collections of tolls, exclusive of some thousands on vessels under 300 tons, amounted to \$18,157,740 for 1941, a sharp drop from 1940's total of \$21,144,675. Net revenue from operation was \$11,253,773 for 1940; \$8,852,037 for 1941.

By tons of cargo, U.S. shipping through the canal increased to 12,384,617 for 1940, from 9,909,380 for 1939, and attained 45.4 per cent of all tonnage of cargo passing through in 1940. The tonnage of British cargo dropped to 5,182,351 (1940) from 6,801,556 (1939); that of Norway to 2,905,772 (1940) from 3,408,078 (1939). That of Japan rose to 1,863,619 (1940) from 1,710,303 (1939). See YEAR BOOK for 1940 for additional data.

Operative Organization. Normally the Canal is operated, maintained, and improved as to construction by a Presidentially appointed Governor, supervised by the Secretary of War. The administration of the Canal is in accordance with an executive order of 1914. But an executive order of Sept. 25, 1939, put the Governor of the Panama Canal under the direction of the military commander of the Panama Canal Department, U.S.A. The Governor also exerts the civil authority in the PANAMA CANAL ZONE (q.v.).

Improvement of the Canal. The chief work of construction carried on in 1941 was that for giving the waterway a third series of locks. This task, ordered by an act of Congress in 1939, sought above all to lessen the risk of a stoppage of the way through the Isthmus in consequence of any hostile attack. Congress set the limit of cost at \$277,000,000 for the undertaking. The foremost advantages in view were the greatly diminished chance of bombs wrecking all the locks at one change of water level and increased quickness of the U.S. Fleet's passage from ocean to ocean. After nearly a year of engineers' studies of the project, construction started gradually in the latter part of 1940. On May 11, 1941, was

signed with a group of firms a contract for removal of 30,000,000 cu. yards of earth and rock at the sites of the intended locks on the Pacific slope; the work was to be performed in 1,200 calendar days. It appeared from the limit of time thus set that the new locks themselves could hardly all be installed and put into service within four years.

On June 14 Rear Admiral Sadler stated the U.S. Navy's intention to effect, in connection with the third set of locks, the construction of a dry dock of a size to take the greatest ships of war and to have near by storage room for abundant fuel oil and other supplies. Also see **COLOMBIA** and **PANAMA** under *History*, **ROADS AND STREETS**; **TUNNELS**.

PANAMA CANAL ZONE. A strip of territory extending across the Isthmus of Panama, bordering the Panama Canal waterway to a width, on either side, generally of five miles and forming a perpetual concession from the Republic of Panama to the United States. Area, 552.95 sq. mi.; includes water, 190.94 sq. mi.

Population. An enumeration by the Canal Zone police in June, 1941, showed 42,346 civilian inhabitants, as against 28,978 in a count made in June, 1939. The heavy increase in the two years reflected the employment of more civilians on work in the area. The U.S. Census of 1940, not limited to civilians, gave the population as 51,827. Employees of the Panama Canal and of the Panama Railroad Company numbered 24,149 in June, 1940, as against 14,757 in June, 1939; they did not all live within the Zone. The death rate among the Zone's inhabitants (many of whom eventually depart by reason of retirement and not of death) was 6.43 per 1,000 for 1940; birth rate, 10.91. Sufferers from malaria among the civil employees came to 17 per 1,000, but none had died of the disease in seven years. The separate white and colored public schools had respectively, in 1941, an average attendance of 3,296 and 2,725 pupils.

The land area, 362.01 sq. mi., included 66.85 sq. mi. of military reservations and 7.36 sq. mi. of naval reservations. On these were maintained the Panama Canal Department, U.S.A., and the home of the Panama Canal Zone District, U.S.N. These areas contained some thousands of men in the armed services of the United States.

Government. The Panama Canal Zone has a civil government prescribed by the U.S. Congress in the Panama Canal Act of 1912 as later modified. The Governor of the Panama Canal (q.v.) also governs the Zone, under supervision, normally, of the U.S. Secretary of War; but the President's executive order of Sept. 25, 1939, subjected the Governor's functions over the Zone, as well as over the Canal proper, to the authority of the commanding general of the Panama Canal Department, U.S.A. Subject to such superior authority, the Governor has charge of the maintenance of law and order, health, and education among the inhabitants. Governor in 1941, Brig. Gen. Glen E. Edgerton.

History. The warlike conditions of 1941 brought about noteworthy occurrences in the Panama Canal Zone. In October, when President Arias of the Republic of Panama (q.v.) was driven out of office by a coup, he attempted after its accomplishment to reenter the republic. According to dispatches in the press of October 15 and 16, Arias was prevented by police of the Zone, for some hours, from leaving the Honduran ship *Cefalu* at Cristóbal, and communication with Enrique Linares, his father-in-law, was denied him. He then agreed to surrender to the police of the republic. On March 30 the 23,000-ton Italian liner *Conte Biancamano*, after lying

at Cristóbal from the time of Italy's going to war, was seized by the United States; she had previously been made to move from an anchorage near the entrance of the Canal, where the vessel might have been employed in some way to interrupt the Canal's working. She was taken to New York in April by the U.S. Government; there several of her company were prosecuted for attempting to damage the ship.

The Zone cooperated with the Republic of Panama, December 8, as the United States went to war, in seizing Japanese and other nationals of governments within the Axis group. On June 19 an executive order of the President suspended the restriction of labor to eight hours a day on construction for the U.S. Government in the Canal Zone. A military post on the shore of Gatun Lake was created in April, and in June the fortification of three islands in that lake was ordered, with a view to greater protection of the Canal's interior part from attack by air

PAN AMERICANISM. The Pan American movement, and with it the good neighbor policy which the United States Government had assiduously pursued in Latin America since 1933, was subjected to severe tests in 1941. The severance of virtually all trade relations between Europe and the Western Hemisphere threatened many of the American republics with an economic crisis of the first order. Agents of the Axis powers made a vigorous, systematic effort, backed by intensive propaganda, to place pro-Axis regimes in power in a number of Latin American countries and thus to disrupt the program of hemisphere solidarity laid down at the Pan American Conferences of 1933, 1936, and 1938, and at the meetings of American Foreign Ministers in 1939 and 1940 (see preceding **YEAR BOOKS**).

Moreover the danger of an Axis military invasion of South America increased after the German victories of April and May in the Balkans, when France moved toward military as well as economic collaboration with the Reich. Efforts by Washington to counter this threat were hampered by unawareness of danger among many South Americans, doubt as to the intentions and power of the United States, and the political, legal, and financial difficulties in the way of obtaining the necessary defense facilities. Nevertheless the end of 1941 found all these difficulties well on the way toward solution

Economic Developments. The economic crisis predicted for many Latin American countries as a result of the loss of European markets failed to develop in acute form, due primarily to Washington's concerted policy of economic aid. There was a tremendous expansion of inter-American trade, stimulated by United States loans and purchases (see **TRADE**, **FOREIGN**).

The rapid development of defense industries in the United States created an active unofficial demand for the strategic minerals and materials of Latin America. In addition, the Metals Reserve Company and Defense Supply Corporation, subsidiaries of the Reconstruction Finance Corp., contracted for virtually all the surplus Latin American metals and other war materials. The Export-Import Bank (q.v.) of Washington made further large loans to various Latin American governments for the development of transportation facilities and for the adjustment of their economic systems to new world conditions. Moreover some \$500,000,000 of lend-lease funds were earmarked for Latin America,

^a Including (1) agreements signed prior to September, 1939, and (2) countries with which intention to negotiate was announced (3) An agreement with Cuba was in effect at the outbreak of the war, a supplementary agreement was signed Dec 18, 1939, and intention to negotiate a new supplementary agreement was announced July 26, 1941.
^b In addition to direct U.S. Government purchases, strategic and critical materials were purchased in the Latin American countries for private United States account

chiefly for the construction of air and naval bases and the equipment of defense forces.

The Inter-American Financial and Economic Advisory Committee, established at Washington by the Panama Conference of American Foreign Ministers in 1939, rescued 14 coffee-exporting Latin American republics from grave economic difficulties by placing coffee imports into the United States on a quota basis (April 15) and thus enabling them to maintain prices. The same committee helped to overcome the shipping shortage hampering inter-American trade by adopting on August 28 a plan for the taking over and operation of 546,000 gross tons of Axis and neutral merchant ships laid up in the ports of the Western Hemisphere. The British Government agreed to waive its belligerent rights with respect to these vessels. The seizure of German, Italian, and Danish ships in United States ports in April led to immediate similar action by Cuba, Costa Rica, Mexico, Venezuela, Peru, and Ecuador.

The Inter-American Development Commission, created at the suggestion of the Inter-American Financial and Economic Advisory Committee, continued its efforts to increase imports of noncompetitive Latin American products into the United States. It encouraged the development of handcraft and other industries in Latin America and the increase of trade between the Latin American countries. Co-operating Development Councils were established in all 10 of the South American republics. Important trade and economic accords concluded at the Regional Conference of the Rio de la Plata (q.v.) in January and in subsequent bilateral negotiations stimulated commercial exchange among the Latin American countries (see especially ARGENTINA and BRAZIL under History).

The U. S. Government made every effort, consistent with its defense requirements, to supply the Latin American countries with the manufactured goods they formerly obtained from Europe and Japan. The principle was adopted that the Latin American republics were to receive the same treatment as the United States in the distribution of available consumption goods. To facilitate exports to Latin America, the Export-Import Bank undertook to advance credits of some \$70,000,000 monthly to secure delivery of United States goods at Latin

American ports without prior payment. The U.S. Department of Commerce and the Office of the Coordinator of Inter-American Affairs assisted in this program.

In addition to extending economic aid to Latin America, the U.S. Government made a successful drive against Axis financial and economic influence in that area. Most of the American republics were induced to divert virtually all their exports of war materials to the United States as a means of economic defense against possible Axis aggression. Beginning July 17, a formal blacklist of Latin American individuals and firms believed to be acting in the interest of the Axis was proclaimed by President Roosevelt. It was subsequently extended and amended. Mistakes of German diplomacy and financial aid extended by the U.S. Defense Supplies Corporation, helped to force the transfer of some 20,000 miles of air lines in Latin America from German and Italian to United States or Latin American companies. Through efforts of the Coordinator of Inter-American Affairs (q.v.), numerous pro-Axis firms and individuals representing United States businesses in Latin America were forced out of their positions.

Cultural Interchange. This tightening of inter-American economic ties at the expense of the Axis powers was accompanied by the intensification of cultural contacts between the American republics. Governments, unofficial agencies, and individuals all contributed to the execution of the cultural interchange envisaged in various inter-American agreements. At the invitation of the U.S. Government and its various departments, universities, philanthropic and cultural organizations, etc., a steady stream of Latin American intellectual and professional leaders, educators, students, army, navy, and air officers; political leaders, social workers, and other representatives visited the United States. At the same time numerous North Americans were invited to the Latin American republics.

Visits were exchanged by delegations representing the Argentine Chamber of Deputies and the U.S. House of Representatives. Secretary of Commerce Jesse Jones announced August 15 a joint U.S. Army-Civil Aeronautics program for training more than 600 Latin American pilots and technicians in

the United States. Naval chiefs and officers of 11 American republics toured U.S. naval establishments in May as guests of the Chief of Naval Operations. The second Inter-American Conference of Committees on Intellectual Cooperation met in Havana in November.

Drift from Neutrality. As the world conflict expanded and drew nearer the Western Hemisphere, the neutrality program laid down by the American republics during previous years gradually crumbled. The more the United States strengthened its defenses and indicated its determination to resist Axis encroachments into the Western Hemisphere, the more aggressive many of the Latin American countries became in curbing Axis propaganda and upholding Pan American principles.

The U.S. Senate on March 10 reaffirmed the traditional U.S. policy of refusing to recognize the transfer of territory in the Western Hemisphere from one non-American power to another. This was followed by the establishment of temporary U.S. protectorates over Greenland and Iceland, the rapid development of U.S. defense bases in the British West Indies, and President Roosevelt's warning that Washington could not permit a hostile power to gain a foothold in the Azores or Cape Verde islands.

These developments made a distinct impression, favorable to the United States, among most Latin Americans. Following Washington's policy of all aid to Great Britain and her allies short of war, Uruguay led the Latin American procession away from strict neutrality. On June 20 its Government announced that Uruguayan ports would be opened to warships of any American nation that became engaged in war with a non-American power. By July 25, 13 other American republics including the United States had backed the Uruguayan proposal that all the Pan American nations make a similar declaration. Argentina, Chile, Peru, and Colombia either opposed the suggestion or considered it unnecessary.

Thereafter Washington made rapid progress in pressing to conclusion defense accords with Bolivia, Brazil, Uruguay, Mexico, and the Central American and Caribbean republics. Most of them obtained U.S. lend-lease funds, loans, or credits for the construction of naval and air bases and other strategic works. In return, they promised the use of these bases and facilities to United States armed forces in the event that country became involved in the World War. Brazil placed airports at the disposal of the United States airmen ferrying military planes to British forces in the Middle East, and in November cooperated with Washington in the military measures taken to insure the safety of the bauxite mines in Surinam (q.v.).

Effect of Japan's Aggression. Japan's treacherous attack upon the United States on December 7 caused a profound and indignant reaction throughout Latin America. The nine Central American and Caribbean republics immediately declared war upon Japan—and later on Germany and Italy. Mexico and Colombia severed diplomatic relations, and all of the remaining American republics abandoned strict neutrality by granting U.S. warships the right to use their ports or taking other measures of similar import. In each case the Latin American governments acted under Resolution XV adopted at the Havana Conference of American Foreign Ministers in 1940. It declared that any attempt on the part of a non-American state against the integrity or inviolability of the territory, sovereignty, or political independence of an American state would be considered an act of aggression against all other American nations.

Argentina, Brazil, Peru, and a number of coun-

tries froze Axis funds. Brazil and Ecuador clapped a strict censorship on the Axis press and Ecuador annulled the contracts of Japanese technicians employed in its oil fields. Chile, Bolivia, and Venezuela took steps to safeguard U.S. properties and mineral supplies. The majority party in Uruguay called for a war declaration. Further action in support of the United States was promised at a third special convocation of American Foreign Ministers, called by Secretary of State Hull at the urgent request of Chile and various other Latin American governments. The conference was scheduled to convene Jan. 15, 1942, in Rio de Janeiro. The severance of diplomatic relations with the Axis by the republics that had not already acted, measures to suppress Axis activities throughout the Americas, and closer economic collaboration were the chief moves contemplated. It was indicated that an effort to settle the boundary dispute between Ecuador and Peru likewise would be made. This controversy, which flared into undeclared warfare during 1941, remained the principal obstacle to peaceful collaboration among all the American states (see *ECUADOR under History*).

For the St. Pierre-Miquelon coup, which the U.S. Government protested as a violation of the Pan American convention of July, 1940, see *FRANCE* and *ST. PIERRE AND MIQUELON under History*. The convention barred the transfer of any colony or region of the Western Hemisphere from one non-American power to another.

PAN AMERICAN UNION. The Pan American Union is an official international organization founded in 1890 as the International Bureau of American Republics and maintained by the 21 republics of the Western Hemisphere for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a Governing Board, composed of the Secretary of State of the United States and the diplomatic representatives in Washington of the other republics, and is administered by a Director General and an Assistant Director chosen by the Board.

The Union publishes a monthly Bulletin which is issued in three editions, English, Spanish, and Portuguese, as well as numerous special reports on the countries which are members of the Union. These are widely distributed in all the republics of the American continent and are intended to make available information on the various aspects of inter-American activity.

The Pan American Union acts as the permanent organ of the International Conferences of American States which meet at intervals of five years. The last or Eighth of these Conferences was held at Lima, Peru, Dec. 9-27, 1938. The program and regulations of each Conference are prepared by the Governing Board of the Union, and in the interval between the Conferences the organization is engaged in giving effect to the resolutions adopted and also cooperates in securing the ratification of the treaties and conventions signed at each Conference.

The work of the Pan American Union during 1941 reflected the new duties and obligations imposed as a result of the European conflict. The

Inter-American Financial and Economic Advisory Committee meeting at the Pan American Union and composed of one expert from each American Republic, drew up a coffee quota agreement, fixing the amount which each producing country might export to the United States. It also studied the marketing of cacao and cotton, adopted measures to alleviate the petroleum shortage experienced by a number of countries, and approved a plan for the taking over of foreign flag vessels lying inactive in the ports of the American Republics.

By the end of the year thirteen governments had ratified the Convention for the provisional administration of European Colonies and possessions in America, signed at Habana in 1940.

As a further aid in the promotion of inter-American cultural relations a new Division of Music was established at the Pan American Union in February, 1941.

At the meeting of the Governing Board held on Nov. 5, 1941, the Secretary of State of the United States was reelected Chairman of the Board for the ensuing year. Diogenes Escalante, Ambassador of Venezuela, was at the same time elected Vice Chairman to succeed Francisco Castillo Nájera, Ambassador of Mexico Headquarters of the Union are at the Pan American Building, Washington, D.C.; L. S. Rowe, Director General; Pedro de Alba, Assistant Director.

See PAN AMERICANISM.

PANTELLARIA. An Italian island (32 sq. mi.; pop., 9,000) in the Mediterranean 45 miles from the coast of Tunisia and 62 miles from the Sicilian coast. Strategically situated to dominate the shipping route between the eastern and western Mediterranean, it was fortified by Italy during the crisis of 1935-37 in Anglo-Italian relations. The island has two small ports and was said to be equipped for use as an auxiliary air and submarine base (see map, YEAR BOOK for 1938, p. 360).

PANTOTHENIC ACID. See BIOLOGICAL CHEMISTRY under *Vitamins*.

PAPER AND PULP. Production of paper in 1941, all grades, is estimated at 17,280,000 tons. This is 20 per cent higher than the previous record made in 1940. The average yearly production ratio of paper mills for the year was 97.4 per cent, compared with 85.6 per cent for 1940. The production ratio for paper-board mills averaged 88.0 per cent, compared with 73.0 per cent for 1940.

The unprecedented demand for paper was due to the sharp increase in general business activity, stimulated by large government expenditures. The heavy volume of orders included not only actual requirements but forward buying in fear of a shortage and rise in prices. Added to this trade demand was the heavy buying of the government for direct use, defense, and lend-lease requirements. This abnormal demand resulted in the largest file of unfilled orders on record. The peak of orders in May, not including paper-board and building paper, exceeded production by 85,000 tons.

Production of paper steadily expanded from early in the year; in October it reached the notable monthly total of 1,600,000 tons, or at the annual rate of 19,000,000 tons. With imports at the annual rate of 3,000,000 tons, the paper supply in October reached an annual rate of 22,000,000 tons, or 4,500,000 tons above the previous record year of 1940.

Domestic chemical pulp production was 9,978,000 tons, of which 1,703,000 tons were bleached sulphite, 1,194,000 tons unbleached sulphite, 688,

000 tons bleached sulphate, 3,700,000 tons unbleached sulphate, and 609,000 tons soda pulp. The total supply represented by apparent consumption was 10,801,000 tons, the estimate of actual consumption 11,068,000 tons. Consumption of pulpwood totaled 15,750,000 cords at an average cost of \$8 per cord, compared with 13,742,958 cords at a cost of \$7.99 per cord for 1940.

Defense requirements sharply curtailed the use of chlorine for the bleaching of wood-pulp and very little was expected to be available in 1942, although the industry normally consumes about 70 per cent of the domestic output.

Early in the year paper and pulp were placed on the export-control list and licenses were required for shipment overseas. In November the OPM began to put into effect a pooling plan for all pulp production; the three chief producers of high quality sulphite pulp for nitrating purposes—Brown Company, Eastern Corporation, and Rayonier, Inc.—will draw upon the pool to supply their regular customers for the paper-making grades of sulphite pulp. This arrangement was intended to prevent the otherwise closing of numerous converting mills through lack of pulp. Despite the heavy demand expected in 1942, the capacity of the industry was considered adequate for actual needs, although some specialty papers may be unobtainable. The large quantities of paper recovered as waste by the many conservation of waste materials drives will substantially help the paper and paper-board supply situation. See TARIFF COMMISSION, U.S. For paper shortages, see NEWSPAPERS AND MAGAZINES. For waste paper, see GARBAGE AND REFUSE DISPOSAL.

PAPUA. See AUSTRALIA under *Overscas Territories*. **PARACHUTES.** See CHEMISTRY, INDUSTRIAL under *Textiles*. For **PARACHUTE TROOPS** see MILITARY PROGRESS; WORLD WAR.

PARAGUAY. An inland republic of South America. Capital, Asunción.

Area and Population. Area, about 169,266 square miles (61,647 sq. mi. east of the Paraguay River, and about 107,619 sq. mi. west of the river confirmed to Paraguay by the arbitral award of Oct. 10, 1938, which ended the Bolivian-Paraguayan dispute over the Chaco Boreal). The estimated population in 1940 was 1,000,000 of whom about 32,000 Paraguayans, 4,000 Mennonite farmers, and 8,000 aborigines inhabited the Chaco. With the exception of the small white ruling class, the people are of mixed Spanish and Guaraní Indian blood. Spanish and Guaraní are the spoken languages; Spanish the language of government, commerce, and education. The estimated population of Asunción on Dec. 31, 1939, was 104,819; of other cities in 1934: Villarica, 35,760; Itá, 30,252; Capiatá, 19,923.

Education and Religion. There is widespread illiteracy. In 1937 there were 139,466 pupils in 1,742 primary schools, 2,034 in secondary schools, and 350 students in the National University. Roman Catholicism is the State religion. Freedom of worship is guaranteed other faiths.

Defense. Paraguay on Nov. 1, 1940, had an active army of about 6,000, an air force of 170, and a trained reserve of 80,000 (mostly veterans of the Chaco War). The navy consisted of two armored gunboats and two other armed river boats.

Production. Agriculture, lumbering, and stock-raising are the principal occupations. Yields of the chief export crops were (in metric tons): Cotton, ginned, 6,500 in 1939-40; sugar, refined, 12,447 in

1940; rice, 2,530 in 1940; tobacco (exports only), 2,106 in 1940, a decline from 6,112 tons in 1933; yerba maté, (exports), 10,092 in 1940. Corn, manioc, beans, sweet potatoes, bananas, and other fruits are grown mainly for local consumption. Livestock at the beginning of 1940 included 3,507,000 cattle, 205,500 horses, and 195,260 sheep. Exports of quebracho extract in 1940 were 32,066 tons; canned meat, 9,100 tons; oil of petit-grain, 164 tons. Cheap textiles, shoes, leather goods, soap, furniture, matches, cigarettes, etc., are produced.

Foreign Trade. Imports in 1940 were 14,832,657 gold pesos (12,735,007 in 1939); exports, 11,385,104 gold pesos (16,001,345 in 1939). The leading exports in 1940 were (in gold pesos): Quebracho extract, 2,522,863; canned meat, 1,714,208; yerba maté, 1,463,779; cattle hides, 1,424,045; cotton, 1,266,617. Of the 1940 imports, Argentina supplied 45.1 per cent; United States, 21.3; Japan, 12.7. Of the exports, 36.4 per cent went to Argentina in transit, 22.5 to Argentina for consumption, 20.9 to the United States, and 12.7 to the United Kingdom.

Finance. The Treasury estimated the deficit for 1940 at 250,000,000 paper pesos on budgeted expenditures of 1,463,794,000 paper pesos. Estimates for 1941 balanced at 1,395,562,000 paper pesos, converting gold pesos to paper pesos at 160 to 1. Revenues were estimated at 583,400 gold and 1,302,218,000 paper pesos; expenditures at 1,259,934 gold and 1,193,965,000 paper pesos. The public debt on Oct. 31, 1939, totaled 19,745,381 gold and 1,336,583,561 paper pesos, or 2,907,328,620 paper pesos converting gold to paper at the official rate of 79.55 to 1. As of Mar. 31, 1941, Export-Import Bank Loans to Paraguay outstanding were \$1,485,000; additional commitments, \$2,405,000. Official exchange rate of the paper peso in 1940, \$0.00383 (\$0.00373 in 1939), gold peso, \$0.6086 in 1940 (\$0.6136 in 1939).

Transportation. There were in 1941 about 713 miles of railways and 3,759 miles of roads, mostly cart tracks. Construction continued during 1941 on the modern 102-mile highway between Asunción and Villarrica for which funds were advanced by the Export-Import Bank of Washington. Air lines link Asunción with Buenos Aires, Santos, and Rio de Janeiro. Situated 950 miles from the sea, Asunción is accessible to river vessels of 12 foot draft at all times of the year.

Government. A state of siege, or modified martial law, was in effect almost continuously from the outbreak of the Chaco War in 1932 through 1941. The Constitution of 1870 was suspended following the successful military revolt of Feb. 17, 1936. A Congress of 20 Senators and 40 Deputies (all Liberals) was elected Sept. 25, 1938, and on Apr. 30, 1939, Marshal José Félix Estigarribia (Liberal) was elected President, with the opposition National Republican (Colorado) party boycotting the polls in both instances. Congress resigned collectively Feb. 17, 1940, and the next day President Estigarribia assumed dictatorial powers. He appointed a committee of university professors to draft a new Constitution, which was promulgated Aug. 15, 1940, after ratification in a plebiscite (see YEAR BOOK for 1940, p. 582 for its provisions). President Estigarribia was killed in an airplane accident Sept. 7, 1940, and the Cabinet designated Gen. Higinio Morinigo, Minister of War, as Provisional President. On Nov. 30, 1940, he proclaimed the establishment of an absolute dictatorship.

HISTORY

President Morinigo maintained himself as dictator throughout 1941, though facing risk of overthrow in

repeated obscure attempts against his power. The indications were that he curbed not only partisan politics but to some extent other activities of the country. The army remained unduly large and security of the Government depended in great part on military politics.

Character of Morinigo's Government. While military considerations necessarily prevailed and the exercise of civil authority resembled that over an army, the group supporting and aiding Morinigo included a band of men of education and scholarly understanding. Four of this group held posts in the cabinet; three were former deans of faculties in the university and had gone through college together. One of them, Luis A. Argaña, was Foreign Minister. These intellectuals, as viewed by an American correspondent at Asunción, had definite plans for establishing a more "authentic" and viable democracy than the country had known. For this result they intended to use planned economy after the example of European countries and more recently of the United States. But first they sought to develop the necessary mentality among their people, meanwhile depending on the army during the possibly long time that this would require. To what extent the military half of the Cabinet and Morinigo himself fell in with these views did not appear, but no signs of discord were noted.

Among the military, Morinigo depended in part on Gen. Damaso Sosa Valdez and on a group of young officers who had risen in the war with Bolivia. Valdez might in some respects be put in this group, but he had for years held a peculiar military office, that of Commander of the National Cavalry. In this duty he had at his orders a body of soldiers barracked in Asunción and ready in troubled times to turn out one President and set up another. Valdez had retained this command and its king-making power through all the changes of government since Col. Rafael Franco's presidency in 1936-37, repeatedly refusing to enter the cabinet. But under Morinigo he took, late in 1940, the Ministry of the Interior, into which the previously separate ministries of development and of labor were merged. He was in turn succeeded in March by Carlos R. Andrada. The young officers' group were distinguished by antagonism to some—not necessarily all—of the senior officers of the army and navy. Accounts sometimes referred to them as the "boy heroes," and their military records apparently gave them influence over the troops.

Efforts at Revolt. For about six months, the first half of 1941, armed efforts against President Morinigo came in quick succession; thereafter none serious enough to be reported occurred. The Government announced, January 7, that a conspiracy headed by Col. Federico Schmidt had failed. Schmidt had led a revolution in 1936 against President Eusebio Ayala, which ended in Franco's establishment as President. On April 18 the Government announced that it had crushed another revolutionary movement. It told few details; but other sources indicated that this revolt would have put Franco back in power. Ex-President Franco was at the time an exile in Uruguay, operating a small soap factory. The Government of Uruguay, at Paraguay's request, forbade his leaving the country, April 19, and put a watch on him. Reports reached other countries by the 27th that about 90 friends of Franco had been arrested in Paraguay on charges of seeking to restore him. An abortive rising of the garrison of Pilar, apparently in April, may have formed part of the wider plan of the April revolt. At Pilar the garrison again rose, July 4, against officers in charge of it, but was promptly put down.

After these incidents the Government felt strong enough to threaten greater severity against future revolt or conspiracy. A series of decrees issued on July 27 and 28 set death as the penalty for a number of acts—attempt to turn over territory to any foreign power, the inducing of a foreign state to declare war on Paraguay, conspiracy to that end, participation in armed movements to disrupt the territory, or against the President's life. The penalty for seeking to change the Constitution by violent means was put at 25–30 years of prison. Severe penalties were prescribed for communistic agitation and for violent conflict between labor and capital.

Foreign Policies. The foreign relations of 1941 had to do mainly with Paraguay's immediate neighbors. This was the case perhaps even more than normally. The foreign trade was affected less by the war than in the generality of the South American countries. About three-eighths of the country's exports of 1938, by value, had gone to Europe. The war had shut much of this outlet, but exports to Great Britain were reported to have held up fairly well.

Paraguay made progress in its relations with Brazil, a contiguous country to the populous parts of which it had no practical way of transportation overland. On June 17 the two Governments signed treaties to improve commerce, transportation, and cultural bonds. See BRAZIL under *History* for their provisions. The Paraguayan Government expected from these treaties an increase of trade with Brazil from small past totals to something like the active trade with Argentina. Conventions with Argentina apportioned dredging on the lower Paraguay River and simplified regulations for vessels on several rivers.

Stand on World Affairs. Paraguay assured the U.S. Minister at Asunción, December 10, of its thorough solidarity with the U.S. Government in the presence of aggression from a non-American nation (Japan) and of readiness to act in conformity with the provisions of the conferences of Lima, Panama, and of Havana. On Mar. 3, 1941, the Export-Import Bank of Washington authorized an additional \$400,000 credit to the Paraguayan Government for the development of mandioca production.

PATENT OFFICE, U.S. Searches of pending applications for patent to find in them inventions useful for national defense and requiring concealment from possible enemies were among the new duties imposed on the Patent Office in 1941. By direction of an Act of Congress (Public No. 700) to preserve in secrecy every invention, whether of military significance or of industrial utility, disclosed in an application and to withhold the grant of a patent for it if its publication would be detrimental to the public interest, the Commissioner of Patents created the Patent Office Defense Committee to conduct this quest for mechanisms, chemical compositions, and processes having defensive importance. The members of this Committee are examiners of training and experience equipping them for these duties. The Committee collaborates

with the Army and Navy Advisory Patent Board in determining which applications shall be sequestered. The Committee cooperates also with the Office of Production Management and the Office of Scientific Research and Development.

Another Act of Congress (Public 239), supplementing Public No. 700, has for its object to prevent the sending abroad of information likely to be helpful to potential enemies of the United States. This statute exacts that in every case of the filing abroad of an application covering an invention originating in this country a license must first be obtained from the Commissioner of Patents.

The effect and the benefit of these two laws are that complete custody and control of all technical data contained in applications filed in the United States is vested in the Federal Government, so that no invention of service to this country can be communicated to its potential enemies.

Applications filed in the eleven months, January to December, 1941, numbered 55, 162, compared with 64,480 in the corresponding period of 1940. Receipts during the twelve months from Dec. 1, 1940, to Nov. 30, 1941, were \$3,991,854.19. Expenditures in the same months were \$4,771,092.14. A decline in the number of foreign applications explained in large part the decrease in the volume of new business and in the earnings of the Office.

PENNSYLVANIA. A middle Atlantic State. Area: 45,333 sq. mi., including 288 sq. mi. of inland water, but excluding part of Lake Erie, 735 sq. mi. Population: (1940 census) 9,900,180. The urban population comprises 66.5 per cent of the total (U.S. average, 56.5 per cent); non-white population, 4.8 per cent (U.S. average, 10.2); elderly (65 years and over), 6.8 per cent. Pennsylvania ranks 32 among the States in area, second in population, and sixth in density, with an average of 219.8 persons per square mile. The capital is Harrisburg with 83,893 inhabitants; largest city, Philadelphia, 1,931,334. There are 67 counties and 92 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Francis B. Huas, Superintendent of Public Instruction, there were 1,855,530 pupils enrolled in the public schools of Pennsylvania during the school year 1939–40, 1,154,465 in elementary schools and 701,065 in secondary schools. Teachers numbered 63,977 and received a median salary of \$1,509. Total expenditures for year were \$225,974,179.

Transportation. State highway mileage in 1939, including streets under State control, totaled 40,512, of which 30,607 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 2,169,702; 1,877,495 were private and commercial automobiles, 5,599 busses, and 262,755 trucks and tractor trucks. Gross motor-fuel consumption was 1,581,975,000 gallons. Net motor-fuel tax receipts were \$62,495,000, the rate being four cents per gallon (Dec. 31, 1940). State

motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$31,891,000.

Railways of all classes extended 10,428 miles (Dec. 31, 1939) 4.44 per cent of the total mileage in the United States. Class I steam railways (5,307 miles) reported 186,501,840 tons of revenue freight originating in Pennsylvania in 1940 and 131,875,294 tons terminating in Pennsylvania. There are 107 airports and landing fields in the State (28 lighted fields) and nine seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 2,169 civil aircraft in the State and 4,109 airline transport, commercial, and private pilots (3,456 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 5,956,200, as compared with 6,035,900 acres in 1940. According to the latest census, there are 169,027 farms, valued at \$864,199,795, averaging 86.3 acres each. Farm population numbered 912,232 or 9.2 per cent of the total. Leading crops with production in 1941 were: Corn, \$44,691,000, 53,203,000 bu.; hay, \$35,406,000, 2,882,000 tons; barley, \$21,241,000, 3,614,000 bu.; wheat, \$17,911,000, 16,897,000 bu.; potatoes, \$17,664,000, 20,540,000 bu.; oats, \$13,902,000, 30,222,000 bu.; commercial truck crops, \$8,935,000; apples, \$3,382,000, 9,313,000 bu.; tobacco, \$7,613,000, 52,518,000 lb.

Manufacturing. The total value of manufactured products according to the latest census (for the year 1939) was \$5,475,925,482. (For details see 1940 YEAR BOOK.)

Mineral Production. The leading mineral products, in order of value, were in 1939 (with 1940 figures in parentheses): Bituminous coal, 92,190,000 short tons valued at \$188,990,000 (112,907 short tons); anthracite coal, 51,487,377 short tons, \$187,175,000; pig iron, 10,057,207 net tons, \$186,302,533 (14,571,517 net tons, \$282,666,561); coke, 12,120,225 short tons, \$49,015,558 (17,412,024 net tons, \$69,599,076); petroleum, 17,382,000 bbl., \$36,200,000 (17,353,000 bbl.); natural gas, 93,882,000 M cu. ft., \$35,268,000; cement (exclusive of natural cement), 24,870,343 bbl., \$34,332,649 (27,499,786 bbl., \$38,350,998); ferro-alloys, 288,078 long tons, \$29,609,712; stone, 15,743,790 short tons, \$16,906,854 (19,277,690 short tons, \$19,855,478); clay products (other than pottery and refractories), \$11,351,849. The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$532,355,651. (Coke, ferro-alloys, and pig iron are eliminated in State totals to avoid duplication.) Pennsylvania is second only to Texas among States in the value of mineral production, with 12.57 per cent of the total value for the United States.

Trade. According to the 1940 census there were 11,450 wholesale establishments in Pennsylvania, employing 98,972 persons, reporting net sales for 1939 of \$3,347,488,000 and annual pay roll of \$169,140,000. There were 134,543 retail stores with 348,390 employees, reporting sales of \$3,133,377,000 and pay roll of \$338,718,000. Service establishments numbered 45,149, employing 61,959 persons for \$60,830,000 per year, and reporting a business volume amounting to \$213,100,000. The leading business center of the State is Philadelphia which reported sales of \$1,622,100,000 wholesale and \$766,622,000 retail. Philadelphia County, which is coextensive with the city of Philadelphia, is the leading county in the volume of receipts for its service establishments (\$78,441,000). Pittsburgh reported sales of \$832,069,000 wholesale and \$337,622,000 retail.

Social Security and Relief. In the calendar year 1940

the total cost of assistance to needy persons in Pennsylvania was \$249,147,000. Under the Social Security program, financed by Federal funds matching State grants, 103,567 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$22.43 (U.S. average pension, \$21.08); 158,348 dependent children in 63,360 families received average monthly payments of \$36.92 per family (U.S. average, \$32.73); and 13,656 blind persons received (without Federal aid) a total payment of \$407,286. General relief cases, which are supported by State and local funds only, numbered 123,071 and received \$19.32 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 11,775 (\$780,000); NYA student work program, 24,239 (\$158,000); NYA out-of-school work program, 21,295 (\$468,000); WPA, 93,018 (\$5,790,000); other Federal emergency projects, 185 (\$14,000); regular Federal construction projects, 40,026 (\$6,275,000). The Farm Security Administration certified subsistence payments totaling \$12,000 for the month to 456 cases.

Legislation. The General Assembly convenes in regular session on the first Tuesday of January in odd years. It is composed of 50 Senators (18 Democrats and 32 Republicans in 1941) and 208 Representatives (126 Democrats and 82 Republicans).

The 134th Legislature ended a 193-day session, the longest in 99 years, at 6:10 a.m. on July 18th; 347 Acts were approved. In a summary of 1941 legislation (see *47th Annual Report*, Penn. Bar Assn., pp. 460-490) Herbert B. Cohen, Director of the State Legislative Reference Bureau, pointed out that, for the first time within the history of the Commonwealth under the 1874 Constitution, the majority in the House of Representatives was of different political persuasion from that of the Governor. The session was thus hampered "not only by the lack of access on the part of the House to the administrative departments in the formulation of a legislative program in contradistinction to that suggested by the Chief Executive, but also by the fact that the Governor sincerely felt that the separation in functions existing between the executive, the legislative, and the judicial bodies should be strictly maintained."

Climax of the disagreement between Democrats and Republicans came in the final all-night session when a reapportionment measure, sponsored by Democrats, was defeated by one vote; in order to reduce the number of Congressional districts from 34 to 33, as required by results of the 1940 census, the Democrats had proposed eliminating a heavily Republican district. It seemed likely that this subject would be dealt with in a special session prior to the 1942 elections, but none had been called by the end of the year.

Long debate developed before financial legislation could be enacted, and little change was made in the tax structure of the State; legislation consisted chiefly in the extension for two years of a number of existing special taxes. Labor achieved only slight amendments to the Occupational Disease and Workmen's Compensation Acts. Charter reform for Philadelphia was among a number of important proposals abandoned because of disagreement among the legislators.

An exception to the failures of the session was quick enactment of the defense legislation advocated by the Governor. A State Council of Defense, with cooperating local and district councils, was

established, and a Pennsylvania Reserve Defense Force was created to serve while the State National Guard is in active military service. The rights of persons in military or naval service were protected by provisions for voting and registering by mail and for renewing licenses which lapse during service. Maintenance of bridges and viaducts on highways designated as "defense highways," and vocational training for defense with use of Federal funds, were provided for. Two measures were designed to prevent subversive activities: Any group advocating overthrow of the government by force could not be classed as a political party or file nominations; and any person advocating subversive doctrines was prohibited from holding public office. (The latter act included a dismissal procedure.)

The National Conference of Commissioners on Uniform State Laws scored heavily, with seven of their drafts adopted in the 1941 session. Other achievements were: a new Unfair Sales Act and new legislation on deficiency judgments, to substitute for legislation previously pronounced unconstitutional; amendments to the law on orphans' courts, decedent estates, and adoption; new regulations for employment agents; and a voluntary quota plan for anthracite mining, aimed at bootlegging. Employers were prohibited from selling their employees any merchandise not produced by or related to their business, however, no damages may be assessed for violation. A "Little WPA Act" authorized the Department of Public Assistance to contribute to labor costs and cooperate in work relief projects approved by the Governor and submitted by departments of the Commonwealth or by subdivisions thereof. The Governor vetoed a new marriage code which would have invalidated common law marriages and would have required special licenses for persons under 18 (previously under 16).

Finances. Total tax collections in Pennsylvania for the fiscal year ending in May, 1940, were \$337,326,000. Total sales taxes amounted to \$83,290,000, including motor fuel, \$47,008,000. Taxes on specific businesses ran to \$66,171,000, general and selective property, \$22,007,000, unemployment compensation, \$82,376,000. The net income taxes were \$23,777,000 (1941: \$84,919,000). Cost payments for the operation of general government totaled \$353,224,000 in 1939, the latest year available. (Revenues for the general government for that year were \$390,317,000.) Cost of operation per capita was \$35.84. Total gross debt outstanding in 1941 was \$205,365,000, as compared with \$88,306,000 in 1932.

Officers and Judiciary. The Governor is Arthur H. James (Rep.), inaugurated in January, 1939, for a four-year term, Lieutenant Governor, Samuel S. Lewis; Secretary of State, Sophia M. R. O'Hara; Attorney General, Claude T. Reno; State Treasurer, F. Clair Ross; State Auditor, Warren R. Roberts. Chief Justice of the Pennsylvania Supreme Court is William I. Schaffer; there are six associate members elected by popular vote for 21-year terms. See FLOODS; PRISONS, PAROLE, AND CRIME CONTROL.

PENOLOGY. See PRISONS, PAROLE, AND CRIME.

PENSIONS. For old-age pensions, see LABOR LEGISLATION; SOCIAL SECURITY BOARD; articles on States. For veterans' pensions, see VETERANS' ADMINISTRATION.

PERU. A republic on the west coast of South America. Capital, Lima.

Area and Population Area, variously estimated at from 430,000 to 482,100 square miles, excluding more than 100,000 sq. mi. in dispute between Peru and Ecuador. The national census of June 9, 1940, showed 7,023,111 inhabitants (6,207,967 actually enumerated and 815,144 added to cover the estimated number uncounted and possible omissions). Of those actually counted, 3,067,868 were men and 3,140,099 women. There were 3,283,360 whites and mestizos, 2,847,196 Indians, 41,945 Negroes, 29,054 Orientals, and 6,412 unclassified. Populations of the chief cities were: Lima, 522,826 in 1940; Callao, 75,000 in 1936; Arequipa, 46,000 in 1936; Cusco, 40,000 in 1936; Iquitos, 40,000 in 1936.

Defense. Military service is compulsory, but the number of conscripts is limited. As of Jan. 1, 1941, the active army was estimated at 14,551; trained army reserves, 470,895; active air force, 1,935; police and gendarmerie, 8,000. The navy comprised 2 obsolete cruisers, 2 destroyers, 1 torpedo boat, 4 submarines, 7 river gunboats, and 3 auxiliary craft. The armed forces were instructed by U.S. naval, aviation, and military missions. Defense appropriations were 19 per cent of the 1941 budget.

Education and Religion. About half the population is illiterate. Education statistics for 1937 showed 4,697 primary schools with 471,304 pupils, 147 secondary schools with about 22,474 students, 7 normal schools with 649 students, 26 vocational schools, and 5 universities, with some 4,500 students. The Roman Catholic Church is protected by the State and only Roman Catholic religious instruction is permitted in State and private schools.

Production. Agriculture supports 85 per cent of the population. Stock raising and mining are other leading occupations. Mineral products accounted for 60.5 per cent of all 1940 exports by value; agricultural products, 30.2 per cent. Minerals produced in 1940 were (preliminary, metal content in metric tons): Copper, 38,557; antimony, 896.2; bismuth, 382.6; manganese, 221.8; silver, 573.8; lead, 37,072; magnesium, 36.9; tungsten trioxide, 179.6; vanadium, 2,166.6; molybdenum concentrates, 337; zinc concentrates, 3,588; refined zinc, 178.3. Gold output was 8,963 kilograms; petroleum, 13,427,000 bbl. The 1940 cotton crop was 83,030 metric tons; sugar (exports), 301,954 metric tons; wheat, 3,858,000 bu.; flax, 300 metric tons of fiber in 1940-41. Rice, coffee, and fruits are other important crops. Wool exports in 1940 were 5,993 gross tons. There are estimated to be 11,048,350 sheep, 1,850,000 cattle, 400,000 horses and mules, 650,000 goats, 1,169,000 alpacas, 650,000 llamas, and 800,000 swine. Guano collections in 1939 were 152,788 tons. Chief manufactures: petroleum products, cotton textiles, knit goods, hats, food products, beverages, leather, shoes, etc.

Foreign Trade. Including specie, imports in 1940 were 318,739,462 soles (255,787,376 in 1939); exports, 405,813,523 (381,421,389 in 1939). In U.S. dollars, the 1940 imports were \$51,668,000 (\$47,960,000 in 1939); exports, \$65,782,000 (\$71,517,000). Values of leading 1940 exports (in 1,000 soles): Copper bars, containing gold and silver, 75,021; cotton, 70,788; crude petroleum, 53,883; oil products, 46,937; sugar, 43,604; gold bars, 24,245; wool, 20,137. The United States furnished 53.1 per cent of the 1940 imports (41.1 in 1939); Great Britain, 9.2 (8.4); Argentina, 7.8

(5.4). Of the exports, the United States took 42.9 per cent in 1940 (30.4 in 1939); Great Britain, 12.1 (19.6); Chile, 10.1 (7.8). See TRADE, FOREIGN.

Finance. The trend of the budget and public debt since 1932 is shown in the accompanying table from *Commercial Pan America*, April-June, 1941, p. 291.

ORDINARY BUDGET ACCOUNT^a
[In millions of soles]

Year	Revenues		Expenditures		Public debt Dec. 31
	Budget	Actual	Budget	Actual	
1932 ..	96.9	86.5	96.9	95.9	551.6
1935 ..	131.3	139.7	131.3	137.6	690.4
1936 ..	139.7	159.6	139.7	155.1	706.7
1937 ..	153.6	172.9	153.6	168.0	723.7
1938 ..	165.5	184.5	165.5	183.5	778.3
1939 ..	174.7	179.9	174.7	185.0	833.1
1940 ..	188.0 ^b	184.5	188.0 ^b	194.5	905.5
1941 ..	214.2 ^b	—	214.2 ^b	—	925.8 ^c

^a Excluding 28,000,000 soles of revenue and expenditure under special laws, incorporated in budget for the first time in 1940. ^b Excluding 64,200,000 soles of revenue and expenditure under special laws. ^c On June 30, 1941.

The sol (nominal par value, \$0.474) depreciated to an average of \$0.1875 in 1939 and \$0.1621 in 1940.

Transportation. Peru in 1941 had about 2,760 miles of railway line (over 600 miles state-owned), 16,559 miles of highways, and an extensive network of airways operated by five companies (one national). With the completion of the new port of Matarani in southern Peru early in 1941, a contract was let for a railway line connecting the new port with La Joya station of the Southern Railway. Shortly after Peru expropriated the Deutsche Lufthansa system on Apr. 1, 1941, Pan American Grace Airways stepped up their services between Peru and Argentina to five weekly (see *History*). Traffic on all air lines in Peru in 1940 was: Passengers, 28,274; kilometers flown, 3,100,015; freight, 694,256 kilograms, mail, 59,117 kilograms; parcel post, 36,096 kilograms. During 1939 a total of 11,616 ships of 16,458,369 tons entered Peruvian ports.

Government. The Constitution of Apr. 9, 1933, as amended by the plebiscite of June 18, 1939, vested executive power in a President elected for six years and ineligible for re-election. Legislative authority was vested in a Senate of 40 and a Chamber of Deputies of 140 members, all elected for six years. The suffrage in national elections is restricted to literate males of 21 years and over. President in 1941, Dr. Manuel Prado y Ugarteche, who was elected Oct. 22, 1939, and inaugurated December 8. Most of the government candidates for the Senate and Chamber of Deputies were successful in the 1939 elections as the strongest opposition group, the so-called Apra party, was forbidden to present candidates (see 1939 YEAR BOOK, p. 609).

HISTORY

Conflict with Ecuador. The conflict with Ecuador is described in the article on ECUADOR under *History*. Provoked by Ecuadoran charges of totalitarianism in Peru, the Congress at Lima on July 13 unanimously passed a declaration of adherence to democratic principles and of protest against Ecuador's "aggression." On August 7 President Prado in a message to President Roosevelt pledged his Government to work for the restoration of normal and peaceful relations with Ecuador. By the year's end, negotiations had advanced to the point where settlement of the boundary controversy was anticipated at the forthcoming conference of American Foreign Ministers in Rio de Janeiro (see PAN AMERICANISM).

Relations with United States. Incidents dampening Peru's cordial relations with the United States arose in connection with the Ecuadoran-Peruvian controversy. The transfer to Ecuador of two U.S. coast guard vessels while this controversy was in a heated stage aroused vigorous protests in the Lima press and provoked student demonstrations. Secretary Hull explained that the transfer of the ships had "no relation whatsoever to the proffer of good offices" by the United States. Application of the U.S. blacklist to pro-Axis firms and individuals in Peru also caused some resentment in Lima.

The War Department in Washington on October 15 seized a shipment of 18 American war-planes, valued at \$1,234,000, which had been purchased by Peru from the Norwegian Government-in-Exile and were on the point of being sent from New York to Callao. The planes were requisitioned for defense purposes and reportedly turned over to Russia. The Peruvian Government protested this diversion and Col. Armando Revoredo, air attaché at the Peruvian Embassy in Washington, announced his resignation. He denounced the seizure as "a most unfriendly act." The Congress and press of Peru joined in criticism of the seizure. Secretary Hull promised full and immediate compensation for the planes and explained that the requisitioning was made necessary by the "critical world situation." A month earlier the United Fruit Company protested to Washington that Peruvian planes had bombed some of its banana plantations in Ecuador, firing at the house of an American manager from which an American flag was flying.

These irritations were more than offset by the steady development of closer economic, military, and cultural contacts between the two countries. At the request of the Peruvian Government, experts of the Fish and Wildlife Service, U.S. Dept. of Interior, went to Peru in January to assist in a survey of fishery resources. Other U.S. Government experts aided in the rehabilitation of the Peruvian rubber-growing industry. Peruvian officers trained with U.S. defense forces in the Panama Canal Zone and the United States. In mid-May Capt. W. M. Quigley, U.S.N., head of the naval mission to Peru, was appointed Chief of Staff of the Peruvian Navy. There was a lively cultural exchange, featured by the large attendance of Americans at the summer school of the University of San Marcos.

The expansion of U.S. purchases of Peruvian products, particularly copper and sugar, was a major factor in Peru's successful adjustment to the loss of European markets (see TRADE, FOREIGN). Due to maintenance of a substantial favorable trade balance, the Banco Central of Peru found it unnecessary to draw upon the \$10,000,000 currency-stabilization loan advanced by the Export-Import Bank of Washington Dec. 9, 1940. Under an arrangement announced in Washington October 2, Peru agreed to sell all of its antimony, copper, lead, tungsten, vanadium, and zinc output to the United States. The U.S. Metals Reserve Co. undertook to buy all these metals not purchased by private American business concerns.

Japanese Funds Frozen. President Prado, Vice President Rafael Larco Herrera, and other leading Peruvians repeatedly affirmed their adherence to the program of inter-American solidarity and support of President Roosevelt's good neighbor policy. On the same day Japan attacked the United States, President Prado in a message to President Roosevelt said that Peru would give the United States every assistance in measures which Washington deemed necessary to meet the Japanese threat. De-

crees issued December 9 froze Japanese funds and securities in Peru and banned import and export of Japanese goods without special license. Severance of trade with Japan closed an important market for Peru's cotton and minerals. On November 14 Peru had agreed to pay Japan an indemnity of 1,400,000 soles for damage to Japanese residents and properties in the anti-Japanese riots of May, 1940, in Lima.

Anti-Axis Measures. During the year the Government placed increasing restrictions upon German and Italian propaganda and political activity in Peru. On April 1 the Peruvian branch of the German-controlled Lufthansa air network was closed and the German Transocean news agency was barred for "spreading news that may disturb the good international relations of Peru." Congress authorized cancellation of the Lufthansa concession in January, after the company had been fined for flying over the Ecuadoran frontier without authorization. Actual seizure of the air line was precipitated by the scuttling of two German freighters in Callao harbor and the flight of two other Nazi merchant ships on March 31 without clearance papers, following news of the seizure of Axis ships in United States ports. Assets of the companies owning the four Nazi ships were seized, while the crews were interned. The remaining German air line (Sodta) was soon forced to suspend operations.

Dissemination of propaganda in favor of any belligerent country was banned by the Government June 28. On August 2 the Government withdrew the diplomatic immunity granted German diplomatic pouches because they had been used "for purposes other than the transport of official correspondence." Later that month the Chamber of Deputies voted adherence to the Roosevelt-Churchill Atlantic Declaration (q.v.) and invited American parliamentary bodies to unite in defense of democracy. Propaganda organs of the Spanish Falange and of the Italian Legation in Lima were suppressed for anti-democratic tendencies August 20. On December 18, the Senate unanimously requested the Government to curb the activities of Axis nationals in Peru.

Other Developments. The Foreign Ministers of Chile and Peru on February 7 initialled three pacts coordinating their foreign and defense policies and opening the way for a new trade agreement (see CHILE under *History*). Highway agreements were concluded with Bolivia and Chile at a highway conference in Buenos Aires in May.

The internal political situation was marked by the relative inactivity of the Apra and other opposition groups and by an undercover struggle between liberal and conservative elements within the government coalition. An anti-government plot, organized by a group of army and police officers, was broken up early in the year by a raid on a meeting of the conspirators during which two police officers were killed. More than 500 lives were lost and the entire residential section of the town of Huaraz was wiped out by a great water-slide on December 13.

See ARGENTINA and CHILE, under *History*; CHEMISTRY, INDUSTRIAL; LEND-LEASE ADMINISTRATION, SOCIALISM.

PETROLEUM. The petroleum industry in 1941 broke even 1940's record-breaking records, according to the annual report of the American Petroleum Institute, and this in spite of the war which put exports at a minimum and taxes at a maximum. Domestic crude oil production climbed to a total of

1,405,218,000 bbl. compared with 1,353,214,000 bbl. in 1940. The rest of the world combined produced only 809,399,000 bbl., or 14,149,000 less than in 1940. Consumption reached the highest figure in petroleum history, which covers a period of 80 years. Domestic consumption of petroleum and petroleum products was about 1,478,697,000 bbl. Exports fell to 105,900,000 bbl.; total demand, 1,584,606,000 bbl. By the end of 1941 crude petroleum was being produced in the United States at the rate of more than 4,100,000 bbl. a day. And the nation's requirements were rising so stringently that the demand for mid-1942 was estimated at a daily 4,500,000 bbl., with an anticipated 5,000,000 a day by July, 1943.

The war was the cause of everything: the extraordinary demand, the high taxes, the low export figures. Although the entry of the United States in the war will cause exports to drop still lower in 1942, the demand was expected to leap ahead because of the rising requirements of the United States armed forces and the merchant marine. The Navy, Army, the air forces, and Coast Guard used a total of some 30,000,000 bbl. of oil in 1941. Total consumption of petroleum and petroleum products in 1938 by the Army, Navy, and Coast Guard was 11,536,645 bbl. Of this amount the Navy took 9,068,000 bbl. But Navy requirements in 1941 mounted to 16,000,000 bbl. of fuel oil and about 3,000,000 bbl. of other petroleum products. Army consumption also took a jump to 5,000,000 bbl. of motor fuel (not counting aviation gas) against only 800,000 bbl. in 1940. In addition the Army consumed still another 5,000,000 bbl. of oil products, including aviation gasoline. The Coast Guard consumed about 550,000 bbl. in 1940 and '41 each. The needs of the United States military forces for 1942 were estimated at about 50,000,000 bbl., possibly 60,000,000. But no shortage was predicted as long as the industry could maintain its 4,000,000-bbl. daily rate.

The production of high-test aviation gasoline rose 33½ per cent. about 18,650,000 bbl. in 1941, 14,000,000 in 1940. Domestic demand was about 13,500,000 bbl., 6,570,000 in 1940. Exports were 4,800,000 bbl. against 4,700,000 in 1940. Both production and distribution were put under government control in 1941, and very early in 1942 all oil produced in California was taken over by a government commission.

The demand for motor fuel oil rose 11½ per cent in 1941 over 1940: 683,363,000 bbl. compared with 614,531,000 in 1940. This includes the aviation gasoline figures. After the Lend-Lease Act was passed (March, 1941) England purchased large amounts of motor fuel oil, especially from the Gulf area. Eighty tankers of 10,000 tons each were transferred to British use, resulting in the motor-oil-shortage scare on the Atlantic coast in the spring and summer. No actual shortage did occur, however. Other means of transportation were rushed into service and three pipe lines were built to keep the area supplied. The third line was completed Jan. 15, 1942. See also PETROLEUM COORDINATOR.

Stocks of motor fuel oil at the end of 1941 were about 88,000,000 bbl., including 6,660,000 bbl. of aviation gas, compared with 84,400,000 bbl. at the end of 1940, which figure included 6,350,000 bbl. of aviation gas. Stocks of crude oil were about 250,000,000 bbl. on December 31, compared with 275,985,000 in 1940. The 1941 domestic demand for fuel oil was 382,700,000 bbl. (337,300,000 in 1940). Exports were 1,000,000 bbl. less than in 1940. Stocks too were less: 82,200,000 bbl. compared with 88,026,000 at the end of 1940. Light

fuel oil had a somewhat different story: the demand was for 174,500,000 bbl. against 160,800,000 in 1940; exports fell only 600,000 bbl. and stocks at the end of the year were 51,600,000 bbl.,—8,700,000 more than 1940's year-end stocks.

Consumption of lubricants in 1941 increased 27 per cent over 1940 to 31,217,000 bbl. Stocks were 1,000,000 bbl. less. Total stocks of refined petroleum products were about 300,000,000 bbl. on Dec. 31, 1941, approximately the same amount as stocks on hand the first day of the year. Gasoline taxes in 1941 amounted to \$1,335,000,000: \$965,000,000 throughout the 48 States, a 12 per cent increase; \$370,000,000 for the Federal government, a 31 per cent increase.

With the fate of the nation (and the United Nations) hanging on petroleum and its products, The U.S. Bureau of Mines (q.v.) launched a rapid, intensive survey of the quantity and geographic distribution of crude oils suitable for the manufacture of aviation gasoline. The survey revealed that a number of oil fields were potential producers of aviation gasoline which had not heretofore been producing that type of crude oil. The Bureau continued to develop methods of extracting gasoline and lubricating oil from domestic coals as a safety measure against any as yet unforeseen but possible petroleum shortage.

The petroleum industry handled almost the entire 1941 production of toluene, for which the last T in TNT is the symbol. High grade aviation gas is a by-product of toluene synthesis. It was discovered that toluene could be produced from petroleum for about 25¢ a gal., whereas toluene from coal-tar, hitherto the usual source, cost 27–30¢ a gal. to make.

See the oil-producing States and countries under *Production and History*; BUSINESS REVIEW under *Minerals*; CHEMISTRY, INDUSTRIAL under *Fuels*; CONSUMERS' COOPERATIVES; MINES, BUREAU OF; UNITED STATES under *Congressional Investigations* For gasoline taxes, see *MOTOR VEHICLES*; for pipe-lines, see *AQUEDUCTS*.

PETROLEUM COORDINATOR FOR NATIONAL DEFENSE, Office of. This office was created by President Roosevelt on May 28, 1941, by executive authority that was his by reason of the unlimited national emergency that was declared on May 27. Its purpose, as stated by the President, is "the development and utilization, with maximum efficiency, of our petroleum resources and our facilities, present and future, for making petroleum and petroleum products available, adequately and continuously, in the proper forms, at the proper places, and at reasonable prices to meet military and civilian needs."

The President appointed the undersigned as Petroleum Coordinator and authorized him: (1) To obtain from Federal and State agencies, and from the petroleum and allied industries, information as to (a) the military and civilian needs for petroleum and petroleum products, (b) the factors affecting the continuous, ready availability of petroleum and petroleum products for those needs, and (c) any action proposed which will affect such availability of petroleum and petroleum products. (2) To make specific recommendations to any Federal or State agency and to industry as to action necessary to insure the maintenance of a ready and adequate supply of petroleum and petroleum products.

The Petroleum Coordinator was instructed by the President to consult with Federal and State agencies so that all governmental participation should consistently further this policy; and to consult with the petroleum and allied industries in order to aid them

in shaping their policies and operations in the discovery, development, production, processing, storage, distribution, marketing, consumption, import, and export of petroleum and petroleum products.

Even before our active engagement in the war, it had become evident that no more important problem confronted the office and the oil industry than that of increasing the nation's production of 100-octane aviation gasoline to a level adequate to our needs for defense. Therefore, four months before the Japanese attack, the Petroleum Coordinator called upon the industry to act at once to double and then to treble its output. Even more 100-octane gasoline is now indicated as being necessary. During the late summer and fall, this program had made substantial progress.

In order to assure full and continuing consultation with the best brains of the industry, both executive and technical, the Coordinator created, before the war, the Petroleum Industry Council for National Defense, composed of 66 outstanding leaders from all parts of the country, representing both large and small producers, refiners, and marketers, and also including trade associations and cooperatives (after the war began, its name was changed to the Petroleum Industry War Council).

When war began, therefore, the machinery for harnessing the great petroleum industry to military effort was already set up. To expedite the 100-octane program, the Office of Petroleum Coordinator took these actions: (1) Obtained from the Supply Priorities and Allocations Board the ruling that all applications for new 100-octane plants would be given A-1-A ratings; (2) made a nationwide survey of refinery capacity and obtained complete data on present and potential capacity; (3) worked out with manufacturers a program for the quickest possible deliveries of materials and equipment for new refineries; (4) got patent owners to cut in half their royalties on the complicated processes used in making 100-octane, thus permitting other refiners to make this fuel; (5) obtained Department of Justice approval for pooling operations by oil companies so that patents, processes, raw materials, and facilities could be made cooperatively available; and (6) invoked full control over 100-octane gasoline and its components so that none would be diverted to non-essential purposes.

The net result of all of these cooperative Government-industry activities was the accomplishment, in a very brief time, of far more progress in 100-octane production than many had deemed possible.

Long before the coming of war, the Office of Petroleum Coordinator had difficult problems with which to cope. At the very moment of its creation, in May of 1941, it had been confronted with a transportation deficiency in the 17 States of the Atlantic Seaboard, which normally receive about 95 per cent of their oil by tank ship, principally from the Gulf Coast. More than 50 of these ships had been diverted to a shuttle service between the Gulf and ports north of Cape Hatteras as part of the aid-to-Britain program. The resultant alarming shrinkage in East Coast stocks made it necessary to institute conservation measures, including the voluntary closing of filling stations between 7 p.m. and 7 a.m. and an order (issued through the Office of Price Administration and Civilian Supply) cutting supplies to filling stations by ten per cent.

Meanwhile, through continuing efforts of this office, there was built up a comprehensive substitute transportation program which included an unprecedented use of railroad tank cars, the heavier loading of tankers, and many other measures. These combined efforts, plus abnormally warm weather

which drastically cut fuel oil consumption, resulted in a substantial building up of stocks in the East. So, when the British were able to return part of the diverted tankers, it was possible to remove all restrictions on the use of petroleum products.

The Coordinator, soon after his appointment, named industry committees to consult and advise with his office on all phases of activity. Since the creation of the Petroleum Industry Council, these committees have been occupied principally with district problems of production, refining, transportation, and marketing. The Office has steadfastly taken the view that there shall be no action or policy on its part which will change the competitive position of anyone in the oil industry. See GAS INDUSTRY.

PHILANTHROPY. The soaring contributions for foreign relief, which had been the striking characteristic of charitable activities in 1940, took a downward plunge in 1941, with total collections dropping probably by about half. (See WAR RELIEF.) They were supplanted somewhat in public interest by a rash of enterprises more intimately connected with the American picture. Early in the year, the most prominent place in the press was occupied by a group of organizations advocating one course or another for our political future. Their collections of funds, which ran in a number of instances into six figures, might be labelled more properly for propaganda than for philanthropy; disbursements went to full-page newspaper advertisements, bombardment of the public by mail, mass meetings of huge proportions, and similar channels.

As the United States knuckled down to the problem of defense and, finally, of actual war, war organizations came more and more to the front. The Red Cross (q v) launched a \$50,000,000 drive and reported \$10,780,341 collected by the end of the year. The United Service Organizations collected \$13,513,043 by the end of November. A number of lesser organizations sprang up, and most existing ones turned at least a part of their resources to the war effort. (See the U.S.O. and other groups under SOCIETIES; also, articles on churches.) Hardly a matter of philanthropy, but the subject of wide appeal to the public, was the campaign for purchase of defense savings bonds and stamps (see PUBLIC FINANCE).

Whether as a result of these special activities, or because of improved economic conditions, there seems to have been a considerable acceleration in giving in 1941. According to the most comprehensive summary statistics (compiled by the John Price Jones Corporation and reported in the quarterly *Giving Today*) publicly reported gifts and bequests in the seven largest cities of the United States totaled \$129,860,430 in 1941 as compared with \$77,720,834 in 1940. Bequests particularly showed a great increase—to \$58,473,657 from \$15,723,127—partly because of the distribution of one great estate, that of Frederick W. Vanderbilt of New York City (see below under *Individual Gifts*). Leading categories were: Education, \$57,494,408; organized social work, \$41,724,468; health, \$8,637,814; fine arts, \$2,751,390; religious purposes, \$2,734,939; foreign relief, \$7,345,934 (as compared with \$14,933,591 in 1940); American war organizations, \$8,790,950. (Above figures exclude contri-

butions reported on a national basis such as the \$13,513,043 raised by the U.S.O., and \$10,780,341 by the Red Cross during December, 1941.)

A problem which always concerns the giver of gifts is that of ascertaining whether or not his contribution will be wisely used. The National Information Bureau (see under SOCIETIES) serves philanthropists by investigating charitable causes. Organizations collecting for relief of foreign belligerents are subject to the requirement that they register with the Department of State and submit detailed reports which appear in published form. Also of interest in this connection in 1941 was the close examination, undertaken by the New York City Department of Welfare, of 50 organizations collecting considerable sums from pedestrians. The investigation followed a decision in the Appellate Division to the effect that the State may dissolve a corporation created by it; the case involved the Volunteer Rescue Army, Inc., which operated on a national scale and paid out only \$10 or \$15 a week to the needy.

Fund Raising Campaigns. Education fared better than usual in 1941, with collections in the seven large cities mentioned above tripling those of 1940. In addition to the usual collections and grants (see table under UNIVERSITIES and below under *Foundation Activities*) a number of institutions reported special activities. Vassar College reached its 75th anniversary goal of \$2,000,000 in March with three-fourths of the amount contributed by former students. The University of Chicago 50th anniversary campaign brought in \$6,080,000 by September, the Fordham University Centenary drive \$525,000 as of November 7, the Stanford University 50th anniversary, \$1,572,251, and the Medical Unit of New York University, \$198,415 for its centenary. Allegheny College, Meadville, Pa., undertook to raise \$900,000 for its 125th anniversary, and Tufts College secured \$500,000 in a special campaign. A special project of Harvard University was the establishment, in cooperation with the Red Cross, of the Harvard Public Health Unit in England with a fund of \$100,000; study and control of communicable diseases was the object. The Rochester Athenaeum and Mechanics Institute raised \$750,000 to expand its "occupational-training program."

Designed as memorials, there were under way during the year a \$3,000,000 campaign for the Cardinal Hayes Memorial High School in New York and a Paderewski Testimonial Fund, which reported \$84,000 collected in November. The now familiar "President's Birthday Ball" for the Warm Springs Foundation (see below) raised \$2,241,457 in 1941. The usual individual hospital drives reported success, and the United Hospital Fund totaled \$1,000,210 for 1941. Two symphony orchestras, the St. Louis and the National, collected approximately \$100,000 each.

A rather unusual project was the \$415,000 raised by duck hunters in the past three years to improve a million acres of duck breeding grounds provided by the Canadian government. The motion picture industry joined the ranks of those providing well for its indigents by instituting a Motion Picture Relief Fund; \$800,000 was reported on March 29. For the activities of various specific organizations, see SOCIETIES and separate articles, as COMMUNITY CHESTS.

Individual Gifts and Bequests. The following list names, in order of magnitude, the beneficiaries, during 1941, of individual gifts and bequests amounting to a half-million dollars or more. The information is derived from *Giving Today*, a quarterly report issued by the John Price Jones Corp.

Yale University: Bequest of \$13,797,660 for the Sheffield Scientific School from Frederick W. Vanderbilt of New York City

Vanderbilt University: Bequest of \$10,348,245 from Frederick W. Vanderbilt of New York City.

Boy Scouts of America: Gift of a 23-story building in Tulsa, Okla., valued at \$5,000,000 together with a 91,538 acre ranch in New Mexico from Waite Phillips, Tulsa, Okla.

Harvard University: Bequest of the Ritz-Carlton Hotel and its site, assessed at \$3,675,000, from Robert Walton Goslet, New York City

Salvation Army: Bequest of \$3,449,415 from Frederick W. Vanderbilt of New York City

Alonzo Mather Aged Ladies' Home: Established on the shores of Lake Michigan, Chicago, by a bequest of \$3,000,000 in the will of Alonzo Clark Mather of Highland Park, Ill.

Boys Club of New York: Bequest of \$2,643,090 from Victor Morawetz, New York

MacMurray College: Gift of \$2,500,000 from James E. MacMurray, South Pasadena, Calif., bringing his gifts to the college to a total of \$4,191,030.

Northwestern University: Grant of \$1,745,000 from the Clara Abbott Foundation, Chicago, Ill.

New York Association for Improving the Condition of the Poor: Bequest of \$1,724,707 from Frederick W. Vanderbilt of New York

Dartmouth College: Bequest of \$1,569,648 from the estate of William N. Cohen of New York City, who died in 1938

College of Wooster (Ohio): Bequest of \$1,400,000 from Burton E. Babcock, Canandaigua, N.Y.

Medical Society of South Carolina: Bequest of \$1,321,545 from Victor Morawetz, New York

Eugene H. Hughes Memorial Hospital for Contagious Diseases, Hamilton, Ohio: To be established with \$1,000,000 from the estate of Eugene H. Hughes

Northwestern University: Bequest of \$1,000,000 from the estate of Mrs. Emma H. Morrison

University of California: Bequest of \$1,000,000 from the will of Michael J. Connell, Los Angeles

University of Chicago: Grant of \$1,000,000 from the Clara Abbott Foundation, Chicago, Ill.

University of Rochester: Bequest of \$925,164 from Mrs. Bertha H. Buswell, New York

University of Nebraska: \$850,000 from Don L. Love for a library building.

Metropolitan Museum of Art: Bequest of property valued at \$815,000 from George Blumenthal, New York

Harvard University: Bequest of \$750,000 from Frank Graham Thompson, Philadelphia

Cornell University: Gift of \$700,000 from Franklin W. Ohn of Alton, Ill., for construction of a chemistry building in memory of his son

Phillips Academy, Andover, Mass: Bequest of \$700,000 under the will of Thomas Cochran of New York

Emory University School of Medicine: Gift of \$550,000 from the Joseph B. Whitehead Foundation

Federation for the Support of Jewish Philanthropic Societies: Bequest of \$534,316 from the estate of James Ulmann of New York

Stanford University: Bequest of an estate valued at \$500,000 to \$1,000,000 from Mrs. Timothy Hopkins, Menlo Park, Calif.

Dartmouth College: Bequest of \$500,000 from Emil Boomer, Brooklyn, N.Y.

Greenwich (Conn.) Hospital: Gift of \$500,000 from Mrs. Henry W. Bagley of Greenwich, matched by \$500,000 from the community

McCullough Memorial Hospital, Oxford, Ohio: To be erected by a bequest of \$500,000 from Daisy M. McCullough of Oxford to the village of Oxford

Post Graduate Hospital, New York: Bequest of \$500,000 from the will of Gertrude S. Thomas of New York.

The Vatican, Rome: Gift of a Florentine Villa valued at \$500,000 from Myron C. Taylor, New York.

Foundation Activities. An important addition to the list of benevolent foundations and trusts in 1941 was the James Foundation (see below). Activities of the wealthier of these organizations, in so far as they choose to make public their reports, are briefly described below.

Automotive Safety Foundation is supported by annual contributions from more than 150 companies in the automotive industry. Organized in 1937 to carry on a broad, integrated highway safety program, the Foundation made grants in 1941 to 14 qualified national organizations for specific activities in the fields of legislation, motor-vehicle administration, enforcement, engineering, education, training of personnel, and research. President: Paul G. Hoffman. Director: Norman Damon. Headquarters: the Tower Building, Washington, D.C.

Bamberger Foundation. See ADVANCED STUDY, INSTITUTE FOR.

Bok Foundation, The Mary Louise Curtis, has as its principal activity the support of the Curtis Institute of Music in Philadelphia. Grants have also been made to the Settlement Music School, Philadelphia, and the Research Studio, Maitland, Fla., the latter being a kind of "laboratory" for painting. Financed by gifts of \$12,500,000 from Mrs. Mary Louise Curtis Bok, the Foundation was created in 1931 for the support of music, fine arts, science, invention, or general education. Address: 1726 Locust Street, Philadelphia, Pa.

Buhl Foundation, established in 1928 by Henry Buhl, Jr., reported that its capital assets were \$12,812,739 in 1941 and that expenditures for the year totaled \$266,895. The Foundation's programs center in the Pittsburgh area, where it has sought to provide more adequate factual bases for social work and regional economic effort, to promote research in public health and the natural sciences, and to develop the community's resources in higher education. Another objective is the advancement of housing standards for American cities, as exemplified in large-scale planned communities administered on a long-term investment basis. In demonstration of this last-named objective, the Foundation operates Chatham Village in Pittsburgh, built in 1932 at a cost of \$1,700,000. The Buhl Planetarium and Institute of Popular Science was built at a cost of \$1,100,000 in 1939 as a gift to the people of Western Pennsylvania. Director: Charles F. Lewis. Offices: the Farmers Bank Building, Pittsburgh, Pa.

Carnegie Endowments. See separate article.

Children's Fund of Michigan reported expenditures of \$703,167.77 during the fiscal year ending Apr. 30, 1941; capital assets on that date were \$8,514,344.83. The Fund was established by James Couzens with a gift of \$10,000,000 in 1929 to promote the health, welfare, happiness, and development of children in Michigan, primarily, and elsewhere in the world. Chief officer: Wm. J. Norton, 660 Frederick Street, Detroit, Mich.

Commonwealth Fund. See separate article.

Cranbrook Foundation is also devoted to the welfare of the people of Michigan, specifically in the field of education. Established in 1927, it maintains at Bloomfield Hills, Mich., a cultural center including three schools, an Academy of Arts, and an Institute of Science. Expenditures for the year ended June 30, 1941, were \$659,122; capital assets on that date, \$3,590,762. Chairman of the Board of Trustees: George G. Booth.

Duke Endowment, created by James B. Duke in 1924, is principally known for its connection with Duke University, but it conducts a number of other activities in the Carolinas as well. The Endowment is a permanent one with a self-perpetuating board of 15 trustees. Except for the \$17,000,000 spent in erecting and equipping Duke University, it is authorized to expend none of its principal. A report covering its first 16 years, ended Dec. 31, 1940, showed that the Endowment had distributed and allocated \$40,148,420 as follows: Duke University, \$19,642,159; hospitals, \$14,099,922; Davidson College, \$1,064,480; Furman University, \$1,065,303; Johnson C. Smith University, \$776,477; orphanages, \$1,795,314; superannuated Methodist preachers, \$373,692; rural Methodist churches, \$625,135 for building and \$705,938 for operations. Chairman of the Trustees: George G. Allen. Headquarters: Power Building, Charlotte, N.C.

Falk Foundation, The Maurice and Laura, makes grants to economic research organization for definitive studies of specific economic problems basic to

the development of American industry, trade, and finance. Grants voted in 1941 totaled \$113,000 and included appropriations to The Brookings Institution, Washington, D.C., for its general support (\$60,000), to the Carnegie Institute of Technology in Pittsburgh for the annual expenses of The Maurice Falk Professorship of Social Relations (\$10,000), to the Community Fund of Allegheny County, Pennsylvania, (\$12,000), to The Brookings Institution for a series of short studies of economic problems arising out of the current defense program (\$11,000). In addition, \$20,000 was appropriated for expenditures by the Foundation itself in connection with the dissemination to the public of various reports and summaries of studies made under its grants. Payments in 1941 on grants made in 1941 and earlier years totaled \$172,435.99. Capital assets had a market value of \$3,509,454.25 on December 15. The Foundation was established by Maurice Falk in 1929 with the provision that principal as well as income be used within 35 years. Executive Director: J. Steele Gow. Chairman of the Board of Managers: Leon Falk, Jr. Offices: Farmers Bank Building, Pittsburgh, Pa.

Field Foundation, Marshall. See OPINION RESEARCH CENTER.

General Education Board. See separate article.

Guggenheim Memorial Foundation, The John Simon was created in 1925 by John Simon Guggenheim and his wife as a memorial to their son who died at the age of 18. The original endowment was \$3,000,000, enlarged to \$7,000,000 by 1939, and further increased upon the death of John Simon Guggenheim in 1941 (see NECROLOGY) when the foundation was named residuary legatee and remainderman for trusts totaling \$2,500,000. In fulfilling its purpose to "promote the advancement and diffusion of knowledge and understanding and the appreciation of beauty" the Foundation awards fellowships, normally \$2,500 a year, to citizens of the United States and also to Latin Americans.

Hayden Foundation, Charles, founded in 1937 with an endowment of \$50,000,000, assists needy boys and young men, especially through aid to recreational centers. Offices: 25 Broad Street, New York City.

James Foundation of New York, Inc., was incorporated Aug. 23, 1941, under the Membership Corporation Law of the State of New York, pursuant to the provisions of the will of the late Arthur Curtiss James who died on June 4, 1941. The Foundation will receive, upon the conclusion of the executorial administration of the estate of Arthur Curtiss James, the residuary estate, the amount of which is not yet determined. The income of the funds received, and ultimately the principal of the funds, will be distributed through organized religious, educational, and other charitable corporations. The officers are William W. Carman, President, and Talbot T. Lewis, Secretary and Treasurer. Trustees: William W. Carman, Robert E. Coulson, William M. Kingsley, Talbot T. Lewis, and Charles E. Andrews. Offices: 40 Wall Street, New York City.

Juilliard Musical Foundation was incorporated in New York State in 1920, in accordance with the will of Augustus D. Juilliard, to aid worthy students of music, promote the instruction of the general public in the musical arts, and to encourage a deeper interest in music in the United States. Invested trust funds had a book value of about \$12,000,000 in 1940; only the income is distributed. Secretary: M. Steilen, 31 Nassau Street, New York City.

Kellogg Foundation, established by W. K. Kellogg in 1930 to advance the well-being of children with-

out regard to race, creed, or geographical boundary, expended \$2,303,461.13 during the year ending Aug. 31, 1941. Total capital assets on that date were \$46,574,167.69. The Foundation has undertaken and is administering the Michigan Community Health Project, a health program involving seven counties in southwestern Michigan. The present program includes also national and international health promotion activities and the granting of fellowships. President: George B. Darling. General Director: Emory W. Morris. Headquarters: Battle Creek, Mich.

Macy Foundation, established in 1930 by Mrs. Kate Macy Ladd in honor of her father, Josiah Macy, Jr., reported total expenditures for the year ending Dec. 31, 1941, at \$218,821.09; total grants paid \$162,233. Drafts are not permitted upon the endowment, which has a ledger value of \$6,280,869. Emphasis is placed on special problems in medicine which require for their solution studies and efforts in correlated fields as well, such as biology and the social sciences. In the present emergency the Foundation is giving special attention to health problems within its program which make a contribution to national defense. President: Dr. Willard C. Rappleye. Headquarters: 565 Park Avenue, New York City.

Markle Foundation, John and Mary R., established in 1927 by John Markle, has limited its new activities since 1935 to grants to institutions in aid of specific research projects in medical sciences. Appropriations made in 1940 amounted to \$552,385 while grants paid and operating expenditures were \$847,065. There were in progress during the year 153 separate projects receiving aid. The year-end market value of the principal account was \$16,246,677. President: J. P. Morgan; Vice President and Treasurer, Archie S. Woods; Secretary, Florence E. Quick. Offices: 14 Wall Street, New York City.

Milbank Memorial Fund, established in 1905, reported assets of \$9,712,050 at the end of 1940. Appropriations for grants and projects in that year totaled \$197,085. The Fund assists agencies and institutions in the field of public health and medicine, education, social welfare, and research. Emphasis is given to activities which are preventive rather than palliative, and to the improvement of administrative procedures in public health. In 1940, 30 organizations received funds, including Community Service Society of New York, \$20,000, Judson Health Center, \$25,000, Neighborhood Health Development, Inc., \$17,500, and Princeton University (for study of population problems) \$13,250. President: Albert G. Milbank. Executive Director: Fran G. Boudreau, M.D. Offices: 40 Wall Street, New York City.

Permanent Charity Fund was established in 1915 by the Boston Safe Deposit and Trust Company to furnish a medium through which money may be left in trust to charity. The principal of the Fund is invested and the income distributed to existing organizations, usually of Boston and vicinity. Payments to charities during the fiscal year ended June 30, 1941, totaled \$167,746 and capital assets on that date were \$5,572,978. President: Charles E. Mason. Secretary: Charles M. Rogerson. Offices: 100 Franklin Street, Boston, Mass.

Reynolds Foundation, Inc., established in 1936 for charitable and civic purposes within the State of North Carolina by the brother and sisters of Zachary Smith Reynolds, deceased, has since its inception used its income for a campaign to control venereal disease in the State. Annual grants have been made as follows to the State Health Depart-

ment for this purpose: (1937) \$100,000; (1939) \$160,000; (1940) \$200,000; (1941) \$175,000. The principal of the Trust had a market value of \$5,805,673 on Nov. 1, 1940. Trustees: Richard J. Reynolds, President, W. N. Reynolds, Mary Reynolds Babcock, Nancy Reynolds Bagley, W. R. Hubner. Secretary: Stratton Coyner, Winston-Salem, N.C.

Rockefeller Foundation. See separate article.

Rosenwald Fund, incorporated by Julius Rosenwald in 1917 "for the well-being of mankind," conducts its activities chiefly among Negroes and in the rural South. Capital assets on June 30, 1941, were valued at approximately \$4,000,000. The present program includes the following: (1) Rural education, especially in the south, for which about \$200,000 is spent each year. (2) Fellowships for advanced study for Negroes and white Southerners, for which \$100,000 a year is set aside; 96 individuals received new grants and 68 received renewed grants during the past two years. (3) Aid to important Negro universities, which is concentrated in four major centers—Howard, Atlanta, Fisk, and Dillard Universities; support was extended also to Talladega College for the first time in 1940. (4) The improvement of Negro health and race relations. President: Edwin R. Embree. Offices: 4901 Ellis Avenue, Chicago, Ill.

Russell Sage Foundation, created by Mrs. Russell Sage in 1907 as a memorial to her husband. Its purpose is "the improvement of social and living conditions in the United States of America." Its general aim is the study of the causes of adverse social conditions and the dissemination of information which will be of assistance to citizens and organizations seeking to ameliorate, remedy, or prevent such conditions. Among the types of activity carried on are adult education, city and regional research and planning, improvement of housing, family welfare, training for social work, community social work programs, child welfare, placement and vocational service, leisure-time activities, legal aid, service to travelers and transients, publications, organization of social workers, improvement of race relations, research, and social phases of the arts. Printed reports of its studies are made available at moderate prices. Among its recent publications are *Consumer Credit and Economic Stability* by Rolf Nugent; *The American Miners' Association* by Edward A. Wieck; and *Social Work Year Book 1941*. The original gift by Mrs. Sage was \$10,000,000, to which was added \$5,000,000 in her will. The offices of the Foundation are at 130 East 22 Street, New York City. Shelby M. Harrison is General Director.

Schalkenbach Foundation. See SOCIETIES under *Henry George School*.

Sloan Foundation, The Alfred P., incorporated in 1936, aids accredited schools and colleges in developing new "patterns" in economic education. On Nov. 30, 1941, its capital assets were valued at \$5,536,216. Up to the same date, the Foundation had made grants amounting to \$1,444,335. At present the Foundation is enabling colleges and universities to promote economic literacy through varied media, including radio, motion pictures, the printed word, fellowships, and class instruction. Among such projects aided by the Foundation are: the University of Chicago Round Table of the Air, a weekly radio discussion of economic phases of national and international questions; the New York University Film Library, which distributes sound motion pictures on economic subjects; and the Public Affairs pamphlets, containing popular digests of current economic researches, issued continuously by the Public Affairs Committee of New York.

Other beneficiaries include the Tax Institute of the Wharton School of Finance and Commerce at the University of Pennsylvania and the National Institute for Consumer Education. Moreover, both at the Massachusetts Institute of Technology and at the University of Denver, the Foundation maintains a special group of ten fellowships offered to college graduates in national competition. At M.I.T. these are awarded to young industrial executives for a year's study of social and economic conditions. At Denver the fellowships provide training for a new profession—appraiser of local government—through an 18-month course in taxation and public expenditure. In the field of applied economics, the Foundation enables the State universities of Kentucky, Florida, and Vermont to carry on experiments designed to aid low-income groups. The experiments aim to discover whether solely through instructing school children in simple, inexpensive ways of improving diet, housing, and clothing, the community level of living can be raised. Director: Harold S. Sloan. Offices: 30 Rockefeller Plaza, New York City.

Spelman Fund of New York was incorporated in 1928 with a principal fund of \$10,000,000. The Trustees of the Fund have power to use the principal as well as income to carry on its purposes. During 1941, the Fund continued its program directed at the improvement of methods and techniques in the field of public administration. Support was extended to public and quasi-public agencies engaged in disseminating information regarding advances in administrative practice, in developing new types of organization and operating methods, and in actually installing administrative improvements in governmental agencies. The Fund appropriated \$787,500 during the year. The Chairman of the Board of Trustees is Charles E. Merriam. The offices of the Fund are located at 49 West 49 Street, New York City.

Warm Springs Foundation, a membership corporation, conducts a modern and scientifically equipped institution at Warm Springs, Ga., with a capacity of 100 beds, for the study and treatment of the after-effects of poliomyelitis (infantile paralysis). The Foundation is the only institution devoting its energies entirely to infantile paralysis. It seeks to improve and perfect methods of treatment and make the knowledge gained thereby available to the medical profession and the public. With the completion of the hospital building at Warm Springs in August of 1939, the Medical Department for the first time in the history of the institution was provided with a unit in which every phase of treatment of the poliomyelitis patient could be applied and studied under one roof. President: Franklin D. Roosevelt. Chairman of the Executive Committee: Basil O'Connor. Address: 120 Broadway, New York City. See ART under *Museums*, gifts tabulated under UNIVERSITIES AND COLLEGES; LIBRARY PROGRESS. Also, see the different articles on churches.

PHILIPPINES. A group of islands lying in the northern tropics, between the Pacific Ocean and the China Sea; ceded to the United States by Spain on Apr. 11, 1899. The Tydings-McDuffie Act of Mar. 24, 1934, made the Philippines an autonomous commonwealth, designed to become fully independent in 1946. Capital, Manila.

Area and Population. The combined area is 114,400 square miles. This comprises 7,083 islands, of which only 466 cover as much as one square mile apiece. Two islands, Luzon (40,814 sq. miles) and Mindanao (36,906 sq. miles) account for more

than two-thirds of the whole area. Others, with their respective areas in square miles, are Samar, 5,124; Negros, 4,903; Palawan, 4,500; Panay, 4,448; Mindoro, 3,794; Leyte, 2,799; Cebu, 1,695; Bohol, 1,534; Masbate, 1,255.

The population was estimated at 16,771,900 on Jan. 1, 1941; at the census of 1918, 10,304,310. The city of Manila had (1939) 623,362 inhabitants. Persons from the United States, other than members of its armed forces and their families, numbered 4,144 in 1939. There were 117,461 Chinese; the Japanese numbered 29,262, of whom 17,888 were in and about Davao, on Mindanao Island. The Commonwealth in 1937 made Tagalog (the most prevalent native tongue) the official language. About one in eight of the population is estimated to have some knowledge of the English language; about one in 16, of Spanish. The Roman Catholic Church holds the greater number of the people of religious affiliation. An independent Filipino Church (Christian) has many worshippers. Mohammedans number not far from half a million. Protestants are estimated at 250,000.

Education. Public schools numbered 10,924 in 1938; 9,489 were primary, 1,316 intermediate, 114 secondary, and 5 junior colleges. These schools had 1,738,868 enrolled pupils. An Office of Adult Education, created in 1936, had 2,057 special schools by the end of 1938, instructing 125,783 adults. Higher education is imparted in several technical institutions and two important universities: The University of the Philippines, state-supported, with 7,711 students (1938); and the University of Santo Tomas, conducted by the Dominican Order. The 1939 census put the literacy rate for the entire Commonwealth at 48.8 per cent (20.2 in 1903).

Production. The islands produce for export a considerable variety of tropical products of the soil, such as sugar, abaca (Manila hemp), tobacco, and the coconut; and several minerals, especially gold, iron, chromium, and manganese. Gold production in 1940 was 33,589 kilograms valued at \$37,900,000, representing more than a five-fold increase during the preceding decade. In 1941, it was 1,161,210 oz. valued at \$40,642,350. Iron ore output rose from 593,894 tons in 1937 to 1,236,206 in 1940; the entire 1940 production went to Japan, but in 1941 United States export control laws restricted this market. Copper production (1940) was 20,413,236 lb.; exports of chrome ore, 194,393 metric tons (126,749 in 1939); exports of manganese ore, 58,038 metric tons (35,998 in 1939).

The estimated value of crops in 1939-40 was 381,067,000 pesos (rice, 159,741,000; sugar, 97,524,000; coconuts, 52,439,000; abaca, 15,053,000; corn, 18,986,000). The quota allotted the Philippines for sugar exports to the United States was 1,055,895 short tons for 1941 (982,441 in 1940). Production of sugar in the season of 1940-41 was estimated at 1,028,354 short tons. Tobacco production in 1939-40 was estimated at 747,956 quintals (of 22 lb.).

Livestock on Jan. 1, 1939, included 2,607,836 water buffaloes, 1,721,600 cattle, 504,967 horses and mules, and 3,558,274 swine. Embroidery, hats, mats, pottery, etc., are manufactured in home industries. Leading factory products are refined sugar, lumber, soap, refined coconut oil, shoes, textiles, and tobacco products.

External Trade. Total imports of 1940 were valued at 269,462,542 pesos (peso equals 50 cents, U.S. money), as against 245,535,000 for 1939; exports, at 236,048,886 pesos, as against 242,450,000. The totals for exports omitted gold and silver; there

were exported, however, 77,750,000 pesos of these metals (almost all gold) in 1940 and 78,670,000 in 1939; thus all exports, the two metals included, amount to 311,849,047 pesos for 1940 and 316,125,000 for 1939.

The Philippines regularly did the bulk of their external trade with the United States. Philippine imports of U.S. merchandise totaled \$93,335,474 for 1940. Philippine exports to the United States were \$129,326,754 for 1940, including gold and silver.

Finance. The outline of the budgets subsequent to 1937 included not only an approximate balance of ordinary expenditures and receipts but also heavy capital expenditures, met principally out of a lump sum of over 111,000,000 pesos received in 1937 from the U.S. Government as an offset for the latter's collection of a tax on imported vegetable oils. The budget for the 1942 fiscal year called for expenditures totaling 112,675,480 pesos; it put ordinary income at 82,310,000 pesos and proposed to put receipts up to 112,982,000 by taking 20,672,000 from surplus and issuing bonds for 10,000,000 pesos.

Transportation. The island of Luzon in 1941 had about 700 miles of railway, the greater part of all the rails in the Philippines. The Manila Railroad Company operated the lines in Luzon; the Government of the Commonwealth owned this company's common stock. The Philippine Railway Company operated lines on the islands of Panay and Cebu, aggregating 133 miles. Producers of sugar and of lumber had an aggregate of thousands of miles of private rails. Several airlines operated to all parts of the Commonwealth. Pan American Airways maintained regular service with the United States, Singapore, and Hong Kong. Under normal conditions the Philippines are well served by steamship lines of all nationalities.

Government. The system of government in operation in 1941 rested on the Philippine Independence Act, passed by the U.S. Congress in 1934. Under this act a constitution, written by a Philippine constitutional convention and approved by popular vote, went into effect Nov. 15, 1935. A President, elected by popular vote for a term of six years, exerts great executive authority. The power of legislation resides in a National Assembly of a single chamber of 96 members elected for three years. Under constitutional amendments adopted in 1940, the term of a President, after the end of the current six-year term, was cut to four years; his reelection, previously forbidden, was allowed, and in the special case of the immediate incumbent only, he could be reelected for a term of two years to follow the six-year term. The National Assembly, after the close of the members' current terms, was to consist of two houses, through the addition of a Senate with its members elected at large. An electoral commission also was created.

The U.S. Government, pending the completion of independence in 1946, retains a measure of authority. The Commonwealth is limited as to public debt and some features of taxation. The United States keeps charge of foreign relations. Constitutional changes and such acts as affect currency, coinage, imports, exports, and immigration require the approval of the President of the United States. Appeal may be taken from Philippine courts to the U.S. Supreme Court. The U.S. Government maintains as its representative in the Commonwealth a High Commissioner.

President of the Commonwealth, Manuel Luis Quezon. U.S. High Commissioner, Francis Bowes Sayre.

HISTORY

Japanese forces overran much of the Philippine Commonwealth in December, 1941, threatening at once to end the Islands' connection with the United States and the Philippine prospect of independence. Japan began war on the United States on December 7; on that day Japanese airplanes dropped bombs on the island of Mindanao and in central Luzon—the first of a series of bombings that brought swift ruin to civil as well as to military property, set great fires in Manila, and destroyed much of the Islands' force of airplanes and a number of vessels. Japanese troops began landing at several points on the coast of Luzon on the 10th. Out of these landings, through successive reinforcements, grew separate invading armies, north and south of Manila, which quickly pushed back the defenders. On Jan. 2, 1942, the American and Filipino forces, abandoning Manila and the naval base of Cavite, took up new defensive positions—the mobile land forces on the rugged Bataan peninsula along the western edge of Manila Bay and the naval vessels in the Dutch East Indian waters. In 26 days the Commonwealth had lost its capital, all but a small remnant of its chief island, and a part at least of its next most important area, the island of Mindanao. See *WORLD WAR*.

Awakening to the Peril. The history of 1941 prior to December 7 has largely to do with the approach of the Japanese peril, the ways that the governments of the Commonwealth and of the United States took in order to meet the danger, and the failure of the two to reach a sufficiently early agreement on the course to take.

Almost from the outset of the year the authorities busied themselves with preparations to defend the islands against the previously familiar and now ever nearer prospect of Japanese invasion. High Commissioner Sayre declared, February 28, that plans had been made, by a special civilian board, to remove much or all of Manila's population of 600,000 in case of bombardment. As to military manpower, Maj. Gen. George Grunert, commanding the Philippine Department, U.S.A., arranged, as early as February 2, to incorporate with his forces 5,000 Filipino reservists, for a year of additional training. Meanwhile troopships from time to time brought to the Islands reinforcements from the United States. In February the U.S. cruiser *Cincinnati*, and in March the *Trenton*, brought to Manila loads of parts and munitions for airplanes. On April 22 the transport *Republic* brought in a contingent of reportedly 2,000 men, called the greatest to arrive at one time since the end of the Filipino insurrection. But no major reinforcement from the United States was attempted.

The Commonwealth Government, which had lowered the yearly number of recruits for military training to 20,000, raised it to 40,000 in the middle of April. President Quezon himself started at the end of January an effort to obtain money, set aside for the Philippines in special U.S. funds, for the Commonwealth's defensive expenditures. These and other measures taken early in the year made it plain that the U.S. Army, the U.S. High Commissioner, President Quezon, and their assistants agreed in their concern over the prospects of Japanese invasion and in trying to provide against it.

Intrusive Economic Difficulties. The Philippine Islands were not in good economic condition early in 1941. They had gathered less than a normal crop of rice at the last harvest, not enough to warrant the usual exportation. The dearth of shipping had pinched the outlet for crops and other products to build up purchasing power. Thus embar-

assed, the government had to look elsewhere for money in great quantities, with which to pay for stronger military protection. It had, in Quezon's judgment, even to buy a substantial quantity of additional foodstuffs, with which to eke out its own somewhat scanty year's production and lay up a stock against risk of famine. Quezon risked additional economic trouble by offering to stop the export of strategic materials to any destination but the United States. There went on at this time, late March, a busy exportation of Philippine copra to Russia, whence the suspicious thought that some went on to Germany, then Russia's friend.

Hampered by lack of outgoing trade, the Philippines could not do much to finance their own defense. Quezon put the case plainly to the Philippine Assembly, January 31. The United States alone could make peace or war; defense was the Commonwealth's greatest concern; Filipinos put their manpower and resources at the United States' disposal for that purpose; the Islands must in turn draw on the United States for financial aid. The slowness of Congress in appropriating funds tended to retard defense preparations.

Another difficulty, alleged by Quezon in a speech of November 28 to students at the University of the Philippines, related to the situation earlier in the year. Quezon said he wanted to make strong use of extraordinary powers proper to an emergency, so as to hasten measures for the protection of the population from enemies' operations, as by shelters and measures to conserve fuel and gasoline; but critical liberals assailed him as arbitrary, and President Roosevelt asked him, by wireless, not to use extraordinary powers, lest democracy be unfavorably affected. "Imperialists," he further asserted, tried to block his plans of defense so that they could point later to the Philippines' lack of preparation, when war should come on. Having done as President Roosevelt, according to him, requested, Quezon was later urged by the High Commissioner to give extraordinary powers to a Civilian Emergency Commission and did give them.

The Defensive Policy. According to Quezon's speech of November 15, President Roosevelt, General MacArthur (creator of the Commonwealth's army), and Quezon agreed from the outset that it was feasible to make a serious defense of the Islands. At first almost alone in holding this view, save for the support of the Filipino people, they developed their idea into the established policy. Since it was not practicable to send hundreds of thousands of men to the Philippines from the United States, this policy involved using the troops of the Philippine Army largely and indeed mainly for meeting the invasion of Philippine soil.

The policy went into force at the end of July. President Roosevelt on the 26th ordered all the land forces in the Islands put under the command of a single general; MacArthur, the obvious man for the place, was made Lieutenant General, U.S.A., in active service. On the 30th MacArthur, as commander of all land forces in the Islands, announced the plan to bring 140,000 reserves of the Philippine army into service as fast as feasible, by their incorporation in successive divisions. They were to keep the Philippine uniform and scale of pay, but the U.S. Government was to maintain them, by appropriation either from general fund or from Philippine trust money. These moves followed directly on the order of President Roosevelt stopping the transfer of Japanese assets in American territory (see *JAPAN under History*). Not all the 140,000 had apparently been brought into

service by the time of the Japanese landing. An order of full mobilization was indeed issued on December 16, in the midst of the confusion started by the Japanese advance, but its degree of efficacy at so late a date was not subsequently determined.

The suddenness of the Japanese attack and the crippling of the U.S. Naval force in Hawaii on December 7 compelled Philippine defense to go into action only partly organized. The plan to defend the Philippines did not mature early enough to have full effect. Its partial effectiveness under the actual circumstances did credit to the judgment of MacArthur, who had insisted that a properly organized native army could defend the Philippines with sufficient vigor to make the cost to an invader greater than the conquest.

Other Events. Manuel Quezon, candidate of the Nationalist Party, was elected President of the Philippine Commonwealth for a second term, by great majority of the popular vote, on November 11. His first term had been one of six years. Before the election of 1941 he declared his intention of retiring after two years of a second term, in order to limit his tenure to the eight years allowed, in two terms, under the amended constitution. Quezon was inaugurated for his second term on December 30, in a dugout near MacArthur's headquarters, after the abandonment of Manila. The Assembly held session in the spring and again in the days immediately after the outbreak of the war with Japan. It voted in May measures to apply restrictions to Philippine exportation of hemp, iron ore, and copper, all sought by Japan, and to register all the 250,000 aliens in the country.

President Roosevelt issued, December 28, a message to the people of the Philippines, praising "your gallant struggle" against the Japanese and giving "my solemn pledge that their freedom will be redeemed." See BRITISH MALAYA under *History*; ENEMY ALIENS.

PHILOLOGY, CLASSICAL. Europe's greater preoccupation has hastened the progress of maturity and independence in American classical scholarship. Study and investigation take directions not necessarily dictated by trends abroad, and in more and more specialties the outstanding figures are American. This is true of epigraphy, papyrology, ancient philosophy, less so in palaeography, very patently so in ancient history. Rostovtzeff's *Homeric Social and Economic History of the Hellenistic World* just published in three volumes (following his earlier monumental *Social and Economic History of the Roman Empire*) and the completion of the late Tenney Frank's *Economic Survey of Ancient Rome* in five volumes prove that in detailed investigation, in synthesis, and in philosophic interpretation America holds the primacy in ancient history.

Fifty-four classical dissertations are listed for the year in E. A. Henry's *Doctoral Dissertations Accepted by American Universities*; this is about ten per cent above the ten-year average. The average for dissertations in English departments, for example, is only about three times as great, whereas there are surely five times as many professors of English as of Classics in the country. The conclusion might be drawn that there is a relatively greater scholarly interest in the classics. The aim of classical scholarship in this country is the disinterested interpretation and criticism of phases of ancient literature, language, history, and institutions. This is to be contrasted with the tendency in Germany and Italy where ancient life and letters, when they are studied at all, are pressed to yield precept and example for contemporary prob-

lems in politics and economics. This is not to say that classics in this country have been relegated to the ivory tower. Last year, this year, and next year a single American publishing house will have brought out, in current standard translations but with new introductions and other subsidia, the complete extant works of Aeschylus, Sophocles, Euripides, Herodotus, Thucydides, Aristophanes, Plato, Xenophon (not entire), Aristotle (almost complete), Epicurus, Menander, Plautus, Terence, Lucretius, Tacitus, Seneca (tragedies), Marcus Aurelius, and Epictetus; Homer, Vergil, Horace, and Plutarch were already on their list. The sizes of these editions are many times those of similar works that have hitherto appeared in English. No better proof of the widespread interest in classical antiquity could be cited.

For professional scholarly work in the classics the best guide to the quantity, direction, and personnel is the current volume (71) of the *Transactions and Proceedings of the American Philological Association*. In addition to 42 substantial papers and abstracts of 46 others the volume gives information about the activity of American scholars, as for example a bibliographical record of all the members of the association. The membership (over 1,000) is slightly larger than five years ago, but the number of contributors and the range and volume of their work is markedly larger, so that the current volume is twice the size of those issued four or five years ago. The scientific quarterlies, *American Journal of Philology* (Baltimore) and *Classical Philology* (Chicago) and the review organ, *Classical Weekly* (Pittsburgh) are flourishing and in some cases expanding. The more popular monthly, *Classical Journal* (St. Louis), is less prosperous, which would indicate a smaller following among High School teachers, to whom it makes its chief appeal. Greek and Latin studies in the High Schools and among undergraduates are no more than holding their own, being restricted to a specialized group rather than remaining part of the general culture. In June, 1941, only 2,983 students took the Latin examinations of the College Entrance Examination Board, whereas five years earlier the number was 4,404 (figures from the Board's *Forty-first Annual Report of the Executive Secretary*). The enormously expanded interest in ancient literature has not brought with it increased interest in ancient languages, and those who teach it are not apt to be trained in philology. These various items fit together. Graduate study, since it is not likely to provide a paying career in teaching Greek and Latin, is apt to be in pure scholarship and apt to favor Greek over Latin. On the one hand highly specialized scholarly organs flourish, and on the other translations of the classics are distributed in large editions, there is a decline of interest in the middle ground occupied by persons intelligently interested in classical scholarship but not themselves specialists in the subject. Nevertheless, as may be seen from the "News Items" in various numbers of *Classical Journal*, there has been sustained activity in the various State and local associations. The meetings of the regional associations have been better attended and have listened to more scholarly papers than ever. See *Philological Association* under SOCIETIES.

Scholarly work and publication continue in England and Germany, though of course on a reduced scale; the trickle from the occupied countries has almost entirely ceased. The 1941 meeting of the Classical Association of England reported a membership of 2,395; Mr. T. S. Eliot was made president. That association has acknowledged with

thanks a gift of \$1,000 from the American Philosophical Association to help it continue its activities in difficult times. The American School at Athens is of course in a state of suspended animation. The School of Classical Studies of the American Academy in Rome is offering three fellowships under the usual conditions except that the holders are to carry on their work in some American graduate school instead of in Rome.

Next in importance to Rostovtzeff's book mentioned above is Martin P. Nilsson, *Geschichte der griechischen Religion* (in the *Iwan Müller Handbuch der Altertumswissenschaften*). In the same series the Attic period has now been covered in Schmid-Stahlin, *Geschichte der griechischen Literatur*. Other books to be mentioned are the third volume of F. Jacoby, *Fragmenta Historicorum Graecorum*; G. E. F. Chilver, *Cisalpine Gaul*; I. Linforth, *The Arts of Orpheus*; C. W. Mendell, *Our Seneca*; G. Thomson, *Aeschylus and Athens*. Some ten new volumes of Greek or Latin texts with English translations have appeared in the Loeb Classical Library; it is interesting to note that this series is now being printed as well as published in America. References to other publications may be found in the bibliographical appendices of the periodicals listed in the 1938 volume of this YEAR BOOK, 585 f. Accurate revision of this list is impossible at this time. Reasonably complete information is to be found in vol. 270 of *Jahresbericht über die Fortschritte der klassischen Altertumswissenschaft* and in vol. 13 of J. Marouzeau's *L'Année Philologique*.

MOSES HADAS.

PHILOSOPHY. The American Philosophical Association represents more movements, schools, and opinions in the field of philosophy than any other body and its annual meetings often furnish a good picture of developments and prevailing interests. But there are other philosophical associations of considerable importance. The American Catholic Philosophical Association, although it has had joint sessions with the A.P.A., meets separately, being devoted almost exclusively to scholastic and neo-scholastic thought.

The symbolic logicians also meet separately, although they hold some joint meetings, occasionally with the A.P.A. but more often with the American Mathematical Society. The organ of the Association for Symbolic Logic is *The Journal of Symbolic Logic*, which has just finished its sixth year. The tendency of the *Journal* has been increasingly technical and mathematical, the philosophy of logic and mathematics being sacrificed to the interest in symbolic calculi, so that some articles on a par (say) with B. Russell's *Introduction to Mathematical Philosophy* appear to have no place. On the other hand, the review section is much broader and more liberal, presenting excellent summaries and criticisms of a wide range of logical publications.

The logical positivists (or empiricists) also have separate meetings. Their International Congress for the Unity of Science is dedicated to a program of unifying the sciences, mainly by the creation of a unified language in which the statements of any science are expressible. Under the leadership of Rudolf Carnap, Otto Neurath, Hans Reichenbach and others, the logical empiricist movement has grown in strength through the concentration in this country of distinguished refugees from Europe and has gained many adherents, but also reaped much searching criticism, from other schools. Its success is due in part to the appearance it offers of greater definiteness and rigor. Extensive use of logical and

mathematical techniques and hostility to metaphysics both prove attractive as interest in speculative and systematic philosophy declines. The movement has effected rapprochement not only with symbolic logicians and with mathematicians and physicists working in foundations, but has discovered in operationalism a common basis with Bridgman and Deweyan pragmatism or experimentalism. Although devoted to their own program, the logical empiricists often welcome outsiders and opponents. At their last meeting (September, 1941) at Chicago, C. Morris, L. Rougier, and O. Neurath discussed "Task of the Unification of Science," R. Carnap and Philipp Frank appeared in a symposium on "Logic and Mathematics," and other well known logical empiricists such as C. G. Hempel, H. Feigl, E. Zilsel, and H. Reichenbach were on the program. But the psychologist, Kurt Lewin, the historian, Oskar Lange, the mathematician, H. B. Curry, not identified with the movement, also read papers, and even A. Korzybski, whose ideas are altogether out of line. L. Feuer also introduced novelty by maintaining that ethical language may be interpreted as the idiom of the "super ego," and that this language will become obsolete whenever society overcomes the necessity of social coercion. The organ of the logical empiricists is *The International Encyclopedia of Unified Science*. One of its advisors is Bertrand Russell, who in his recent book, *An Inquiry Into Meaning and Truth*, took issue sharply with many aspects of the movement. The last issue of the *Encyclopedia*, *The Development of Rationalism and Empiricism* contains an essay by George de Santillana which describes the evolution of basic ideas in the science of the 19th century and the fate of scientific rationalism; also an historical article, *Problems of Empiricism* by Edgar Zilsel. Although the movement is chiefly occupied with syntax and semantics, and with problems of probability and foundations of science conceived in these terms, historical interest is voiced.

Another philosophical association which, like the Symbolic Logic and Unity of Science groups, has been built up and sustained by the help of distinguished refugees from Europe, is the International Phenomenological Society. Its organ is the quarterly, *Philosophy and Phenomenological Research*, established in September, 1940. Its editors are former students of the late Edmund Husserl, and most of them are refugees. The journal has performed the valuable service of publishing (in German) various posthumous writings of Husserl, showing the late trend of his philosophical development. In the September issue 1941, for example, there is printed for the first time a lecture given by Husserl in Berlin, 1931, entitled, *Phänomenologie und Anthropologie*, in which he takes issue with the anthropologism gaining currency at the time, even among some of his own students. But the journal not only elucidates and promotes phenomenology, but also adapts itself to the American scene. A number of American philosophers untouched by Husserl's influence, have nevertheless discovered agreement with his method or results. The issue alluded to above contains C. J. Ducasse's "Objectivity, Objective Reference, and Perception," a lengthy phenomenological analysis, not in the least indebted to Husserl. E. Parl Welch's *The Philosophy of Edmund Husserl* (1941) provides an introduction to phenomenology and an excellent bibliography.

A review of the literature of the year, and a glance at the papers read at the A.P.A. meeting held this year at Vassar will show that a great many contributions do not fit into the schools and movements discussed above.

The anniversary of the birth of Wm. James furnished the occasion for a symposium in his honor at the annual meeting of the American Philosophical Association. G. S. Brett, leading historian of psychology, maintained that in James' psychological writings, such as the *Principles of Psychology*, and particularly in his alternate emphasis on cognition and volition, the basis of his later philosophy is to be found. In an illuminating paper, H. W. Schneider saw James as his father's son, a champion of "individual manliness." James' ethical ideal developed under the influence of Goethe, Darwin and such philosophers as Renouvier, Green, Royce, Sigwart, Spir, and Peirce. The outcome was a radical individualism, "idealistic, pluralistic—Kantian, anti-Hegelian, anti-utilitarian." "His chief interest remained to defend the claims of individuals against God, against Society, and against science (romantic gnosticism) in spite of the 'strenuous' character and 'tragic' consequences of this Promethean and heroic ideal."

In another symposium on "The Relation of Sign to Object Signified," E. Nagel suggested that scientific expressions which have no apparent referents in the external world, really "serve to integrate various parts of an inclusive inquiry; the specific 'objects' which they signify are thus certain modes of conducting inquiry." The suggestion is in line with Dewey's view presented in *Logic, The Theory of Inquiry*.

The philosophy of the 19th century Danish thinker, Kierkegaard, which is very influential in Nazi Germany and has latterly won admirers in other European countries, in South America and in the United States, was discussed in two papers. K. Löwith pictured Kierkegaard as the historical counterpart and opponent of Marx and claimed that his *Das EINE was not tut* (1848) contains Kierkegaard's answer to *The Communist Manifesto*, (1847). The Danish philosopher insisted that the lonely individual make an either-or choice between real Christianity and everything else, including Christianity interpreted as social philosophy or meliorism. He tended, however, to identify religion with the individual's attitude toward God, and hence to forfeit a transcendent God. Erich Frank agreed that, unfortunately, Kierkegaard and the Existentialists (a present day German school) fall into subjectivism, but needlessly, for objectively theirs is the true diagnosis of man's present quandary. "In the limitation of his existence which is determined by the inevitability of guilt, death, physical and spiritual struggle, man encounters a truth which transcends his subjectivity."

There were a series of papers on scattered subjects. E. J. Nelson rejected the positivistic position that a principle of induction "is a maxim of procedure," and hence "neither true nor false," and maintained that realism, which any inductive principle presupposes, should be assumed until a suitable rationalism can be found to justify it. In the field of esthetics, Max Rieser concluded that the esthetic significance of order and harmony in art "is not due to their being a form, but to their being meaningful terms in esthetic language." It is not the shapes that count but the ideas represented by them. Other papers on esthetics, logic, history were presented and the meeting closed with a session devoted to "The Philosophical Presuppositions of Democracy" which did not appear to throw much new light on the subject.

Besides the Eastern Division of the A.P.A., whose meeting is described above, there is also a Western and a Pacific Division, each holding meetings within its area. Perhaps the most important paper read

at the last meeting of the Western Division of the A.P.A. was "Logical Systems and Principles of Logic," by Marvin Farber. The meaning of "alternative" systems of logic is discussed in relation to alternative geometries, the admissibility of the Law of Excluded Middle in logical and mathematical systems, in relation to the question whether all propositions are "decidable" (*Entscheidungsfrage*). The trouble with the realistic view is that it excludes objectively undecidable propositions by definition, and is embarrassed by the resulting paradoxes, for sciences with paradoxes, as Husserl has maintained, are not genuine sciences. Farber concludes that "decidable" should be defined for every system and that in general more analysis is needed of the logical activities of the logician if a logic is to be built in which paradoxes will not occur.

This brief survey of schools, movements, associations, and periodicals of philosophy should include a reference to recent publications of The Philosophical Library such as *The Philosophical Abstracts*, edited by D. D. Runes, now in its second year, which digests books and important articles by countries; U.S., Gr. Britain, Latin America, Italy, Germany, France, Japan, Rumania, U.S.S.R., India, etc; a new quarterly, *The Journal of Aesthetics* (founded spring, 1941); and finally *The Dictionary of Philosophy*, which contains definitions of terms peculiar to philosophy, to schools and movements. Medieval, Indian, mathematical, and modern Soviet philosophy are especially well covered.

If William James (1842-1910) has received the greatest acclaim this year, Alfred North Whitehead, at Harvard until his retirement a few years ago, has sustained the most analysis and criticism. The two philosophers are not unrelated. Victor Lowe (*Jour. of Philosophy*, Feb. 27, 1941) maintain that in spite of James' distaste for metaphysical construction, they agree in the matter of radical pluralism, the important experiential character of relations, transitions, contexts, and transmission of feelings, and on the immanence of the past in present memories. Whitehead's "non-sensuous perception," the author holds, "is what James later called 'the plain conjunctive experience,'" and he finds Whitehead's important doctrine of "prehension" prefigured in the famous chapters on the Stream of Thought.

The significance of the experiential character of relations is also central in the discussion. "Whitehead's Answer to Hume," (*Jour. of Phil.*, Feb. 13, 1941). J. W. Robson here maintained that Hume's epochal doctrine that experience affords no basis for any prediction of the future, remains unshaken by Whitehead's attempt to discover such a basis in the experience of transitions, i.e. of relations terminating in the determinate future, which are what they are only if the determinate future exists. Mason W. Gross, on the other hand, argued that Whitehead has satisfactorily answered the problem of induction, if only "internal relations with the immediate past and the environment" are accepted.

The most comprehensive commentary on Whitehead's philosophy appeared during the year in the third volume of *The Library of Living Philosophers: The Philosophy of Alfred North Whitehead*. Victor Lowe, in a long essay, traces the development of the philosopher's thought beginning with his early life and from his first book, *A Treatise on Universal Algebra* (1898) to his last, *Modes of Thought* (1938). Lowe is successful in showing that even in the *Universal Algebra*, Whitehead's main interest was synoptic or synthetic and hence really philosophical, and that there is no sharp change of heart or of interest, as is often supposed,

between his first mathematical period, roughly from 1898 to 1919, the second period in which the new developments in physics were uppermost, from 1919 to 1925, and finally the last metaphysical period, from 1925 to the present. Whitehead's specific philosophical interests were in evidence from the first, and even where he dealt with science, it was the philosophical aspects which occupied him. Quantum mechanics and Einstein's Relativity theories were after all, philosophically very provocative. Although Whitehead's own Relativity Theory, alternative to Einstein's, "failed to deflect the path of physics," it "may yet affect the history of Science for he deduced several consequences which differ from those of Einstein's theory by minute quantities still beyond our powers of observation." Of special interest is Lowe's demarcation of Whitehead's philosophy from the Humean tradition and from B. Russell's work. Even in 1915-17 Whitehead (1) set store by metaphysics, (2) was not inclined to skepticism, (3) began to reject the construction of a public world from privacy as a false start, (4) and to see that the past is immanent in the present, and (5) that immediate experience has a certain uniformity of texture. (5) is the basis of Whitehead's "prehension" and also of his insistence, as against Einstein, that geometry of actual space be construed as homogeneous. W. V. Quine's essay analyzes the contributions of Whitehead to modern logic, with particular attention to *Principia Mathematica*. Especially repaying are the sections concerning the second and third volumes which are seldom studied. The weakness of Whitehead's philosophy of science, according to F. S. C. Northrop, are: his assumption of "internal relations" between sense data and his overemphasis on their cognitive value, his failure to account for public time, scientific causality, etc. Its strength is that it accounts for certain facts, such as Kant's "incongruent counterparts" and Newton's rotating bucket experiment, better than Einstein's theory does. E. B. McGilvary is also concerned with Whitehead's physical theories, while J. Needham, of Cambridge, England, reviews the biological implications of his organismic philosophy. Needham suggests that Whitehead's emphasis upon process, his acceptance of the "unity of opposites," his polemic against sharp boundaries between the sciences, against mechanical conceptions such as "nature at an instant" and against the doctrine of "external relations," is in accord with dialectical materialism. Other essays in the volume are devoted to Whitehead's psychology and ethics, his theory of art, organism, religion, esthetics, and education. Instead of a reply to his critics, in accordance with the plan of the Library, two Whitehead essays, *Mathematics and the Good* and *Immortality* are printed at the end. Curiously enough, no critic referred to Hegel, although he must have been indirectly, a great influence on Whitehead.

The thesis of Herbert Marcuse's *Reason and Revolution, Hegel and the Rise of Social Theory* is that Hegel is in no sense a father of National Socialism, that his stress upon reason and the universality of law is inconsistent with Nazi irrationalism, capricious power politics, and cynical use of propaganda. Never really accepted by conservative forces in Germany, Hegel was adopted by Marx, Engels, and Lenin, and migrated to Moscow. The ideological roots of fascism are to be found in the positivistic reaction against Hegel, (F. J. Stahl, A. Comte and others) which "substituted the appeal to facts for the appeal to reason." Documentation which would support Marcuse's evident opinion that National Socialism is primarily an economic phenomenon, is furnished by A. R. L. Gurland's *Technologi-*

cal Trends and Economic Structure under National Socialism (*Studies in Philosophy and Social Science*, Inst. of Social Research, 1941) and by M. Y. Sweezy's *The Structure of Nazi Economy* (Harvard U. Press, 1941). Another book on Hegel, J. G. Gray's *Hegel's Hellenic Ideal*, demonstrates the enormous influence of Greek norms and Aristotelian philosophy on Hegel's thought, shows Hegel's early preference for Greek religion as against Christianity, and his later reconciliation with Western religion and ideals. The conflict between classicism and Christianity, however, remained a central tension in his mature thought.

Whitehead's warning against the sequestration of the sciences from one another and from philosophy, is heeded when scientists write philosophy, or vice versa. Most interesting from this point of view is Joseph Mayer's *Social Science Principles in the Light of Scientific Method*. Here a political scientist and historian applies philosophy and social theory to problems of method with special reference to modern economic thought. Philosophical theories of R. B. Perry, Santayana, and Laird, for example, are brought to bear upon the thought of such economists as Keynes, B. M. Anderson, and J. M. Clark. In concluding the author makes the important point that in social science (unlike natural science), normative standards are significant, for its legitimate aim is to bring about the good. Another book on scientific method, long overdue, is A. Lowinger's *The Methodology of Pierre Duhem*, a careful study of the distinguished French philosopher and historian of science. *Man on his Nature*, by Sir Charles Sherrington, contains the philosophical reflections of the great physiologist who sees the human mind insulated from other minds, and regrettably unexplained by the "integrative action of the nervous system."

In the field of historical philosophy Benedetto Croce's *History as the Story of Liberty*, written in Naples, strikes a blow for freedom, perhaps at some risk to the author, yet what he praises is, after all, an aristocratic freedom, chiefly for the intellectual élite. George H. Sabine's *The Works of Gerrard Winstanley With an Appendix of Documents relating to the Digger Movement* is a generous collection of Digger tracts, together with a long critical introduction by Sabine. It gives us, for the first time, a good picture of mystical tendencies and communistic ideals of left-wing groups of Cromwell's England.

Three outstanding books may be mentioned in conclusion. In *Philosophy as a Science*, C. J. Ducasse refutes a series of current definitions of philosophy and its subject-matter, and then defends his own contrasting position. His criticism of Russell's conception of philosophy as logic, of Dewey's social interpretation, and of Carnap's view that philosophy is the logical syntax of the language of science, is terse and meaty. Ducasse's own definition of philosophy is in terms of subject-matter or primitive facts, which he takes to be appraisals or valuations. This definition, however, would not exclude logical positivism altogether and the author agrees that logic may be largely a matter of syntax. Philipp Frank's *Between Physics and Philosophy*, deserves mention because Frank, a physicist, philosopher, and leading logical empiricist, was a member of the original Vienna Circle, and gives one of the few accounts of the historical development of the Circle. Frank shows that it was much influenced by socio-political events in Europe, and at times reacted by retiring to an ivory tower. A series of popular essays, dealing with modern physics and philosophy, Quantum theory, positiv-

ism, metaphysics, etc., it should serve as a good introduction to logical empiricism. The most dominant note is insistence on the contemporary importance of Machian ideas and tradition; the most challenging, is the contention that logical empiricism and Soviet philosophy have much in common. Ledger Wood, in his *Analysis of Knowledge*, shows a certain sympathy with logical empiricist semantics, but differs fundamentally as to the referential function of knowledge. The book is distinguished from other epistemological studies by its careful consideration of data supplied by psychology.

Bibliography. In addition to those listed in the text, the following books are notable: Brandt, Richard B., *The Philosophy of Schleiermacher*, Brinton, Nietzsche, Buross, Oscar K., editor, *The Second Yearbook of Research and Statistical Methodology*, Cairns, Huntington, *The Theory of Legal Science; Conference on Science, Philosophy and Religion in Relation to the Democratic Way of Life, Philosophy and Religion*, A symposium, Cooper, Lane, *Plato On the Trial and Death of Socrates*, Crowther, J. G., *The Social Relations of Science*, DeLacy, P. H. and DeLacy, E. A., *Philodemus On Methods of Inference*, Gonseth, F., editor, *Les entretiens de Zurich sur les fondements et la méthode des sciences mathématiques*, Hook, Sidney, *Reason, Social Myths and Democracy*, Jones, Rufus M., *Spirit in Man*, Kussler, Kurt, *Nietzsche und das Recht*, Kroner, Richard, *The Religious Function of Imagination*, Lundholm, Helge, *The Aesthetic Sentiment*, Martin, Alfred von, *Nietzsche und Burchhardt*, McKeon, Richard, *The Basic Works of Aristotle*, Morgan, G. A., Jr., *What Nietzsche Means*, Niemeyer, Gerhart, *Law Without Force The Function of Politics in International Law*, Pratt, James Bissett, *Can We Keep the Faith? Proceedings of the American Catholic Philosophical Association*, Vol. XVI, *The Problem of Liberty*, Tarski, Alfred, *Introduction to Logic and to the Methodology of Deductive Sciences*, Vennart, Laonello, *Art Criticism Now*

V JERAULD MCGILL

PHLEBITIS. See MEDICINE AND SURGERY under *Prophylaxis of Pulmonary Embolism*.

PHONOGRAPHS. See RADIO

PHOSPHATE ROCK. The domestic demand for phosphate rock jumped 16 per cent in 1940 and it was put under export-license control, Mar. 4, 1941. Practically none was imported in 1941. Even in 1940 imports amounted to only 2,953 long tons from the island of Curaçao, Netherlands West Indies, where phosphate mining ceased entirely for the duration of the war. Hence domestic phosphate rock production was enormously increased in 1941, especially in Tennessee and Florida, and by the end of the year all producers were operating at almost 100 per cent capacity. Plans for pushing up 1942 production were being made, but no new sources were discovered or developed during 1941. Increases in the cost of labor and fuel raised the 1941 prices slightly above those of 1940 and may cause some additional increases in 1942.

PHOSPHORUS. See CHEMISTRY, INDUSTRIAL.

PHOTOENGRAVING, PHOTOMECHANICAL PROCESSES. See PHOTOGRAPHY.

PHOTOGRAPHY. Photography in national defense was the keynote of the year. As the tempo of the war increased with nation after nation being drawn into the maelstrom, more and more men and women in all countries were trained with the aid of photography, either for immediate military service or in vital defense industries. Photographic branches of the armies, the navies, and the air corps bustled with activity. Photographic industries hummed with production and struggled with priority restrictions as defense needs began to cut off the supply of certain metals, chemicals, plastics, etc., which were considered requisites in this field (*Photo-Technique*, Sept., 1941).

Color Photography. Although the military aspect of photography dominated the scene, significant advances in the field of color photography were announced during the latter part of the year. In August, the Kodak Company showed at Chicago the first enlargements from Kodachrome transparencies. These were made on a semi-opaque safety (cellulose acetate) base instead of paper and they were processed by the manufacturer. Two types of prints were supplied from the customer's negatives, namely (1) "Municolor," which represented a two or a five times enlargement from miniature films, and (2) "Kotavachrome," enlargements in sizes varying from 8 x 10 inches to a maximum of 30 x 40 inches from professional sheet Kodachrome transparencies. With this latter, a certain degree of color correction was used if necessary or requested.

An entirely new process of color photography, called "Kodacolor," was announced in December by Dr. C. E. K. Mees in a lecture before the Franklin Institute at Philadelphia (N.Y. Times, Dec. 18, 1941). After exposure in the camera in the usual way, the film was developed by the manufacturer to a color negative in which all silver was removed leaving a dye image having colors complementary to those of the original subject. Thus a blue sky appeared yellow in the negative, red lips were blue-green or cyan, and green grass came out magenta. When this color negative was printed upon a paper coated with a similar set of emulsions as used for the film, a color print was obtained in which the colors of the original subject were reproduced. Thus, for the first time in the history of photography, a negative-positive process of color photography was made available commercially for the amateur which gave a color negative and had as its end result, a print on paper in full natural colors. Details of the new process were thus described by Dr. Mees: "The film is coated with the three light-sensitive emulsion layers as well as a yellow filter layer. In each of the emulsion layers are suspended particles of organic compounds insoluble in water, so small that they can be seen only under a high-power microscope, and these particles contain the couplers required to produce the dye appropriate to each layer when they react with the oxidized developer."

The Crawford "Flexchrome" color process combined the use of a relief image with hand application of dyes. In brief, a special film is exposed and developed to form a positive silver image, which is bleached to remove the silver and then dyed with a black dye which is taken up in the same region of the silver image. After the film is backed with a liquid which dries to form an opaque white, the face side is colored by applying appropriate colors with hand brushing. A wide range of control of the hue and saturation was said to be possible.

A third series of articles on patents related to color photography was published (*Brit. J. Phot.*, Jan. 10, 1941, et seq.). A bibliography on color photography was compiled by Brode covering books, sections of books, monographs, and pamphlets which had appeared from 1924 to June 30, 1939 (*Brit. J. Phot.*, Jan. 17, 1941, et seq.).

Military Photography. Still photographs, slide films, and motion pictures were used extensively for training purposes in all branches of the military and civilian defense program. The number one photographic school of the U.S. Army Signal Corps was located at Fort Monmouth, N.J., where the men were trained about thirteen weeks before assignment to an active photo-section (*U.S. Camera*, Sept., 1941). In collaboration with the Academy of Motion Picture Arts and Sciences at Hollywood,

California, the Signal Corps had in production a program of 160 training films (*Mot. Pict. Herald*, Mar. 8, 1941). A special training program for officer instruction of the Signal Corps had been in progress for nine years in Hollywood with the cooperation of the Academy. Training programs and research work for the U.S. Army Air Corps were centralized at Logan Field near Denver, Colorado, and at Wright Field, Dayton, Ohio. The U.S. Navy also was training a photographic personnel, and maps for various branches of the army, navy, and air corps were made at the Engineering Reproduction Plant of the Corps of Engineers located at Washington, D.C.

Many types of specialized equipment was required for military use, such as trailer darkrooms, collapsible dark tents, a wide variety of cameras, portable developing outfits and printers for quick-work photography, synchronized flash-bomb apparatus for night photography, and numerous other items. Special airplanes were constructed for aerial reconnaissance photography. These were fitted with camera openings in the top, sides, and floor and with resilient mountings for supporting the cameras (*Pop. Phot.*, Jan., 1941; also *Amer. Cinemat.*, Mar., 1941). Improved lenses and sensitive materials made possible much sharper photographs, although reconnaissance work for tactical purposes had to be done at altitudes around 30,000 feet due to the great range and accuracy of anti-aircraft fire. Besides fast panchromatic films, sheet Kodachrome and very high-speed infrared films were reported to have been used with success (*Military Eng'r.*, Sept., 1941).

Flares were usually dropped by the Royal Air Force to locate their targets for night photography, the camera shutter was opened and when the flash bomb exploded the flash operated a photocell mechanism which closed the camera shutter. Photocells were used by the U.S. Army Air Corps to operate the camera shutter simultaneously with the maximum intensity of the light of the flash bomb (*Amer. Phot.*, Apr., 1941; also *Engineer*, Dec. 27, 1940). It was common practice to mount small cameras using 16-mm. film in the wings of combat airplanes and operate them automatically in synchronism with the firing control of the armament of the plane (*Phot. J.*, Apr., 1941).

Black lacquers which transmitted infrared radiation were used to coat photoflash bulbs in England for "black-out" photography of air-raid casualties, automobile accidents, and other incidents occurring at night. Similar types of lamp were made in this country by the Wabash Photolamp Corporation and by the General Electric Company.

For counter-espionage work, the U.S. Federal Bureau of Investigation used cameras of many types and several instances were described by Toombs of the value of photography in solving espionage cases (*Pop. Phot.*, May, 1941). A group of 33 spies were convicted in a New York court in December after a trial lasting several months, during which much photographic evidence was introduced to prove their activity against the government (*Life*, Dec. 29, 1941).

A very rapid method of mail transportation between the British forces in Egypt and the Near East was put into operation in April. It consisted in photographing the letters on 16-mm. film, sending them to England by airplane, and enlarging them to one-half their original size for mailing to their destination within the country. A special form was used for the original letter which had a space for the address to be printed by the sender in block letters, so that this could be used later with an

envelope having a cut-out opening. Each 100-foot roll of film held about 1,700 pages of letters. One hundred rolls, containing approximately 160,000 letters, weighed only 40 pounds, compared to an estimated 6,000 pounds in standard size in an envelope. The plan was called the "Airgraph System"; it was developed by the British Post Office with the cooperation of Kodak, Limited (*Amat. Phot.*, May 2, 1941).

Industrial Photography. Two important uses of the camera in aircraft production were described by Washburn of the Lockheed Aircraft Corporation and these are typical of such work that was being done in other airplane plants. The first use was the production of duplicate templates or work patterns, which were photographed directly onto a sensitized metal sheet, wood, transite, etc., and cut out very accurately to make the template. The sensitized coating for the sheets was obtained from a new product called "Eastman Matte Transfer Film," described later in this review. The second use was the production of blueprints from photo-tracings.

Two cameras were developed for copying the detail assembly drawings; one was portable and could be taken to the loft-room where the drawings were made, and the other was located permanently in the photographic department. The portable camera was shaped like a wigwam, 8½ feet high, and was mounted on rubber-tired wheels. It was fitted with a Cooke, F/12.5 lens of 19-inch focal length to make a fixed one-quarter reduction onto a 14 x 17-inch glass plate. The permanent camera was also used as a projector when the negatives were enlarged onto the photo-template sheets. This camera was equipped with a Goerz, F/16 lens of 70-inch focal length. It was 6 inches in diameter and weighed 18 pounds. After enlargement of the template drawing to exact size on the sensitized metal, the sheet was hooked onto an electric conveyer to move it to the developing room where it was lowered with an overhead crane into the developer and other processing solutions. Immediately previous to making the exposure onto the metal sheet, the negative drawing was projected onto sensitized tracing cloth from which blueprints could be printed. It was stated that these procedures cut down the time to one-tenth that required previously for such work and effected a saving of several hundred thousand dollars in production costs (*Aero Digest's Aviation Eng.*, Sept., 1941).

Another method of photo-template production made use of a special lacquer that phosphoresced after it had been exposed to X-rays. The drawing was made on a board or metal surface after it had been sprayed with the lacquer. While it still glowed with a pale phosphorescence after exposure to weak X-rays, a sheet coated with Matte Transfer Film was brought into close contact for several minutes. After development, a negative image was obtained. A positive image could be produced by exposing a photographic plate to the phosphorescent drawing first and then printing from the developed plate onto a sensitized metal sheet. Although this phosphorescent method was very rapid and economical, it was limited to a one-to-one ratio of reproduction.

Accurate photographic records of important buildings in London and other cities in England were being made under the auspices of the National Buildings Record with the collaboration of the Royal Photographic Society. Two plans were being carried out: (1) straightforward photography, and (2) calibrated photographs from which dimensional plans and elevations could be derived

for aiding postwar reconstruction (*Phot. J.*, Jan., 1941; also June, 1941).

Photomechanical Processes. A high standard of quality was retained in the processes of photo-mechanical reproduction even though the war needs resulted in a drastic reduction in paper consumption with accompanying necessary use of cheaper paper stocks for magazine and book printing.

Hand correction of color printing plates made from artists' drawings was said to have been minimized greatly by the introduction of a method called the "Fluorescence Process." By this method, sketches made with special pigments were photographed by illuminating them with arc lights covered with filters, which transmit ultraviolet rays and some visible light. A novel copyboard hood was used to hold the filters and obtain proper balance of light on the sketch (*Photo-Engravers Bull.*, Nov., 1941).

A new method for making fine line halftones (120 to 300 per inch) was demonstrated publicly for the first time at Cincinnati, Ohio, on September 18. It was called a contact screen process. The shortcomings of the standard halftone screen, such as difficulty of contrast control, lack of sharpness of fine lines, and long exposure for certain types of work, were said to have been practically eliminated by the new method. Essential features of the process were (a) the making of a continuous tone magenta (dye image) negative, and (b) the printing of this magenta negative by contact through a special orange, vignetted dot screen onto an orthochromatic film of very high contrast. Contrast was controlled by placing yellow (for higher contrast) and rose (for lower contrast) filters over the printing light source. The final result (illustration, map, etc.) was printed from this screen positive by deep-etch offset lithography. The production of unusually fine-screen maps by this method was reported by the Engineering Reproduction Plant at the U.S. War College, Washington, D.C. (*Photo-Engravers Bull.*, Nov., 1941).

The introduction of the masking process several years ago resulted in a noticeable improvement in the quality of the cuts made from color separation negatives. Panchromatic plates or film were used to make the mask by exposing them through the Kodachrome with colored light. After development to a very low contrast, the negative mask was bound to the Kodachrome before making color separation negatives from it. In November a better material was made available known as "Kodak Masking Panchromatic Film." It was supplied as a stripping film from which the emulsion on a thin support could be stripped while dry and cemented onto the Kodachrome. The exposure was made with red light through the Kodachrome and the mask developed while attached to it. Exact registration was assured and separation negatives could be made easily, which were said to require very little hand correction when making the printing plates.

Motion-Picture Photography. An expanding program of production of motion pictures for defense purposes and a loss of most of the European market caused an appreciable drop in total footage of pictures for theater use. The United States government established projection facilities in all of the training centers and arranged for showings of many of the feature pictures. More color pictures were produced than ever before. A total of 18 feature pictures in color were delivered during the 1940-41 season and 23 pictures were promised for 1941-42. The majority of these were made or contracted for in technicolor, and the balance in cinecolor. It

was estimated that about 100,000,000 feet of technicolor prints would have been delivered by the end of the year. It was reported by Kalmus that a monopack (single negative) film was being used by the Technicolor Company on an experimental, semi-commercial basis at their Hollywood laboratory (*Film Daily*, July 23, 1941).

An announcement was made in September that good quality 35-mm. technicolor prints could be made from 16-mm. Kodachrome prints (*Amer. Cinemat.*, Sept., 1941). Details were given of the design of processing equipment for the making of two- or three-color prints by the Gasparcolor process by the Hollywood Color Film Company. This process requires color separation positives from a color film, such as Kodachrome. The positives are printed on a special reversal type positive film containing dyes; the three-color film stock having on one side two emulsion layers containing magenta and yellow dyes, respectively, and on the opposite side a third emulsion containing the blue-green (cyan) dye (*Amer. Cinemat.*, Nov., 1941).

Extensive use was made of motion pictures as training films in many defense industries in an effort to shorten the time that was usually required to prepare individuals for specialized work. For example, a series of eight sound films was used to supplement machine-shop instruction for apprentices who were learning to operate various types of machines (*Factory Management*, Oct., 1941).

Applied and Scientific Photography. An estimated total of four million pages of the British House of Commons Sessional Papers, comprising the record for the entire nineteenth century, were being copied by the microprint process. A master positive matrix was prepared first and a reduction made from this matrix to 1/300th the original page size onto a special diazo paper. Each page of 6 x 9-inch size of the final microprint contained 100 pages on the front and back, so that an 800-page volume was printed completely on four microprint sheets. A special type of viewing device, called the Readex projector, permitted rapid and convenient examination of any page on each microprint (*J. Documentary Reproduction*, June, 1941).

It was announced by New York University that candidates for the doctorate degree would be allowed to publish their theses on microfilm. By this method, more data could be included at a lower cost, and a great saving in storage space effected (*N.Y. Times*, June 22, 1941).

Many valuable papers, documents, and books were destroyed or damaged by the great fire of London, started by the bombing raid of December 29, 1940. The charred records were photographed in various ways when possible to salvage them. One scheme consisted in shining a very narrow, intense beam of light on the page while making the exposure (*Science*, Aug. 1, 1941). Another plan required the application of several layers of a chloral hydrate solution until a mass of crystals was formed that gave a "clarifying" effect on the inked or printed portions of the document. A copy was then made on a contrasty, non-color sensitive plate (*Nature*, Apr. 5, 1941).

The great aurora of September 18, one of the most brilliant displays ever seen in this country, was photographed by many observers (*Tech. News Bull.*, U.S. Bur. of Standards, No. 294, October, 1941; also, *Sky and Telescope*, November, 1941). Motion pictures and other photographic records were made of the total eclipse of the sun as seen on September 22, at Lintao, Kansu Province, China (*N.Y. Herald Tribune*, Sept. 22, 1941). Washburn and party made the first successful ascent of Mt.

Hayes (13,800 ft.) in Alaska in August and obtained several hundred feet of remarkable Kodachrome pictures as well as other photographic data. Ewing lectured on his work and that of his associate, Clarke, on the photography of the ocean bottom at depths ranging from 125 to 3,000 feet (*Science*, Feb. 7, 1941).

Radiography. The induction of more than a million men into the armed forces of this country resulted in a great increase in the use of X-ray film. A rapid preliminary check-up of the chest was usually made by using small sheet film of 4 x 5-inch size or in some cases miniature 35-mm. roll film. More complete radiologic examination followed if pathologic conditions were found. For diagnostic purposes, X-ray materials were being used more than ever as a supplement to medical examination of the wounded.

New fine-grain, high contrast, industrial X-ray films were being used extensively for checking flaws in airplane castings, seams on armor plate, parts for tanks, trucks, and guns. The General Electric Company completed delivery and installation of a number of 1,000 kilovolt X-ray units with which heavy thicknesses of steel, as great as 7 inches, could be penetrated with comparatively short exposures (*Welding J.*, October, 1941; also, *Iron Age*, Sept. 18, 1941).

Physical Measurements. Active work was continued by the various subcommittees of Committee Z-38 of the American Standards Association on the problem of photographic practice standardization. Proposed American standards published for trial and criticism included the following: contact printing equipment (Z38.7.1); projection equipment for film strips, 35-mm. film viewers, and microfilm readers (Z38.7.2); lantern-slide projectors (Z38.7.3); reflection-type projectors (Z38.7.4); testing printing and projecting equipment (Z38.7.5); film-pack tabs (Z38.1.1); film-pack cases (Z38.1.2); dimensions for 70-mm. used for recording work, e.g. seismographs, oscillographs, etc. (Z38.1.3) (*Photo. Trade News*, July, 1941; also September, 1941). Arnold reported that the use of a Dewar flask and a standard agitation technique for evaluation of film speeds as proposed in 1940 by the British Technical Committee PHC/1 had been checked in several laboratories in the United States and would be considered for the proposed American standard specification (*Amer. Phot.*, February, 1941).

A test of lens resolution was described by Gardner, which consisted in photographing two new types of resolving power charts (Circular No. C428 of the U.S. Bur. Standards). Technical details of the application of the electron microscope to the study of photographic phenomena were published by Hall and Schoen (*J. Opt. Soc. Amer.*, April, 1941).

The factors affecting the photography of objects through atmospheric haze were evaluated by Clark for black and white and for color photography (*Photo-Technique*, July, 1941).

Additional fundamental information on the problem of tone reproduction was presented in a comprehensive paper by Jones and Condit on the brightness scale of exterior scenes and the computation of correct photographic exposure. A formula for exposure calculation based on the *minimum brightness* of the scene was derived which takes into consideration the statistical average characteristics of cameras and lenses of predominant use. A factor to compensate for flare light effects is included (*J. Opt. Soc. Amer.*, November, 1941).

Manufacture of Sensitized Materials. One of the most

significant developments over the past half century in the field of glass manufacture was the commercial production of a new type of optical glass by the Eastman Kodak Company. Suggestions made several years previous by Dr. George W. Morey of the U.S. Geophysical Laboratory initiated this work. The new glass has no silicates but includes certain rare elements such as tantalum, lanthanum, and tungsten. It has a much higher refractive index than other glasses of the same dispersion. For the present it was understood that most of the production would be used in military instruments.

An announcement was made in December of the first steps that were being taken to establish an optical glass industry in Canada. Production of lens glass in a \$7,000,000 government-owned plant was said to have begun (*Nat. Phot. Dealer*, December, 1941). A review was published by Nelson of the growth of the Bausch & Lomb Optical Company. Over fifty types of glass were being manufactured by this concern (*Photo-Technique*, July, 1941).

The discovery and development of methods of manufacture of film products which could be stripped while dry from a paper support and laminated onto metal, wood, or other sheet material was regarded as an accomplishment of the first order in the ranks of film manufacturers. As noted previously, this product, known as "Eastman Matte Transfer Film," was being used extensively in the airplane and automotive industries for the preparation of photo-templates. A new paper, called "Eastman Autopositive Paper," was announced in October for use in making black and white positive prints directly from Kodachrome transparencies. Observations on latent image stability of motion-picture film were reported by Famulencr and Loessel (*J. Soc. Mot. Pict. Eng.*, April, 1941).

New Apparatus. During the past few years a large number of small cameras have appeared on the American market. Many of them were made in this country, but quite a few were manufactured abroad. Included in the latter group were the two best known precision-built instruments, the Leica and the Contax. No American-made amateur camera had the fine workmanship of these cameras until the year 1941 when the Ektra and the Medalist were placed on sale in this country. Engineering skill and scientific precision of a very high order were shown in the manufacture of these cameras. Other new cameras were the Super D Graflex with built-in open-flash synchronizer and automatic diaphragm-control; the Graphic View, a 4 x 5-inch view camera fitted with an inverted V-bar sliding-bed support, the Ikoflex I, a twin-lens, reflex-type camera taking pictures 2¼ inches square.

A description was prepared by Clark and Laube of a new 35-mm. sound motion-picture camera in which all fast-moving parts were said to be so quiet that the camera could be used without any sound-proof housing (*J. Soc. Mot. Pict. Eng.*, January, 1941). Improved flash lamps were marketed including blue bulbs for use with daylight Kodachrome, and a midget lamp which used no magnesium foil or wire but employed a combustible paste on the lead-in wires (*Pop. Photog.*, May, 1941). Several varieties of lamps emitting considerable infrared radiation were introduced for the drying of film in photo-finishing laboratories (*Current Photog.*, June, 1941). The ever-growing field of cine equipment for 16-mm. sound-film was expanded again by the introduction of five new models of sound projectors made by the Eastman Kodak Company.

Two different types of stereo projectors were demonstrated successfully during the year, one by the Society for Visual Education, and the other by

FOCUS ON WAR

The great fire of London on the night of December 30, 1940—one of the most remarkable photographs to come out of the war

(London Daily Mail)

Quick-Work Photography—a reconnaissance photograph made by members of the U.S. Army Air Corps, exposed, developed, and printed in an airplane about three minutes.

(Official Photograph, U. S. Army Air Corps)

the Three Dimension Corporation. The former type used 2 x 2-inch glass slides or slide films; the latter was designed to take standard 3¼ x 4-inch slides or smaller slides with the aid of an adapter. Polaroid filters were required for each apparatus and for the one viewing the pictures.

Additional apparatus were plastic safelights, improved synchronizers for flash photography, new models of enlargers and slide projectors, a daylight-loading developer tank for 35-mm. film, darkroom mittens made of thin, transparent Pliofilm, and parabolic, adjustable safelight lamps.

The Photographic Process. Although no actual shortages of chemicals restricted photographic processing, the possibility of such restriction was growing as the year closed. Substitutes for certain staple chemicals, such as developing agents, acetic acid, chromium salts, and borax, were under consideration. Wratten and Levenson discussed the use of "Kodolon" (para-aminophenol hydrochloride) as a substitute for Elon in motion-picture positive film developers (*Brit. Kinet. Soc. J.*, April, 1941; also October, 1941). James continued his investigation of the mechanism of development with a report on developing and non-developing agents (*J. Amer. Chem. Soc.*, December, 1940). He also published some experimental bases for the development process (*Photo-Technique*, December, 1940; also January, 1941). A new fine-grain developer and replenisher known as "Finex" was announced by Agfa-Ansco, which was said to give low graininess without sacrifice of film speed (*Photo-Technique*, October, 1941). Other proprietary products were wetting agents for the prevention of non-uniform drying of films and plates, stop bath and fixing bath testing solutions, selenium toners, and liquids to insure print flexibility. Hanson published a series of articles on various aspects of the photographic process (*Amer. Phot.*, July, 1941, et seq.). For photoflash lamps, flashbulbs, see ILLUMINATION.

Bibliography. The more notable books of the year were D. Charles, *Photographic Enlarging*, London, N. Barrett and R. Wyckoff, *How to Build and Equip a Modern Dark-room*, San Francisco; H. B. Wobbe, *A New Approach to Pictorial Composition*, East Orange, N. J.; B. Abbott, *A Guide to Better Photography*, New York; F. R. Frappie and R. H. Morris, *Copying Technique*, Boston; W. Mortenson, *Flash in Modern Photography*, San Francisco; A. R. Greenleaf, *Chemistry for Photographers*, Boston; T. T. Baker, *Photographic Emulsion Technique*, Boston; A. S. C. Lawrence, *The Scientific Photographer*, New York; *The Film Index*, compiled by the Works Progress Administration, New York; *Directory of Microfilm Sources*, compiled by R. C. Cibella, New York; several new *Photo Guides* were published by Focal Press, Ltd., London, and additional numbers of the *Little Technical Library* were issued by Ziff-Davis Publishing Co., Chicago, further sections of the *Photo-Lab Index* by H. M. Lester were published by Morgan and Lester, New York. The first number of a new encyclopedia, *The Complete Photographer*, appeared in September. It was edited by W. D. Morgan and issued three times each month by the National Educational Alliance, Inc., Chicago. Articles were written by experts in various fields of photography.

GLENN E. MATTHEWS.

PHYSICS. Electron Microscope. As an instrument of research, the electron microscope has proved itself during the past year of wider and more varied usefulness than any other single instrument. Extensive use has been made of the new commercially built instrument of the Radio Corporation of America perfected late in 1940, as reported in the YEAR BOOK of that year. The first instrument for industrial use was put to work in January in the Camden Research Laboratories of the American Cyanamide Company. This instrument is compact and has built into it all the necessary accessories—the transformer to provide the 60,000 volts required to accelerate the electrons, apparatus to keep the voltage steady to within one volt, and the pump necessary

to maintain the vacuum. Observation may be visual by means of a fluoroscope, or the latter may be turned up out of the way to permit a photograph to be taken. Specimens can be inserted or removed through an air-lock without breaking the vacuum. Direct magnifications of 2,000 to 30,000 diameters are obtained, but by further photographic enlargement magnifications up to 100,000 diameters or more can be obtained without loss of detail.

Exciting as the highest magnifications may be, it is important that the magnification can be regulated at will down to the point where it joins the possibilities of the optical microscope. Users of microscopes wish to be able to vary the magnifying power continuously from the lowest to the highest. More important than magnification, is the resolving power, indicated by the smallest details that can be distinguished. As with the ordinary photograph, it is useless to magnify the image beyond the point where these details become blurred. Theoretically, the resolving power is limited by the wave length of the radiation used. For 60,000-volt electrons the equivalent wave length is 0.05 angstrom units or about $\frac{1}{100,000}$ that of light. In practice the full theoretical resolving power is never attained. For the RCA microscope under ordinary working conditions, it is about 100 angstrom units, 10 millimicrons or $\frac{1}{2,500,000}$ of an inch. The best that has been obtained with any electron microscope is 30 angstrom units.

Dr. V. K. Zworykin, J. Hillier, and A. W. Vance of the RCA Research Laboratories experimented with higher voltages up to 300,000. They found that increase in penetration, enabling thicker specimens to be used, was the only advantage obtained, and that there was no advantage in using a higher voltage for specimens that were transparent to the lower voltage of the commercial instrument. Higher voltage also gave a great deal of trouble, chiefly because of the hard X-rays produced by the speedy electrons. Because the commercial instrument requires thin specimens that are transparent to the electron beam, it cannot show the surface structure of opaque materials, often important in metallurgy. This, however, Dr. Zworykin has made possible by making a thin plastic replica of the surface that is transparent to the rays.

An electron microscope with a built-in optical microscope was patented in February by Ladislaus Marton, also an RCA scientist. This attachment makes it possible to watch the specimen while it is being photographed, although at a lower magnification, so that one may see if it undergoes any change during the electron bombardment, a thing which sometimes happens and which would at least render the results obscure.

The electron microscope has been used in the study of thin films, electro-deposits, age hardening, solid solubility, super-lattices, colloids, etc. A photomicrogram of a rubber-like synthetic, polymerized vinyl chloride, magnified 100,000 times, clearly shows small black dots which are taken to be actual large size molecules. The greatest achievement of the electron microscope during the year was to make visible for the first time the influenza virus. This turned out to be a tiny spherical particle 11 millimicrons, 110 angstrom units, in diameter. This, it will be noted, is close to the limit of the resolving power of the instrument. Photographs of the virus were made late in the year by Dr. Leslie A. Chambers and Dr. Werner Henle at the University of Pennsylvania.

Million-Volt X-ray Machines. The towering two-story X-ray machine that formerly was necessary when the voltage neared the million mark and which re-

quired a specially built house or room to accommodate it, will soon be a thing of the past. Several small compact 1,000,000-volt outfits were made by the General Electric Company and placed with several manufacturing companies, including their own. They are used for the detection of flaws in heavy castings, and can photograph through five inches of steel in two minutes, a job that previously required three and a half hours. The new machine weighs only 1,500 pounds, about a third that of its immediate predecessor, and is easily carried around by the traveling crane of a machine shop wherever its work is needed. It is hung on gimbals so that it can be pointed in any direction.

The great reduction in size was made possible principally by a new type of transformer, called a resonance coil, designed by W. F. Westendorf, which dispenses with the usual iron core. The tube, also reduced in size from the foot or more of the original high-voltage tubes to $3\frac{1}{2}$ inches in diameter and to 30 inches in length in place of the former 14 feet, was placed inside the resonance coil. Further reduction in size was made possible by using Freon gas under pressure as an insulator in place of oil. This gas, which is used in refrigerators and is known chemically as dichlorodifluoromethane, saves space because it is a better insulator. This arrangement of the parts also makes the outfit shock-proof, because the resonance coil, which steps the voltage up to the million volt mark, is entirely enclosed in the steel casing of the unit. Only low voltage cables are outside, where they can be handled. The leads from the various sections of the transformer to the tube are also made thereby very short. See **ELECTRICAL INDUSTRIES**.

Electron Induction Accelerator. An apparatus for whirling electrons up to an energy of 20,000,000 volts, more than twice that obtained by any previous accelerator, and to a speed within a tenth of one percent of that of light, was also constructed at the General Electric Laboratories. This machine was patterned after a smaller 2,300,000-volt induction accelerator devised and built by Dr. D. W. Kerst at the University of Illinois, and described in the **YEAR BOOK** for 1940. The electrons are liberated by a hot filament inside a doughnut-shaped glass tube exhausted of air. The electrons are accelerated by the alternating field of an electro-magnet energized by a 600-cycle electric current. The entire acceleration takes place during a quarter of a cycle, $\frac{1}{4}$ of a second. During that brief interval the electrons are whirled around inside the doughnut-tube some 400,000 times and travel some 200 miles, at the end of which they strike a target and produce X-rays of equal energy and having a penetrating power exceeding the gamma rays of radium.

If a loop of wire were placed in the position of the orbit of these whirling electrons, an alternating current of electricity would be induced in it by the fluctuating magnetic field. This is simply Faraday's principle of magnetically induced currents. This alternating current is nothing other than a stream of electrons that takes place in the wire, first in one direction then in the other. With the wire removed the same streaming of electrons occurs. But without the wire to guide them, the extremely delicate problem arose of focussing the electron streams by means of magnetic forces, so that their paths would be nearly circular. But not quite circular. A radial component of magnetic force on the electrons had to be arranged so that they would spiral gradually inward. A target was so placed that the electrons would strike its edge at the moment they acquired their maximum velocity. This was accomplished by the proper shaping of the conical pole

pieces, determined partly by calculation and partly by trial and error.

If the electrons had not struck the target, in the second quarter cycle when the magnetic field is decreasing they would have been decelerated and brought to rest. In the third quarter cycle they would have been accelerated in the opposite direction. The latter actually takes place in the machine with fresh electrons from the hot filament, so that the target is struck from both sides and gives an intermittent beam of X-rays. At present, only X-rays emerge from the machine. The electrons are used up in producing these rays. But means are being studied of utilizing the electron streams in other ways or of possibly getting them out of the machine.

While the electron induction accelerator appears to be a sort of cyclotron, it is in many ways very different and its manner of operation is quite different. The cyclotron can only accelerate heavily positively charged atomic particles, protons, deuterons, etc., which are 1,800 times or more heavier than electrons. For the same voltage, the cyclotron is enormously larger, and the speeds attained by the particles are much lower. The cyclotron uses a steady magnetic field. The pole pieces are flat. The acceleration takes place in a flat circular box which has been cut diametrically in two. The two pieces are called the dees because of their "D" shape. The upper and lower plates form a condenser. The two dees are oppositely charged and periodically reverse their polarity, being charged by an oscillating current of the proper frequency. During each cycle the atomic particle makes one revolution, spirals outward, and finally emerges from the machine, where it can be used for any purpose required.

The induction accelerator, on the other hand, uses an alternating magnetic field, has conical pole pieces, produces the entire acceleration during a quarter cycle, during which time the electron makes hundreds of thousands of revolutions and never gets out of the machine. The induction accelerator was called by its inventor, Dr. Kerst, the rheotron, but was rechristened by the General Electric Company, the Betatron. Both names are appropriate, because the Greek word, *rheo*, means to flow, while beta rays is the name that was given to the electron emission of radium.

This machine has now been sent to the University of Illinois where it will be installed in the University's new Abbott Power Plant. Meanwhile the General Electric Company has begun construction on a still larger machine that will speed the electron whirlpool up to 100,000,000 volts. With this machine it is believed that X-rays as powerful as some of those of the cosmic rays can be produced, so that some cosmic-ray phenomena can be produced and studied in the laboratory.

Cosmic Rays. Some semblance of an orderly theory concerning the cosmic rays is now possible. Since we cannot get up above the atmosphere and actually observe the incoming, or primary, cosmic rays and measure them, some hypothesis must be made about them. For the present, that theory must serve which explains the most with the least.

Dr. W. F. G. Swann of the Bartol Research Foundation has summarized the theory based on the assumption that the incoming rays are of one kind only; namely, heavy, positively charged particles, probably protons. Any other hypothesis, Dr. Swann states, leads to some contradictions with the facts. By processes at present unknown, he continues, the primary radiation gives birth, probably indirectly, in the upper atmosphere, to mesotrons—middle weight atomic particles. Those mesotrons which are born approximately at rest will have such short

lives that they will disintegrate before they have traveled 1,000 feet, giving rise to electrons which emerge on the average equally in all directions. High speed mesotrons, which penetrate to and disintegrate at lower levels, will give rise to electrons having a predominantly forward direction.

This hypothesis explains as well as any other the main facts of cosmic radiation and, in addition, the fact that at sea level the radiation comes prevalingly from overhead, while at high altitudes it comes more or less equally from all directions, horizontal as well as vertical. If any of the incoming primary rays were electrons, Dr. Swann declared, there would be a strong asymmetry in their distribution both vertically and horizontally in the high altitude measurements, which asymmetry has not been found. Such asymmetry would be due to the strong effect of the earth's magnetic field on the light electrons. Protons, 1,800 times as heavy, are much less affected.

Further support of this hypothesis is afforded by the measurements of V. C. Wilson, M. Schein, W. P. Jesse, and F. O. Wollan of the University of Chicago, carried out by airplane and balloon to a maximum height of $12\frac{1}{2}$ miles above the earth. At the maximum height the atmospheric pressure is about 2 centimeters of mercury or $\frac{1}{38}$ of its sea-level value. This is practically the top of the atmosphere, for although some air probably extends another hundred miles or more, 95 per cent of it lies below this level. A primary electron, in order to penetrate the earth's magnetic field, would have to have an energy of about three billion volts—yet would be stopped by a few inches of lead. Schein and his collaborators found that near the top of the atmosphere, varying the thickness of lead, shielding their apparatus, up to seven inches had practically no effect on penetrating power of the particles they measured. These could not be primary electrons. Furthermore they concluded that at the highest altitude reached there were no electrons of energies between a billion and a trillion volts.

The theory that the cosmic rays are born of the suicide of atoms in outer space, propounded by Dr. R. A. Millikan, head of the California Institute of Technology, received some support from measurements made by his associates in India near the magnetic equator. The theory is that the rays are produced by the complete annihilation of atoms of helium, carbon, nitrogen, oxygen, and silicon with the generation of two high-speed electrons. These five elements are the most abundant in the cosmos with the exception of hydrogen. Calculations show that their annihilation would produce electrons having energies of 19, 56, 66, 7.5, and 13.2 billion electron volts, respectively. On account of the earth's magnetic field, only the most energetic of these rays, those due to silicon, would come down near the magnetic equator. A little further north those from oxygen would appear, and so on to the poles. If this were true, the intensity of the radiation, instead of increasing continuously from the equator to the poles, would do so by a series of sudden jumps or steps, forming a sort of cosmic ray spectrum. The observations made in India, coupled with previous work done farther north, were designated by Dr. Millikan as excellent evidence for the existence of such a spectrum.

New Measurements. Three fundamental quantities received new values during the past year: The mean distance of the sun, the astronomical unit, was announced as 93,003,000 miles, with the very small probable error of 8,000 miles, in place of the previously accepted figure, 92,780,000. The new figure, more than 200,000 miles larger than the old,

has been somewhat upsetting to astronomers. It is the result of ten years calculations by Dr. H. Spencer Jones, Astronomer Royal of England, on observations of the asteroid Eros at its last close approach to the earth in 1931. The time consumed by the calculations was due in part to the disturbed conditions in Europe, which delayed the arrival of data from distant parts of the world. The present calculation is based entirely on celestial triangulation. A calculation based on gravitational perturbations is yet to be made. Until this is completed, no final revision of the solar distance will be made.

A new value of the velocity of light was announced by Dr. W. C. Anderson of Harvard University as the result of 2,895 observations. The new value is 299,776 plus or minus 14 kilometers per second (186,272 plus or minus 8.7 miles per second). In 1935 Michelson, Pease, and Pearson gave the velocity as 299,774 kilometers per second, but the close agreement of these two measurements is regarded as more or less accidental. In view of the fact that each successive measurement of the velocity of light had given a value smaller than the preceding one, the suggestion had been made that the velocity was slowly decreasing with time. Dr. Anderson pointed out, however, that the probable errors of the earlier measurements were too large to warrant such a conclusion and that the later measurements were in excellent agreement. Furthermore, R. T. Birge pointed out in a private communication to Dr. Anderson that in all previous measurements adequate correction had not been made for "group velocity" in reducing the velocity in air and other materials to velocity in vacuo. Dr. Anderson took careful account of this correction in his own measurements and applying it to previous ones found that it had amounted in some instances to 7 kilometers per second. He concluded, "that the velocity of light is a constant as nearly as we can measure it at present."

A new measurement of the electron charge was made by V. D. Hopper and T. H. Laby at the University of Melbourne, using the oil-drop method. The value obtained was 4.8020 plus or minus 0.0013 ten-billionths of an electrostatic unit. This is in close agreement with the generally accepted figure 4.803.

Isotopes. Radioactive carbon of atomic weight 14 was produced in appreciable quantities by the cyclotron of the University of California. This isotope emits beta rays (electrons), but no gamma rays (hard X-rays). It has an unusually long life. No appreciable decay was detected in a batch nine months old. Dr. Samuel Ruben and M. D. Kamen, the University of California scientists who prepared the batch, estimated its half life to lie between 1,000 and 100,000 years. The larger figure is longer by far than the half life of radium, which is 1,600 years.

This isotope of carbon is extremely useful as a tracer atom in chemical, physiological, and biological processes. Ordinary carbon is composed of two stable isotopes of atomic weights 12 and 13, 99 per cent of the first and 1 per cent of the second. The radioactive isotope can be made either by battering C^{13} with deuterons or N^{14} with neutrons. At the University of California, it was made by subjecting two carboys of a concentrated solution of ammonium nitrate to a constant rain of neutrons for six months. This is a long way of preparing it, but Dr. Ruben and Mr. Kamen pointed out that it can be separated from mixtures of the other isotopes. Also it can be recovered and reconcentrated from processes in which it has been used.

Radioactive strontium and barium were produced in pure form for the first time by bombarding strontium oxide and lanthanum with deuterons obtained from the cyclotron. The former is useful in the treatment of bone cancer because, when taken internally, it goes straight to the bones. Four radioactive isotopes of germanium, an element similar to lead, were also produced by the cyclotron. A radioactive isotope of gold with a half decay period of 48 minutes was produced by bombarding mercury with fast neutrons. Other work on isotopes consisted mostly of continuing or confirming previous work or in the attempt to assign atomic weights to already known isotopes. Compare with CHEMISTRY.

PITTSBURGH. See FLOOD CONTROL.

PLANNING. The National Resources Planning Board continued its multifold activities for the whole country and in cooperation with State, county, city, and town organizations. Much attention was given to defense public works, defense housing, and public works programming. During 1941, the Board's records show, extensions were made to State planning enabling legislation as follows: City planning: Kansas, Oklahoma, Nevada, Utah. County planning: Oklahoma, Nevada. Regional planning: Oklahoma, Nevada. City zoning: Minnesota, Nevada. Town zoning: Michigan, Minnesota. County zoning: Oklahoma, Nebraska, Nevada, Utah. Airport zoning: Arkansas, Maine, Massachusetts, New Mexico, North Carolina, Oklahoma, Wisconsin, Wyoming. Subdivision control: by cities, Kansas; by counties, Utah.

The number of counties having organized planning under their control increased from 1,532 in 1940 to 1,893 in 1941. Forty-seven States had land-use planning divisions. Formal planning education is now given in some ten universities and colleges. Three of the largest cities of the United States—Chicago, Detroit, and San Francisco—have reorganized their city planning commissions, enlarged their staffs, and are working on comprehensive master plans.

Immense defense housing projects have been accompanied by progressive planning, some of it resulting in low-rent single-family houses. Unique among housing projects was one completed in November by the Federal Works Agency (q.v.) in accordance with a "park-living plan." It provides 254 houses for 700 families on a naturally wooded site between a county park and a river. By a special act of the New Jersey legislature the site was made into a new township called Winwood. Streets are laid out to conform to the bell-like shape of the site. The houses were erected by a contractor at the rate of two a day by using precut lumber. (*Engineering News-Record*, Nov. 20 and Dec. 4, 1941, New York.) See HOUSING AUTHORITY, U.S.; SOCIETIES under *Planning and Civic Association, American*. See AGRICULTURE under *Experiment Stations*; AGRICULTURE, U.S. DEPARTMENT OF under *Land-Use Planning*.

PLATINUM AND PLATINUM METALS. The production of platinum in the United States increased enormously in 1941 as a result of the growing demands of the aircraft industry and the falling off of imports in 1940. Recoveries by United States refiners were chiefly from concentrates received from Canada and from crude platinum from Alaska, which in former years was exported to refineries in Great Britain. Consumption of platinum and platinum metals also increased in 1941, the greatest amounts going into the chemical and electrical industries. In former years the jewelry industry had been the largest consumer of platinum metals, especially of iridium. But the need for iridium to make contact points for magnetos, voltage regulators, and other electrical requirements of the military program caused the OPM in July, 1941, to ask refiners to cease using iridium in platinum alloys for all jewelry and to substitute 5 per cent ruthenium platinum alloys. In December a government conservation order prohibited the use of iridium and its alloys in the manufacture of jewelry. This put platinum on the list of essential defense and military metals.

Imports in 1941, January–September, were 215,069 oz.; 195,645 oz. were imported in 1940. Exports of ingots, sheets, wire, alloys, and scrap amounted to 13,388 oz., January–September, 1941, as compared with 55,027 oz. for the year 1940.

The price of platinum was \$36 per troy ounce during 1941; palladium, \$24; osmium, \$45–\$48; rhodium, \$125; ruthenium, \$35–\$40. Iridium jumped from \$148 an ounce to \$275–\$300 during November–December, 1940, and January, 1941. As a result the OPM undertook a study of military requirements and supplies. "No real shortage" of iridium was the verdict, and the price was consequently lowered to \$175 an ounce on Feb. 6, 1941, where it remained throughout the remainder of the year.

POLAND. A central European republic, established Nov. 9, 1918. It was invaded by Germany Sept. 1, 1939, and partitioned between Germany and the Union of Soviet Socialist Republics by the treaty of Sept. 28, 1939. Warsaw, capital of the republic, surrendered to the Germans Sept. 27, 1939. See **YEAR BOOK** for 1939, p. 625 f., for data on Poland prior to its partition.

The Partition. At the outbreak of the war with Germany on Sept. 1, 1939, Poland had an area of 151,100 square miles and a population of 35,500,000, according to official Polish statistics. By the German-Russian treaty of Sept. 28, 1939, Germany occupied the western sector of 72,432 square miles with about 22,000,000 inhabitants, predominantly Polish, and Russia the eastern sector of 78,400 square miles with approximately 13,500,000 inhabitants, mostly Ukrainians and White Russians. See map in **YEAR BOOK** for 1939, p. 626

A German decree of Oct. 8, 1939, incorporated in the Reich about 35,512 square miles of Polish territory with a population of about 9,627,000. This area comprised the Polish provinces of Pomorze, Poznania, and Upper Silesia, which were ceded by Germany to Poland under the Treaty of Versailles, and the additional Polish districts of Suwalki, Ciechanow, Plock, Wloclawek, Kutno, Lodz, Konin, Kalisz, Bedzin, Sosnowiec, Biala, and Zywiec. Of the remaining German-occupied territory, an area of 225 square miles with some 45,000 inhabitants was transferred to Slovakia on Oct. 21, 1939. The rest—an estimated 36,921 square miles with a population variously estimated at 10,500,000 to 14,500,000—was created a separate German-controlled territory known as the Government-General of Poland, with its capital at Cracow.

On Oct. 10, 1939, the Soviet Government ceded to Lithuania part of the Vilna district taken from Poland—an area of 2,570 square miles with 457,500 inhabitants. The remainder of Soviet-occupied Poland—about 77,703 square miles with 11,924,000 inhabitants—was incorporated in the Soviet Union by vote of the Soviet Supreme Council (Nov. 1-2, 1939). According to Soviet figures, 41,650 square miles with a population of some 8,000,000 was annexed to the Ukrainian Soviet Socialist Republic and 34,000 square miles with about 4,800,000 inhabitants to the White (Byelo) Russian Soviet Socialist Republic. All of this Soviet-annexed territory was occupied by German forces beginning June 22, 1941. See **WORLD WAR.**

Government-in-Exile. The Polish Government-in-Exile established a temporary capital in Paris on Sept. 30, 1939; it was transferred to a site near Angers, France, on Nov. 22, 1939. President of the republic, Wladyslaw Raczkiwicz, who was appointed by President Ignace Moscicki upon the latter's resignation, Sept. 30, 1939. (The Polish Constitution empowered the retiring President to name his successor.) Premier, War Minister, and Commander-in-Chief of the Polish armed forces in Britain, Gen. Wladyslaw Sikorski. Premier Sikorski's non-party Cabinet, formed Sept. 30, 1939, was made up as follows at the beginning of 1941: Vice Premier, Gen. Kazimierz Sosnkowski; Foreign Affairs, August Zaleski; Information, Prof. Stanislaw Stronski; Labor and Social Welfare, Jan

Stanczyk; Finance, Henryk Strassburger; Interior, Prof. Stanislaw Kot; Justice, Marjan Seyda; Education, Gen. Joseph Haller.

The Polish Parliament was dissolved by Presidential decree in November, 1939. A decree of Dec. 19, 1939, authorized the appointment of a National Council of 24 members to serve in an advisory capacity to the Government. The National Council, with ex-Premier Ignace Jan Paderewski as president, convened in Paris Jan. 23, 1940 (see **YEAR BOOK** for 1940, p. 603 for membership). Following the capitulation of France to Germany, the Polish Government and National Council moved to London, where an Anglo-Polish military convention was signed Aug. 5, 1940 (see **YEAR BOOK** for 1940 for terms).

War Contribution. At the beginning of 1941, the Polish armed forces training in Great Britain and serving in the Middle East with the British were reported to total 50,000 men, including 3,000 airmen. There was a small Polish fleet of 3 destroyers, 2 submarines, and 14 other vessels serving with the British navy. Polish merchant ships aggregating more than 100,000 tons were assisting the Allied cause.

During a visit to Canada in April, 1941, Premier Sikorski signed an agreement with the Canadian Prime Minister on April 5 for the recruiting and training of a Polish armed force in Canada for service with the Allied armies overseas. Shortly afterward, the Polish leader conferred with President Roosevelt in Washington and received pledges of aid under the lend-lease act in equipping the Polish forces in Canada. After short visits to New York and Chicago to enlist the aid of Polish organizations in the struggle for Polish independence, General Sikorski returned to London.

The German invasion of the Soviet Union beginning June 22, 1941, brought a turn in the tide of war favorable to the Polish cause. The Government-in-Exile had considered Poland at war with the U.S.S.R. ever since the Soviet attack of Sept. 17, 1939, upon Eastern Poland. Immediately following Prime Minister Churchill's offer of aid to Russia against Germany, the Polish Cabinet in London agreed to collaborate with the U.S.S.R. in the struggle against the Reich on certain conditions. The same day the British Foreign Secretary stated in the House of Commons that Britain's pledge to restore Poland's independence remained unaffected by the decision to help Russia.

Polish-Soviet Treaty. Polish-Soviet negotiations were immediately opened, with British and American support. On July 30 a five-point agreement was signed in London. In it the Soviet Government declared the Soviet-German treaties of 1939 partitioning Poland to have lost their validity, while the Polish Government stated that it was not bound by any agreement with any third power directed against the U.S.S.R. Both Governments pledged immediate restoration of diplomatic relations and mutual "aid and support of all kinds in the present war against Hitlerite Germany."

The Soviet Government agreed to the formation on its territory of a Polish army, under a commander appointed by the Polish Government and approved by the Kremlin. This force was to be "subordinated in an operational sense to the Supreme Command of the U.S.S.R., in which the Polish Army will be represented." The Soviet Government also undertook to grant amnesty to all Polish citizens then detained on Soviet territory as soon as diplomatic relations were restored.

The treaty left unsettled the question of future Polish-Soviet boundaries. The Soviet Government

rejected a Polish request that it reaffirm the Treaty of Riga of 1921, by which Moscow recognized Poland's independence. Immediately after the signing of the July 30 accord, the British Foreign Secretary handed Premier Sikorski a note stating that the British Government had made no agreement with the Soviet Union affecting Polish-British relations, and that Britain did not recognize any territorial changes in Poland since August, 1939.

On August 6 it was announced that Gen. Wladislas Anders had been released from a Soviet prison camp and appointed commander of Polish forces in Russia. These forces were organized mainly from Polish war prisoners released by the Russians. A military agreement covering their maintenance and control was signed by Polish and Soviet authorities in Moscow August 16. Under the London treaty, the Polish Government assumed responsibility for the relief and rehabilitation of from 800,000 to 1,500,000 Polish citizens exiled to various parts of the Soviet Union after the Russian occupation of eastern Poland.

Premier Sikorski arrived in Moscow for conferences with Joseph Stalin on December 2. As a result of their meeting, a declaration of friendship and mutual aid between the two countries was issued. Premier Sikorski announced December 6 that the Polish army being organized in Russia would no longer be confined to two divisions—the previous limit—but would be “several times as large.” He previously stated that President Roosevelt and Prime Minister Churchill had given assurances that their Governments would equip “as many Polish soldiers as necessary.” The Soviet Government also helped to arm Polish forces in Russia.

Cabinet Split. Premier Sikorski's action in signing the Soviet treaty without obtaining Russia's pledge to respect Poland's pre-war frontiers caused a split in the Government-in-Exile. Led by Foreign Minister Zaleski, several Cabinet members resigned. Count Edward Raczyński, Polish Ambassador in London, succeeded Zaleski as Acting Foreign Minister. On September 3 Dr. Herman Lieberman, noted Polish Socialist leader, replaced Marian Seyda (Nationalist) as Minister of Justice. Stanislaw Mikolajczyk, Peasant party leader, became Deputy Premier and Minister of Interior, and Karol Popiel, leader of the Christian Democrats, Minister without Portfolio. Lieberman died October 21.

War with Japan. Upon unanimous resolution of the Cabinet, President Raczkiewicz on December 12 signed a decree declaring war upon Japan. The Government then sought an arrangement with the U.S. Government permitting conscription of Polish nationals in the United States for service in Poland's armed forces. The negotiations with the Czechoslovak Government-in-Exile for a Polish-Czechoslovak federation after the war were carried forward (see CZECHOSLOVAKIA under *History*).

Government-General of Poland. The Government-General was constituted Oct. 25, 1939, under Hitler's decree of October 12 appointing Dr. Hans Frank, Reich Commissioner of Justice, as Governor-General. While administered and controlled by the Germans, it was not a part of the German Reich. It remained outside the German customs area, although organized as an economic adjunct of the Reich. The Government-General was divided into four administrative districts of Cracow, Radom, Warsaw, and Lublin, and these in turn were subdivided into 10 provincial districts. All the districts were placed in charge of German appointees of the Governor-General. In the municipalities, Polish

mayors acceptable to the German district leaders were permitted to retain office.

According to Governor-General Frank, the population of the Government-General in March, 1940, was 14,500,000, including 12,000,000 Poles, 2,000,000 Jews, 400,000 Ukrainians, and about 60,000 Germans. He gave populations of the chief cities as follows: Warsaw, about 1,800,000; Cracow, 300,000; Czeszochowa, 140,000; Lublin, 140,000. After the German occupation of Soviet Poland in 1941, the Polish Ukraine was incorporated in the Government-General. The Jews were concentrated mainly in a reservation south of Lublin and in ghettos established by the Germans in Warsaw, Cracow, and many other cities and towns. In all Poland some 3,000,000 Jews were segregated in about 300 ghettos in September, 1941, according to a Jewish estimate. Of this total, 500,000 were in Warsaw. For an account of German methods and policies in the Government-General, see “The ‘Master Race’ in Action,” *The New York Times Magazine*, Apr. 27, 1941.

German Poland in 1941. Both in the Government-General and in the Polish districts incorporated in the Reich, the condition of the Polish population, described in preceding YEAR BOOKS, became increasingly desperate in 1941. The Germans actively pressed their policy of eradicating all Poles from the annexed areas except those peasants required to work German-owned farms. It was estimated in May, 1941, that 1,500,000 Poles had been deported from the annexed areas into the Government-General. About 1,000,000 others were conscripted for labor service in Germany proper. The places of these Poles were taken by Germans brought in from the Reich, the Baltic States, Eastern Poland, or other parts of Europe. German newspapers early in 1941 reported that in 15 months the Reich had settled 422,000 colonists in the annexed districts. Poles remaining in these districts were subjected to a ruthless Germanizing process. The ban on the use of the Polish language was extended early in the year to its use in prayers, sermons, and confessions in the churches. It was reported that Polish Catholic religious orders were being liquidated and the churches closed. The influx of Germans into the region was reflected in the opening of the new Reich's University at Poznan (Posen) on Apr. 20, 1941.

According to reports of trials published in the four German newspapers published in occupied Poland, death sentences pronounced during January, 1941, totaled 326. It was charged that many other Poles were killed without the formality of trial, particularly in mass retaliation for attacks upon Germans and upon Poles cooperating with the conquerors. A savage underground warfare continued between the German secret police and Polish patriots, who resorted to terrorism and sabotage. There were thousands of arrests in Warsaw and other cities. Prisons and concentration camps were said to be crowded, and the death rate among the prisoners extremely high. Following large shipments of requisitioned grain and livestock to Germany proper, the food shortage became acute early in 1941 and serious food riots were reported in various parts of Poland.

Polish resistance to the German conquerors continued. After the Russo-German war revived hope of liberation, a wave of sabotage and guerrilla warfare swept the country. Lines of communication of German armies operating in Russia were obstructed and damaged, despite numerous executions of suspected saboteurs. Underground Polish workers' organizations joined with other patriot

groups in the development of organized resistance to German rule. A manifesto attributed to leaders of 2,000 organized Polish workers' groups was published in London on August 9. It appealed for world aid against "Nazi totalitarian tyranny." It charged the Germans with killing more Poles since the occupation than in the fighting that preceded it, and with planning to transform the Polish masses "into German slaves." On August 26 the Polish Government-in-Exile reported that Prof. Casimir Bartel, former Premier of Poland, had been shot by the Gestapo in Lwow.

Early in October the Vatican issued a report stating that more than 40,000 Poles had been executed, 60,000 placed in jails and concentration camps, and 1,180,000 drafted for forced labor. The Inter-Allied Information Committee, representing the Allied Governments-in-Exile, announced in New York on November 19 that not less than 82,000 Poles had been executed and 30,000 had died in concentration camps during the German occupation. The plight of Polish Jews and those sent to Poland from other parts of German-occupied Europe was reported even worse than that of the Poles. The difficult food situation became steadily worse during the winter of 1941-42. The typhus epidemic that made its appearance in Eastern Europe ravaged parts of Poland.

Soviet Poland. Before the German occupation of Soviet Poland, the same story of repression and suffering came from the districts under Russian rule. According to the Polish Information Center in New York City, more than 1,500,000 Poles, Ukrainians and Jews had been deported to Siberia and other parts of the Soviet Union under conditions of the utmost hardship and suffering. Deaths among these deportees were reported to be abnormally high. All anti-Soviet elements within the occupied districts were subjected to organized plunder, nationalization of their property, forced labor, and general political persecution. Religious activities were systematically repressed.

POLITICAL ECONOMY. Subjects in the field of applied economics are treated in this volume under the following heads: BANKS AND BANKING; BUSINESS REVIEW; CONSUMERS' COOPERATIVES; FINANCIAL REVIEW; LABOR CONDITIONS; LABOR LEGISLATION; SOCIALISM; SOCIAL SECURITY BOARD; RELIEF. See also the article on AGRICULTURE and the various crops, industries, minerals, public utilities, etc. Books on political science and economics for the general reader are to be found listed in the article, LITERATURE, ENGLISH AND AMERICAN, under *Economics and Politics*.

POLLS. See OPINION RESEARCH CENTER; UNION NOW.

POLO. Stewart Iglehart remained the lone ten-goal player in polo at the close of 1941, although he was defeated in the final games of the two most important tournaments, the national open and the Monty Waterbury Cup competition. The young

man was by far the best player on all fields, and when Cecil Smith, hard-riding Texan, was set down a peg, Iglehart stayed at the "dream" level. Michael Phipps drove his Gulf Steam four to both titles, when he rode with his brother Ben, Charley Von Stade, and Alan Corey. All in all, the polo season was poor, with most of the players either in action with the Army or Navy or out of polo action because of taxes and expenses. There was no indoor polo, aside from the intercollegiates, which were taken by Princeton at West Point.

PORTS AND HARBORS. In spite of the vast expansion of the shipping industry, due to the national defense program and shipment of supplies to the British, few important works were undertaken by port authorities for two reasons: (1) in general existing facilities were adequate to meet all requirements; (2) difficulties in obtaining construction materials under the war priorities system. As a result, the principal activities in 1941 were in maintenance and rehabilitation. In port operation, however, an unusual feature is that several United States ports had American and British experts charged with the special duty of expediting the movements of trains and cars in the yards and on the dock tracks and the orderly loading of the ships.

Offsetting the limited construction activities of dock authorities are the activities of the Army and Navy authorities for military purposes. For example, at Charleston, S.C., an anchorage basin is to be dredged at a cost of \$1,800,000, and \$4,500,000 will be spent in rehabilitating the port terminal property, now used by the Army as an auxiliary supply base. At New Orleans about 900 ft. of new wharf will form an extension of the Poland St. wharf, purchased from the Port Commissioners by the War Department. At San Francisco the Navy Department built a large supply depot, of piers, wharves, and warehouses, while the War Department built similar facilities, as needed for a port of embarkation. The Navy also has a base at Bayonne, N.J., including a great dry-dock for battleships, and has been specially active in the construction of dry-docks of both the fixed and floating types at several Atlantic, Gulf, and Pacific ports. All these works by private and municipal interests and government authorities are independent of the great activities in shipbuilding.

The port of New York is peculiar in being composed of a dozen separate ports in two states, all located in and around the New York harbor, but all under the direction of the Port of New York Authority. There are vehicle and railroad tunnels under the rivers, and a railway freight tunnel across the bay is proposed. At Portland, Maine, and Fall River, Mass., additional facilities for tankers have been provided on account of the new pipe lines for pumping oil from Portland to Montreal and from Fall River to Waltham. The Portland work includes a pier 1,200 ft. long for berthing the ships to unload their cargoes. To provide improved facilities in the harbor at Boston, Mass.,

the State legislature has appropriated \$4,700,000 to purchase and rebuild one of the railroad piers, and it is hoped to begin work in 1942.

Of particular interest is the establishment of the Port of Pasco, at Pasco, Wash., as the head of navigation on the Columbia River. This new inland port is 332 miles from the mouth of the river and 242 miles above Portland, Ore. The river has a deep-water channel as far as The Dalles, 200 miles, beyond which it is navigable for boats drawing not more than eight ft. The Port District has a 200,000-bushel grain elevator, a petroleum tank farm and a public wharf with warehouse or transit shed and railroad connections; it has also acquired land for industrial sites.

At Montreal, Canada, berthing space has been ample, and the principal work has been in additional tracks and minor buildings. Electrical operation of the Harbor Terminal Railway has been abandoned in favor of steam. Modernization of the port of Vera Cruz, Mexico, is under consideration, involving the construction of new piers and other facilities. In England, a curious feature is the formation of the National Dock Labor Corporation to promote rapid loading, unloading and handling of freight and the quick turn-around of ships by establishing an adequate and mobile labor force. One of its objects is to secure regular employment and pay for transport workers.

Expansion of the original plans for extensive enlargement of the port facilities at Cape Town, Union of South Africa, has postponed the final completion, which is now expected in 1942. Dredging for the new basin and its deep approach channel is practically finished, and tracks have been laid on the reclaimed land, but the large classification yards are left for postwar construction. A dry-dock 1,250 ft. long is projected, large enough for battleships and the largest class of liners; it would be so divided by gates as to be used economically for smaller vessels, and also used as a commercial wet dock. While the cost would be about \$5,000,000, it is suggested that the sale of the large area of reclaimed land for industrial sites and other purposes would pay for the entire harbor project, including the dry-dock.

A new African west-coast port, established and fortified by the Vichy government of unoccupied France at Abidjan, on the Ivory Coast, is said to be part of a French-German scheme for control of the northwest coast, threatening the British port of Freetown and the Free-French port of Pointe-noire. In Spain, the government has a ten-year program of public works construction, which includes extensive port and harbor works. It has also issued a decree for the enlargement of the port of Vigo, on the Atlantic coast. War traffic between Great Britain and Turkey has necessitated improvement of Turkish ports, especially to expedite the unloading of such heavy material as locomotives and tanks. Contracts have been given to British firms for building piers and otherwise modernizing the harbors at both Alexandretta and Mersina.

E. E. RUSSELL TRATMAN.

PORTUGAL. A republic of southwestern Europe. Capital, Lisbon.

Area and Population. The area is 35,582 sq. mi. (continental, 34,386; Azores and Madeira, 1,196), and the population was estimated at 7,539,000 on Jan. 1, 1940 (6,825,883 at the 1930 census). Living births in 1939, 26.5 per 1,000; deaths, 15.5 per 1,000. Of 13,609 emigrants in 1938, 9,314 went to Brazil. The 1930 populations of the chief

cities were: Lisbon, 594,390 (1936 estimate, 650,000); Oporto, 232,280; Setúbal, 46,398; Funchal (in Madeira), 31,352; Coimbra, 27,333; Braga, 26,692; Evora, 22,061.

Colonial Empire. The overseas possessions of Portugal occupy an area of approximately 808,363 square miles. In 1938 the population was estimated to total 9,405,000. Colonies not listed in the accompanying table will be found in separate articles under their respective titles: Namely, ANGOLA, CAPE VERDE ISLANDS, MACAO, MOZAMBIQUE, PORTUGUESE GUINEA, TIMOR.

Colony (Capital)	Sq. mi.	Population
Portuguese India ^a (Nova-Goa)	1,538	601,000 ^b
São Thomé and Príncipe (São Thomé)	386	59,000 ^b

^a Includes Daman, Diu, and Goa. ^b 1936 census

Defense. Military service is compulsory for men from 20 to 48 years of age. As of Jan. 1, 1941, the standing army totaled 30,868 and the air force 868. There were 155,000 trained reserves but no equipment for them. The navy consisted of 7 sloops, 6 destroyers, 7 gunboats, 3 submarines, and a dozen auxiliary vessels. The naval personnel on Jan. 1, 1941, included 719 officers and 5,550 other ranks.

Education and Religion. Education is compulsory. The census of 1930 indicated that 67.8 per cent of the population were illiterate. Efforts to spread elementary instruction were thereafter intensified. In 1938 the public elementary schools numbered 7,937; teachers, 10,149; pupils, 458,463. In addition, individuals hired by the government gave elementary instruction in small villages to some 50,044 pupils. Secondary schools numbered 43 and had 958 teachers and 18,532 pupils. The three universities and their totals of students were those of Lisbon, 3,035; Coimbra, 1,631; Oporto, 1,213. The Roman Catholic faith prevails. The government maintains religious liberty for the individual but signed in 1940 a concordat with the Holy See assuring the preservation, to the Roman Catholic Church, of several specific rights.

Production. Agriculture is the leading occupation, followed by forestry, fishing, mining, and manufacturing. The 1933 constitution provided for Portugal's economic reorganization along corporative lines. In 1941 over 70 per cent of all exports were subject to state (corporative) control. Production of leading farm products in 1939 was (metric tons): Meat, 67,700; wheat, 516,100; barley, 39,200; rye, 98,800; oats, 91,100; corn, 364,700; potatoes, 606,000. Rice production (1939) was 3,510,000 bu.; olive oil, 22,000,000 gal.; wine, 203,943,000 gal.; fish catch, 180,400 metric tons, valued at \$7,180,000 (excluding certain kinds); sardines canned, 23,055 metric tons. Portugal is the world's leading producer and exporter of cork (291,886,000 lb. exported in 1939). Mineral output in 1940 was (in metric tons): Coal and lignite, 376,520; tin ore, 2,239; tungsten ore, 4,040; mixed tin and tungsten ore, 924; pyrites, 372,506; sulphur, 10,076. Chief manufactures: Cotton textiles, shoes, cement, lime, glass, fertilizers, paper, household wares, soap, chinaware, farm implements, cork wares, tiles, hardware, refined sugar, and olive oil. Also see *History* below.

Foreign Trade. Imports in 1940 were valued at 2,523,500,000 escudos (2,081,500,000 in 1939); exports, 1,612,600,000 escudos (1,339,300,000 in 1939). Chief imports in 1940 (in million escudos): Coal and coke, 208.0; chemicals and drugs, 177.2; mineral oils, 169.8; raw cotton, 165.3; yarn, cloth, etc., 151.4; vehicles and ships, 146.7; iron and

steel, 134.1; machinery and apparatus, 124.1. Leading exports (in million escudos): Cork and its products, 270.8; wine and other beverages, 248.8; fish products, 238.1, cotton manufactures, 82.3; olive oil, 78.4; wolfram and tungsten ores, 68.8. Trade is mainly with Great Britain, the United States, Germany, and the Portuguese colonies. See TRADE, FOREIGN

Finance. Budget estimates for 1941 anticipated total receipts of 2,783,700,000 escudos and expenditures of 2,783,200,000 escudos. Closed accounts for 1939 showed a surplus for the 12th consecutive year as against almost continual deficits during the republican period of 1910-26. The public debt was steadily reduced after 1928. On Jan. 1, 1940, it totaled 6,322,000,000 escudos (about \$133,000,000), of which 3,315,000,000 escudos was external. The escudo, which was closely linked to the pound sterling, exchanged at an average of \$0.0404 in 1939 and \$0.0371 in 1940.

Transportation. There are 2,150 miles of railway lines, which normally transport about 30,000,000 passengers and nearly 8,000,000 tons of freight annually. In 1941 services were sharply curtailed for lack of coal. Highways extend 8,700 miles. Eleven rivers are navigable for varying distances. As a result of the European War, Lisbon became one of Europe's most important shipping and air traffic centers. It was a base for air lines to most parts of Europe, England, and North and South America. The merchant marine on June 30, 1939, comprised 266 vessels of 269,118 tons. In 1938 a total of 10,178 ships of 30,567,561 tons entered Portuguese ports

Government. Under a constitution adopted Mar. 19, 1933, Portugal is governed as a corporative state. It has as its executive head a President, elected by the vote of the people to a term of seven years. The people also elect a National Assembly, serving for four years. The popular vote extends to both sexes but is restricted, unequally as to the two, by requirements of literacy or of the payment of direct taxes. A Corporative Chamber of 79 appointed members represents the interests of local "autarchies" and of certain social groups, administrative, economic, cultural, and moral. But one single political party is allowed to function. Entitled the National Union, it supports the government. The President appoints the Premier and he in turn names his Cabinet, which is not responsible to the National Assembly. President, Gen. Antonio Oscar de Fragoso Carmona, who was elected without opposition Nov. 29, 1926, and twice reelected, the second time for the term ending Apr. 15, 1942. The unofficial dictator was Dr. Antonio de Oliveira Salazar, Premier and Minister of War, Finance, and Foreign Affairs, heading a military-civilian Cabinet formed in 1926 and reconstituted in 1936 and 1940.

HISTORY

Portugal, its economic strength seriously impaired in February by a destructive hurricane, burdened with the continued ingress of refugees and with hindrances to commerce with its colonies, passed the year in dread that belligerents would seize either Portugal itself or parts of its colonial empire. The first step in such occupation actually occurred in December, when Australian and Dutch forces occupied Portuguese Timor, north of Australia.

Hurricane of February 15. Striking first the island of Madeira, February 15, a hurricane of exceptional violence passed on northeastward, ravaging

continental Portugal and continuing into Spain. According to such estimates as appeared, it took 400 lives, injured 2,000 persons, and did material damage to the amount of \$100,000,000. Some 700 fishing craft were lost and many others damaged, greatly cutting down the equipment of the fisheries that normally provide a very substantial part of the country's livelihood. The loss of olive trees was put at one-tenth or more of the entire number, a corresponding drop in the country's heavy production of olive oil was likely to reduce this important source of wealth until the growth of new trees. The loss in almond trees and fruit trees was similarly sharp. It seemed likely that the forests had lost heavily in cork oaks and pine trees, overthrown by wind, and that the output of cork and of naval stores would long show the effect. The monetary estimate of total damage was exceedingly great in proportion to the limited area and the modest economic wealth of Portugal. Yet the disaster received comparatively little attention and the concern, in Portugal and outside, whether the country could maintain its independence and territorial integrity

Fears of Invasion. From early spring until the time when the German forces became definitely committed to a long Russian campaign, the Portuguese had to apprehend German seizure of the country, on one hand, and on the other, an occupation of some of the Portuguese islands or other possessions by the opponents of Germany. The Government made successful efforts to convince both of the belligerent parties in Europe that an aggression would help nobody. Herein the Government had behind it the evident prospect that an aggression, wherever started, would result in the division of Portuguese territory between the Germans, who would acquire the continental European part, and the adversaries of Germany, who would take the colonies and islands.

The peaceable bombardment of the country by means of German propaganda through the radio gave uneasiness early in the year, other countries' experience suggested that troops might soon follow. In mid-April a party of 800 Portuguese soldiers sailed to reinforce the Azores; two more contingents went there before midsummer. Nevertheless the possibility of a German expedition against these islands gave rise to anxiety and discussion in England, as a possible way of interrupting ships' passage between Great Britain and the North American ports. In the United States, President Roosevelt adverted to the Azores in a speech transmitted by radio; in its course he represented the possible German capture of Portuguese islands in the Atlantic as a peril to the United States.

The Portuguese Government promptly presented, May 30, a note of protest to the U.S. Secretary of State, the text of which was not officially published. Secretary of State Hull replied, June 10, in a note saying, among other things, that his Government "harbors no aggressive intentions against the sovereignty or territorial integrity of any other country." But he added: "Our policy today is based upon the inalienable right of self-defense. The Government of the United States cannot but view with increasing anxiety the constantly expanding acts of aggression on the part of a certain belligerent power." The press questioned the President about this exchange of notes immediately after the delivery of the answer to Portugal. He disclaimed knowledge of either note.

Under these circumstances the Portuguese Government sought further light on the United States' utterances on the subject; and the journal *Diario*

da Manha of Lisbon declared that the Portuguese would defend the Azores and had "the will and right to defend themselves against any aggression no matter whence it comes." A month later the Portuguese Minister at Washington announced, July 13, that he had the desired assurances that the United States would not seek control of the Azores, Cape Verde, or other Portuguese islands. Also see BRAZIL under *History*.

Seizure of Timor. Portuguese Timor, Portugal's part of the island of that name, was occupied later in the year by troops under the authority of the Australian and the Dutch Governments. The remainder of the island being a possession of the Netherlands and the Japanese submarines reportedly operating in the region, while distance and scantiness of means prevented Portugal's adequately defending the coast of her territory, the Netherlands had the warrant of need for such action as might keep the Japanese from lodging on these coasts. The Australians, since the northern coast of Australia lay 300 miles south, had like reason of their own. The Portuguese authorities on the island apparently protested but did not offer armed resistance. The Government of the Netherlands, in an announcement from London, December 18, revealed the occupation and declared the continuance of Portuguese sovereignty.

Portugal summoned the National Assembly in special session immediately and asked the occupying Governments, December 19, to withdraw their troops immediately. Foreign Minister Salazar in presenting to the Assembly the circumstances in Timor revealed that the British Government had since December 4 sought an understanding that would bring them Portuguese permission to put troops in Portuguese Timor, which proposal had been refused.

Other Occurrences. Lisbon was troubled early in the year by bandits who occupied themselves impartially with subversive political terrorism and with private assassination and robbery. Fourteen of them were sentenced to long terms of prison, March 23. Portugal and Spain signed, May 21, economic accords that effected concessions for trade, free visas on either side for passports, equal rights for ships in Portuguese ports, and preference, as to surtaxes, for Portuguese colonies' goods in Spanish ports. On November 9 the Government created a commission to control production and exports and to limit prices for goods in domestic trade.

See GREAT BRITAIN, NETHERLANDS INDIES, and SPAIN, under *History*.

PORTUGUESE EAST AFRICA. See MOZAMBIQUE.

PORTUGUESE GUINEA. A colony of Portugal situated on the west coast of Africa between French Guinea and Senegal. Area, 13,944 square miles; population, 415,200, mostly natives of various tribes. Bolama, the capital, located on an island of the same name, became in 1941 an air base for Pan American Airways planes on their alternative southern route across the Atlantic. Bissao is the chief port. Imports in 1938, about \$1,171,847; exports, \$1,288,464. See PORTUGAL under *Colonial Empire*.

PORTUGUESE INDIA. See PORTUGAL under *Colonial Empire*.

PORTUGUESE WEST AFRICA. Same as ANGOLA (q.v.).

POST OFFICE. The Post Office Department is the largest civilian department of the United States Government, with 338,114 regular employees and

some 44,095 post offices and 6,553 branches and contract stations. During the fiscal year 1941, it transported and delivered approximately 29,236,000,000 pieces of mail, weighing about 3,125,000 tons. This was an increase over the previous fiscal year of 1,486,000,000 pieces and 185,000 tons. The audited revenues of the Post Office Department for the fiscal year 1941 amounted to \$812,827,735, the highest in the history of the postal establishment.

FRANK C. WALKER.

POSTWAR PLANNING. See CONSTRUCTION INDUSTRY; LEAGUE OF NATIONS.

POTASH. Production of potash in the United States in 1941 amounted to 480,000 tons (366,344 tons in 1940) and all fears that a possible shortage such as developed during the war years 1915-1918 were put to rest. Foreseeing an appreciable decrease in imports for 1941, potash was put under export-license control by government order, Jan. 10, 1941. A third mine opened in the Carlsbad, New Mexico, area was in full operation in 1941 and helped to swell the year's output. Production capacity for 1942 was expected to reach 600,000 tons, enough for all United States requirements with sufficient margin for exports to friendly countries.

Potassium sulphate, formerly available only from abroad, was produced in 1941 chiefly by two companies in California and New Mexico. A third put out sulphate of potash-magnesia. The basic price of 53½¢ a unit for muriate remained unchanged to June, 1941. But a 2½-4½¢ increase per unit for 50 per cent K₂O muriate from the New Mexico mines was reported for the 1941-42 period. A \$2 increase per ton to \$38.25 for sulphate was expected for the same period. A discovery value of 85¢ a ton was granted to the United States Potash Company by the U.S. Board of Tax Appeals on a workable deposit of 14,000,000 tons of potash.

Imports for 1941 included 20,000 tons of 50 to 60 per cent muriate from Spain, and 16,000 tons of potash nitrate from Chile.

POTATOES. The 1941 potato crop in the United States was estimated by the U.S. Department of Agriculture at 357,783,000 bu. harvested from 2,733,000 acres averaging 130.9 bu. compared with 378,103,000 bu. in 1940, 2,865,000 acres, and 132 bu.; and the 1930-39 average of 370,045,000 bu., 3,296,000 acres, and 112.6 bu. The 18 surplus late potato States produced 242,217,000 bu. and were led by Maine with 44,745,000 bu., New York 27,676,000, Idaho 27,450,000, and Pennsylvania 20,540,000 bu. The 12 other late potato States made 38,314,000 bu. with Ohio 10,614,000 bu. leading the group. These 30 late potato States made a total of 280,531,000 bu. The seven intermediate potato States led by New Jersey with 10,360,000 bu. totaled 29,935,000 bu. and the 12 early potato States led by California with 10,101,000 bu. and North Carolina with 6,636,000 bu. totaled 47,317,000 bu. The seasonal average price per bu. (preliminary) received by farmers in late potato States was 68.9¢, in intermediate States 68.6¢, in early potato States 75.0¢, or a National average of 69.5¢ and an estimated production value of \$248,715,000 (1941), compared to 53.8¢ and \$203,345,000 (1940). See ENTOMOLOGY, ECONOMIC.

POULTRY. Stimulated by improved market conditions and a very favorable feed situation, both as to quantity and price, poultry production in the United States reached unprecedented levels during

1941. The numbers of laying hens were somewhat below 1940 levels to midsummer but increased steadily thereafter, the 336,766,000 on farms at the end of December being 5 per cent higher than a year earlier. Egg production per hen averaged higher during every month of 1941 than for the previous year. Total egg production reached 40,322 millions, 4 per cent above that of 1940 and 10 per cent above the preceding 10 year average. An estimated 1,055 million chicks were produced by commercial hatcheries, 28 per cent more than in 1940, with November and December hatchings exceeding 1940 levels by much wider margins. The marketing of young chickens established a new record, with an approximate total of 3,012 millions lb. (live weight basis) being slaughtered during the year, about 14 per cent above that of 1940.

With retail prices of chickens advancing less than that of other meats, consumption during the closing months of 1941, also was estimated to be the highest on record. The number of turkeys produced in 1941 was estimated to be 33,553,000 or only 0.3 per cent greater than in 1940. The market receipts were actually below 1940 levels indicating that larger than normal numbers were retained on farms for breeding purposes.

Prices for eggs, chickens, and turkeys during 1941 were consistently above 1940 levels, prices received by farmers in December averaging 30, 15, and 25 per cent respectively higher than a year earlier. Food production goals for 1942 called for 11, 13.6, and 10 per cent increases above 1941 levels for eggs, chickens, and turkeys respectively. To protect farmers against an abnormal market decline, the government guaranteed prices for eggs and chickens of not less than 85 per cent of parity to Dec. 31, 1942.

With dried eggs greatly in demand for lend-lease shipment, capacity for drying eggs was more than trebled during the year. Over 40 million lb. of dried eggs were produced in 1941 or approximately four times the previous record output of 1939. Cold storage stocks at the end of the year included 551,000 cases (30 dozen each) of shell eggs, 95,561,000 lb. of frozen eggs, and 218,374,000 lb. of frozen poultry, 11 per cent below and 31 and 5 per cent above 1940 levels respectively. The Federal Government made direct purchases of 52,645,230 dozen fresh eggs, 66,190,000 lb. of frozen eggs, and 44,614,000 lb. of dried eggs during the year and in addition over 60 million dozen eggs were distributed to low income families under the Blue Food Stamp Plan.

Mainly because of lend-lease shipments, egg exports were far above normal in 1941, the total for the first 9 months of the year including about 23 million dozen shell eggs and 23¼ million lb. of dried or frozen eggs, as compared with 3½ million dozen and 127,489 lb. respectively for the corresponding period of 1940. Principal imports consisted of approximately 3 million dozen shell eggs, mainly from Argentina, and about 2 million lb. of dried yolks.

Fragmentary information from European countries indicated a general drastic reduction in egg production and forced liquidation of laying flocks in the face of steadily decreasing feed supplies. Denmark, an important exporting nation, produced only 47 per cent as many eggs during the first half of 1941 as in the corresponding period of 1940. Swedish production was reduced about 30 per cent below the 1940 level and strict rationing was adopted late in the year. Italy, facing a serious shortage, blocked all egg stocks in midsummer and placed distribution under the Ministry of Agricul-

ture. Great Britain has been extremely deficient in shell eggs since midsummer 1940, but greatly increased imports of dried and frozen eggs has tended to relieve the situation there. See AGRICULTURAL COOPERATION; VETERINARY MEDICINE.

E. C. ELTING.

POWER, DIVISION OF. The Division of Power of the Department of the Interior was created on Apr. 18, 1941, by order of Secretary Ickes. The order stated that the new Division would "have supervision over all functions in connection with electric power matters in the Department of the Interior, the study of power problems, and the coordination of power policies and activities within the Department and with other agencies dealing with power." Pursuant to the order, the Director of the Division reports directly to Secretary Ickes.

One of the first problems to confront the newly created Division involved the proposed lease agreement submitted by the City of San Francisco as an attempt to comply with the Raker Act. This agreement was analyzed, and conferences were held with representatives of the Federal Power Commission and the Department of Justice. Secretary Ickes determined that the plan did not comply with the Act and subsequently representatives of the Division negotiated with City officials concerning submission of a new plan and a further stay of the outstanding injunction.

The Division is directly concerned with the many problems, requiring departmental action, which arise in connection with the generation and distribution of power at the projects operated by the Bureau of Reclamation, of which one of the most important is the Boulder Canyon Project. Immediately upon its establishment the Division was required to work with the personal representative of the Secretary in drafting regulations and negotiating contracts under the Boulder Canyon Project Adjustment Act. This work extended over a period of nearly two months and culminated in the execution of the contracts and the promulgation of the regulations by Secretary Ickes.

The Reclamation Project Act of 1939 affirms the policy of Congress that preference in the sale of power shall be given to municipalities and other public corporations and to cooperatives, so as to distribute the benefits of the public power systems as widely as possible. The Division of Power is responsible for giving effect to this policy. Since its inception, the Division has reviewed and passed upon power sales contracts or other power matters relating to the following Reclamation projects, in addition to those already mentioned: Shoshone and Kendrick projects in Wyoming, North Platte Project in Nebraska, Minidoka and Boise projects in Idaho, Deschutes project in Oregon, Parker Dam project in Arizona, Strawberry project in Utah, and others located in each of the far western States. The Division has also been considering power problems which have arisen in Puerto Rico and the Virgin Islands.

One of the major activities of the Division has been assisting the Bonneville Power Administration in its negotiations with the Office of Production Management and Defense Plant Corporation in regard to the location of plants for the production of critical materials, contracts for the supply of power, and purchase of necessary electrical equipment. Coordination of the program for the installation of additional generating facilities at Grand Coulee Dam and the estimates of both the Bonneville Administration and the Bureau of Reclamation for funds to proceed with the construction program

during the current fiscal year are discussed and reviewed with those agencies. The Bonneville Power Administration is engaged in negotiations with several utility companies in its region, looking to the acquisition of their properties by local public power distributing bodies. The Division of Power has been following these negotiations closely and advising the Bonneville Power Administration on matters of policy and of financing the public utility districts.

The Division is directly concerned with the many of the possibility of providing additional sources of power for defense use on existing or proposed projects under the jurisdiction of the Department of the Interior. The staff of the Division has worked with other Divisions of the Department, as well as with the Federal Power Commission, the Office of Production Management, and the Corps of Engineers of the War Department upon this matter. In connection with these studies the Division also has undertaken to consider plans for mineral resource utilization and for industrial development which will assure a well balanced defense program as well as the continuance of a market for power after the defense emergency. Such work on defense power supply and future planning looks to the development of hydroelectric facilities that might be placed in closer geographic and economic relationship to domestic sources of critical raw materials

PRESBYTERIANS. A religious connection adhering to a system of church government by presbyters or elders and having some 60,000,000 members throughout the world. In the United States there are ten Presbyterian bodies, the largest of which follow. See also RELIGIOUS ORGANIZATIONS.

Presbyterian Church in the United States of America. This is the largest body of the Presbyterian communion, being represented by churches in every State of the Union and having official mission stations in Alaska, Cuba, Puerto Rico, and 16 foreign lands. In 1941 its churches in the United States and abroad were organized into 42 synods and 276 presbyteries. Statistics for the year ended Mar. 31, 1941, showed a total communicant membership in full standing of 2,013,247, with adherents numbering approximately 5,000,000. The Sunday school enrollment totaled 1,453,225. The number of churches was 8,733 and of ministers 9,538. Contributions during the year amounted to \$42,200,443, of which \$35,173,337 was for current expenses and \$7,027,106 for benevolences. The Board of National Missions received \$2,296,154; the Board of Foreign Missions, \$2,167,989; the Board of Christian Education, \$519,748; and the Board of Pensions, \$151,434, all from living givers. The Church maintains 53 colleges and 11 theological seminaries. It published three national official periodicals, *Monday Morning, Everyone,* and *Women and Missions.*

The 153rd annual General Assembly was held at St. Louis, Missouri, May 22-28, 1941. The Rev. Herbert Booth Smith, D.D., L.H.D., pastor of Immanuel Presbyterian Church, Los Angeles, California, was elected Moderator. In the matter of Church cooperation and union the Assembly directed its three Boards of Foreign Missions, National Missions, and Christian Education to appoint committees to confer with similar committees of the Presbyterian Church in the United States (Southern). Though the General Assembly expressed its

belief that the United States could do more for a lasting peace by "remaining free from military participation in the present conflict," yet it declared that "it is the duty of a Church which worships a God of justice to recognize a moral distinction between enslaving dictatorships which invade the lands of others, and those peoples which are valiantly defending their liberties and spiritual heritages." The Assembly approved the establishment of the Presbyterian United World Emergency Fund committee and established a Presbyterian Emergency Service Commission. The Church has its headquarters in the Witherspoon Building, Philadelphia, Pa., in charge of the Rev. William Barrow Pugh, D.D., LL.D., Stated Clerk.

Presbyterian Church in the United States (South). This division of the Presbyterian denomination covers the territory commonly known as the Southern States. It was composed in 1941 of 17 Synods (in most cases, corresponding to State lines) and 88 Presbyteries, with 3,497 organized churches, 2,475 ministers, and 538,176 members. During the year 16,190 were received on confession of faith, and 23,379 by certificate. There were 9,670 adult baptisms and 5,630 infant baptisms. The Ruling Elders numbered 17,795, and deacons, 20,484. Contributions for current expenses during the year amounted to \$3,576,295, for pastors' salaries \$3,133,485, for building expense \$2,110,369, and for benevolences \$3,490,130, a grand total of \$12,310,279. The total per capita gift was \$22.87, of which \$6.48 was for benevolences and \$16.39 for current expenses.

Foreign mission work has been carried on in six countries: Africa, Brazil, China, Japan, Korea (Chosen), and Mexico, among 36,000,000 people. Three hundred and seventy-seven American missionaries have constituted the foreign working force. The war, of course, disrupted the work in the Orient. Most of the missionaries to China, Japan, and Korea had been evacuated to the homeland some months prior to the entry of America in the war with Japan. However, Japan's sudden attack on the Hawaiian and Philippine Islands found about fifty in the three countries and there is much uncertainty as to the treatment which is being accorded those who are in territory controlled by Japan.

In the homeland the church maintains four theological seminaries, one training school for lay workers (white), two training schools for colored people, thirteen colleges, eight junior colleges, two preparatory schools, three mission schools, four mountain schools, two Mexican mission schools, and sixteen orphans' homes and schools. The official organ of the church is the *Presbyterian Survey*, published monthly by the Presbyterian Committee of Publication, Richmond, Va. Privately owned weekly papers of the denomination are *The Christian Observer*, Louisville, Ky., and *The Presbyterian of the South*, Richmond, Va.

The Eighty-first General Assembly of the church convened in Montreat, N.C., May 22, 1941, with 345 commissioners present. Rev. Chas. E. Diehl, D.D., LL.D., President of Southwestern (The College of the Mississippi Valley), Memphis, Tenn., was elected Moderator. The Ministers' Annuity (Pension) Fund was put into operation on Apr. 1, 1940, and during the year which ended on Mar. 31, 1941, the Presbyteries retired 92 ministers who were entitled to retire because they had reached or exceeded the age of sixty-five years. Each of these was granted a pension based on the number of years of service to the Church. The 1942 meeting of the General Assembly will convene in the First Presbyterian Church, Knoxville, Tenn., on May

28. Rev. E. C. Scott, D.D., is Stated Clerk and Treasurer, with office at 1120 Liberty Bank Building, Dallas, Tex.

United Presbyterian Church of North America. A member of the family of Presbyterian Churches, of Secession and Covenant origin, formed by the Union in Pittsburgh, Pa., May 26, 1858, of the Associate and Associate Reformed Churches. The General Assembly of the Church convened in Indianapolis, Ind., May 21, 1941. The membership of the church is 188,131 in America and 67,767 in Egypt and India. The contributions in America averaged \$22.98 for the year. The Moderator of the General Assembly is Rev. R. L. Lanning, D.D., of Pittsburgh, Pa. The Rev. O. H. Milligan, D.D., of Avalon, Pittsburgh, Pa., is the Principal Clerk. The Executive Secretary of the Board of Administration is the Rev. T. C. Strangeway, D.D., Pittsburgh, Pa.

Cumberland Presbyterian Church. One of the Presbyterian bodies whose chief strength is in the Southern States. The 1941 statistical report shows: churches, 1,105 reporting, ministers, 808, total membership, 73,759, a net gain of 402 members over the previous year, with 165 churches making no report.

A general assembly which meets annually is the supreme judiciary, the 1942 meeting to be held in McKenzie, Tenn., June 18-23, 1942. Rev. L. L. Thomas, D.D., McKenzie, Tenn., was Moderator of the general assembly in 1941 and the Rev. D. W. Fooks, of Nashville, Tenn., was stated clerk, treasurer, and general secretary.

PRICE ADMINISTRATION, Office of (OPA). The Office of Price Administration, formerly known as the Office of Price Administration and Civilian Supply, was created Apr. 11, 1941, by executive order of the President. Into this one agency were combined activities formerly performed by the Commissioners in charge of price stabilization and consumer protection in the advisory commission to the Council of National Defense, the initial organization set up to direct the nation's armament program. The executive order charged the agency with taking "all lawful steps necessary or appropriate in order to prevent price spiraling, rising costs of living, profiteering, and inflation resulting from market conditions caused by the diversion of large segments of the nation's resources to the defense program, by interruption to normal sources of supply, or by other influences growing out of the emergency." Additional responsibility of OPA, through the consumer division, is to see that the standard of living is maintained at the highest level consistent with the military defense requirements.

Organization of the Office of Price Administration is set up as follows: Administrator, appointed by the President, Deputy Administrator, under the Administrator; Director of the Price Division; Director in charge of the Consumer Division; General Counsel. These three are under direction of the Deputy Administrator.

In the Price Division are fourteen commodity sections, each headed by a Price Executive in charge of price work for all commodities in his section, a research division, and a division of accounting, analysis and review. Commodity sections include: consumers durable goods; industrial and agricultural machinery; copper and brass; chemicals, drugs, and paints; rubber and rubber products; paper and paper products; textiles; leather goods and apparel; automobiles and trucks; food and food products; fuels; lumber and building materials; zinc, lead, and tin; and steel, iron, and steel

products. Another section handles rent problems.

In the Consumer Division there are three sections. They deal with consumer relations, consumer standards and needs, and consumer publications.

There are four general classifications into which fall price actions taken by the Office of Price Administration: (1) Warnings concerning price increases which are deemed unjustified. (2) Informal agreements with individual concerns on prices they charge for their products. (3) Letters to individual members of industries, asking them not to charge prices higher than those prevailing on specific dates. (4) Establishment of formal price schedules, setting maximums which may be charged for commodities specified in the schedules. A general practice of OPA has been to hold conferences with representatives of companies whose prices are under consideration. In many cases industry panels have been set up, composed of representatives of various concerns in the industry, to meet OPA officials and to offer advice in working out price schedules or other actions.

A total of 63 price schedules have been issued as of December 31. The schedules (including five marked with an asterisk which were revoked), and the commodities they cover, follow:

(1) Second-Hand Machine Tools; (2) Aluminum Scrap & Secondary Ingot; (3) Zinc Scrap Materials and Secondary Slab Zinc; (4) Iron and Steel Scrap; (5) Bituminous Coal *; (6) Iron and Steel Products; (7) Combed Cotton Yarns; (8) Nickel Scrap and Secondary Materials; (9) Hides, Kips, and Calfskins; (10) Pig Iron; (11) Cotton Grey Goods; (12) Brass Mill Scrap; (13) Douglas Fir Peeler Logs & Douglas Fir Plywood; (14) Raw Silk and Silk Waste *; (15) Copper; (16) Sugar; (17) Pig Tin; (18) Burlap; (19) Southern Pine Lumber; (20) Copper Scrap; (21) Formaldehyde; (22) Pennsylvania Grade Crude Oil; (23) Cotton Grey Goods; (24) Washed Cattle Tail Hair & Winter Hog Hair; (25) Fats and Oils and Their Products *; (26) Douglas Fir Lumber; (27) Anthracite *; (28) Ethyl Alcohol; (29) Coke; (30) Waste-paper Sold East of the Rocky Mountains; (31) Acetic Acid; (32) Paperboard Sold East of the Rocky Mountains; (33) Carded Cotton Yarn; (34) Wood Alcohol—Methanol; (35) Carded Grey & Colored Yarn Cotton Goods; (36) Acetone; (37) Normal Butyl Alcohol; (38) Glycerine; (39) Upholstery Furniture Fabrics; (40) Builders' Hardware & Insect Screen Cloth; (41) Steel Castings; (42) Paraffin Wax; (43) Used Steel Barrels or Drums; (44) Douglas Fir Doors; (45) Asphalt or Tarred Roofing Products; (46) Relaying Rail; (47) Old Rags; (48) Flashlights, Flashlight Batteries, and Flashlight Bulbs *; (49) Resale of Iron or Steel Products; (50) Green Coffee; (51) Cocoa Beans and Cocoa Butter; (52) Pepper; (53) Fats and Oils; (54) Douglas Fir Peeler Logs; (55) Second-Hand Bags; (56) Reclaimed Rubber; (57) Wool Floor Coverings; (58) Wool and Wool Tops and Yarns; (59) Kapok; (60) Direct Consumption Sugars; (61) Leather; (62) Cigarettes; (63) Retail prices for new rubber tires and tubes.

Briefly, this is how a price schedule is prepared: (1) A factual background regarding price problems is built up by research workers, cooperating with technical consultants, business advisors, and other Government agencies. (2) Representative industry members are invited to the Washington offices of OPA for discussion of the price problem under consideration. (3) The plan of action deemed most appropriate is formulated, these ob-

jectives being taken into account: prevention of inflationary price movements, encouragement of an adequate supply of vital materials, maximum use of existing trade practices and an effort to avert disturbances to the existing business structure and practices of an industry. When this preparatory work is completed, an economic brief is prepared, outlining economic details of the problem and giving reasons for recommending a definite line of action. A legal brief also is prepared, outlining legal problems involved in any proposed price schedule. These briefs, economic and legal, together with recommendations of staff members, are reviewed by department heads before they are placed before the Administrator for his approval and formal signature. See BUSINESS REVIEW; LIVESTOCK; MARKETING.

(The Emergency Price Control Act of 1942 became law on Jan. 30, 1942, and Leon Henderson was inducted as Price Administrator on February 11. All of the former "price schedules," including some 39 additional that were issued between Dec. 31, 1941, and Feb. 11, 1942, acquired the status of "regulations" within the meaning of the Act. On March 4 the OPA underwent an internal reorganization. The former single price division was replaced by five separate operating divisions—Food and Apparel; Industrial Materials and Equipment; General Products; Fuel; and Rent. An assistant administrator was placed in charge of each division. By Directive No. 1 of the War Production Board, issued Jan. 24, 1942, the OPA was given authority to ration commodities and goods at the retail level. Rationing of tires was begun at once, followed by rationing of new passenger automobiles. Sugar rationing was scheduled to begin early in the spring. A separate Rationing Division was being organized as of the close of February.)

LEON HENDERSON.

PRIMATES. See ANTHROPOLOGY.

PRINCE EDWARD ISLAND. A maritime province in eastern Canada. Area, 2,184 square miles. Population (1941 census), 93,919. Vital statistics (1940): 2,047 living births, 1,057 deaths, 702 marriages. Chief towns (1941 census): Charlottetown, capital (14,460), Summerside (4,978). Education (1938-39): 19,798 students enrolled in schools and colleges.

Production. The gross value of agricultural production in 1940 was \$13,387,000 (field crops \$8,290,000, dairy products \$1,765,000, farm animals \$1,617,000, poultry products \$951,000, fur farming \$544,000). Oats 3,726,000 bu. (4,998,000 in 1940), mixed grains 1,315,000 bu. (1,505,000), potatoes 142,000 tons (228,950), roots 91,000 tons (127,450), hay 368,000 tons (344,000), were the main field crops in 1941. Livestock (1940): 93,800 cattle (including 44,400 milk cows), 53,200 hogs, 43,900 sheep, 28,650 horses, 851,400 poultry. Fur output (1938-39): 74,748

pelts worth \$1,299,331. Fisheries catch (1940): 12,280 tons valued (as marketed) at \$714,900. Forest production (1939) was valued at \$551,000. Manufacturing (1939): 222 factories, 1,088 employees, \$1,243,979 net value of products.

Government. Finance (1940): \$2,030,366 for revenue and \$2,152,101 for expenditure; net funded debt, \$6,814,904. The executive authority is vested in a lieutenant governor who is advised by a ministry of the legislature. In the legislative assembly there are 30 members elected (15 by real property holders and 15 by universal male and female suffrage) for a five-year term. Four senators (appointed for life) and 4 elected commoners represent the province in the Federal Parliament at Ottawa. Lieutenant Governor, Bradford W. LePage (appointed Oct. 1, 1939); Premier, Thane A. Campbell (Liberal). See CANADA.

PRISONS, PAROLE, AND CRIME CONTROL. Three things stand out as one reviews the prison field during the past year: the effect of defense activities on prisoners and prison programs, the growth of probation and parole, and the reaction of the public against brutality in prison discipline. Perhaps the most important accomplishment of the year was the modification of the century-old statute forbidding the induction of any felon into the military service of the United States. The most significant proposal made was that offered by the American Law Institute in its model Youth Correction Authority Act. Most prominent in newspaper headlines were the prison activities of the States of California and Georgia. The population of Federal and State prisons showed a steadily downward trend during the past year due, no doubt, to improved economic conditions and the induction of large numbers of young men into the armed services.

Prisons and National Defense. Even before Dec. 7, 1941, prisoners everywhere in America were pleading for an opportunity to join in the defense program. Petitions to be allowed to help in some way in the world-wide struggle poured in from both Federal and State prisons, from individual prisoners, and from groups of inmates who want to do their part.

As the defense program gathered headway, Federal prisons especially felt the effect of increased orders and demand for production. In several Federal prisons, industries ran on several shifts daily to fill defense orders for canvas goods, textiles, and metal products. Production was doubled in some instances. Chairman of the Committee on Prisons and National Defense, Mr. Sam Lewisohn, proposed the organization of "Division M" with training courses in essential services in every prison so that on release prisoners may at once begin to aid in the defense program. In anticipation of such a demand, an Airplane Mechanics School was established at the Federal Reformatory at Chillicothe, Ohio.

Military Service for Ex-prisoners. One of the most significant results of the defense program as it relates to prisoners was the passage of a law approved

July 29, 1941, giving the Secretary of War power in "special meritorious cases" to waive the ban on the induction of ex-prisoners into military service. Concomitant with this recognition of the principle of individual treatment, the War Department, working in collaboration with the Selective Service System and the Federal Bureau of Prisons, issued regulations whereby all but certain classes of ex-prisoners are made eligible for military service, other things being equal. These regulations exclude those convicted of the heinous crimes of treason, murder, rape, kidnapping, arson, sodomy, or pandering; or of any crime involving sex perversion; or for any illegal dealing in narcotics or other habit-forming drugs; or those convicted more than once of any offense which may be punished by death or confinement for a term exceeding one year in a penitentiary or prison; or those on probation or parole unless released from supervision during the period of military service; or those previously discharged from the Army by other than an honorable discharge. This statute and these regulations for the first time officially modified the century-old provision barring all felons from military service, and are a most important recognition of the principle of democratic rehabilitation (as opposed to totalitarian extermination) of anti-social groups. As a result, a growing number of ex-prisoners took their places in various branches of military service, and the effect of such action was reflected in the heightened morale of those still in institutions.

Growth of Probation and Parole. The year 1941 marked the centennial of the beginning of probation as a means of treating criminals. An appropriate celebration was held in Boston in commemoration of that event since it was John Augustus, the Boston shoemaker, who first persuaded the courts to let him try to readjust a convicted criminal under supervision in the community. The results of that experiment have grown until at present both the Federal and 30 State governments now employ probation in dealing with youthful or first offenders or those whose crimes arise chiefly out of some unforeseeable circumstances which are adjustable in the community. As compared with approximately 20,000 offenders annually sentenced to confinement in prisons and reformatories in these 30 States over 17,000 offenders are placed on probation or given a suspended sentence. (Attorney General's Survey of Release Procedures, Volume II, "Probation," p. 36.) On June 30, 1941, there were 29,303 Federal offenders on probation as compared with 23,666 Federal offenders under confinement in institutions. There is no question but that readjustment of criminals under proper supervision in the community is proving to be the most satisfactory method of treating offenders.

Such community supervision is essential even if the offender is required to spend part of his sentence under observation or confinement in an institution. The steady growth of parole in spite of its critics fully attests this conclusion.

Action in at least eight States was taken during 1941 to strengthen and extend the operation of parole. The United Prison Association of Massachusetts began the year with a resolution asking the Governor to complete carrying out the recommendations of the Parole Commission, which in 1940 reported the results of an extensive investigation into pardon and parole practice in that State. The investigation had shown that beginning with Governor Ely in 1931 the malodorous practice of permitting political favorites to collect fees amounting to as much as \$10,000 for securing pardons for notorious criminals had prevailed for nearly ten

years in Massachusetts and that at least one member of the Governor's Council, since removed from office by the legislature, had made a regular business of dealing in pardons and paroles. As a result, sweeping changes in Massachusetts parole law went into effect in 1941 including a ban on all parole petitions from the prisoner or anyone acting in his behalf. The entire membership of the parole board was changed, and improvement in the operation of the parole system of Massachusetts was anticipated as a result of this action.

During the year Pennsylvania also passed legislation providing for a "streamlined" parole administration by a five-man board under the general supervision of the Superior Court and with 280 aides to be appointed under Civil Service regulations. Parole for all prisoners with sentences of two years or over (except life and death sentences which will remain with the Board of Pardons) will be handled by this board. Parole for prisoners having less than two years will continue to be handled by county court judges.

Alabama, Florida, and South Carolina all moved to abolish the pardon and parole racket by putting these matters in the hands of nonpartisan boards. In Florida the three-man board which also has supervision of probation, was chosen by competitive examination. Louisiana undertook a survey of its existing parole procedure preliminary to making needed reforms, and the grand juries of at least 50 counties in Georgia memorialized the legislature to end the pardon racket which has centered in the governor's office.

Maryland has announced a plan to improve its parole procedure by providing a parole officer and a welfare and employment officer at each of its three major institutions whose duties shall consist in collecting and presenting pertinent data about prisoners to the parole commissioner and in helping prisoners to find suitable homes and employment on release. Such officers are to be selected under the merit system.

In Virginia, one of the only two States not having some kind of parole program in 1941, a legislative committee has presented a report recommending the establishment of a state-wide probation and parole system, and the Legislative Advisory Council of that State has recommended that \$138,000 be included in the budget for the biennium 1942-1944 to set up such a program.

Prison Discipline. Considerable interest in the methods used in various prisons to enforce discipline was evinced during 1941 in a number of States. In Louisiana following a series of newspaper articles showing that as many as 10,000 floggings of prisoners had occurred in the past 13 years in Louisiana prisons, the Governor abolished the use of the lash as a method of punishment. In Texas, both the Board of Prison Managers and the legislature took action abolishing "the bat" in that State. In Alabama a warden who admitted flogging women as well as men prisoners was fired. To a single courageous and public-spirited State legislator, Floyd Barham, goes the credit for exposing the brutal beatings of convicts, the insufficient food and clothing, and the bribery of prison officials in renting of prison farms in Arkansas.

In Illinois and in Colorado, exposure of the use of the lash as a means of corporal punishment for juveniles resulted in the removal of the superintendents of two schools for delinquent boys, and in Colorado this included the request for the resignation of 39 out of 46 employees of the school. In West Virginia, the papers reported that the Industrial School for Boys at Pruntyville was "an institu-

tion at the mention of whose name informed citizens hung their heads in shame."

In California, investigations disclosed the brutal beatings of two juveniles committed to the Whittier State School for Boys and resulted in the discharge of several employees including the superintendent of the school and a complete overhauling of the policies governing the school and its administration. A new superintendent was chosen after several months of inquiry, but unfortunately he, too, resigned after only five months in office. The widespread attention which juvenile institutions have received during the past year or so can undoubtedly be traced to the work of The Osborne Association and its very excellent reports setting forth the facts regarding these institutions in many States.

Youth Correction Authority. The most constructive proposal made during the year was that proposed by the American Law Institute in its plan to create a Youth Correction Authority to handle all offenders between juvenile court age and 25 years of age. Under this program, youthful offenders convicted of an offense would be committed to the custody of a board or authority which would determine after a careful study and diagnosis of the case the best type of treatment to fit the individual case. Such treatment might or might not include institutionalization; it might involve assignment to training in a non-penal type of institution or to a job in industry where skill could be acquired in the course of work. It would include careful supervision and guidance. During 1941, at least one State, California, adopted such a law and began to experiment with this new method of dealing with youthful criminals. The Federal Juvenile Delinquency Act applies the same general principles to offenders 17 years of age or under has demonstrated the practical possibilities of such a procedure.

Growth of Case Work in Prisons. The basis for such progressive legislation is, of course, an adequate case history and diagnosis of each prisoner sometimes known as classification. The beginnings of this technique in about half of the major prisons and reformatories of the country were noted in the report on prisons of the Attorney General's Survey of Release Procedures published in 1940. During 1941 the extension of this system of study and diagnosis in the prisons of Alabama, Maryland, and Tennessee should be noted.

New Institutions. Several new prisons were opened or put into operation during the year. A new maximum security prison at Green Haven, N.Y., was about completed. At Chino, Calif., a new institution for reformable cases from San Quentin and Folsom was opened. Utah was undertaking the construction of a new State prison to replace its antiquated penitentiary at Salt Lake City.

A new industrial school built at White Hill, Penn., at a cost of \$4,500,000 for 1,400 youths 15 to 25 years of age was opened in March, 1941. Boys confined there were regarded as "cadets" and not prisoners and an educational system was proposed which it was intended should link this school with the State educational system from grades to high school. By year's end, however, a special investigating committee appointed by the Governor to investigate the shooting of several youths and the killing of one attempting to escape from the school, reported that without classrooms, classes, library, or even recreation fields, White Hill was "just another prison."

Prison Personalities. The retirement of Lewis Lawes as warden at Sing Sing in 1941 marked the completion of one of the most colorful careers in prison administration in America in modern times.

Beginning as a guard in a State institution in 1905, Mr. Lawes became warden of the famous "Big House" in 1920 and for over twenty years has been an outstanding personality among American prison officials. He has undoubtedly done a great deal to inform the public regarding the human side of crime and criminals and to interpret the offender to the public.

Warden Jesse Dunn of the State Penitentiary at McAlester, Okla., was killed during a prison break in which he was taken through the gate of his prison as a hostage by an inmate intent on escape. Warden Thomas Gore of Nashville, Tenn., narrowly missed a similar fate when two of his prisoners captured and bound him in the prison yard and forced him to walk them to the front gate. There the coolness and courage of Record Clerk Glidewell who drew a pistol and shot both prisoners dead, saved the day.

The Federal Government granted an ex-prisoner named Ray McMillan, an allowance of \$3,500 to compensate him for false arrest and imprisonment for a crime the commission of which was confessed by another man.

René Belbenoit, famous as the man who escaped from Devil's Island, the French penal colony in French Guiana, was forced to flee to Latin America for fear of deportation. A number of his former companions at the French penal colony taking advantage of the fall of France in 1940 escaped in small boats and finally landed in the United States where during the first few months of 1941 a group of citizens sought vainly to find some happy solution for their problems. Finally, no other satisfactory solution having been worked out, it was necessary to turn them all back to the French authorities at Martinique with the understanding, however, that they would not be returned to the penal colony in Guiana.

Prison Population and Crime Trends. The total population of the State and Federal prisons and reformatories in the United States, which had been about 180,000 on Jan. 1, 1940 and 1941, is estimated to have decreased to a slightly lower level on Jan. 1, 1942. The approximate total number of Federal prisoners in custody decreased from about 25,456 on Jan. 1, 1940, to 23,933 on Jan. 1, 1941. There was a further decrease to 23,116 on Jan. 1, 1942. The number of Federal probationers under supervision, which had increased from 28,563 on Jan. 1, 1940, to 29,472 on Jan. 1, 1941, showed a slight decrease to 29,283 (estimated) on Jan. 1, 1942.

The latest official crime statistics of the Department of Justice showing the number of offenses known to the police in 345 cities with populations over 25,000 for the first nine months of 1940 and 1941 indicate a decrease for robbery, burglary, and larceny, and increases for murder, manslaughter by negligence, rape, assault, and auto theft.

OFFENSES KNOWN TO THE POLICE IN CITIES WITH POPULATION OVER 25,000 JAN.-SEPT., 1940 and 1941 (*)

Offense	1940	1941	Increase or decrease (-)
Murder and non-negligent manslaughter	2,094	2,259	165
Manslaughter by negligence	1,073	1,234	161
Rape	3,478	3,729	251
Robbery	21,526	19,876	-1,650
Aggravated assault	18,833	19,871	1,038
Burglary—breaking or entering	113,176	106,225	-6,951
Larceny—theft	302,300	299,221	-3,079
Auto theft	68,418	72,901	4,483

(*) The above figures cover 345 cities with a combined population of 49,010,650

The accompanying table summarizes the situation.

PROBATION. See PRISONS.

PRODUCTION DIVISION. See PRODUCTION MANAGEMENT, OFFICE OF.

PRODUCTION MANAGEMENT, Office of (OPM). When the impact of defense needs upon the normal operations of American industry became apparent toward the end of 1940, a government operating agency was needed to coordinate defense production and to assure an adequate flow of materials to defense industries. The Office of Production Management was therefore established by Executive Order of the President on Jan. 7, 1941.

The new agency was charged not only with responsibility for accelerating production of tanks, guns, ships, airplanes, and other material for the Army and Navy, but also with the task of stimulating an increase of productive facilities wherever needed. For the attainment of these objectives, OPM was given broad power to put defense orders ahead of ordinary civilian supply through a system of priorities.

As a matter of organization, OPM was placed within the Office for Emergency Management in the Executive Office of the President. (See NATIONAL DEFENSE AND WAR AGENCIES.) At the same time, OEM took over the functions of the Advisory Commission to the Council of National Defense, and most of them were delegated to OPM. Administration of OPM was vested in a council of four, consisting of the Director General, Associate Director General, Secretary of War, and Secretary of the Navy.

In the beginning, OPM operated through three divisions: Production, Priorities, Purchases. In the course of the year, divisions of Labor, Materials, Civilian Supply, and Contract Distribution were added.

Under the OPM divisions of Production, Purchases, Materials, and Civilian Supply, 32 industrial branches were set up, each headed and staffed by experts familiar with the problems and practices of defense industries. Priorities specialists were attached to each of the industrial branches and given responsibility for carrying out the policies of the Supply Priorities and Allocations Board (q. v.) through their action on specific applications for priority assistance.

Each division of OPM was given specific responsibility for part of the general program for increasing war production and supplying material aid to other countries fighting the Axis Powers.

The *Production Division* was directly charged with increasing the rate of production of war materials, and especially with steps to encourage the expansion of productive facilities wherever necessary. In cooperation with the War and Navy Departments, private manufacturers and Federal financing agencies, the Production Division of OPM has taken an active part in the building of new factories for the manufacture of airplanes, new plants for finishing alloy steel, new shipbuilding facilities and ordnance factories, and in increasing the supply of raw materials for defense industries use.

By review of all major proposals for the purchase of war materials and construction projects,

the *Purchases Division* has prevented competitive bidding between the armed services, the Lend-Lease Administration and foreign governments. This division has also helped to secure an orderly scheduling of purchases by all agencies associated in the war program.

All American producers are required by law to accept war and essential civilian orders. The *Priorities Division* was set up to avoid jams in production schedules by indicating which orders are to be filled when there is a conflict. This division allocates the total available supply of certain scarce materials and types of equipment, such as metals and machine tools, and has made preparations to extend further the system of allocations.

The *Labor Division* of OPM was given the job of assuring the availability of men having the proper skills and training wherever needed by defense industries. In cooperation with NYA, WPA, and CCC, the Labor Division set up training programs for workers both in and outside of industry. It also has branches dealing with labor relations, defense housing, dislocation of labor resulting from scarcity of materials, labor standards in shipbuilding and other industries, and with the training and employment of Negroes and minority groups. (See SOCIAL SECURITY BOARD.)

The *Civilian Supply Division* was organized to determine the relative need for scarce materials among competing civilian demands, and was given jurisdiction over the industrial branches which deal primarily with production of civilian goods.

The *Materials Division* was made responsible for integration of the program for the supply of raw and semifinished materials needed for defense production. It also cooperates with the Priorities Division in determining the allocation of scarce materials.

The *Contract Distribution Division* has established field offices, conducted traveling exhibits, and worked with Army and Navy procurement officers to spread defense production throughout industry by encouraging subcontracting and the conversion of plants to defense use.

In addition to its seven major divisions, the Office of Production Management contains the President's Committee on Fair Employment Practice, a Bureau of Industrial Conservation, a Bureau of Research and Statistics, a Bureau of Clearance of Defense Industry Advisory Committees, and maintains a legal staff.

Operating on a front broad enough to cover the whole range of American industry, OPM was charged with responsibility for obtaining maximum production of defense materials while cushioning the shock to the normal economy as much as possible. Some of the specific achievements were as follows:

More than 6,000,000 workers were registered for defense jobs and defense training; more than 2,000,000 received industrial defense training outside of industry and in-training programs were set up in more than 1,800 plants handling war orders.

Close to half of \$9,200,000,000 earmarked for defense construction was represented by buildings in place at the end of the year. When the United States entered the war, about 1,500 defense construction projects had been completed and another 3,000 were under way.

American steel plants set a new production record of 83,000,000 tons in 1941, and the steel industry had undertaken an expansion program to add 10,000,000 tons to the annual capacity. Plans were completed for doubling the aluminum pro-

duction capacity, and both production and imports of other metals were greatly increased. Stockpiles of rubber, tin, cork, and hemp were accumulated.

Production of machine tools was close to 200,000 units in 1941, about double the volume produced in 1940 and eight times the normal production of 25,000 units a year.

Exact production figures for munitions became a strict military secret with the outbreak of war. However, in the first eleven months of 1941, the Navy commissioned 27 major combat ships, including two battleships, launched 41, and laid the keels for 128 more. Aircraft production had reached over 2,000 planes a month. Deliveries of merchant ships had reached two a week, and the shipyard capacity for merchant ships had been expanded to such an extent that deliveries of a ship a day were anticipated in the very early future. Production of tanks, guns, and ammunition had been greatly increased, and capacity to produce them was being expanded even more rapidly. Mass production of the materials and implements of war was getting into full swing at the end of the year.

Toward the end of the year, on December 18, the internal organization of OPM was rearranged in preparation for dealing with the vastly increased problems of production involved in a war program. The industrial branches which had previously reported to the division of Civilian Supply and the Purchases division were made directly responsible to the Director General and Associate Director General through a Special Assistant in Charge of Industrial Branches. With this change, the machinery of OPM was set up and functioning smoothly to handle the heavy load of the 1942 war program.

(The OPM was still functioning at the end of 1941, but was abolished Jan. 21, 1942 For a brief account of the new organization set up at that time, see WAR PRODUCTION BOARD.)

PROTESTANT EPISCOPAL CHURCH. The end of the first year of the Presiding Bishop's advance program—Forward in Service—found virtually every diocese in the Episcopal Church participating in the movement. Following a period of preparation, culminating in a Church-wide Roll Call at Whitsuntide, Forward in Service announced a two-fold plan for the year beginning in the Fall of 1941:

1. To make the dominant theme for the coming year Worship and Prayer, with the aim to enlist all baptized members in regular and devout worship and prayer, so that they may acquire the incentive and receive the power to go forward in service.
2. To perfect the organization in every parish so that it may be better able to play an active part in the ten-year program.

The increasing tension in the world during 1941, culminating in the actual involvement of the United States in the war could not but have its effects on the world-wide work of the Church. Aid-to-British-Missions, undertaken under the authority of Gen-

eral Convention, received a hearty response resulting in a speedy oversubscription of the \$300,000 sought and substantial help to eleven English missionary societies for their work in every corner of the globe. Among the well-known societies aided were Society for the Propagation of the Gospel, Church Missionary Society, Universities Mission to Central Africa, Jerusalem and Near East Mission, South American Missionary Society.

During the year the rapidly enlarged defense forces of the nation placed a large responsibility on the Church to maintain its ministry among the men in uniform. Upwards of 200 ministers of the Church were serving as chaplains with the armed forces and the Army and Navy Commission was inaugurating a campaign to raise \$385,000 to uphold this work. The campaign is scheduled for early 1942. In addition one of the Commission's most important services is aid to parishes near Army camps and Naval training stations where the facilities are inadequate to cope with increased responsibilities. Closely akin to these responsibilities are those arising from the gathering of large numbers, especially young people, in defense industries. These responsibilities the Church tried to meet through its regular parishes and its various social agencies such as Church Mission of Help.

As a result of the withdrawal of American Bishops from Japan (in carrying out the provisions of government regulations) the Church in that country, Nippon Sei Ko Kwai, elected Japanese to lead the dioceses formerly headed by Americans. The Japanese Church was already showing definite signs of ability to accept the new responsibilities and real leadership.

The Presiding Bishop's Fund for World Relief administered by the National Council's Department of Social Relations coordinated many tasks arising out of the world situation and gave help in many directions. Chief among these was its aid to refugees. Working closely with the American Committee for Christian Refugees, the Fund was able to secure many affidavits for support, passage money, resettlement opportunities and a vast amount of hospitality and friendly service for the refugees from racial, political, and religious persecution in Europe.

Other events of the year 1941 which should be noted are: The setting apart of the Presiding Bishop's Seat in the Cathedral of St. Peter and St. Paul in Washington, D.C.; the opening of the full length of the Cathedral of St. John the Divine, New York; a survey of the Church's work in the Hawaiian Islands (prior to Pearl Harbor) undertaken at the request of the Bishop of Honolulu and with his full cooperation; the 110th anniversary of the New York Protestant Episcopal City Mission Society; the campaign in the Diocese of Delaware to free all its parishes of debt—an indication of a trend throughout the Church.

During the year 1941 eight retired Bishops and one Suffragan Bishop died, three Bishops were consecrated: Noble C. Powell (Coadjutor: Maryland), Oliver L. Loring (Maine), Wallace E. Conkling (Chicago).

In 1941 the total number of communicants of the Episcopal Church in 7,835 parishes and missions was 1,519,048, an increase of 34,434 over the preceding year. The baptized persons numbered 2,162,022. The clergy numbered 6,200; 154 priests were ordained. In the 5,000 church (Sunday) schools, 472,694 pupils were enrolled. Baptisms during the year numbered 68,990, and confirmations 70,100. The government of the church centers in a General Convention which meets triennially.

The next session, the 54th, will be held in Cleveland, Ohio, in October, 1943. Between sessions of the General Convention the affairs of the church are conducted by the National Council.

The headquarters of the National Council, which is the board of directors of the Domestic and Foreign Missionary Society, is in the Church Missions House, 281 Fourth Avenue, New York. The official magazine is *FORTH—The Spirit of Missions*, Joseph E. Boyle, editor. The president of the National Council is the Presiding Bishop, the Rt. Rev. H. St. George Tucker, Bishop of Virginia.

PRUSSIA. See GERMANY under *Area and Population*.

PSYCHIATRY. As in all branches of science the increasingly disturbed state of the world has had a marked effect upon psychiatric research. The quota of clinical and laboratory studies of peace time has fallen off and the free exchange of scientific thought between nations has been checked. The war psychosis has engaged the attention of numerous writers in various fields, especially since the manifesto signed by 339 psychiatrists of 30 nations addressed to the statesmen of the world by the Netherlands Medical Association in 1935, wherein the pathologic and atavistic characteristics of the war mentality were pointed out and indicated prophylactic measures urgently advocated. Medicine recognized with apprehension the sociopathologic trends of which Germany was the infectious center; the statesmen of the world paid no heed. The psychopathic personality of the arch dictator-aggressor has also been dealt with by psychologists, psychiatrists, sociologists, anthropologists; and his morbid mentality and sadistic character have been increasingly demonstrated by his behavior and his utterances.

An outstanding event of the year was the visit to the United States and Canada of Dr. Robert D. Gillespie, psychiatric specialist to the R.A.F. who came as the Salmon lecturer. Dr. Gillespie spoke in key cities across the continent and also made his services available to military authorities in Washington and Ottawa. Significant points in his addresses: remarkably low incidence of neurosis in the Royal Air Force, owing to extreme care in selecting recruits; importance of shelter life and community centers in preventing nervous manifestations, the paramount value of useful activity for all classes in the common effort in fighting the war of nerves; extraordinary stamina of civilians under air raids; predisposition to neurosis of those who were timorous and nervous as children; striking immunity of children in general to fear of air raids unless adults around them become terrified; occasional examples of cure of neurosis and strengthening the personality through the very demands of service in civilian defense; war psychoses and neuroses are not different from those of peace time.

An extensive literature on military psychiatry grew up during and following the last war and is now expanding. Billings (*Am. Journ. Med. Sci.*, June, 1941) gave an excellent survey of the literature since 1938.

Lauren H. Smith, discussing "Psychiatric Aspects of Military Medicine" (*Med. Clinics of N. Amer.*, Nov., 1941), surveys the whole problem of the mentally unfit or disabled soldier. If all other considerations were disregarded, the financial aspect of this problem alone places it in the forefront of national economy. From 1923 to 1940 the tax payers contributed through the Veterans Administration to neuropsychiatric claimants from

the armed forces approximately one billion dollars. It has been estimated that every military mental patient will cost the nation during his lifetime between \$30,000 and \$34,000. The corresponding figure for civilian patients is about \$7,000. Brown (*Lancet*, May 31, 1941), Baillie (*Am. J. Psychiatry*, Jan., 1941), Campbell (*Journ. Am. Med. Assn.*, Apr. 26, 1941), and Sullivan (*Psychiatry*, Aug., 1941) presented various phases of this subject.

The vital question of civilian morale is dealt with in a remarkable volume issued by the Committee on National Morale, entitled "German Psychological Warfare" (1941). The November, 1941, issue of the *American Journal of Sociology* is devoted entirely to the subject of national morale, discussed by various authorities.

In the clinical field the disorders grouped under the heading 'schizophrenia' continue to claim major attention both in inquiries into the nature of these conditions and in studies of the newer empirical therapies. There is considerable agreement that at least two clinical subgroups can be separated: (a) a severely constitutional type with regressive symptoms during adolescence or earlier and a generally progressive course, which may be termed 'essential schizophrenia,' and (b) a form with more prominent reactive features, occurring in a previously well developed and functioning personality, with less uniform and characteristic symptoms than in the 'essential' type, and with more favorable outlook.

The severer forms are sometimes traceable to childhood. Bradley (*Schizophrenia in Childhood*, 1941) presents personal observations of these fortunately somewhat rare conditions in which the young patient gives the impression of seeking to withdraw from his environment. As would be expected clinical pictures are less clear-cut and without differentiation into the subtypes described by Kraepelin in the later-age cases.

Hypoglycaemic shock induced by insulin remains the treatment of choice in properly selected cases of schizophrenia. Emphasis must be placed upon the qualification 'properly selected.' It has been found that insulin following a course of electroshock treatments may give better results than insulin alone. Goldfarb (*Am. J. Psychiatry*, Nov., 1941) has also found the administration of vitamin B₁ advantageous during the course of insulin therapy. Electroshock is being used more extensively at the expense of other methods of convulsive therapy. The tendency is toward more conservative application however, 6 to 10 treatments usually being considered the maximum. Work is in progress on the use of weaker, potentially less dangerous current. Electroshock is mainly serviceable in the so-called affect psychoses (manic-depressive and involutional melancholia). See BIOLOGICAL CHEMISTRY under *Vitamins*.

Zehnder (*Monatsschr. f. Psychiatr. u. Neurol.*, 103: 231, 1941) in a study of schizophrenic siblings, on the basis of 92 cases in 38 families, found wide divergence of clinical types among children of the same family. These variations he attributed to environmental differences, a conclusion seemingly supported by the fact that psychoses developing in siblings in the same age range are likely to be similar, and dissimilar in siblings far apart in age.

There has been progress in biochemical and physiological studies as related to behavior and mental states. In an important symposium held by the American Association for the Advancement of Science on "Internal Environment and Behavior"

(*Am. J. Psychiatry*, Jan., March, May, 1941) McFarland, Gellhorn, Adolph, Shock, and Richter reported experimental work upon the delicate balance between internal body states and psychic, sensory, and motor functioning. Significant findings were: "the basic role of oxygen in neural activity" and the great sensitivity of psycho-physiological processes to changes in oxygen supply; the effects of hypoglycaemia in decreased cortical activity with increased excitability of the sympathetic centers; the consequences of disturbed water balance; the effects of alterations in acid-base equilibrium ("slight increases in pH and decrease in CO₂ tension tend to increase motor reactivity . . . but to decrease functions involving higher levels of the central nervous system"); the importance of behavior factors in maintaining a constant internal environment and the role of the endocrines.

The role of vitamins in nervous health and disease has been reviewed by Herman Wortis and Norman Jolliffe. The former, in 1939, summarized clinical advances to date with respect to vitamins A, C, and D (*N.Y. State J. Med.* 39, 1178). The two authors now continue in the same Journal (July 15, 1941) in a survey of work with vitamin B₁ (thiamin), nicotinic acid, vitamin B₆ (pyridoxine), and vitamin E (alpha tocopherol).

In the field of encephalography, in which steadily accumulating data are throwing new light upon the various processes going on within the tissue of the brain, it is important to note the appearance of Gibbs and Gibbs' monumental *Atlas of Encephalography* (1941), an authoritative work of reference, published during the year in which Hans Berger, the originator of the method, died.

Recent years have been characterized by a succession of drastic treatment measures, applied principally at first in schizophrenia and later in almost all forms of mental disorder. Among these heroic methods the most sensational was a mutilation brain operation devised by Moniz of Lisbon (*Lisboa méd.* March, 1936). This operation, referred to as prefrontal lobotomy (Moniz also used the monstrous term "psychosurgery"), consists in cutting through the white matter of the frontal poles of the cerebral hemispheres just anterior to the ventricles. The grey matter (cortex) is left intact. The correct designation of the procedure is therefore "prefrontal leucotomy." The operation was introduced into the United States by Freeman and Watts of Washington and has been resorted to by neurosurgeons and psychiatrists in several other centers. Freeman (*J. Am. Med. Assn.*, Aug. 16, 1941) reported 80 cases with varying favorable results in 54 (20 regularly employed, 22 keeping house, 7 partially employed, 5 still in institutions). The severance of fiber tracts between the frontal lobes and lower brain centers undoubtedly reduces the capacity to experience emotional distress and lessens morbid preoccupation with self. Apparently also it renders thinking somewhat more superficial and impairs the critical faculty. In a word, by partially cutting off the newest part of the brain it would appear that mentality is reduced to a more primitive level.

There is general agreement that prefrontal leucotomy should only be resorted to after all other treatment measures have been given reasonably long trial and have failed and a chronic course of mental illness seems to be in prospect. In such cases, particularly the severe melancholias of later life and also in certain schizophrenias of long standing, the operation deserves consideration. The mitigation of suffering even at the expense of some impairment of the higher mental faculties may be a desirable goal. From the scientific standpoint this

procedure affords opportunity for valuable psychological and personality studies. See SOCIETIES under *Psychiatric*.

CLARENCE B. FARRAR.

PSYCHOLOGY. Military Aptitudes. R. M. Yerkes urges that psychology be recognized as science and profession basic to all forms of human engineering, and that professional schools of psychology with high admission standards be established, after the model of the best in medicine and engineering. K. M. Dallenbach is chairman of the Emergency Committee in Psychology, appointed by the Division of Anthropology and Psychology of the National Research Council. This committee has prepared a bibliography of psychological publications relevant to war and military endeavor (C. C. Pratt, Editor). The Committee on Selection and Training of Airplane Pilots of the National Research Council has also prepared an extensive bibliography.

W. V. Bingham headed the Committee on Classification of Military Personnel Advisory of the Adjutant General's Office. This committee devised and standardized several equivalent forms of a group psychological test which is given to new recruits at reception centers, to divide them into broad groupings with respect to their ability to learn quickly. A clerical aptitudes test and a mechanical aptitudes battery are given to recruits in the upper four groupings. Those in the lowest grouping receive a nonlanguage test. A training program for military psychologists will be given to selectees with the desired professional background.

Army motor transport personnel are being selected carefully by established methods of analyzing driver ability and minimizing accidents. It is generally agreed that the army should select only men who can stand additional strain, are at least fairly intelligent, and are adaptable to a new plan of life and new standards. The first step is to educate local draft boards. A. D. Leigh found that the bulk of treatment cases in an army driver training center were neurotics who should have been detected and eliminated by a civilian board.

S. A. Cohen points out that neurotic officers are a problem even if they have superior intelligence. Those who do not have superior intelligence are a liability. D. M. Bullard points out that civilian adjustment does not signify a capacity for military adjustment. The testing of army recruits was developed in America during the last world war, but carried to a high point of efficiency by Germans prior to the present war. *German Psychological Warfare: Survey and Bibliography*, by L. Farago and L. F. Gittler, (New York: Committee for National Morale), includes psychological problems of leadership, selecting and testing of personnel, psychology of military life, and psychology of combat.

Employment Tests. Experience with Employment Tests, edited by H. Moore, describes and evaluates various tests and also reports the specific experiences of several large industrial concerns using tests in their personnel program. Job analysis, improved training procedures, and psychologically guided management are contributing to war production. The National Institute of Industrial Psychology is devising plans for the rapid systematic training of operatives in engineering and manufacturing processes. J. W. Rigel reports studies of foreman-training programs in 50 companies. Among practical handbooks are *Training Workers and Supervisors* by C. Reitell (New York: Ronald), *How to Supervise People* by A. M. Cooper (New York: McGraw-Hill), and *How to Select and Direct the Office*

Staff by E. A. Richards and E. B. Rubin (New York: Harper).

Psychological research is contributing to a reduction of industrial hazards of many sorts. A. R. Lauer and E. H. Silver have investigated the problem of night driving in relation to vision. Financed by the Interstate Commerce Commission, the Division of Industrial Hygiene of the United States Public Health Service conducted an investigation to determine the physical and psychological effects of driving interstate trucks for various periods of time. As the length of the drive increased, there was a corresponding decrease in the functional efficiency of the driver.

W. A. Rosenblith has studied industrial noises and industrial deafness. T. S. Littler finds that aviators suffer temporary high-tone deafness after flights of only one hour, and that after recurrent exposure a permanent impairment of hearing may be induced. P. N. Pastore studied hearing among experienced aviators and found that less than half had retained normal hearing, though few were aware of the impairment. Suitable protection would prevent this loss.

Physical Handicaps. The psychological problems of various handicapped groups have been intensively studied. Research findings accumulated over many years are brought together in such books as *Contributions to a Psychology of Blindness*, by S. P. Hayes, (New York: American Foundation for the Blind), and *The Psychology of the Physically Handicapped*, by R. Pintner, J. Eisenson, and M. Stanton (New York: Crofts).

Pure Science. Paralleling the advance in applied psychology has been a wealth of research in pure science. There have also been developments in theory, and some suggestions for radical revision. E. Duffy contends that the conceptual categories of psychology, based on a traditional and a priori analysis, fail to describe functionally unitary processes. He proposes to substitute three categories which recognize the adjustive, goal-directed character of behavior: (1) maintenance of direction, (2) response to relationships, and (3) energy level. *Man on his Nature*, by C. S. Sherrington, (New York: Macmillan), argues for the acceptance of energy on the one hand and mind on the other as a working biological unity, though it is still impossible to explain that unity at the present time. Among new general texts are *General Psychology*, by R. B. Cattell, (Cambridge: Sci-Art), and *Psychology*, by J. J. B. Morgan, (New York: Farrar & Rinehart).

Intelligence and Testing. G. D. Stoddard defines intelligence as "the ability to undertake activities that are characterized by (1) difficulty, (2) complexity, (3) abstractness, (4) economy, (5) adaptiveness to a goal, (6) social value, and (7) the emergence of originals, and to maintain such activities under conditions that demand a concentration of energy and a resistance to emotional forces." Stoddard finds evidence that mental development is determined by cultural conditions. In *Time and the Mind* (Cambridge: Sci-Art), H. Babcock contends that "the distinguishing characteristic of intelligence is . . . the potential degree to which one can abstract and generalize, can express these functions symbolically, and use these symbols in future thinking." R. B. Cattell, S. N. Feingold, and S. B. Sarason report the development of a culture-free intelligence test.

The Measurement of Infants and Young Children, by P. Cattell, (New York: Psychological Corporation), describes the author's new infant intelligence tests, a downward extension of the Re-

vised Stanford-Binet, covering the range from three to thirty months. M. Roff finds evidence that the so-called constancy of the I.Q. is due primarily to the retention by each child of the skills and knowledge which determined his scores in previous years, and is not due at all to correlations between earlier scores and later gains or increments. S. R. Heath, Jr., reports the case of a boy who gained steadily on successive retests, beginning with an initial Binet I.Q. of 41 at the age of 3.7 and attaining an I.Q. of 91 at 11.1. M. W. Richardson recommends that the age scale technique in its present form be abolished entirely and be supplanted by reliable homogeneous tests of single functions.

In South Africa, H. A. Reyburn and J. G. Taylor found five factors present in certain intelligence tests: an immediate memory factor, a verbal factor, mental dexterity in dealing with perceived objects, ability to find or make a significant pattern in a mass of irrelevant material, and ability for logical elimination of irrelevancies. D. M. Johnson and F. Reynolds find two factors in tests of verbal ability, F (flow of responses) and S (selection of responses). W. Harrell and R. Faubion find that mechanical ability depends on several factors, perceptual, verbal, reasoning, and a knowledge of mechanical processes; and in routine jobs where objects are manipulated, manual dexterity is also important. *The Factors of the Mind: An Introduction to Factor-Analysis in Psychology*, by C. Burt (New York: Macmillan), is directed to the general psychologist who may have little mathematical or statistical knowledge. *The 1940 Mental Measurements Year-Book* (Highland Park, N.J.: Mental Measurements Yearbook), edited by O. K. Buros, contains descriptions, references, and critical reviews of old and new standardized tests and books on mental measurement. *Measurements of Human Behavior*, by E. G. Greene (New York: Odyssey), is a comprehensive text. *Measurement in Today's Schools*, by C. C. Ross (New York: Prentice-Hall), is concerned primarily with achievement testing. *Educational and Psychological Measurement* is a new quarterly, edited by G. F. Kuder (Chicago: Science Research Associates).

Mental Defectives. *The Practice of Clinical Psychology* by S. D. Porteus, M. Hunter, and C. J. Herrick (New York: American Book) gives a clear, composite picture of clinical psychological problems and methods in three different parts of the world. P. Blanchard points out that in clinical work some very low scores on intelligence tests are probably due to Burnham's pseudo-feble-mindedness or to Anna Freud's neurotic inhibitions with restriction of ego activities. Hence, caution in diagnosis and prognosis is necessary. W. J. Ellis urges increase and improvement in facilities for discovering defectives in their earliest years, more efforts to make school systems aware of their special needs, community care and supervision for those discharged from special classes and institutions, and emphasis in institutional programs upon the early return of hopeful cases to the community. Since State institutions provide for less than a fifth of the feble-minded, C. H. Town urges creation of a local agency to meet the problems of the feble-minded in the community.

A. A. Jewell reports a follow-up study of 190 mentally deficient children excluded from public schools of the District of Columbia. Their I.Q.'s ranged below 55. The majority were well adjusted in their homes, and social misconduct was not serious, though about one sixth were institutionalized. R. S. Fried points out that the nervous energy of mentally deficient children should be con-

served by frequent relaxation periods. When this is done, nail biting, irritability, and many functional difficulties disappear. H. Muskowitz finds that in selected cases prolonged administration of benzedrine sulphate raises the ability of the mentally handicapped to the point where educational training can be utilized.

Educational Psychology. A. I. Gates suggests the need for educational psychologists in public and private schools and nursery schools, libraries, museums, adjustment service agencies, institutions for handicapped adults, hospitals, department stores, radio studios, publishing houses, government agencies, and elsewhere. According to L. Carmichael, the educational institution should understand the individual as completely as possible: his physical makeup, social background, personality, and the psychometric patterning of his capacities. Then it should work out sympathetically with the individual himself a plan-of-life and educate him to undertake his own education, a process which should continue throughout life. W. W. Cook finds that high standards of promotion result in a high percentage of overage pupils in the upper grades of school, thus reducing the average intelligence and achievement of the class.

Three Hundred Gifted Children. by M. R. Sumpston (Yonkers-on-Hudson: World Book), is a follow-up study of the results of special education of superior children in Cleveland Compared with equally gifted graduates from the regular school classes, the specially educated excelled in leadership ability, reading interests and activities, social responsibility, and the development of individual aptitudes. Health was not impaired and fundamental knowledge and skills were not neglected.

New Methods vs. Old in American Education, edited by G. D. Baker (New York: Teachers College), is an analysis and summary of recent comparative studies by the informal committee appointed by the Progressive Education Association to report on evaluation of newer practices in education. In general, the new methods show gains in initiative, knowledge of contemporary and world affairs, and social participation without loss of academic proficiency in the usual school subjects. N. E. Drought finds that students from progressive secondary schools are at least as successful in college work as those presenting conventional credits, while those from six of the most unconventional schools are distinctly more successful.

There have been numerous studies of factors making for success in college and university work. I. H. Anderson and W. F. Dearborn find a positive relationship between reading ability and college achievement *Ten Years of Research in Reading*, by A. E. Traxler, M. Seder, and others (Educ. Rec. Bull.), is an annotated bibliography and brief summary of studies between 1930 and 1940. H. D. Worthy recommends science materials and activities in remedial reading programs, to maintain interest in subject matter. The Readability Laboratory of the American Association for Adult Education finds that many young adults fail to read nonfiction in book form, partly because it is not readable and partly because they have been prejudiced against it in school. The Laboratory is encouraging the making of books that will have more lucidity and appeal.

Among recent books are *Psychology in Education*, by D. Starch, H. M. Stanton, and W. Koerth (New York: Appleton-Century); *Educational Psychology*, by G. W. Hartmann (New York: Teachers College); *Mental Health in the Classroom*, edited by P. A. Witty and others (Washington, D.C.:

National Education Association); *Mental Hygiene in Education*, by E. W. Tiegs and B. Katz (New York: Ronald); *Some Basic Problems of Behavior*, by M. Sherman (New York: Longmans, Green); *Readiness for Learning*, edited by G. Hildreth (Washington, D.C.: Association for Childhood Education); *The Literature of Adult Education*, by R. A. Beals and L. Brody (New York: American Association for Adult Education, and *Encyclopedia of Educational Research*, edited by W. S. Monroe (New York: Macmillan). In the guidance field are *A Guide to Guidance*, by C. M. Smith and M. M. Roos (New York: Prentice-Hall); *Principles and Techniques of Guidance*, by D. W. Lefever, A. M. Turrell, and H. I. Weitzel (New York: Ronald); *Vocational Guidance for Boys: A Program for Schools and Social Agencies*, by R. C. Cole (New York: Harper), and *Principles and Techniques of Vocational Guidance*, by G. E. Myers (New York: McGraw-Hill).

Child Psychology. G. Lewin and K. Lewin contend that democratic education cannot start with an autocratic treatment of the baby and then slowly shift to democratic methods. It should create a democratic atmosphere for and within the actual world of the child. S. Ackerly and R. Mellor find the nursery school valuable for teaching child guidance by the demonstration method. Concerning afternoon sleep of nursery-school children, R. J. Dales points out marked individual differences and the necessity of considering the individual's need in any program of regulation. R. Barker, T. Dembo, and K. Lewin observed preschool children in free play and in a frustrating situation, and found that during frustration, constructiveness decreased on the average by more than 17 months of mental age. H. Jost has measured physiological changes during frustration. C. Landreth, studying crying of young children in the home and in the nursery school, found that in the nursery school crying was usually associated with conflicts with other children, but in the home with conflicts with parents, frequently over health routines.

L. Bender and F. Vogel find the tendency of certain children to create imaginary companions is a healthful mechanism to supplement environmental deficiencies. *Wolf Child and Human Child*, by A. Gesell (New York: Harper), an interpretative account of a Hindu child brought up by wolves, throws light on the nature-nurture controversy. W. Blumenfeld contends that unrest, moodiness, and introversion of adolescence, commonly attributed to biophysical causes, are really due to the social and cultural conflicts of youth. Outstanding among new periodicals is *The Nervous Child*, a quarterly journal of psychopathology, psychotherapy, mental hygiene, and guidance (Philosophical Library), edited by E. Harms, L. Bender, R. C. Bernreuter, B. Glueck, I. Kanner, K. Lewin, C. M. Louttit, T. V. Moore, M. L. Reymert, A. Runes, E. A. Strecker, E. Wexberg, and I. S. Wile.

M. Huschka found that among 488 problem children 41.6 per cent had mothers suffering from psychopathological conditions. These mothers were hard to treat because they had the habit of projecting their difficulties on the children. A. B. Weiss-Frankl finds the play interview useful in dynamic diagnosis of the child's personality, and in providing common bases for discussion between child guidance worker and parents, which help the parents to use their own experiences with the child constructively. E. Benjamin points out that in early childhood, negativism, resistance, maliciousness, and feeding difficulties are always the result of anxiety or inner insecurity. P. Greenacre finds that

a pre-anxiety reaction occurs in foetal life but that painful situations in the first post-natal weeks serve to heighten the anxiety potential, thereby laying the foundation for severe reactions in later life. A. L. Billig finds that the onset and occurrence of fingernail biting is associated with anxiety, fear, suspense, or excitement for which no adequate outlet is permitted.

W. Boyd, C. Burt, and others have studied the effects of wartime evacuation of children. C. Burt comments on the unexpected facility of adaptation and the very slight increase in delinquency and nervous disorder. T. Brander found that in Finland voluntary evacuation of children was relatively free from undesirable effects but that forced evacuation, with its physical discomforts and mass hysteria, resulted in symptoms of amnesia followed by depression, anorexia, enuresis, tics, night terrors, etc. *Essentials of Child Psychology*, edited by C. E. Skinner and P. L. Harriman (New York: Macmillan), discusses every aspect of child development. *Patterns and Problems of Development*, by C. M. Child (Chicago: Univ. Chicago Press), is a textbook of developmental physiology.

Social Psychology and Personality. *Life, Liberty, and Property*, by A. W. Jones (Philadelphia: Lippincott), reports a questionnaire study of attitudes which suggests that our society is splitting into two or more groups with fundamentally different ethical ideas. R. B. Perry urges revivifying our common democratic creed. S. Z. Orgel finds that delinquency depends more on life history than heredity. The development of the ego and superego are problems of identification. In the Citizenship Training Department of the Boston Juvenile Court, according to K. I. Wollan, a group leader impresses the delinquent with his similarity to the nondelinquent, and encourages independence of decision and the idea of growth away from asocial behavior. J. E. Oltman, S. Friedman, and others regard delinquency and criminality as one symptom of a disordered personality derived from conflicts, insecurity, and maladjustments of childhood, due to such situations as a disrupted home, a cruel domineering father, an overprotective mother, or unsuccessful competition with siblings or schoolmates.

B. Karpman argues against the traditional legal concept of a clearcut separation between sanity and insanity and precise knowledge on the part of the criminal of the differences between right and wrong. A. J. Rosanoff, L. M. Handy, and I. R. Plesset, from a study of 409 pairs of twins, conclude that cerebral birth trauma is often a predisposing factor for delinquency. J. Lander found that 99 of 116 delinquent boys had suffered from parental rejection, parental incompatibility, parental instability, or some similar traumatic influence. Lander feels that neither institutionalization nor foster home care offers a solution, but that in kindergarten the teacher who gives a child a sense of emotional warmth and security will have little difficulty in giving him a conscience also. In follow-ups of delinquent boys seen by the Division of Mental Hygiene of Massachusetts, D. A. Thom and F. S. Johnston found that the percentage of satisfactory adjustments greatly exceeded prediction.

R. Stagner, M. Ginsberg, and others have studied causes of war. B. Malinowski points out that it is fallacious to regard war as a necessary result of man's biological nature. In human societies the impulse of anger is usually transformed into attitudes of hostility or acts of violence which are culturally determined. Conflicts are subject to norms of custom, technique, ethics, and law. R. Pearl points out that belligerency for its own sake is not a normal

way of life for any organism. The basic biological principle underlying belligerent behavior is the will-to-live. R. H. Bruce elicited competitive behavior in rats by an arrangement such that only one animal could drink at a time. Dominance occurred only when the competitive element was introduced.

Outstanding among new books is *Social Psychology of Modern Life*, by S. H. Britt (New York: Farrar & Rinehart). A. I. Hallowell recommends the Rorschach for studies of personalities in primitive societies because of the absence of literacy requirement and the usability by relatively untrained examiners. M. R. Hertz points out that despite the copious literature on the Rorschach, real scientific validation is lacking. There are many new and promising approaches to personality study. According to J. D. Frank, recent experimental studies of the level of aspiration offer a promising approach to problems of the genesis of the self and its relation to achievement, social environment, success and failure, etc. H. A. Reyburn and J. G. Taylor find that introversion and extroversion are not unitary characteristics but may be analyzed into several factors. L. D. Zeleny finds that leadership ability can be developed by instruction and practice, provided the practice is done in groups similar to real life groups. E. Murray, arguing that social misunderstanding is largely due to immaturity and maladjustment of speech personality, stresses the importance of speech development in college education. Among new texts are *Personality and Life: A Practical Guide to Personality Improvement*, by L. P. Thorpe and J. N. Holliday (New York: Longmans Green); *Psychology of Personal Adjustment*, by F. McKinney (New York: Wiley; London: Chapman & Hall), and *Personal Problems in Everyday Life: Practical Aspects of Mental Hygiene*, by L. E. Travis and D. W. Baruch (New York: Appleton-Century). See SOCIETIES under *Psychological*.

PUBLIC FINANCE. The national finances were placed virtually on a war basis during 1941 as a result of the addition of \$46,000,000,000 to aggregate defense appropriations, contract authorizations, and recommendations in the course of the year. Added to the total of \$28,480,000,000 at the beginning of the year, the cost of the defense program was thus raised to almost \$75,000,000,000, a sum by far exceeding the entire cost of our participation in the first World War. It should be noted that this entire defense program was launched before the actual involvement of this country in war. It represented only the cost of preparation for war and aid to the beneficiaries of lease-lend legislation. President Roosevelt estimated that war expenditures, which at the end of 1941 were running at the rate of two billions monthly, would probably surpass five billion dollars a month during the fiscal year beginning July 1, 1942.

Since only about 40 per cent of the enormously enlarged budget was to be met out of taxes, the chief fiscal problem facing the Administration was to borrow as needed the largest sums ever required by the American Treasury. The public debt increased \$5,993,000,000 in the fiscal year ended

June 30, 1941. Increases in the public debt of \$21,-650,000,000 in the 1942 fiscal year and \$39,808,-000,000 in the 1943 fiscal year were anticipated by the President, so that he estimated that, on June 30, 1943, after 18 months of war, the national debt would rise to \$110,421,000,000.

The Treasury explicitly recognized that it would be highly desirable to raise these sums through sales of its obligations to ultimate investors, rather than to banks. When bonds are sold to individuals and corporate buyers other than banks, purchasing power is absorbed and the pressure to buy goods is reduced. This helps to stabilize commodity prices. On the other hand, when banks buy bonds they pay for them with an increase in deposits, thus leaving the total of purchasing power undiminished and adding to the supply of liquid funds available for the purchase of commodities. Despite the recognition of the desirability of selling new issues of Federal securities to the banks, the rapid rise of the rate of Government borrowing compelled the Treasury to rely upon commercial banks to a growing extent in finding a market for its obligations.

Federal Revenues. Receipts of the Federal Government aggregated \$8,268,000,000 in the fiscal year ending June 30, 1941, as compared with \$5,387,000,000 in the 1940 fiscal year. These receipts included payroll tax collections, the bulk of which were turned over to the Federal old-age and survivors insurance trust fund for the payment of old-age pensions under the Social Security Act. The largest increase in Federal revenues occurred in income taxes, which produced \$3,469,000,000 for the 1941 fiscal year, as compared with \$2,125,-000,000 in the preceding 12 months, a rise of \$1,344,000,000. Miscellaneous internal revenues rose \$622,000,000 to \$2,967,000,000. Higher tax collections reflected not only higher rates and new imposts provided by the 1940 and 1941 revenue laws, but also the record level of national income which boosted receipts from older taxes. (See **TAXATION**)

The chief sources of Treasury revenues in the year ended June 30, 1941, with estimates for the 1942 and 1943 fiscal years that make no allowance for additional taxes to be voted by Congress after 1941, follow:

RECEIPTS FOR THE FISCAL YEAR 1941 AND ESTIMATED RECEIPTS FOR THE FISCAL YEARS 1942 AND 1943

1. Revenue	Estimated, 1943	Estimated, 1942	Actual, 1941
Internal revenue			
Income tax (Including tax on unjust enrichment)	\$11,316,000,000	\$7,147,000,000	\$3,469,637,848.48
Miscellaneous Internal Revenue	4,206,467,000	3,862,965,000	2,966,863,798.83
Federal Insurance Contributions Act Taxes	1,394,100,000	900,400,000	690,554,674.33
Federal Unemployment Tax Act Taxes	150,400,000	117,600,000	97,676,584.19
Taxes on Carriers and employees	194,400,000	170,700,000	136,942,076.40
Railroad Unemployment Insurance Act Taxes	9,500,000	8,500,000	6,814,717.52
Customs	297,000,000	368,000,000	391,870,013.27
Miscellaneous revenues	284,223,000	240,915,000	508,871,307.81
Gross receipts	17,852,090,000	12,816,080,000	8,268,512,585.50
Deduct net appropriation for Federal old-age and survivors insurance trust fund	1,364,890,000	872,087,000	661,300,733.42
Net receipts	16,487,200,000	11,943,993,000	7,607,211,852.08

Federal Expenditures. Outlays of the Federal Government during the fiscal year ended June 30, 1941, totaled \$12,710,000,000, an increase of \$3,712,000,-000 over those of the year before. National defense outlays were \$6,301,000,000 in the 1941 fiscal year, as compared with \$1,711,000,000 for the previous year. Unemployment relief, despite the fact that industrial activity rose to the highest level on record, took \$1,774,000,000, as compared with \$1,989,-000,000 the year before. The cost of the agricultural adjustment program, covering soil conservation, parity and other benefits to farmers, declined but slightly in the face of the sharp rise in agricultural

prices and farm income which occurred. The "economy bloc" in Congress and business groups criticized the Administration severely for not cutting nondefense expenditures more drastically, but popular interest in this phase of the fiscal problem lagged as it became apparent that such savings would, at best, be quite small by comparison with the fantastic sums that must be spent to fight a modern war.

Expenditures for the fiscal year ending June 30, 1941, with estimates for the two following fiscal years, are shown in the table, on pages 545-546.

Treasury Financing. The deficit of the Federal Treasury for the fiscal year ended June 30, 1941, aggregated \$5,103,000,000. In addition, \$1,148,-000,000 was needed by Government corporations. Of these sums, \$1,385,000,000 was raised through the Social Security funds, which invest their reserves in Government bonds, while the Treasury sold \$4,602,000,000 of its securities on balance and the Government corporations \$972,000,000. In this way, \$708,000,000 more was raised than was required, which went to build up the cash reserves of the Treasury and Government corporations.

The financing of the 1941 deficit, with estimates for 1942 and 1943, was outlined in the Budget as shown in the table at the center of page 546.

The President signed on February 19 a law to raise the national debt limit from \$49,000,000,000 to \$65,000,000,000. On May 1, in order to raise larger sums through the sale of special long-term obligations to investors, the Treasury offered three series of Defense Savings bonds. Series E, similar to the old savings bonds, mature in 10 years and give a yield of 2.9 per cent if held to maturity. Any one individual may purchase \$5,000 of these obligations each year. Series F bonds, also sold at a discount, give a yield of 2.53 per cent if held to maturity 12 years after purchase, and Series G bonds, bearing coupons of 2½ per cent, similarly mature in 12 years. Series F and G may be purchased up to \$50,000 by one owner in any one year. All defense savings bonds are nonnegotiable, but may be redeemed at the Treasury at any time after 60 days from the date of issue for Series E, and after six months for Series F and G. In the case of Series E and F, redemption prior to maturity provides a lower yield, while in the case of Series G

coupon bonds redemption before maturity is at a discount which accomplishes the same result of cutting the yield to the owner. Interest on savings bonds sold after Mar. 1, 1941, is taxable. The Treasury also inaugurated on May 1 the sale of savings stamps of 10c, 25c, 50c, \$1, and \$5 denominations. Sales of defense bonds and stamps rose sharply after our entry into the war.

On August 1, the Treasury inaugurated the sale of another special type of obligations, Tax Anticipation Notes. Series A notes may be purchased by individuals up to \$1,200 in any one year. They may be used to pay personal income taxes due after

EXPENDITURES FOR THE FISCAL YEAR 1941, AND ESTIMATED EXPENDITURES FOR THE FISCAL YEARS 1942 AND 1943

(Estimated and actual expenditures from general and special accounts)

	<i>Estimated, fiscal year 1941</i>	<i>Estimated, fiscal year 1942</i>	<i>Actual, fiscal year 1941</i>
I LEGISLATIVE, JUDICIAL, AND EXECUTIVE;			
1. Legislative establishment	\$26,622,800	\$25,494,800	\$24,172,235.98

Total, financing	4,866.9	18,833.5	42,617.9

^a Deduct.

^b Includes return of surplus funds to the Budget.

^c Includes interest accrued on U.S. savings bonds

Jan. 1, 1942, yielding 1.92 per cent for the period held. Series B notes may be purchased by corporations and used similarly to pay corporate taxes due the Federal Government. Series B obligations, which may be purchased without limit as to amount, give a yield of 0.48 per cent. Both series may be cashed by the holder without waiting for using them for tax payments, if desired. Through the medium of these notes, the Treasury obtains immediate use of

tax funds due it at some later date, while the taxpayer can thus assure that he will have on hand money needed to pay future taxes.

Sales of defense bonds, stamps, and tax anticipation notes month by month during 1941 were reported as in the table at foot of column 1.

The Public Debt. The gross public debt of the nation at the end of the calendar year 1941 was \$57,938,000,000, as compared with \$45,024,000,000 at the end of 1940. The public debt at the end of the 1941 fiscal year, and estimates for the two following years, contained in the President's budget message of Jan. 5, 1942, are tabulated on page 547.

For appropriations, see UNITED STATES and States under *Legislation*; principal foreign countries under *History*. See also BANKS AND BANKING; CUSTOMS, BUREAU OF; FINANCIAL REVIEW under *New Financing*; TARIFF COMMISSION, U.S.; TAXATION; WAR DEBTS; articles on countries and States under *Finance*.

**GROWTH IN THE PUBLIC DEBT IN FISCAL YEARS
ENDING JUNE 30, (000 OMITTED)**

	<i>Actual 1941</i>	<i>Estimated 1942</i>	<i>Estimated 1943</i>
Public debt at beginning of year	\$ 42,967,531	\$ 48,961,444	\$ 70,612,247
Increase in public debt during year.			
To meet deficiency in revenues and receipts, general and special accounts	5,103,418	18,631,803	35,440,792
To purchase obligations of government corporations	3,019,000	4,368,000
Increase in working balance on general and special account	890,495
Net increase in public debt during year	5,993,912	21,650,803	39,808,792
Public debt at end of year	48,961,444	70,612,247	110,421,039

PUBLIC HEALTH SERVICE. The year 1941 has subjected health organizations in the United States to the crucial tests of national emergency culminating in war. Every branch of the Public Health Service has felt this impact. The burden has fallen most heavily, however, upon the Federal-State cooperative programs for general health services, upon venereal disease control and industrial hygiene.

Division of States Relations. This Division, organized in 1910 as the Division of Domestic Quarantine, was intended to check the interstate spread of communicable disease by use of quarantine restrictions. It soon became obvious, however, that a better method was to help State health authorities build up adequate organizations and facilities to prevent disease at the source.

During the five and one-half years of operation of Title VI of the Social Security Act, which provides Federal funds for States and municipalities to augment health work, there has been a steady growth of basic health services throughout the country. It has not been sufficient to meet the emergency demands of 1941. Military camps and industrial developments brought large new concentrations of population into hundreds of communities. Serious problems began to arise because of inadequate sanitary facilities and means for disease control. In March, 1941, Congress appropriated \$525,000 for improving health personnel and facilities in critical areas during the remaining months of the fiscal year. By June 30, 104 specially trained physicians, engineers, nurses, and technicians had been assigned to this duty. The Public Health Service appropriation for the fiscal year 1942 (beginning July 1, 1941) allows \$1,235,000 for emergency health and sanitary activities. In a later act an additional \$1,940,000 was appropriated to expand these services. The Community Facilities Act of June, 1941, makes available to the Public Works Administration (q.v.) the sum of \$150,000,000 for such facilities as schools, waterworks, sewage disposal plants, sewers, public sanitary facilities, and hospitals. If the project applied for by a community relates to public health or sanitation, it is referred to the Public Health Service which, by reason of its extensive reconnaissance surveys in defense areas during the past year, is able in most cases to clear the application within 24 hours.

While the work of the Division of States Relations has been geared primarily to defense needs and war conditions, substantial progress has been made in normal activities. The total payments to

the States from Title VI, Social Security Funds during the fiscal year ending June 30, 1941, amounted to \$10,722,115, having been increased by \$1,500,000 over the preceding year. Funds budgeted from all sources in the cooperative health program in the 48 States, the District of Columbia, Alaska, Hawaii, and Puerto Rico were \$109,352,919 during the fiscal year 1941, representing an increase of 30.56 per cent over the preceding year; largely because of the extension of cooperative health programs to additional counties and cities which now submit their budgets to the Public Health Service.

Noteworthy improvements were achieved in methods of handling State budgets which, in a number of States, resulted in increased legislative appropriations for public health. Health units under the direction of a full-time health officer totaled 1,669 by June 30, 1941. These units were of three types: the single county unit, the district unit serving two or more counties or other local subdivisions, and the State supervisory unit. Rules and regulations governing personnel management on a merit basis have been established in all State health departments and efforts are being directed toward the same status for local health department employees. During the year, 1,175 applications for training were received from State and Territorial health departments and approved by the Public Health Service district directors; 82.6 per cent of the training was to be financed by Title VI funds.

Although the need for public health nursing service increased, the 23,533 nurses employed by all health agencies on Jan. 1, 1941, was less by 172 than on the same date in 1940.

Division of Marine Hospitals and Relief. This oldest function of the Public Health Service, dating from its origin in 1798, through 26 Marine Hospitals, 126 relief stations and more than 130 contract hospitals provided hospital care for 77,317 persons and out-patient care for 433,706. American merchant seamen made up 40.1 per cent of those receiving hospital care. Among other legal beneficiaries were those of the Veterans' Administration, members of the Civilian Conservation Corps, personnel and dependents of the Coast Guard and the Coast and Geodetic Survey. Freedmen's Hospital in Washington, D.C., which was transferred to the administrative supervision of the Public Health Service in 1940, provided a total of 127,926 days of hospital care and gave 86,665 out-patient treatments during the past year, during which it was for the first time approved by the American College of Surgeons.

Division of Venereal Diseases. During 1941, \$8,200,000 was appropriated under the National Venereal Disease Control Act of 1938 for prevention, treatment, and control of venereal conditions. Almost 90 per cent of this amount was devoted to setting up adequate control measures in the States and territories; \$458,600 was used for intensifying the program in areas where the armed forces are located. Country-wide clinic facilities for venereal disease treatment increased from a total of 1,746 in 1938 to 3,245 in 1941. Approximately 13,400,000 doses of the arsenical drugs for the treatment of syphilis were sold during the past year, an increase of over 100 per cent since 1933. Encouraging results were reported from experiments with the massive dose method of treating syphilis. These indicate a possibility that at least 85 per cent of patients having the disease in an early stage might be cured by five days of treatment as contrasted with usual methods taking a year or more. Considerable progress, also, was reported

from the treatment of gonorrhea with the sulfonamide drugs.

Division of Mental Hygiene. This Division maintains hospitals for drug addicts at Lexington, Ky., and Fort Worth, Texas, and administers the medical and psychiatric services in Federal penal and correctional institutions. (See NARCOTIC DRUGS CONTROL.) St. Elizabeths Hospital for the mentally diseased who are Federal responsibilities, operated with an average daily patient population of 6,663—an increase of 562 over the preceding year. The number of admissions was the highest since 1919.

National Institute of Health (Division of Scientific Research). Research has shifted its emphasis to war medicine. Industrial hygiene, aviation physiology, tropical diseases, chemotherapy, nutrition, the prevention and cure of such warborne diseases as typhus fever, have become problems vital to the successful prosecution of war. There is an increasing demand for vaccines, antitoxins, and serums. Chemists are working toward substitutes for overseas supplies of opium and quinine.

Among successful results of research during the past year has been a substantial protection against whooping cough by use of a two-dose pertussis vaccine, the development of a serum for the treatment of Rocky Mountain spotted fever, a laboratory test to differentiate typhus fever from other rickettsial diseases such as spotted fever, and improvements of the X-ray microfilm for diagnosis of tuberculosis.

In the National Cancer Institute, special attention was focused on gastric cancer. Among numerous studies conducted on the multiple aspects of cancer, new findings were reported on cancer of the lung. Cancer control programs were established in Arizona, New Mexico, Wyoming, Montana, and Idaho, making a total of 39 such programs in the States and territories.

In February, 1941, the Division of Industrial Hygiene of the National Institute of Health was designated to coordinate all activities for health protection of defense workers. The program now in operation includes: the recruitment and training of professional personnel; the provision of industrial hygiene services in Government industrial establishments; laboratory and field research in the cause and control of occupational diseases; and aid to state industrial hygiene units.

Division of Foreign and Insular Quarantine and Immigration. In spite of a large influx of war refugees, with overcrowding and insanitary conditions on vessels which carried them, no case of quarantinable disease entered a United States port during the past year. The rapid expansion of airplane service to the United States and increased incidence of yellow fever in foreign countries made it necessary to establish disinsectization bases at Barranquilla, Colombia, and Maracaibo, Venezuela, as well as inspection bases at Kingston, Jamaica, and at Port-au-Prince, Haiti.

Division of Sanitary Reports and Statistics. Favorable health conditions continued in the United States during the calendar year 1940. Of the important communicable diseases, only influenza and poliomyelitis were above the five-year median. Reported cases of diphtheria, smallpox, and typhoid fever were the lowest on record. Morbidity reports for the first half of 1941 showed a continuation of the influenza epidemic which began late in 1940, a sharp rise in poliomyelitis in June, the beginning of epidemic encephalitis in the West North Central States and a high incidence of measles which indicated that 1941 would be a cyclic "measles" year. The crude death rate for the United States in

1940 was 10.8 per thousand population, a little less than 2 per cent above the rate for 1939 which was the lowest recorded in the history of the United States registration area.

National Nutrition. An outstanding event of the year was the setting in motion of a national nutrition program. In May, 1941, 900 food experts from all parts of the country assembled in Washington for a conference by invitation of the President who asked them to "explore and define our nutrition problems and to map out recommendations for an immediate program of action."

The Conference drew up specifications for a diet adequate for good health and selected from a wide choice of natural foods purchasable anywhere in the country. Announcement was made of new flour standards by which vital elements naturally present in wheat are now conserved. Further recommendations included the continuation of scientific research in nutrition with greater support by Government, industry, and private institutions; the increased production of foods needed for national defense; the extension of the food stamp plan or similar governmental machinery to make essential foods available to nutritionally needy families; and, finally, a nation-wide program of nutrition education.

The United States is profiting by the experience of the British in meeting wartime medical, public health, and nutrition problems. An equally acute problem of the British in securing adequate supplies of protective foods is being worked out under the Lend-Lease Act by the Anglo-American Food Committee in which the Public Health Service participates actively.

Detailed accounts of the activities of the Public Health Service may be found in the Annual Reports of the Surgeon General. For other activities in this field, see topics listed under HEALTH WORK.

THOMAS PARRAN.

PUBLIC WORK RESERVE. See CONSTRUCTION INDUSTRY.

PUBLIC WORKS ADMINISTRATION (PWA). For statement in detail concerning the organization and activities of the Public Works Administration, see 1940 Year Book. By the Independent Offices Appropriation Act, 1942 (Public Laws 28—77th Congress) approved Apr. 5, 1941, the life of this organization was extended to June 30, 1942. The functions of the Public Works Administration may be summarized as follows: (1) To make allotments to finance Federal projects; (2) to make loans or grants or both to non-Federal public bodies to aid in financing the construction of useful public works; and (3) to construct and lease projects, with or without the privilege of purchase, to public bodies. No funds are now available for undertaking new projects of this character.

PUBLISHING. See LITERATURE, ENGLISH AND AMERICAN; NEWSPAPERS AND MAGAZINES.

PUERTO RICO. A West Indian Island, forming a territory of the United States. Acquired from Spain through the Treaty of Paris, 1898. Small adjacent islands, Vieques and Culebra, are included in its jurisdiction and statistics. Capital, San Juan.

Area and Population. Area, 3,435 square miles. Population, 1940 (U.S. Census), 1,869,255; 1935 (by special census of the Puerto Rico Reconstruction Administration), 1,723,534; 1930 (U.S. Census), 1,543,913. In 1940 the dwellers in places of

2,500 or more numbered 566,357; the rural population, 1,302,898. The territory had, in 1940, 544.2 inhabitants to the square mile—an exceptional density for an area dependent mainly on agriculture. Births totaled 73,044 in 1939 and came to slightly less than 4 per cent of the population. Deaths in 1939 totaled 32,631 and constituted 17.8 per 1,000, the lowest yearly rate recorded. The births exceeded deaths (1940) by more than 40,000, and comparable though not quite so great excesses had been the rule. Despite an apparent excess of emigration over arrivals from elsewhere, the population gained by 21 per cent in the ten-year period 1930-40. Colored inhabitants (1938) were stated as 417,401; whites, 1,388,079. Populations of cities (1940), San Juan, 169,247; Ponce, 65,182; Mayaguez, 50,376.

Education. Enrollments of pupils in the public day schools in the year ending June 30, 1940, numbered 286,098, or about 15 per cent of the population; of the pupils, 68 per cent were in the lowest four grades; less than 6 per cent were in grades 9-12. Public schools were numerous, 1,773 in all, four out of five were rural elementary schools, teachers numbered 6,294. The year's expenditures for these schools averaged \$25.57 to the pupil in regular attendance; they totaled \$5,470,517 as budgeted.

The University of Puerto Rico, at Rio Piedras and Mayaguez, giving instruction in various branches of higher education, had 4,987 on its roll in 1940. Its faculty and administrative staff numbered 277. A School of Tropical Medicine, attended largely by students from elsewhere, not only gave instruction and conducted research in its field but operated a hospital newly reconstructed to meet contemporary standards.

Production. The territory, as an economic producer, is predominantly agricultural, its main manufactures are those processing its agricultural products. Of some 2,000,000 acres of land area, about 825,000 acres were reported in 1940 as under cultivation. Of the remainder, 780,000 acres were pasture, mainly clear, but some of it wooded, 120,000 acres in farm woodland; and only some 280,000 acres were not in farms. Sugar cane, the most extensive cultivated crop, occupied approximately 300,000 acres, divers minor crops, grouped, 250,000; coffee, 225,000, tobacco, 33,000. Production of sugar in the 1940-41 season was estimated at 832,140 short tons; the U.S. quota of 1941 for Puerto Rican sugar was 818,166 tons. Tobacco, on 33,262 acres, produced in 1939-40 18,369,848 lb.; in value, \$2,572,000. The crop of coffee totaled 23,498,000 lb., worth \$4,247,500 at the price fixed for the domestic market. Crops grown mainly for the farmers' subsistence included sweet potatoes, corn, rice, cowpeas, beans, and bananas. Cotton of the sea-island type was grown on a rising scale: in 1940, on 4,000 acres.

Products of manufactories attained for 1939 a total value of \$109,615,313, as determined by a census published at the outset of 1941. Those employed in factories comprised 2,147 on salaries and 22,267 receiving wages. The total value added to goods by manufacture was \$36,339,865, or close to one-third of the whole value of product. The value of cane sugar totaled \$55,377,402, of which sum the part added by manufacture contributed \$16,496,602, while the wage earners numbered 7,765 and received \$4,501,813. Sugar-refining (separate from sugar-making) totaled \$12,510,477 of product, of which the part added by manufacture made \$2,169,539. Needlework industries, employing 6,378 wage earners, totaled \$20,778,267 of products, \$7,454,994 of that total being con-

tributed by manufacture, and paid \$1,575,814 in wages.

External Trade. In the year ended with June 30, 1940, Puerto Rico imported merchandise to the value of \$107,030,482 and exported to the total of \$92,347,242. Of imports, \$100,517,184 came from the United States; and to that destination went \$90,002,156 of the exports. The year's exports of sugar were 868,568 tons; value \$57,328,790.

For the calendar year 1940 Puerto Rico's imports of merchandise from the United States amounted to \$103,972,709, as against \$86,447,423 for 1939; and exports to the United States declined to \$83,773,274 for 1940, from \$88,977,210 for 1939. Sugar accounted for five-eighths of the exports to the United States; namely, to \$51,800,616 for 1940 and \$58,325,509 for 1939. Other articles exported to the United States: tobacco and its manufactures, \$8,700,595 for 1940 and \$5,006,782 for 1939; rum, \$6,366,261 and \$4,413,129; women's cotton apparel, \$5,248,072 and \$7,671,831; worked linen, \$2,662,387 and \$4,037,672. The main groups of imports from the United States were vegetable foods, \$19,670,656 for 1940 and \$16,394,573 for 1939, textile products (1940), \$15,750,420 and (1939) \$17,418,279; machinery and vehicles, \$12,678,098 and \$8,292,527; other metal goods, \$8,856,557 and \$5,561,450.

Finance. The general fund of the Territorial Government received, in the fiscal year ended with June 30, 1940, insular revenues of \$16,867,933. It expended \$15,393,982. Insular internal taxes made up about three-fourths of the revenue. Of the expenditure, \$5,678,403 was for education; \$2,068,895 for public health. Bonded debt amounted to \$27,200,000 on June 30, 1940.

Transportation. Highways in Puerto Rico were said to have an aggregate length of 11,252 miles in 1939. Surfaced roads maintained by the Territory totaled 1,033 miles. Railroads, aggregating 922 miles, included 574 miles for the special uses of producers of sugar. Pan American Airways maintained frequent service between San Juan and Miami, Florida. Airplanes also covered routes to a number of South American and West Indian points.

Government Under the Organic Act, as passed by the U. S. Congress in 1917 and later amended, Puerto Rico has the status of an organized Territory of the United States. Its citizens are U. S. citizens. A Governor, the chief executive officer, holds office by appointment of the President of the United States, confirmed by the U. S. Senate. The popular vote elects a Legislature of two houses and a Resident Commissioner to the United States.

Governor, 1941, Guy J. Swope and (successor, Sept. 19) Rexford G. Tugwell. Resident Commissioner, Bolívar Pagan.

HISTORY

General Conditions. The Island in 1941 enjoyed such economic improvement, compared to its record of recent years, as amounted to a boom. According to reports made by ex-Governor Swope on his return to the United States in August, business activity, construction, and payments for labor all ran higher than in a number of years. These features of the Island's prosperity had been improving since the autumn of 1939. Influences connected with warlike activity in the United States helped Puerto Rico in 1941. Prices for sugar, in particular, rose during the year, as they had risen during the period 1914-18. Coffee made the best prices in a decade. Employed persons outnumbered any total previously recorded. The exports of native rum

surpassed those of any earlier months, as the higher cost of imported whiskies in the American market encouraged substitution. Activity in construction gained through the prosecution of Federal works of defensive purpose. There was little political disturbance, unless for Nationalist demonstrations against the military draft (see below).

Legislation. The Legislature, as made up by the election of Nov. 5, 1940, convened February 10 in regular session. The Popular party had a majority of one in the Senate and controlled the lower house with the aid of three members of a minor group. The Coalition party, thus reduced to a close minority in the Legislature, claimed privileges of a majority, on the ground that it had reelected its candidate, Bolívar Pagan, to the office of Resident Commissioner. Governor Swope, in making nominations necessary at the time, favored the Popular party and excluded the Coalition from his list. The legislators carried out the Popular party's will by fashioning a mechanism to break up the greater landholdings. This, its chief achievement, was effected by the Land Authority Act, which created a board of 7 members, the Land Authority, designed to bring about the expropriation of landholdings in excess of 500 acres to each proprietor, to purchase the expropriated lands, and to distribute land in small parcels, allowing the buyers long terms for completing payment. The act did not originate the policy of breaking up big estates, for a resolution of the U.S. Congress, voted in 1900, had forbidden the holding of more than 500 acres of Puerto Rican land by one possessor: as the original prohibition had lacked any particular means of enforcement it had stood inoperative for four decades. Other acts restricted plural public employ in any household, created an Insular Power Authority, and exempted \$1,000 from realty tax.

The Legislature met again, in special session, early in November upon Governor Tugwell's call, for the main purpose of putting prices and supplies of goods under public control. For this work it created a Civilian Supply Committee. This body, in conjunction with the Governor, had authority to fix prices for food and to buy, using a fund of \$1,000,000, commodities needed in the Island. The committee bore some likeness to the Puerto Rican Food Commission, which had operated 23 years before. The Legislature later, December 11, rejected a measure to let the President of the United States declare martial law in Puerto Rico as Secretary of War Stimson had asked.

Frequent Change of Governors. Three successive persons wielded the powers of governor in the course of 1941. José M. Gallardo, acting Governor, held through from 1940 until the appointment of Guy J. Swope in January. Swope, previously Auditor of Puerto Rico, served as Governor until shifted to Washington early in August to become Director of the division of territories and insular possessions in the Department of the Interior. Rexford G. Tugwell, a figure of note for some time in the personnel of the New Deal, next took office as Governor, September 19. If one counted Governor Leahy, who had left office Nov. 23, 1940, Tugwell was the fourth to perform the governing functions in 10 months. Such rapid coming and going had less of disturbing effect on the public business than it might in other circumstances, for Swope and Tugwell held much the same ideas of policy, and both made their first acquaintance with the Island before taking the oath.

Tugwell in special had chances to look into Puerto Rican affairs at several points before becoming Governor. Early in the year he served as

chairman of a commission sent by the Secretary of the Interior to investigate Puerto Rican landholding and utilization of land. At the conclusion of this inquiry he was quoted in the press as expressing views likely to have a good welcome among the members of the Popular Party; that Puerto Rico's land act of 1941 sought to carry out just what Congress's resolution of 1900 had required, and that it would be fair for Puerto Rico to look to Federal financing toward paying for land expropriated. Soon Tugwell was nominated, July 30, by President Roosevelt for Chancellor of the University of Puerto Rico; and though Resident Commissioner Pagan, one of the Coalition party, criticized the appointment of an outsider to rule the Island's intellectual culture, Muñoz Marín, head of the dominant Popular party and chief agitator for redistribution of land, gave the nomination quite sufficient backing. Tugwell spent several weeks as Chancellor, and then the President appointed him Governor, issuing an order at the same time to permit Tugwell to hold both this new post and the Chancellorship at the same time. The special rule in Tugwell's favor was not everywhere well received by Puerto Ricans. Tugwell, taking office as Governor, September 19, sent in his resignation as Chancellor.

Expropriation and Landholders. The passage of the Land Authority Act, already mentioned under Legislation, opened up possibility of most extensive change in the social fabric of Puerto Rico and in its economic condition. The bigger landlords wanted for their holdings more than the Government offered. They took the course of applying to the U.S. Court, in some instances, for injunctions against the application of the law. One such applicant was the firm of Luce and Company, owning 24,700 acres and leasing 17,900 more, on which it reportedly operated in connection with the Central Aguirre. Another was Russell and Company, owning 21,000 acres on which cane was grown for the South Puerto Rico Sugar Company. Both these litigants started suit shortly before July 12, when the act went into force. The litigation, still running at the end of the year, delayed the operation of the new Land Authority.

Draft Versus Nationalists. The Nationalist party kept up its abstention from the doings of the Territorial Government. Refusing in general to acknowledge the authority of the United States in Puerto Rico, its leaders offered nonviolent but agitative opposition to the United States' drafting men on the Island for service in the U.S. forces. A small number of Nationalists who had refused to register under the draft law in November, 1940, were arrested and ten of these were convicted in February. R. Medina Ramirez and R. Lopez Rosas, officials of the party, prosecuted for having issued a proclamation urging Puerto Rican young men not to register, were found guilty of conspiracy to prevent the operation of the draft act, and convicted to two years' imprisonment and a period of probation. The period of probation required in Federal sentencing of Nationalists often led to their longer confinement, for other Nationalists imprisoned by the United States had from time to time refused or failed to observe the conditions of parole and had been remanded to prison. In the same way, Pedro Albizu Campos, head of the Nationalists, refused in November to pledge observance of the conditions of parole and was put back in prison for 19 months more.

Among the people in general, however, few gave evidence of sharing the indignation of the Nationalists at compulsory service under the American

flag. The pay under that flag, as compared with even the somewhat augmented rate of wages in their own island during a booming year, appeared good enough to remove from the draft the flavor of compulsion. About 3,600 of the original quota of 9,600 called for service had volunteered.

Federal Defenses in Puerto Rico. In addition to continuing work started earlier, the U.S. Navy undertook in 1941 a plan to develop a naval base on the island of Vieques, lying off the eastern end of Puerto Rico and forming part of the latter's territory. Intended expenditure there was reported in February as \$35,000,000; in June at \$42,500,000. A great dry dock was to be included. The position of Vieques was reported to have been deemed so favorable for naval operations as to find preference among two or three other West Indian sites that had been studied as possible sites for a primary naval base in the eastern Caribbean. The Navy announced, November 14, that it was taking immediate possession of 10,208 acres on Vieques and posting \$403,326 to assure payment therefor.

The Federal order to stop the movement of European foreigners' assets created trouble in Puerto Rico toward the end of June. It appeared that Spanish firms, some partly Americanized, did a great part of the mercantile business—nine-tenths of it, by one report. The effort to suspend the movement of their assets under such conditions hindered the course of trade on the Island so much that the U.S. Government granted temporary licenses to enable the merchants in Puerto Rico to set matters in order.

See BIRTH CONTROL, LABOR LEGISLATION.

PULITZER PRIZES. A series of annual awards established in 1915 by the will of Joseph Pulitzer, publisher of the *New York World*. On May 5, 1941, the following awards were made by the Trustees of Columbia University on the recommendation of the Advisory Board of the Graduate School of Journalism:

Prizes in Journalism: (1) For the most disinterested and meritorious public service rendered by an American newspaper during the year, a gold medal costing \$500: *St. Louis (Mo.) Post-Dispatch* for its successful campaign against the city smoke nuisance. (2) In place of an individual Pulitzer Prize for foreign correspondence, the Trustees approved the recommendation of the Advisory Board that a bronze plaque or scroll be designed and executed to recognize and symbolize the public services and the individual achievements of American news reporters in the war zones of Europe, Asia, and Africa from the beginning of the present war. (3) For distinguished editorial writing (\$500): Reuben Maury of the *Daily News* (New York, N.Y.). (4) For a distinguished example of a reporter's work (\$1,000): Westbrook Pegler of the *New York World-Telegram* for his articles on scandals in the ranks of organized labor, which led to the exposure and conviction of George Scalise. (5) For a distinguished example of a cartoonist's work published in an American newspaper (\$500): Jacob Burck of *The Times* (Chicago, Ill.), for "If I Should Die before I Wake," published June 2, 1940. (6) Special citation to *The New York Times* for the public educational value of its foreign news report.

Prizes in Letters: (1) For a distinguished novel by an American author, preferably dealing with American life (\$1,000): No award. (No explanation was made by the Advisory Board for its failure to recommend a novel for the prize.) (2) For the original American play, performed in New York, which shall represent in marked fashion the educational

value and power of the stage, preferably dealing with American life (\$1,000): *There Shall Be No Night*, by Robert E. Sherwood. (3) For a distinguished book of the year upon the history of the United States (\$1,000): *The Atlantic Migration*, by Marcus Lee Hansen (Harvard University Press). (4) For a distinguished American biography (\$1,000): *Jonathan Edwards*, by Ola Elizabeth Winslow (The Macmillan Company). (5) For a distinguished volume of verse (\$1,000): *Sunderland Capture*, by Leonard Bacon (Harper and Brothers).

QUEBEC. A province in eastern Canada. Area, 594,534 square miles, including 71,000 square miles of fresh water. Population (1941 census), 3,319,640, compared with (1931 census) 2,874,774. Vital statistics (1940): 83,857 living births, 32,799 deaths, 35,069 marriages. Chief cities (1941 census): Quebec, the capital (147,002), Montreal (882,398), Verdun (65,927), Three Rivers (41,732), Sherbrooke (35,501), Hull (32,474), Outremont (28,621), Westmount (24,123). Education (1938-39): 718,617 students enrolled in schools and colleges.

Production. The gross value of agricultural production in 1940 was \$213,116,000 (field crops \$89,531,000, dairy products \$59,472,000, farm animals \$34,941,000, poultry products \$10,929,000, fruits and vegetables \$10,094,000, maple products \$3,295,000, tobacco \$1,680,000, fiber flax \$1,159,000, fur farming \$1,036,000). Oats 46,872,000 bu. (44,290,000 in 1940), barley 3,762,000 bu. (3,888,000), buckwheat 1,777,000 bu. (2,144,000), mixed grains 5,027,000 bu. (4,502,000), potatoes 525,100 tons (656,250), roots 303,000 tons (298,750), hay 3,836,000 tons (5,280,000), fodder corn 581,000 tons (552,000) were the main field crops in 1941. Livestock (1940): 1,794,900 cattle (including 1,028,000 milk cows), 936,900 hogs, 648,200 sheep, 304,700 horses, 8,660,700 poultry. Furs (1938-39): 417,632 pelts worth \$2,230,280. Forest products (1939) were valued at \$56,140,000. Fisheries (1940): 51,485 tons worth \$2,002,000 as marketed.

Mineral output (1940 preliminary report) was valued at \$85,621,000 (\$77,335,998 in 1939), including gold (1,019,175 fine oz.), silver (1,328,864 oz.), asbestos (345,600 tons), cement (3,850,900 bbl.), lime (231,800 tons), copper, zinc, selenium, tellurium, sulphur, and clay products. Manufacturing (1939): 8,373 factories, 220,321 employees, \$223,757,767 for salaries and wages, \$470,385,279 net value of products.

Government. Finance (year ended June 30, 1940): \$59,153,857 for revenue and \$66,441,201 for expenditure; net funded debt, \$339,804,681. The executive authority is vested in a lieutenant governor who is advised by a ministry of the legislature. There are 24 members (appointed for life) in the legislative council, and 86 members (elected by male and female suffrage) in the legislative assembly (70 Liberals, 15 Union Nationale, 1 Independent; elected Oct. 25, 1939). Twenty-four senators (appointed for life) and 65 elected commoners

represent Quebec in the Federal parliament at Ottawa. Lieutenant Governor, Maj. Gen. Sir Eugène Fiset (appointed Dec. 30, 1939); Premier, Adélard Godbout (Liberal; appointed Nov. 8, 1939).

History. The Premier, Adélard Godbout, on May 16, 1941, issued a statement in reply to certain critical articles that had appeared in the press of the United States concerning the attitude of French Canadians to the war. Among other things, he said ". . . that French Canadians face the study and solution of Canadian questions of Canada and its future from a thorough Canadian angle. And it is precisely because the present war jeopardizes the civilization and democratic institutions . . . that French Canadians from one end of the country to the other, have arisen as one man against neopaganism, Hitlerism, and all other forms of tyranny that flourish in totalitarian countries. . . . We are striving toward the triumph of justice against barbarism, of liberty against totalitarianism. . . . We French Canadians earnestly desire that Canada present before the enemy a front united and solid."

A forest fire raging for seven days over 2,000 square miles in the Chicoutimi and Lake St. John districts was brought under control on June 7, 1941, by a 24-hour rain and the efforts of some 4,000 fire fighters. See CANADA.

RACING. Three things—Whirlaway, a three-year-old colt which won the hallowed Triple Crown; Alsab, an amazing two-year-old, stamped as the best in years; and money—were the standouts of the 1941 racing season.

Whirlaway, a little horse with a long tail, won the Kentucky Derby, the Preakness, and the Belmont, the three classic romps constituting the Triple Crown. And this horse, owned by Warren Wright, baking-soda magnate, earned \$272,386, top for the year, but still far short of the one-year total taken down in 1930 by Gallant Fox of \$308,275. But late in the year Whirlaway, in training from January in Florida, started to tire, and was beaten by War Relic in Massachusetts and then trounced by the former plater, Market Wise, in the lengthy New York Handicap at Belmont Park, a two-mile affair.

Alsab, named after his Chicago owner, Al Sabbath, entered the scene late in the summer and amazed everyone by his speed. He went East to beat Requested in a match race, and to set a Belmont track record, and later set a mile mark for two-year-olds when he won the classic Champagne Stakes in 1:35 $\frac{1}{2}$ under 122 pounds, something unheard of in other years and shattering Twenty Grand's standard at the same age and distance.

There was so much money shoved through mutuel machines through the country that it was a field day for track owners as well as state tax commissioners. In 1,710 days of betting in the sixteen states which countenance racing, \$517,382,107 was wagered, more than a hundred million dollars over the previous year. As expected, New York State led with a total bet of \$133,982,574 and a state "take" of more than \$7,500,000.

The trotting game was accelerated by mutuel machines in New York and such ventures as the Roosevelt Raceway, erstwhile automobile pretzel, on Long Island, and another track at Saratoga served valiantly. The game prospered throughout the country, and there were six horses who went the classic mile in two minutes or better in the

year. These were Bill Gallon, 1:59 $\frac{1}{2}$, Hambletonian winner; Nibble Hanover, 1:58 $\frac{3}{4}$; His Excellency, 1:59 $\frac{1}{4}$; Milestone, 2:00; Earl's Moody Guy, 2:00, and Spencer Scott, 1:58 1:57 $\frac{1}{4}$. Spencer Scott finished back of Nibble Hanover in Maine when that stallion went two amazing heats in 1:58 $\frac{3}{4}$ and 1:59 to set a world's record.

As victor in the rich Hambletonian, Bill Gallon was the leading money-winning trotter of the season, with more than \$30,000 to his credit, although that was the slowest of the sixteen races in the series. Later Bill Gallon lowered his record from 2:01 to 1:59 $\frac{1}{2}$ at Lexington in a race against time. He didn't start until late July and was twice beaten in his six races. The United States Trotting Association estimated that more than \$2,000,000 was distributed in purses for trotting and pacing races in 1941. See RADIO PROGRAMS.

CASWELL ADAMS.

RACKETEERING. See LABOR CONDITIONS.

RADIO. Preliminary estimates placed the 1941 output of radio receivers at 13,800,000 sets and the output of radio tubes at 100,000,000—new records for the radio manufacturing industry. In fact, the number of receivers for the year nearly equaled the 15,000,000 figure which represents the industry's estimate of the cumulative grand total of all radio receivers commercially built prior to 1930. By the end of the year military demands on the industry, coupled with the increasingly severe restrictions of key materials ranging from copper to plastics, was affecting the industry's ability to meet a consumer demand stimulated by interest in war news and by increased income of labor. Diversion of engineering effort to war needs was expected to "freeze" the basic design of circuits and equipment for the duration of the war.

As public purchasing power increased, the demand for the more expensive consoles and radio-phonograph combinations increased. Record-players came back strongly into favor and a corresponding all-time high record in the production of phonograph records was set, with an estimated total of 111,000,000. Combination consoles in many instances included receivers for both amplitude- and frequency-modulated radio and automatic record-player and changer. A noteworthy development of portable radio receivers was a unit powered by a nonspillable airplane-type storage battery instead of dry cells. This set also could be plugged into an ordinary 110-volt a-c house-lighting circuit and played as a power set while recharging its own battery; it could be operated similarly on a 6-volt d-c automobile circuit.

Frequency modulation, established in 1940 (see 1940 YEAR BOOK, p. 642) has grown steadily. As of Dec. 9, 1941, a total of twenty-two FM transmitting stations were operating on daily schedules, forty stations approved by the FCC were in various stages of construction, and some fifty applications were pending before the FCC. Manufacturers operating under Armstrong licenses, and at least two nonlicensed manufacturers, were turning out increased numbers and types of FM receivers. A low-power (25-watt) FM transmitter was brought out for point-to-point transmission of high-fidelity FM broadcast and television aural programs, to take the place of wire lines, for example, between pick-up studio and broadcasting station. Standardized FM equipment has been developed for the use of police departments and utilities in maintaining communication with patrol cars under conditions that would preclude the reception of AM signals. In

Toronto such equipment is being used to facilitate the control and emergency dispatching of street cars under difficult traffic conditions.

Research in radio and related electronic fields continues to give mankind many new and valuable tools. Notable among these is the electron microscope, which has revealed objects far beyond the range of optical microscopes. See CHEMISTRY, PURE.

Notable in broadcast developments is the 50,000-watt station built at a cost of \$600,000 by Columbia Broadcasting Company for its radio station WABC. Novel features of the station are the design of its single 410-foot steel tower, and its location on a tiny half-acre island built up out of Long Island Sound about a mile off New Rochelle, N.Y.

Point-to-point two-way multiple radio communication, pioneered for construction projects on the San Francisco Bay Bridge, was used to enormous advantage to coordinate widely scattered operations on many big wartime manufacturing-plant construction projects during 1941, and probably will be retained on those projects to facilitate the operation of the plants. Ordinary police-type equipment is used.

Television. Television officially "arrived" as of July 1, 1941, when commercial operation was authorized by FCC. It was something of an anticlimactic arrival, however, and one fraught with discouraging difficulties. After the initial "limited commercialization" which got off to a fair start in the spring of

1940 (subsequently rescinded by FCC) all television stations were required to shift to new frequency-channels as the result of a general reallocation of channels required to accommodate FM broadcast stations. This required a shutdown of television broadcasting and also required technical changes not only in station equipment, but in every television receiver in operation and in dealers' stocks.

Defense demands upon available technicians and priority controls of strategic materials further plagued the infant industry. By year-end, however, 8 telecasting stations had been granted commercial licenses and 34 had been granted experimental licenses. One station was operating on a regular commercial schedule and at least three others were offering fairly regular programs. Of the experimental stations, 11 were operating.

The National Television Systems Committee (see 1940 YEAR BOOK) established by the Radio Manufacturers Association in cooperation with the FCC succeeded in drawing up a set of television standards that were acceptable to all parties concerned as a mutual compromise. These were adopted by FCC early in 1941, and now form the basis for further television developments—in color as well as in black-and-white. This successful cooperative venture was regarded by observers as being a noteworthy milestone along the long and troubled road of relations between government and industry.

RADIO PROGRAMS. Never in radio's history has there been a development of such significance as in the latter part of 1941. In that somber period it was demonstrated that the potentials of the medium had not been approached even remotely in previous years, that the leading commercial programs—at

least on the basis of past ratings by the Cooperative Analysis of Broadcasting¹—were no longer the yardstick of maximum audience size.

Specifically, the addresses of President Roosevelt and Prime Minister Winston Churchill created audiences of such vast dimensions that the most brilliant ratings of years gone by were not only outstripped, but indeed doubled or more. This elasticity of the audience-potential was even more remarkably demonstrated when the President broke all audience records two days hand running. On Monday noon, December 8, the President's appeal for declaration of war against Japan attained a rating of 65.7 per cent. The next evening, his speech at 10 p.m. similarly shattered all nighttime listening levels with a rating of 83 per cent.

For the sake of comparison, these superlative

¹ A 'rating' is a percentage of families owning one or more radio sets. To illustrate: If, out of each one hundred families owning radio sets who are interviewed in the area covered by a given program, 20 families report that they heard it, then the rating which is published by the O.A.B. is 20. The number of stations (size of network) does not affect the size of the rating.

figures may be gauged against the President's Charlottesville speech of June 10, 1940 (7:15 p.m.—all four networks), in which he denounced Italy's entrance into the war. That memorable address rated 45.5 per cent—the highest mark, up to that time, recorded by the C.A.B. for a speech of any kind. Other Presidential addresses broadcast over all the major networks, throughout 1941 likewise brought inordinately high audiences: March 15 (Press Correspondent's Dinner), 9:30 p.m., 47.0 per cent; April 30, 10:30 p.m., 26.7 per cent; September 11 (Greer Incident), 10:00 p.m., 72.5 per cent; November 6 (Navy Day Address), 3:00 p.m., 20.0 per cent; November 11 (Armistice Day Ceremonies), 11:30 a.m., 28.4 per cent; December 15 (Bill of Rights Program), 10 to 11 p.m., 63.3 per cent.

A relative newcomer to the ranks of radio during 1941 was Prime Minister Winston Churchill. On four separate occasions his speeches were rated by the C.A.B. The first one occurred at 3 p.m. on Sunday, February 9, and bore a rating of 23.7 per cent. At the same time of day, and the same day of the week, on June 22, he attained a rating of 16.5 per cent. On Sunday, August 24, at 4 p.m., he registered 26.1 per cent. With his visit to the United States, his audience jumped immensely. His most recently rated address—at noon on Friday, December 26—showed a mark of 44.7 per cent.

As of December, 1941, the 20 leading evening programs, listed in order of their ratings, were:

- Chase & Sanborn Program—Edgar Bergen
- Jack Benny
- Fibber McGee & Molly
- Lux Radio Theatre
- The Aldrich Family
- Pepsodent Program—Bob Hope
- Maxwell House Coffee Time
- Walter Winchell
- Kate Smith Hour
- Kraft Music Hall
- Fitch Bandwagon
- One Man's Family
- Major Bowes Amateur Hour
- Time to Smile—Eddie Cantor
- Kay Kyser
- Lowell Thomas
- Texaco Star Theater—Fred Allen
- Mr. District Attorney
- Burns & Allen
- Red Skelton

As against the year before, there was very little fluctuation in this list. Only four newcomers appeared: *Lowell Thomas*, *Mr. District Attorney*, *Burns & Allen*, and *Red Skelton*. The 1940 quartet thus displaced included *Dr. Christian*, *Rudy Vallee*, *Hit Parade*, and *Big Town*.

In Table I the 10 evening leaders for the standard-time months of '41 are noted by rank. Changes in position are confined to very limited movements.

I—MONTHLY RANKING OF THE TEN LEADERS FOR STANDARD-TIME MONTHS, 1941

	For the									
	Period	Jan.	Feb.	Mar.	April	Oct	Nov.	Dec		
Jack Benny	1	1	1	1	1	4	2	2	2	2
Chase & Sanborn	2	2	2	2	3	2	1	1		
Fibber McGee & Molly	3	3	5	5	2	1	3	3		
Lux Radio Theatre	4	4	3	4	4	3	5	4		
Aldrich Family	5	6	4	3	5	5	4	5		
Bob Hope	6	5	6	6	6	6	6	6		
Maxwell House	7	9	8	9	7	7	7	7		
Major Bowes	8	7	7	7	11	8	9	13		
Kate Smith Hour	9	8	9	8	8	9	13	9		
One Man's Family	10	13	11	12	10	11	8	12		

On the other hand, during the daylight-saving time period (Table II) fluctuations of a fairly high order appeared. In consideration of the fact that summer schedules undergo many changes, and leading winter programs are at times absent, such ups-and-downs are not unexpected.

II—MONTHLY RANKING OF THE TEN LEADERS FOR DAYLIGHT-SAVING MONTHS, 1941

	For the						
	Period	May	June	July	Aug	Sept.	
Chase & Sanborn	1	4	3	a	a	a	3
Lux Radio Theatre	2	6	2	a	a	a	1
Aldrich Family	3	5	4	a	a	a	2
Maxwell House	4	9	5	a	a	a	10
Walter Winchell	5	10	6	3	a	a	8
Kraft Music Hall	6	13	7	1	1	1	9
Kay Kyser	7	7	17	2	2	2	4
One Man's Family	8	11	8	4	3	5	5
Eddie Cantor	9	14	9	a	a	a	11
Mr. District Attorney	10	15	12	10	9	7	7

* Off the air. Only programs broadcast three or more months out of the five summer months were used for the purpose of this analysis.

During the daytime, the network leaders as of December, 1941, in order of their ratings, were:

- Life Can Be Beautiful
- Kate Smith Speaks
- The Woman in White
- Right to Happiness
- Romance of Helen Trent
- Our Gal Sunday
- The Guiding Light
- Ma Perkins
- Road of Life
- Mary Marlin
- Vic and Sade

It will be seen that it takes 11 programs to make a list of 10 leaders this year, due to a tie for tenth position. Eight of these 10 programs were also in the list of last year's leaders. The three newcomers are—*Kate Smith Speaks*, *Romance of Helen Trent*, and *Guiding Light*. Since the list last year required only 10 programs to fill 10 positions, there are now only two displacements. *Pepper Young's Family* (currently in 16th position) and *Stella Dallas* (in 18th place) are the two dropped in favor of newcomers.

While the daytime schedule, like the evening list, seems to suggest a lack of change, the stability is not so great. The foregoing list really includes only the Monday-through-Friday broadcasts. If Sunday programs are included, three changes occur—*Pause That Refreshes on the Air*, and *William L. Shirer* (both of which out-rank any of the weekday shows), and *Prudential Family Hour*. By way of contrast, the 1940 weekday programs, in every instance, were able to out-rate the weekend broadcasts.

Although winter and summer network evening schedules exhibit many changes and substitutions in individual programs, the proportion of time devoted to the various program types nonetheless remains about the same. When the winter-season evening program types for 1940-41 are compared with the types prevalent in 1939-40, a marked swing away from the expensive variety shows to drama and audience-participation is found. During 1940, the level of the network audience reached a new zenith. As previously mentioned, during several special periods in 1941 these 1940 high marks were virtually doubled. On the other hand, from the standpoint of seasonal averages, nighttime set-in-use, on the basis of three months ending Dec. 31, 1941, was about 8 per cent less than for the comparable 1940 period, while daytime listening dropped 11 per cent during the same interval. Naturally, this tilt in the listening plane was reflected in the distribution of programs ratings (Table III). This means that there was a drop-off in the upper strata and a concomitant increase in the number of programs at the lower end of the scale.

Keeping in mind the fact that normal network-program ratings cover only metropolitan set-owners, although 43 per cent of the United States pop-

III—DISTRIBUTION OF SPONSORED NETWORK EVENING PROGRAMS ACCORDING TO RATINGS—DECEMBER

Rating (% of Set-Owners)	1941		1940	
	No of Programs	% of Total	No of Programs	% of Total
40% and over	0	0	1	0.9
35.0-39.9	2	1.8	1	0.9
30.0-34.9	3	2.6	3	2.7
25.0-29.9	2	1.8	4	3.6
20.0-24.9	6	5.3	7	6.3
15.0-19.9	14	12.4	14	13.1
10.0-14.9	32	28.3	41	38.2
5.0-9.9	34	30.1	30	28.0
0.0-4.9	20	17.7	7	6.3
Total	113	100.0	108	100.0

ulation is still rural, the C.A.B., in the spring of 1941, made its fourth study in rural sections and small towns of the basic area. About 75,000 interviews were made and the results show: (1) Greater daytime set-use in rural areas than in metropolitan areas. (2) After 8 p.m., on weekdays, however, city dwellers use their sets more than small town and rural people. Similarly, daytime commercial programs, as a whole, enjoy higher ratings in rural communities than in big cities, but nighttime programs exhibit the contrary tendency. The average daytime rating is 6.2 in rural areas as against 5.5 in big cities. At night, the average program rating in rural areas is 10.6, whereas in cities the average program is rated at 12.8.

An examination of the 10 highest-rating evening programs in rural areas and cities, respectively, shows that 8 programs are common to both lists. The two programs preferred by the rural audience, but not by its big-city counterpart, are *Lowell Thomas* and *National Barn Dance*. Conversely, the city audience prefers two programs which do not appear on the rural "first 10" list. They are *Bob Hope Program* and *Kate Smith Hour*.

Some network evening programs show an especially strong preference among rural set-owners as compared with metropolitan radio homes. This group includes, in part: *Plantation Party*, *Lowell Thomas*, *Uncle Jim's Question Bee*, *National Barn Dance*, *Easy Aces*, *Death Valley Days*, *Mr. Keen Tracer of Lost Persons*, *Battle of the Sexes*. Likewise, city set-owners have certain favorites which do not evoke nearly so high a response among the

rural listeners. On this list would be, among others: *Goodwill Hour*, *Guy Lombardo*, *Helen Hayes*, *Screen Guild Theatre*, *Take It or Leave It*, *Wayne King*, *Uncle Walter's Doghouse*, *Campbell Playhouse*, *Lux Radio Theatre*. Because of rural living habits, either one or both of these two groups of programs may possibly be influenced by time of broadcast.

Among the daytime leaders, there are only three which are common to both rural and big-city lists: *Ma Perkins*, *Pepper Young's Family*, *Mary Marlin*.

Aside from measuring the audiences of President Roosevelt and Prime Minister Winston Churchill (noted in the opening paragraphs of this article), the C.A.B. also evaluated a representative number of other special and newsworthy events. Among them were:

The Human Needs Mobilization program staged October 3. With President Roosevelt, Wendell Willkie, and the Aldrich Family as features, the broadcast rated 19.2%.

Wendell Willkie's address at 11 p.m. on Friday, June 6, was tabulated at 14.4%.

Queen Elizabeth, on Sunday, August 10 (4 p.m.) was tuned in by 10.5% of set-owners.

One rating was also made on Charles Lindbergh III's address of Friday, October 3, rated 6.5%.

As is customary, the C.A.B. in 1941 reported on all the regular sports, plus numerous athletic events of a special nature.

Kentucky Derby. The year's annual classic at Churchill Downs occurred on Saturday, May 3. It was reported as having been heard by 16.7% of set-owners. In 1940 the rating was 15.2%.

Baseball. During the baseball season, the C.A.B. again reported on listening to play-by-play broadcasts, both major and minor leagues, heard in the 33 C.A.B. cities.

Averaged from May through September, daytime baseball (7 days) listening stood at a level of 15.0%. The monthly figures are

May	15.6
June	14.6
July	15.1
August	13.6
September	15.7
Average	15.0

The season average for baseball listening, for the average weekday Monday through Friday inclusive, was 13.8.

In 1941, a notable increase in listening to the World's Series was recorded. The games this time

were played between Brooklyn and the New York Yankees on October 1, 2, 3, 4, 5, and 6. The average rating was 32.8 per cent as against 25.2 per cent the year before when Detroit and Cincinnati were the contenders. In both years the Mutual network carried the play-by-play description.

Football. The ratings for college football broadcasts were as follows.

Oct 18.	28 2
Nov 1	32 4
Nov. 15	34 9
Nov. 29	27 2

The foundation for the C.A.B. was laid by the radio committee of the Association of National Advertisers in January, 1929. As a result of the committee's discussion of a study made by Crossley, Inc., a number of leading advertisers employed that organization to make individual surveys. Later these were combined into a report for the Association of National Advertisers, and at the same time Crossley was requested to submit an outline for a cooperative investigation which would include "the checking of program popularity." The Association of National Advertisers appointed a special committee to work out the details. The field work was started by Crossley, Inc., on Mar. 1, 1930.

In 1934 the C.A.B. was reorganized, taking its present set-up as a mutual, nonprofit organization with a governing committee of six, three of whom are appointed by the Association of National Advertisers and three by the American Association of Advertising Agencies. This committee sets all policies—business, financial, and research. Crossley, Inc., is still employed to do the field and technical work. The C.A.B. is the official organization for rating radio programs. It is supported by leading advertisers, agencies, and networks on the basis of their respective stakes in radio.

Under the method used by the C.A.B., the listener need not remember the exact program name. He or she needs to give sufficient information about the program to enable the investigator by cross-checking station, time, or description of the program, to enter it on C.A.B. records as having been heard. This method has several outstanding advantages, such as speed, accuracy, economy. It obtains the answer to the vital question "Has the program made a conscious impression?"—a factor which the advertiser, to be successful, must know.

Fifty-two investigators, making calls at eight stated times each day, working simultaneously 168 days of the year in 33 major cities from coast to coast, completed 690,000 interviews based on more than 1,100,000 telephone calls. The geographical distribution of calls coincides with the distribution of radio sets, and calls are distributed by income groups in accordance with the distribution of radio-set ownership by income groups. Thus the criticism leveled at most telephone surveys, that they reach an undue proportion of persons in the upper income groups, has been eliminated as far as the C.A.B. is concerned. The results of these investigations are sent to subscribers in the form of 40 reports per year.

Leading advertisers and agencies use the C.A.B. reports to help them: (1) Determine the best day and hour to select whenever a choice of radio time is offered; (2) follow the popularity trend of various programs and types of programs and discover when a given program or type of program is worn out; (3) purchase talent advantageously by comparing the performers on different programs; (4) decide whether a given season should be included or dropped; (5) make comparisons between day-time and evening programs; (6) compare the dif-

ference in program audiences by sections of the country, population groups, income levels, etc.; (7) discern by study of the leaders and laggards what makes a good radio program; (8) check where the most important competition is and thus find the most desirable time to buy.

The C.A.B. provides within a fortnight the "box-office" on all sponsored network programs based on a comprehensive, nation-wide sample, regardless of the time of day or night program is broadcast.

Awards. A new set of radio prizes made its appearance on Mar. 29, 1941, when the George Foster Peabody Radio Awards were granted for the first time. These awards, authorized by the regents of the University System of Georgia, were designed as an annual event somewhat comparable to the Pulitzer Prizes awarded in journalism. The award to individuals, for the year 1940, went to Elmer Davis, C.B.S. news commentator, for his "terse, incisive, and impartial reporting of the news, day by day." The award to networks was granted to the Columbia Broadcasting System, with the notation that that system had broadcast 3,500 hours of public service programs during the year, giving 10,000 noncommercial broadcasts. The awards to large, medium-sized, and small stations went, respectively, to WLW of Cincinnati, WGAR of Cleveland, and KFRU of Columbia, Mo. Citations for special service were made also to: WSB, Atlanta; KNX, Los Angeles; WLS, Chicago, for service to agriculture; WCAU, Philadelphia, for *Wake Up America*; WBAP, Ft. Worth, for prison broadcasts; WOR, New York, for the *American Forum of the Air*; WCEO, Schenectady, for service to the Byrd expedition; WJZ, New York, for *Town Meeting of the Air*; WJJD, Chicago, for broadcasts to schools; WQXR, New York, for high musical standards; WOW, Omaha, for originating the President's Birthday Ball of 1940; KSTP, St. Paul, for *America Calling*; WBNX, New York, for service to foreign-language groups; WRC-WMAL, Washington, for the *Mile o' Dimes* feature, KVOS, Bellingham, Wash., for its Armistice Day program.

The Institute for Education by Radio made thirty awards for the fifth exhibition of recordings of educational programs, at Columbus, Ohio, May 5. First prizes for adult programs went to *London After Dark* over C.B.S., *Town Meeting of the Air* over N.B.C., and *The Mole on Lincoln's Cheek* broadcast by Station KNX, Los Angeles. C.B.S. was first among children's programs with *The Fisherman and His Wife* and *Poor Farmer Songs*. Other awards went to N.B.C. for *One Nation Indivisible* and to the New York City municipal station for *Through the Looking Glass*.

The Women's National Radio Committee on May 24 presented its 1940 awards to programs "which in one way or another help to safeguard our essential freedom" instead of for entertainment value, as previously. Among foreign commentators, Raymond Gram Swing of the Mutual Broadcasting System was voted the one "best serving the interests of democracy." Other winners were *The University of Chicago Round Table*, N.B.C., as the most effective forum, *Headlines and Bylines*, C.B.S., as the best educational program with a democracy theme, and *I'm an American*, N.B.C., as the best miscellaneous program promoting democracy.

Among the fifteen awards made by the National Headliners Club on June 28 for reporting and other news service, one went to Miss Helen Hiatt of N.B.C. and another to William L. Shirer, former commentator from Berlin for C.B.S. The William S. Paley Amateur Radio Award of 1940, announced June 17, went to Marshall H. Ensor of Olathe, Kan-

sas, who had conducted courses in radio operation over his amateur station W9BSP for the preceding ten years. A scroll in recognition of public service was awarded to Station WINS by the Veterans of Foreign Wars on June 11.

Awards for radio advertising in 1941 went to: Norman Corwin for "We Hold These Truths" on the 150th anniversary of the Bill of Rights; to the Aldrich Family program for skill in production; to the Pepsi-Cola and Pall Mall Cigarettes commercial announcements; and to the Metropolitan Opera programs, for the advancement of radio advertising as a social force. The plaques for the 1941 Showmanship Survey were awarded as follows: To CKCL (Toronto), El Mundo (Buenos Aires), WCAU (Philadelphia), WJNO (West Palm Beach), WJR (Detroit), WQAM (Miami) for show management; to WLW (Cincinnati), WNYC (New York), WRCA-WNBI (Bound Brook, N.J.), and the Council For Democracy (New York) for patriotic leadership; to the Mutual Network, KGO-KPO (San Francisco), WCKY (Cincinnati) for public relations; to the Rocky Mountain Radio Council for regional service; to the CBS Forecast series for distinguished programs, to the *New York Times* for radio program criticism.

For technical developments and a list of broadcasting stations, see the separate article on RADIO. See also CENSORSHIP, OFFICE OF; COORDINATOR OF INTER-AMERICAN AFFAIRS; DEFENSE COMMUNICATIONS BOARD; FACTS AND FIGURES, OFFICE OF; MUSIC; NEWSPAPERS AND MAGAZINES.

RAILROAD RETIREMENT BOARD. See RAILWAYS.

RAILWAYS. Labor. The bottleneck of the operation of the railways under war strain proved to be the railway labor situation. President Roosevelt's emergency fact finding board made its report and recommendations on November 5. The board was appointed on September 10, consisting of W. L. Morse, dean of the Law School of the University of Oregon; T. R. Powell, Harvard Law School; J. C. Bombright, Columbia University; J. H. Willits, Rockefeller Foundation, and Huston Thompson, attorney, Washington, D.C. The board recommended that the five operating brotherhoods should receive a wage increase of 7½ per cent over their present wage rates; that employees in the 14 nonoperating railway labor organizations should receive an addition of 9 cents per hour, equal to 13½ per cent over their present wage; that a week's vacation should be granted during 1942. The total wage increase, including details not mentioned above, was estimated at \$267,000,000.

The board recommended that the wage increases be effective as of Sept. 1, 1941, and terminate automatically on Dec. 31, 1942, and that the wage structure be then reexamined.

The operating brotherhoods rejected the findings of the board and voted to strike on December 7, 8, and 9. The nonoperating unions objected to the findings of the board but did not vote to strike. The railway managements accepted the findings of the board.

On December 2 the President announced that an agreement had been reached. The agreement grants a further 10 per cent increase in wages to the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors of America, the

Brotherhood of Railroad Trainmen, and the Switchmen's Union of North America. These are the five operating brotherhoods. The total increases granted amount to about a third of the original demands.

An important point is that the increases were made to the basic wage scale, that is they were not temporary additions to pay. This is a condition on which the brotherhoods strongly insisted. The increases given to the operating brotherhoods amount to 9½ cents an hour, or 76 cents a day. In return for the fact that the increases applied to the basic rates labor agreed to a moratorium on demands for changes in rules of work for the period of the national emergency. The cost to the railway companies of the increases which were finally made was estimated at \$300,000,000. The increases are made retroactive to Sept. 1, 1941. The Railway Express Agency did not agree to increases made to non-operating employees.

The Interstate Commerce Commission does not classify employees according to the Unions to which they belong, but by the character of their work. The number of employees in train and engine service, as reported in 1938, was 202,669 (total pay at that time, \$1,746,193,567). All of these men belong to one or other of the five unions. Thousands of other men whose work is directly connected with the actual movement of trains belong to these unions, but are classified by the ICC as "in train and engine service." It can be seen, therefore, how disastrous both to aid to England and the defense plans of the United States such a strike would have been. Hence, the strike threat was viewed in some quarters, not as an indication of the relations between railway employees and their employers, but rather as a disclosure of labor-leader opportunism.

Labor conditions are markedly improving. The annual report of the Railroad Retirement Board for the fiscal year ended June 30, 1940, the latest available, shows total benefits payable under the act creating the board amounting to \$113,733,000 for that year. This amount was 10.1 per cent above the amount for 1939. The amount for 1939 was 21.7 per cent above the amount for 1938.

According to a supplementary statement given out by the Information Service of the Railroad Retirement Board, benefits totaled \$121,799,776 during the year ended June 30, 1941. The average employee annuity in force on the same date was \$65.70; pensions in force numbered 31,080 with an average pension payment of \$58.91; survivor annuities numbered 2,771, with an average payment of \$32.50, and death benefit annuities 710 with an average of \$35.97; lump-sum death benefits certified in the year numbered 13,171, and the average benefit was \$218.64.

The balance in the railroad retirement account, according to the same statement, was \$76,803,438 of which \$74,000,000 was invested in special 3 per cent Treasury notes and \$2,803,438 was in cash. Collections during 1940-41 were \$136,942,076, which was 13.2 per cent more than the amount collected in the preceding year.

Interstate Commerce Commission. The Interstate Commerce Commission in its first annual report made after the passage of the Transportation Act said that experience under the Transportation Act of 1940 "is plainly desirable before further amendments of the Act are, in general, considered." During 1941 there were no cases that afforded any real test of the drastic change in railway regulation prescribed by the Act. Prices of railway stock in 1941 indicated that the Act itself had not proved an incentive to participation in ownership of railways.

This may have been a reflection only of the general reluctance on the part of investors and speculators to buy stocks, that is to participate in business profits and risks. The situation is illustrated by prices in the later part of 1941. Union Pacific Railroad stock was selling at 70 and was paying 6 per cent dividends on its \$100 par value stock. At this price the yield to the investor is 8.57 per cent. Pennsylvania Railroad stock was selling at 22; the company was paying \$2 a share on its \$50 par value stock. Thus the yield was 9.09 per cent. At the same time American Telephone and Telegraph stock was selling at 149 and was paying 9 per cent dividends, yielding 6.04 per cent. United States Steel stock was selling at 52, paying 4 per cent, and yielding 7.70 per cent. National Biscuit was selling at 16, paying 1.60, and yielding 10 per cent. Woolworth stock was selling at 27, paying 2 per cent, and yielding 7.41 per cent.

In contrast, Union Pacific Railroad first 3½ per cent bonds were selling at 99, giving a current yield of less than 3½ per cent. American Telephone and Telegraph 3¼ per cent bonds were selling at 110, giving a yield of 2.5 per cent. Jones and Laughlin Steel 3¼ per cent bonds were selling at 98½, giving a yield of less than 3.30 per cent. The New York Central Railroad, with the best of opportunities for sharing in war profits, paid no dividend and sold at 9½.

Passenger Trains. The attempt of railway managements to increase their earnings from passenger business included putting in service the "Southerner," an all coach train between New York and New Orleans scheduled to make the run southbound in 28 hours and 38 minutes and the run northbound in 28 hours and 50 minutes. The fastest train theretofore had made the run southbound in 31 hours and 50 minutes and northbound in 34 hours.

By Jan. 1, 1941, there were in operation three newly installed streamlined coach trains between Chicago and Florida. It was estimated that all three were operated at a profit. On the first 21 trips of the trains 3,000 passengers answered the question, "If you had not used this train how would you have traveled?" The answers ran, approximately, 24 per cent automobile, 12 per cent airplane, 7 per cent bus, 21 per cent coach on other trains, and 34 per cent Pullman sleeper. The reasons for using the trains were divided between price, speed, comfort, cleanliness.

The derailment of the Union Pacific's *City of Los Angeles* (see YEAR BOOK, 1938, page 639, for description) afforded an opportunity for appraisal of the shock resistibility of the new light passenger trains now in high-speed service. The derailment took place late in 1940 and the study was made in 1941. The train consisted of 3 Diesel power units and 15 cars of lightweight, glider-type aluminum-alloy construction. At the point of derailment the train was scheduled to run 63.6 miles per hour. No passenger was killed and none badly injured. The interior of the cars was only slightly damaged. Only one of the cars turned on its side. The power units and the cars were repairable and were returned to service.

Although it is not possible to trace earnings directly to character of passenger stations, money is being spent by the railways even in these times of depression on passenger stations. An example is the Union Station at Minneapolis, Minn. The station is used by the Chicago, Milwaukee, St. Paul & Pacific, the Chicago, Rock Island & Pacific, and the Minneapolis, St. Paul & Sault Ste. Marie. The old station was built in 1897 and the cost of present re-

pairs was \$60,000. While greater convenience was aimed at most of the money was spent to make the station more pleasing. Fluorescent lighting was installed; the waiting room walls and ceiling were painted white with chromium trim; high backed settees were replaced with upholstered furniture arranged in groups; the women's waiting room has a table, around which are grouped chairs; the men's waiting room also has the appearance of a lounge.

Motive Power. With the possibility of again being able to replace worn out equipment, increased earnings being in prospect, there has been much discussion among railway officers of what type of motive power is best adapted for railway use. Three considerations enter the discussion: (1) cost, where initial cost has to be weighed in connection with cost of upkeep and cost of operation; (2) effectiveness of service; (3) wear on track, involving rail breakage and danger of derailment.

In June, 1941, E. E. Chapman, Mechanical Engineer on the Atchison, Topeka & Santa Fe, read a paper before the American Society of Mechanical Engineers which, together with the discussion that followed, gives a comprehensive idea of opinion in 1941. Three types of motive power were considered—the steam locomotive, electric traction, and the Diesel-electric locomotive. The Interstate Commerce Commission gives the number of steam locomotives in service on Class I railways at the end of 1938 as 42,637 divided between 25,956 freight, 7,486 passenger, and 7,672 switching. The ICC gives the number of electric locomotives as 829 divided 338 freight, 328 passenger, and 163 switching.

Mr. Chapman said that in 1941 there were about 900 electric locomotives in service and that since 1925 there had been placed in service 1,300 freight, passenger, and switching Diesel-electric locomotives. The advantages claimed for the Diesel-electrics, he said, are high thermal efficiency, low water costs, flexibility, reduction of delay due to taking fuel and water, high sustained speeds, and low stresses imparted to track and dynamic braking. The disadvantages are high initial investment, short life, high repair cost, high cost of lubrication, and high unit cost of fuel. In estimating depreciation it is usual to assume a life of 15 years for road Diesel locomotives, 20 years for switching Diesels, and 28 years for steam locomotives. Mr. Chapman thought the figures for Diesels should be higher.

In discussion S. Withington gave it as his opinion that proper maintenance of Diesels amounted to complete renewal part by part so that life of the locomotive was unlimited. The manufacture of parts has now reached a standardization that makes renewal part by part feasible, Mr. Withington thought. It was generally agreed that the Diesel locomotive in switching service was more efficacious than the steam locomotive.

The Davenport 30-ton Diesel-mechanical switcher may be taken as an example. One in service on the Chicago, Rock Island & Pacific for four months worked 95.1 per cent of its assigned hours. During this time the entire maintenance cost including material and labor was \$0.184 per hour. The average grand total operating and maintenance cost was \$1.802 per hour. Switching work was done with the expenditure of fewer hours than would have been required had the work been done by a steam locomotive. There was less damage to rolling stock and lading than there would have been had a steam locomotive been used. The length of this 30-ton Diesel is 23 ft. 6 in. It operates at 15 miles an hour. It is equipped with air booster clutch and shift, and has four speeds forward and four speeds in re-

verse. It may be equipped with a special fifth speed gear for operation up to speeds of 25 miles an hour. It has 15,000 lb. tractive force.

In comparison with this Diesel-mechanical switcher is the Diesel-electric freight locomotive for main-line service of the Atchison, Topeka & Santa Fe. It has 5,400 h.p. Its length over all is 193 ft.; weight on drivers is 923,600 lb.; it has 16 pairs of driving wheels. The three largest steam freight locomotives have a weight of 1,116,000; 898,300, and 853,000 lb. respectively. The Diesel has a starting force of 220,000 lb., whereas the steam locomotives have a starting force of but 153,300; 176,600, and 160,000 lb. respectively.

Truck Auxiliary Service. In coordinating trucking with rail freight movement heretofore the railways have been hampered by the former ruling of the Interstate Commerce Commission that: "Shipments transported by applicant [truck] shall be limited to those which it receives from or delivers to either one of the railways under a through bill of lading covering, in addition to movement by applicant [truck], a prior or subsequent movement by rail." This condition has now been removed by the Commission in Case Mc-61438. In this case the ICC said in part: ". . . public convenience and necessity require the substitution of trucks for way-freight train service, regardless of whether there is a prior or subsequent movement by rail." The American Trucking Association unsuccessfully tried to force the railways to use independent motor-operator's trucks instead of the railways own trucks. The railways showed that by the use of their own trucks the through rate would be lower.

The interpretation given this Mc-61438 case by lawyers generally was that the Interstate Commerce Commission would not force competitive conditions where competition resulted in higher rates. The implications of the decision are far reaching. It permits the railways to keep their monopoly of transportation so long as they furnish the transportation at a lower cost than independent competitors. For the time being it gives shippers lower rates and strengthens monopoly. Railway officers have for years said among themselves that monopoly is necessary to profitable operation. Public opinion has been against them. Now the ICC seems to agree with them.

What can be done under this new ruling of the Interstate Commerce Commission is being shown by what the Dominion Atlantic was doing in Canada during 1941. This road is a separately operated subsidiary of the Canadian Pacific and runs from Halifax to Yarmouth along the Bay of Fundy. There is a paved highway paralleling its entire line. Way freight-train service was abandoned on about two-thirds of the line, truck service was substituted and a pick-up and delivery service was added.

During the first month of the combined local and pick-up and delivery service the revenue from less than carload freight was \$32,909 as compared with \$28,984 revenue from l.c.l. freight in the same month of the previous year—a gain of 13½ per cent. Furthermore, by combining pick-up and delivery service with local service, private truck competition was eliminated. Thus elimination of competition resulted in improved service with increased revenues which is the assumption underlying the Interstate Commerce Commission's changed ruling. It follows the recommendation made by J. B. Eastman in his report made when he was acting as Coordinator of Transportation.

By the introduction of trucking service in l.c.l. business the Dominion Atlantic effected economies in its freight service generally. Car loading was in-

creased from an average of 19.2 tons to 23 tons. Over-time engine crew hours per 1,000 train miles were reduced by 61.2 per cent. Train crews were reduced by 52.1 per cent. The average loading of freight and mixed trains increased 10.5 per cent. Gross ton miles per hour increased by 79.3 per cent.

Railway Income. The railways of the United States in 1941 did the greatest freight business in their history. They carried 470 billion ton miles as compared with 373 billion 253 million ton miles in 1940 and 447,322,000,000 in 1929. The income account of class 1 roads showed the increase in business done with the offsetting effect of the delayed maintenance expenditures. Thus total operating revenues in 1941 were \$5,325,000,000 as compared with \$4,297,000,000 in 1940 and with \$5,281,000,000 in 1930. Net operating income—that is the amount left after expenses but before the payment of rentals and interest on debt, was \$980,000,000 in 1941, \$682,000,000 in 1940, and \$869,000,000 in 1930.

The break-up of revenues and expenses is shown in the following table:

	1941 (Millions)	1940 (Millions)
<i>Income</i>		
Freight revenue	\$4,432	\$3,537
Passenger revenue	510	417
Mail revenue	108	101
Express revenue	60	56
All other	215	186
Total	\$5,325	\$4,297
<i>Expenditure</i>		
Maintenance of way	\$ 600	\$ 497
Maintenance of equipment	990	819
Traffic	115	107
Transportation	1,760	1,501
General and other	195	165
Total	\$3,660	\$3,089

Average revenues per ton mile in 1941 were 0.942 cent in 1941 comparing with 0.945 cent in 1940 and 0.973 in 1939. Changes in the character of traffic in part explain the lower revenue per ton mile. These changes also show where the railways were being hit by truck competition:

CARLOADINGS, BY GROUPS OF COMMODITIES (Thousands)

	1941	Increase over 1940 (Number) (Per cent)	
Miscellaneous	18,375	3,533	23 8
Mdse, L. C. L.	8,065	386	5 0
Coal	7,610	790	11 6
Ore	2,683	535	24 9
Forest Products	2,183	383	21 3
Grain and products	2,006	171	9 4
Coke	678	129	23 5
Live Stock	650	Dec. 35	Dec 5 2
Total	42,250	5,892	16 2

Performance. The average train-load of revenue freight in 1941 was 951 tons. That compares with 849 tons in 1940 and with 733 tons in 1931. The average revenue load per freight car in 1941 was 28.4 tons comparing with 27.6 in 1940 and 25.7 in 1921. Changes in character of traffic explain this gain in part but—and it is a very important but—the miles per day per freight car in service were 45.8 in 1941 comparing with 42.6 in 1940 and 29.6 in 1922. Speed of freight trains is only one of the factors. The average speed of freight trains in 1941 was 16.5 miles per hour. In 1940 it was 16.7 and in 1922 it was 11.1. Delays on sidings in 1941 were considerably less than in 1940.

Additions and Betterments. Very significant of the present trend of railway development is the fact that in 1941, with total capital expenditures of \$600,000,000, the total mileage of new railway

built was 54, the mileage of railway abandoned was 1,509, while for the same year the railways and their subsidiaries bought 641 motor buses, 4,106 units of highway freight equipment, 385 automobiles, and 2 miscellaneous vehicles. It is also significant that with \$600,000,000 capital expenditures, total railway securities sold to the public amounted to but \$324,953,000, and at the end of the year the railways were indebted to the Reconstruction Finance Corporation to the extent of \$443,443,989. Some of it of course being for loans made prior to 1941.

A considerable part of the capital expenditures was for the installation of centralized traffic control. Under this new system, replacing the time-honored system of train orders, the engine-driver's movements are controlled by signals operated by a man in a central tower. It is estimated that centralized control should give single-track 75 per cent of the capacity of double track. The following table shows signal installation in 1941 as compared with 1940:

COMPARISON OF ANNUAL SIGNAL CONSTRUCTION

Type of Installation	Number of units	
	1940	1941
AUTOMATIC BLOCK SIGNALS	1,017	1,407
HIGHWAY CROSSING PROTECTIVE UNITS	3,006	2,615
INTERLOCKINGS		
Signals and switches at new plants	1,024	518
Signals, switches, and electric switch locks added at rebuilt plants	734	693
Signals and switches at automatic plants	125	80
CENTRALIZED TRAFFIC CONTROL		
Signals, switches, and electric switch locks	496	868
SPRING SWITCHES		
Spring mechanisms	294	275
Mechanical facing-point locks	97	159
Signals installed at spring switches	336	353
CAR RETARDERS	11	-
	7,140	6,968

Locomotives Ordered. The total number of locomotives ordered for use in the United States in 1941 was 1,436 comparing with 712 in 1940. The orders were divided, 302 steam locomotives, 1,096 Diesel locomotives, and 38 electric locomotives. There were a third more steam locomotives ordered in 1941 than in 1940 but there were over twice as many Diesels. Of the total of all locomotives 176 were for the government as compared with 9 in 1940.

Freight Cars Ordered. A total of 131,670 freight cars were ordered in 1941, comparing with 70,562 in 1940. Freight cars built in 1941 totaled 86,843; 56,603 in 1940.

Passenger Cars Ordered. There were 639 passenger cars ordered in 1941; 475 in 1940. There were 339 passenger cars built in 1941; 200 in 1940.

Equipment Prices. In 1941 prices for Diesel locomotives ranged from \$60,290 for a 660 h.p. switcher weighing 220,000 lb. to \$506,928 for a 5,400 h.p. freight locomotive weighing 920,000 lb. A 4-6-6-4 steam freight locomotive weighing 620,000 lb. cost \$231,750.

A steel box car of 100,000 lb. capacity cost about \$3,000 and a steel gondola of 100,000 lb. capacity cost about \$2,365.

Fuel. The average cost of coal for railways in 1941 was two dollars a ton at the mines and \$2.55 a ton with freight added. This compares with \$1.88 at the mines and \$2.45 with freight added in 1940. Fuel oil cost an average of 2.12 cents per gal. in 1941 and 2.02 cents in 1940. Diesel fuel cost 4.45 cents per gal. in 1941 and 4.48 in 1940. In comparing coal costs it should be noted that in 1941 some railways were compelled, on account of government coal requirements, to go to more distant

fields for their coal so that freight was a larger item in their coal costs.

Dividends. The only important change in dividend rates was the resumption of common stock dividends by the Atlantic Coast Line and larger payments made by the Pennsylvania Railroad and by the Louisville & Nashville Railroad.

Receiverships. No important railway companies went into receivership in 1941 and but 25 miles of railway were placed in receivership as compared with 6,194 miles in 1938. Apparently the liquidation of weak railways was about completed by 1938. Nine railways, with a total mileage of 5,031, were taken from receivership in 1941.

RAINFALL. See METEOROLOGY.

RAPID TRANSIT. In local passenger transportation, urban and suburban, an outstanding development of 1941 was the tremendous increase in traffic resulting from the national defense program, with its vast increase in employment of skilled and common labor, as well as in technical and office workers. At Washington, with its influx of employees, government departments adopted staggered hours of work as a means of checking the congestion of traffic during the morning and afternoon rush hours. In many cities the number of passengers increased so rapidly that the transportation authorities were unable to increase the number of their vehicles proportionately, so that a very serious and difficult situation was created.

The problem of handling this traffic is likely to become still more serious under war conditions, owing to the increase in employment, the difficulties in production of the needed street cars and motor coaches, and the numerous and increasing restrictions upon the production and use of private automobiles. Black-outs, incident to war conditions, represent a new and dangerous factor in relation to street traffic, and add a new difficulty to the already difficult problem of controlling street traffic in the interests of convenience and safety. A minor development will be the increasing employment of women as drivers and conductors, as well as cleaners and shop workers.

For the special problem of handling crowds of workers at new plants, and of soldiers at new camps, in suburban or outlying districts, the motor-coach shows its advantage in rapid establishment and flexibility of operation of the necessary service. There is no track or overhead wiring to be installed, or to become useless if the plant or camp is abandoned or moved to another site.

The trend towards discontinuance of street-railway lines continues, together with the substitution of motor coaches or buses for such lines, but the extent of the change has been less than in other recent years. While most of the coaches have gasoline engines, there has been a steady increase in the number of trolley-buses, usually on lines formerly operated by trolley cars. It is estimated that some 3,000 trolley-coaches are now in service. At Seattle, Wash., the last of the street-railway cars and cable cars were taken out of service in April.

In some cities, the abandoned tracks have been taken up, either for repavement with a smooth surface or to furnish needed scrap metal for the

steel industry. But in other cases the cost of removal and repaving is more than the value of the metal recovered, so that the material may be left in place unless the Federal government assumes a part of the cost of removal.

There has been also some decline in the mileage of elevated railways, generally due to the extension of subways. This is the case in New York and Brooklyn, while in Chicago the new subway system aims at the eventual removal of the elevated "loop" around the central business district. At Cincinnati, Ohio, a report on improvement of street traffic facilities has suggested a belt-line boulevard around the city to enable automobiles to approach their destinations before entering the congested district, and a belt-line subway around that district for the use of all public transport vehicles. This subway would utilize and extend the one built several years ago, but never put into service. Since the cost of the proposed system would be some \$15,000,000, its serious consideration must be left for the future.

On the two Chicago subways (parts of a comprehensive system) construction was completed on the State Street line, and it was being equipped with track, electric cables, wiring, and station equipment to be ready for operation in 1942. This includes basic construction for 26 stations, but considerable changes were made in the station plans to avoid use of materials affected by priority control under war conditions. Contracts have been let for steel work of three inclined connections with the elevated railways, and for much of the equipment material. The operating company is to provide rolling stock, and when the new unification ordinance becomes effective the company will reimburse the city for funds advanced in order to expedite the work.

On the Dearborn Street line, construction has been halted pending State approval of a super-highway over the Congress Street section of the subway, since the cost would be reduced considerably if both projects were carried on together. Although June 30, 1942, is the date for completion of both lines, the delays due to war conditions and the Congress Street extension may necessitate an extension of time, but it is planned to have the State Street line ready for operation late in 1942. Progress has been made with the court proceedings to provide for merger of the existing transportation companies under a unification ordinance.

In Brooklyn, N.Y., five miles of the Long Island Railroad occupying Atlantic Avenue are being placed underground, eliminating $1\frac{1}{4}$ miles of elevated line and $3\frac{3}{4}$ miles of surface line, together with a score of grade crossings. The subway tracks are about 30 ft. below street level and the roof is covered with 5 ft. of earth fill, to form the central part of a boulevard 120 ft. wide. The subway has a concrete floor and side walls, with a central row of steel columns and steel roof beams carrying the concrete roof. A central wall 5 ft. high prevents damage or collision in case of derailed trains. This work is to be completed in 1942. At Boston, the Huntington Avenue subway of the Boston Elevated Railway, opened on February 16, at a cost of \$7,126,000, removes surface trolley cars from a busy section of street and provides for future operation of third-rail trains. It is 4,200 ft. long, of concrete construction, with two "tubes" 12 ft. wide and 15 ft. high carrying track of 85-lb. rails on wood ties in stone ballast. This subway is estimated to save riders 20 minutes during rush-hour periods, with cars at 2-minute intervals, and 10 minutes at other times, with 4-minute service.

Escalators are being used more and more on subway stations, being more convenient and speedy than elevator service and eliminating the tiresome climbing of stairs. The greatest vertical travel of escalators is said to be 86 ft. in some of the London underground stations, while those at the Lexington-Third Avenue station in New York have a rise of 56 ft. 3 in. Car-washing machines, consisting of a series of vertical revolving brushes and water jets, are used by many street-car and bus companies.

The underground railway system of London, England, comprising a network of lines under one control, reached its jubilee in 1941. Its first section was three miles long, but it has now some 200 miles, including surface extensions. A curious development of this system is the construction of isolated lengths of deep tunnels for present use as public bomb shelters and eventual use as extensions of the underground railways. But as the cost is enormous in relation to the protection provided, and the relations to public health are objectionable, while the economic direction of future extensions of the railways cannot be predicted, an investigating committee has recommended that no more such tunnels be built.

War conditions in Europe have led to the curtailment of street-railway lines and services, with many miles of track taken up to supply material for steel-making. It has led also to experiments with new fuels, in view of the great demand for gasoline as war material. London and other cities in England are using coal-gas for buses. Ireland is trying gas from anthracite and peat charcoal. Denmark is using natural gas and coal gas, as well as gasoline produced from lignite.

At Melbourne, Victoria (Australia), the streets adjacent to the great Flinders Street railway terminal station have had such a congestion of passengers due to the use of the station for both main-line and suburban trains that connections are to be made with the underground railways, so that many suburban trains can proceed beyond the terminal station and so serve a number of city stations. In spite of the war, Italy is proceeding with the construction of the 7-mile underground line from the Termini main-line station to the site of the proposed 1942 international exposition, although all plans and construction for the exposition have been stopped. The trains are to consist of two motor cars with four non-motor cars between them. On the street-car lines, articulated two-car trains are being tried experimentally.

Street-car service at Panama City was discontinued on May 31 by order of the government, a new franchise having been given to the motor-bus company. The former company was required to remove the rails, except in streets where they are embedded in concrete. In Berlin, service has been abandoned on several street-car lines, owing to labor shortage and the need of conserving electric current for war purposes. In general, Germany prefers street railways where traffic warrants the expense, but under war conditions there is greater use of the trolley-bus on streets having overhead wiring, since no gasoline or fuel oil is required. It is considered that in peace times the use of trolley buses is rarely economical and should be limited to towns of 25,000 to 100,000 population. See TRANSPORTATION DIVISION.

RFC SUMMARY OF ACTIVITIES FEB. 2, 1932, THROUGH DEC. 31, 1941

	<i>Authorizations</i>	<i>Disbursements</i>	<i>Repayments and other reductions</i>
For benefit of agriculture	\$2,604,071,430	\$1,450,652,374	\$1,448,940,848
To open banks to meet demands of depositors	1,334,805,161	1,138,251,619	1,082,584,822
For distribution to depositors in closed banks	1,391,474,104	1,035,530,126	1,003,087,205
For bank capital (including Export-Import Banks \$176,500,000 and Federal Home Loan Banks \$124,741,000)	1,645,205,689	1,469,712,331	744,230,583
For self-liquidating projects (including PWA municipal securities)	1,270,701,298	1,058,500,414	895,865,658
To business enterprises	587,650,939	271,978,915	162,329,107
For loans for National Defense	5,338,612,873	980,346,623	173,152,054
For loan to Great Britain and Northern Ireland	425,000,000	350,000,000	4,844,381
For purchases of stock—National Defense	120,100,000	20,100,000	
To drainage, levee, and irrigation districts	147,747,818	98,210,980	25,397,370
To railroads (including PWA railroad securities)	1,531,530,885	1,027,450,714	554,448,632
For loans to and capital of mortgage loan companies (including \$25,000,000 capital The RFC Mortgage Company and \$11,000,000 capital Federal National Mortgage Association)	760,367,930	586,658,311	371,286,372
For loans to and capital of insurance companies	138,914,750	125,168,209	102,418,473
To building and loan associations (including receivers)	170,530,059	125,275,297	122,114,740
To public school authorities	25,074,050	23,242,170	22,393,900
Catastrophe rehabilitation loans	16,184,520	12,003,055	10,975,936
To state funds for insurance of deposits of public moneys	13,087,715	13,064,631	13,064,631
For mining, milling, and smelting businesses	16,578,100	6,898,409	3,126,779
For loan to Export-Import Bank	25,000,000	25,000,000	25,000,000
For other purposes	669,057	614,813	614,813
Total—By Directors of the Corporation	\$17,563,806,385	\$9,818,058,998	\$6,765,876,312
Allocations and loans to other governmental agencies and for relief by direction of Congress	3,484,649,945	3,199,696,363	2,852,014,066
Grand Total	\$21,048,456,330	\$13,018,355,361	\$9,617,890,379

* Includes \$2,738,724,131 of Corporation's notes canceled pursuant to Act of Congress, approved Feb 24, 1938.
 † Includes \$42,508,118 credited on indebtedness for property taken over for debt

RECONSTRUCTION FINANCE CORPORATION (RFC). The Reconstruction Finance Corporation, one of several agencies grouped under the Federal Loan Agency, may perform all its functions to Jan. 22, 1947, or such earlier date as the President may authorize. The Corporation was created by Act of Congress approved Jan. 22, 1932, to provide emergency financing facilities for financial institutions, to aid in financing agriculture, commerce, and industry, and for other purposes. Subsequent legislation extended its operations. The capital stock of the Corporation was fixed by section 2 of the Reconstruction Finance Corporation Act at \$500,000,000, all of which was subscribed by the Secretary of the Treasury on behalf of the Government of the United States on Feb. 2, 1932. The entire capital stock has been paid in by the Secretary of the Treasury. Pursuant to the provisions of section 2 of the Reconstruction Finance Corporation Act, as amended by the Act of Congress approved June 25, 1940, the Corporation retired \$175,000,000 of its capital stock at par.

The accompanying table summarizes the activities of the Reconstruction Finance Corporation, covering the period Feb. 2, 1932, the date the Corporation began operations, to Dec. 31, 1941.

RED CROSS, American National. The outbreak of the war found the American Red Cross ready with the full force of its wide experience of more than sixty years. Both at Manila and Honolulu the Red Cross was ready to give immediate medical help, emergency first aid, and evacuation assistance to civilians. Red Cross trained personnel were instantly available.

Large stores of emergency supplies had been

strategically placed. In the Philippines, ten, and in Hawaii, twelve, fully equipped Red Cross first aid stations of 50 beds each were set up and ready to operate. Schemes for evacuation from bombed areas under Red Cross direction had been devised and rehearsed beforehand.

Within twenty-four hours after Japan struck in the Pacific, the American Red Cross launched a war fund campaign for at least \$50,000,000 to discharge the traditional responsibilities delegated to it under its Congressional Charter. The campaign was at once endorsed through a White House proclamation issued by President Franklin D. Roosevelt.

Following the President's declaration of a state of national emergency, the American Red Cross last year undertook the greatest development of its domestic services since the days of the first World War.

For military defense, the national organization assigned field directors to every Army and Navy station here and abroad to act as the communicating link between the man in uniform and his family back home. In key metropolitan chapters the Red Cross began recruiting 200,000 blood donors to safeguard the lives of men daily confronted with the hazards of military life. In chapter work rooms, more than 1,250,000 women produced 40,000,000 surgical dressings to stock Army and Navy medical supply depots; simultaneously they launched a nation-wide project to knit 500,000 sweaters for the armed forces. In military camps and naval stations Red Cross instructors began classes in first aid and water safety. From the First Reserve of Red Cross nurses, the Army and Navy drew more than 6,000 trained women, requesting 4,000 more by the summer of 1942.

Growing consciousness in the need for civilian defense preparedness likewise had a pronounced effect in the expansion of domestic services of the Red Cross. Throughout the nation Red Cross disaster preparedness committees undertook measures to strengthen facilities for feeding, housing, clothing, and providing medical attention in event of national or sectional emergency brought about by sabotage, epidemic, armed invasion, or sporadic attacks from the air or sea. In cooperation with the U.S. Office of Civilian Defense, the Red Cross

began training 100,000 Nurse's Aides, 100,000 Nutrition Aides, 500,000 Canteen Aides, and to train 500,000 in the rudiments of Home Nursing. Also in cooperation with the OCD, the Red Cross, by the end of 1941, was training men and women in first aid at the rate of 1,000,000 yearly—almost triple that of the preceding year.

Meanwhile the plight of foreign war victims was not overlooked by the American Red Cross. In hand with its sixty-three sister societies throughout the world, the American Red Cross extended aid in England, the British Middle East, China, Russia, unoccupied France, and also to other continental European nations prior to their seizure by Axis powers. For shipment abroad Red Cross volunteers produced some 30,000,000 surgical dressings and 7,000,000 articles of clothing. Shipment of food, medical supplies, and purchased clothing brought American Red Cross relief abroad to the \$50,000,000 mark, including expenditures made from a \$21,000,000 fund contributed by the public and distribution of supplies bought with funds allocated for that purpose by the Congress. By the end of the year, war victims in Great Britain and her war zone possessions had received more than half of all American Red Cross foreign war relief.

The American Red Cross had 3,735 chapters with 6,131 chapter branches in the United States and the insular possessions on June 30, 1941. In the 12 months preceding June 30, the American Red Cross conducted disaster relief operations at the scene of 149 catastrophes occurring in Continental United States. Assistance was given 217,000 persons at a cost of \$946,626. During the year 260,332 water safety certificates were issued. Through the same period 577,267 first aid certificates—the largest number in the 31-year history of the program were issued.

The problems of 127,098 disabled veterans or their families were dealt with by chapter workers. In hospitals and regional offices of the Veterans' Administration and in other Government hospitals, representatives of the national organization dealt with 51,729 ex-service men or their families. Chapters aided 29,147 men now in regular service, or their families. Red Cross field directors in Army, Navy, Coast Guard, and Marine Corps stations and workers in Government hospitals handled the cases of 126,515 men in active service or their families.

On the active list of the Red Cross Nurses' Reserve were 62,937 (Dec. 30, 1941) nurses ready for calls from Army, Navy, and Red Cross disaster service. In 460 communities where other nursing facilities were not available, the Red Cross maintained a total of 639 nurses.

During the year 999 Red Cross chapters conducted 5,712 courses in Home Nursing, certifying 80,939 persons. Accomplishment of volunteers in special services included: Production of 473,365 pages of Braille transcribed by hand for blind readers and 371,138 pages printed by duplicating process: the making of 193,259 calls by members of motor corps; the feeding of 104,557 persons by canteen workers. Membership for the year ended June 30, 1941, was 9,190,474 men and women—an increase of 2,051,211 over that of the year ended June 30, 1940.

The President of the United States is president of the American Red Cross. Norman H. Davis is chairman of the Central Committee, having been named by President Roosevelt on Apr. 12, 1938, to succeed the late Rear Admiral Cary T. Grayson. The Central Committee is composed of 18 members, six of whom are appointed by the President of the United States to represent the Government.

REFUGEES. Although 1941 saw a diminution, as compared with 1940, in numbers of people newly uprooted from their homes the world over, the difficulties of tens of millions of human beings who can be classified as refugees, were intensified. Those who had been victims of mass population movements in 1940 and had as yet been unable to return to their homes or take root elsewhere, found their resources dwindling at an alarming rate. Clothing was worn out, cash was used up, and even the first flood of public sympathy and helpfulness, which eased their plight at the time of expulsion or flight, began to dwindle.

In terms of numbers, the largest refugee group was in China, where 30,000,000 war refugees fled before the Japanese armies to the agricultural hinterlands in the west. For the most part, sustained flight was limited to skilled laborers, industrial leaders, small merchants, government employees, students, and intellectuals. Unskilled laborers and peasants, whether because of inertia, lack of funds, or the need for continued cultivation of the land, moved shorter distances and were prone to return to their homes as soon as the Japanese stabilized the occupied areas or the Chinese armies recaptured them.

In Europe, the movement of refugees was greatly reduced in volume as compared with the preceding year. In 1940 mass movements had involved 3,000,000 Poles, fleeing eastward and southward from German-occupied into Soviet Poland, and later 300,000 of them transported in sealed trains to Siberia. At the same time, over 500,000 people of German stock had been repatriated to Germany or German-occupied Poland from Bukovina, Bessarabia, Rumania, and the Italian Tyrol. Finland had seen 400,000 people uprooted and forced to find new homes within the restricted borders provided in the peace treaty with the Soviet Union. Another huge movement had involved the flight of 3,000,000 Dutch, Belgian, and French people from the Low Countries and Northern France at the time of the German invasion in May, 1940.

During the latter part of 1940 and throughout 1941, some of these movements reversed themselves. The majority of the refugees who had come to Southern France returned to their homes after the armistice. On the other hand, fresh deportations took place during the fall of 1940, such as the expulsion of 100,000 French inhabitants from Luxemburg and Lorraine. As the Finns regained the Karelian territory from Russia during the latter half of 1941, the resettled people moved back to their former homes where those had not been destroyed.

However, the German war against Russia, which

began with the invasion of Russian-occupied Poland and proceeded to within a few miles of Moscow, uprooted many millions. Approximately 2,000,000 Polish nationals were moved out of the theater of war into the far reaches of Siberia and Asiatic Russia. Enormous Russian populations were likewise evacuated, but some returned when the Russians later recaptured certain areas in central and southern Russia from the Germans. Other populations uprooted because of military reasons included tens of thousands of American and Filipino women and children in Manila, who were evacuated with the United States army in the battle for the island of Luzon, as well as substantial numbers of British nationals who had to leave Hong Kong and other parts of the British Far East as a result of the Japanese attack in those areas.

The exodus of Jews from Europe, which had been the first refugee movement of any size since World War I, diminished somewhat during 1941. Although 500,000 had left the borders of Germany and the lands which subsequently fell under German domination, such as Austria and Czechoslovakia, since 1933, there remained nearly 450,000 people of the Jewish faith in the countries of Greater Germany at the beginning of 1941. In addition, several million were under direct or indirect German domination in Poland, Rumania, Hungary, Yugoslavia, etc. By the end of the year, the Jewish population of Greater Germany proper had been reduced by about 125,000. Of these, approximately 20,000 had been able to emigrate to countries of permanent asylum overseas, while the remaining numbers had been deported to Poland in a German drive to make the Reich Judenrein. A high death rate and an extremely low birth rate likewise contributed towards the reduction of the Jewish population in Germany.

The distribution of the refugees who had left Greater Germany from 1933 through 1941 was approximately as follows: United States, 200,000; Central and South America, 115,000; Palestine, 85,000; Shanghai, 20,000; England, 40,000, and still in continental Europe, approximately 75,000. France contained the largest number of Jewish refugees still on the continent. Smaller numbers were to be found in Switzerland, Spain, Portugal, Italy, Hungary, Rumania, Sweden, Yugoslavia, and Northern Africa. Little groups were scattered all over the world, in such remote areas as Burma, Australia, New Zealand, Turkey, South Africa, etc.

The principal route used by refugees in leaving Europe during 1941 was via Spain and Portugal. During the latter part of 1940 and the first month or two of 1941, some 2,500 refugees used the trans-Siberian route from Lithuania to Vladivostok and then Japan, but this movement ceased when the Japanese refused to grant further transit visas. Towards the end of the year, the emigration stream was greatly reduced for a number of reasons. In the first place, a new visa control system instituted by the United States, which centralized visa applications in Washington, imposed much more stringent regulations on refugees desiring to enter the United States. Central and South American lands, fearing the possibility of fifth columnists, also closed immigration doors tightly. The most compelling measure to reduce refugee emigration, however, was taken by Germany when in November a policy was adopted of not granting exit permits to Jews of military age, and a few weeks later complete stoppage of exit permission took place.

Certain shipping difficulties also contributed to the shrinkage in emigration. At the beginning of the year, the trans-Atlantic route was plied by

American, Portuguese, and Greek steamers. The invasion of Greece during the early spring necessitated the withdrawal of Greek boats and shortly thereafter, American defense requirements necessitated the use of several steamers which had formerly serviced emigration from Europe. Partial compensation for these losses, however, was made when Spanish boats entered the traffic. With the American entry into the war in December of 1941, the American Export Line, which held the New York-to-Lisbon franchise, announced that it had stopped this run, and the field was left to the neutral Portuguese boats. The extension of the theater of war to the Middle East made immigration to Palestine difficult, and only 15,000 refugees were able to reach its shores in 1941.

The year 1941 ended with millions of homeless people temporarily stalemated, awaiting the end of the war before they can be either repatriated or permanently resettled. International bodies were able to do little more for these people than make plans for postwar rehabilitation. On the other hand, extensive relief programs were carried out by a number of private and governmental agencies to ease the immediate plight of the homeless. See WAR RELIEF; also ART under Exhibitions, BRAZIL and DOMINICAN REPUBLIC under History; articles listed under EMIGRÉ LITERATURE.

JAMES G. McDONALD.

REGIONAL CONFERENCE OF THE RIO DE LA PLATA. The first Regional Economic Conference of the Río de la Plata was held at Montevideo, Uruguay, during Jan. 11–Feb. 6, 1941, with official delegates of Argentina, Bolivia, Brazil, Paraguay, and Uruguay in attendance. Observers appointed by the governments of Chile, Peru, and the United States were present at the invitation of the conference.

The conference was called at the joint request of the Bolivian and Paraguayan Foreign Ministers, in line with recommendations for regional solutions of economic problems made by the Panama Conference of American Foreign Ministers in 1939 (see YEAR BOOK for 1939, p. 596). It was specifically concerned with reducing the physical and legal handicaps to foreign trade and communication imposed upon Bolivia and Paraguay by their inland positions and lack of seaports. The Chaco Peace Conference that settled the old controversy between Bolivia and Paraguay over the Chaco Boreal in 1938 had recognized Bolivia's landlocked position as a major cause of the Chaco War of 1932–35. It likewise had recommended the cooperation of the countries neighboring Bolivia and Paraguay in settling this problem. Moreover all of the participating countries were concerned with finding new markets and sources of supply for those cut off or impaired by the European War.

During its 11-day sessions, the conference adopted 9 conventions and 17 resolutions, all designed to further economic cooperation among the republics of the Río de la Plata basin. Probably the most important convention was one binding Argentina, Brazil, and Uruguay not to invoke the most-favored-nation principle to obtain special concessions granted by any one of them to Bolivia and Paraguay. The convention was contrary to the unconditional most-favored-nation clause approved as the basis of inter-American commercial policy at the Pan American Conference in Lima, Peru, in 1938. However it was accepted without protest by the United States, chief advocate of the most-favored-nation principle.

Another convention established a regional office at Buenos Aires to study and report on the practical

results of the resolutions adopted by the conference and to collect data on economic problems of mutual interest. Shipments to and from Bolivia or Paraguay were to receive preferential treatment in the form of rebates on freight rates by the other three countries, according to another convention. Others provided for bilateral accords among the five participating countries on foreign exchange, banking facilities, and credits; tariff-free transit for Bolivian and Paraguayan trade crossing Argentine, Brazilian, or Uruguayan territories; and mutual encouragement of tourist travel.

Another convention bound the five countries to grant facilities for the transport of petroleum by pipeline from a producing country across any of the others, with exemption of the oil from all charges other than those paid by home-produced petroleum. This bound Argentina to facilitate shipments of Bolivian oil across its territory by pipeline without imposing tariffs or taxes additional to those levied on Argentine-produced oil. The remaining conventions established regional parcel post services at reduced rates, and authorized free visas for immigrants entering any one of the five countries in transit to another. These conventions required ratification by the participating governments before going into effect.

Among the 17 resolutions adopted was the Argentine proposal that the feasibility of a regional customs union be studied by the five governments. Others called for regulation and extension of border retail trade by bilateral treaties; extension of commercial arbitration; reduction of consular fees and adoption of uniform consular forms and regulations; an international conference to draft uniform legislation on transportation and foreign exchange; the promotion of the Pan American Highway by establishment of a central organization and national committees; and exemption of ferryboats from international port dues. Reciprocal extension of national advantages and privileges to one another's vessels engaged in inland river traffic was envisaged in another resolution. Others provided for the establishment of mixed commissions of technical experts to study regional cooperation in the construction of public works; establishment of animal and plant quarantine by bilateral agreement; the ratification of measures for suppressing smuggling; freer interchange of books; establishment of free port zones; organization of mixed commissions to study the improvement of navigation on the Río de la Plata and its tributaries; and the creation of facilities for preferential distribution of native products, raw materials, and manufactured articles among the five countries.

In his opening address, Foreign Minister Alberto Guani of Uruguay, as president of the conference, emphasized that the gathering had no isolationist aim but was designed to strengthen democracy and inter-American solidarity by establishing a firmer basis of cooperation among the Río de la Plata countries. This spirit of cooperation for mutual economic progress was maintained throughout the conference, despite the clashes of national interest occasioned by some of the proposals under consideration.

Brazil strongly opposed the Argentine proposal for the establishment of bilateral customs unions among the five countries. The suggestion was then changed to provide merely for study of a regional (multilateral) customs union, which had little chance of acceptance since it was strenuously opposed by Bolivia, Paraguay, and Uruguay. Argentina and Brazil rejected a Uruguayan proposal that the five countries grant each other preferences over

non-American countries in disposing of their export surpluses. The Bolivian proposal for free transit through the other countries of merchandise, materials, and passengers bound for Bolivia brought a protest from a Paraguayan delegate, who feared that Bolivia might employ the convention to import munitions. (Bolivia had imported arms and munitions through Chile under a similar clause in a Bolivian-Chilean commercial treaty during the Chaco War.) The issue was settled in the convention signed at Montevideo by making the free transit clause subject to the international obligations and the laws of the countries granting free transit. Many proposals on which agreement could not be reached were postponed for consideration at subsequent conferences.

For bilateral economic agreements among the participating republics, see ARGENTINA, BOLIVIA, BRAZIL, PARAGUAY, and URUGUAY under *History*. Also see INTER-AMERICAN UNION OF THE CARIBBEAN; PAN AMERICANISM.

RELIEF. The program of relief to needy persons, as it has developed in the United States since the first inauguration of President Roosevelt, falls into three distinctly separated categories, and it should be borne in mind that these three categories have entirely different types of administration, different sources of funds, and not altogether identical objectives. (1) There are the three special types of public assistance administered by the Social Security Board—old-age assistance, aid to dependent children, and aid to the blind—more commonly referred to as "social security" and financed by Federal grants-in-aid matching State funds to the extent that the legislation of the various States provides them. The Social Security Board also administers the unemployment insurance program, which serves to relieve the plight of the jobless, but is a form of insurance rather than public aid. For a description of these programs, see SOCIAL SECURITY BOARD. (2) The Federal work programs, designed to aid the needy by providing employment, are financed entirely by Federal funds. See the separate articles in this volume on the Federal agencies involved, namely, CIVILIAN CONSERVATION CORPS, NATIONAL YOUTH ADMINISTRATION, and WORK PROJECTS ADMINISTRATION. (3) General relief, which bears the closest resemblance to a "dole," is financed entirely from State and local funds.

The faults inherent in such division of administration continued to be the subject of study by interested groups in 1941. There were, on the one hand, advocates of a system of relief by which authority and responsibility for relief would be handed back to the States; this view has been consistently put forward by Republicans during consideration of the annual Congressional relief bills. On the other hand, there was the contention (eloquently supported at the 1941 meeting of the National Conference of Social Work in June by Edith Abbott, dean of the School of Social Administration at the University of Chicago) that the present "relief chaos" demands establishment of a comprehensive Federal relief program.

When statistics are lumped together for all phases of the program, the 1941 trend continues in the downward direction. Total payments and earnings for November, 1941, were \$160,384,000 as compared with \$209,235,000 for November,

1940; the unduplicated total of recipients fell to 10,271,000 (preliminary) from 14,577,000. However, the three types of special assistance under the Social Security Board, showed a steady increase as the States expanded their programs. Among the Federal work programs all showed a decrease except the out-of-school work program of the NYA. The CCC suffered most, with a decline in earnings of enrollees from \$18,725,000 in November, 1940, to \$9,572,000 in November, 1941; WPA funds dropped from \$93,545,000 to \$59,732,000. General relief, administered by States and localities, decreased to \$18,432,000.

Despite the obvious improvement in employment in 1941 (see LABOR CONDITIONS) the relief issue continued to be a lively one both in Congress and in State legislatures. The relief bill for 1942, as passed by Congress on June 30, just before the beginning of the fiscal year, provided a total of \$910,905,000, primarily for the WPA except for \$25,000,000 earmarked for buying surplus farm commodities under the Food Stamp Plan. This was a reduction of \$457,156,357 from the amount voted in 1940 (\$1,350,650,000) and was expected to reduce the WPA rolls to a million from the current enrollment of approximately 1,700,000.

The measure was the occasion for a sharp debate hinging primarily on the extent to which the defense program might be expected to reduce unemployment. WPA officials had estimated that 5,500,000 persons would be unemployed during the ensuing year and pointed out that defense work would necessarily be unevenly distributed. In line with this, larger appropriations were advocated by a number of Democrats. The Republican minority, while approving the cut, continued to strike hard against the mismanagement of relief. A particular object of the opposition attack was the employment of David Lasser as a field investigator of the WPA. Although Lasser had resigned the presidency of the Workers Alliance because of its Communist activities, opponents quoted him as having stated that the Communist party was not subversive. The appropriation, as passed, was slightly higher than the figure (\$886,000,000) recommended by the President in a special message to Congress on May 20. The message urged Congress—in vain—to remove certain requirements imposed in 1941: the limitation of continuous employment on the WPA to 18 months, investigation of each worker at least once a year, and the ineligibility of aliens for relief.

Opponents of a large relief program were determined that funds should feel the axe still further in 1942. The Congressional-Executive Department Joint Committee on Non-Essential Expenditures, headed by Senator Byrd of Virginia, recommended in its report on December 25 that the annual outlay for the WPA be reduced by about \$400,000,000. The Committee had before it a survey made by the National Economy League, showing that only 59 cents of the WPA dollar went to the relief workers, the remainder being used for supplies, administrative costs, etc.; the League advocated abandonment of work relief during the crisis and a return to a system of direct relief, with an estimated saving of \$479,000,000 for the fiscal year 1942. Four days after the report of the Byrd Committee was made public, the Brookings Institution released the results of a study financed by the Falk Foundation, in which curtailment of expenditures in the field of public welfare was advocated to the tune of \$615,000,000. Both the Byrd Committee and the Brookings report favored complete abolition of the CCC.

A stormy chapter in relief annals of recent years was closed in November, 1941, with the formal disbandment as a national organization of the Workers' Alliance, a left-wing group serving the interests of the unemployed and relief recipients. In the course of its ten-year existence, the Alliance had staged a hunger march on Washington, found 75 of its members ejected from the Capitol, and been instrumental in a widespread strike of relief workers. Reduction in unemployment was cited as the reason for disbandment; the 200 branches of the organization were instructed by the national board to affiliate with other labor groups and community organizations.

Developments in the field of general relief, and with regard to State participation in Federal programs, are discussed in the articles on States under *Legislation*. To an extent, the States reflected the national tendency to reduce the relief drain on their resources. Pennsylvania, for example, adopted a policy by which all single, employable persons between 20 and 40 were barred from relief after July 16. The laws of Indiana were amended to provide that indigents of the State receiving public support could be required to perform useful public work. For statistics on payments, see the articles on States under *Social Security*.

For farm aid, see AGRICULTURE and AGRICULTURE, U.S. DEPARTMENT OF. For privately sponsored activities in the field of public welfare, see the article on PHILANTHROPY.
